A subsequent modification of the significant facts, or a change or development in the controlling legal principles, may make a prior adjudication obsolete or erroneous, at least for the future; and a judicial declaration intervening between two proceedings involving the same parties and like issues may so change the legal atmosphere as to render the rule of collateral estoppel inapplicable. [333 US 591.]—Schultz Transit, Inc. v. United States, 208 F. Supp. 537 (540-1)*.

Although an earlier opinion of the district court (reported 207 F. Supp. 749) held that transportation of plaintiff shipper's merchandise in trucks leased by it from plaintiff Schultz was private carriage, not for-hire transportation by Schultz, and the present court may assume that subsequent expansion of plaintiffs' operations under their lease agreements did not so change the factual situation as to render that judgment inapplicable

as an estoppel, absent any change in the legal climate, there has since been a substantial change in the applicable law, due to decision in 368 US 370, which rejected the test of shipper control over a challenged operation as solely determinative of whether the transportation is private or for-hire, and approved the commission's consideration of substance of the arrangements. Thus, the rule of res judicata or collateral estoppel is inapplicable in suit to set aside the commission's cease-and-desist order entered upon further investigation of plaintiffs' operations.—Id., pp. 540, 541-2.

Petition for reconsideration of denial of complainant's request for oral argument, on ground that the issue of lawfulness of rate bureau's practice of protesting rates filed by nonmember carriers needs clarification and further evaluation, denied, as the issue has been decided by the judiciary.—Arbet Truck Lines, Inc. v. Central States Motor Freight, 321 I.C.C. 460 (461). [But see dissent.]

Complainants are not estopped by the doctrine of res judicata from challenging defendant's right to engage in charter operations under its regular-route authority for airport limousine service, since the commission, in the proceeding which led to issuance of defendant's certificate, did not specifically determine the extent to which it might engage in incidental charter operations. Moreover, not all parties to the complaint proceeding were parties in the application proceeding.—Arrow Lines, Inc. v. Connecticut Limousine Service, Inc., 96 M.C.C. 1 (4).

Though in 4 application proceedings in which applicant appeared as protestant its authority to serve points "in Connecticut, Pennsylvania, New Jersey, and New York within 100 miles of Columbus Circle" was construed as restricting its territory in all 4 States, no exhaustive study of scope of its authority was made in those proceedings because it was a collateral issue, and none of reports therein explained basis for that conclusion; such conclusionary findings do not control outcome of investigation to determine whether respondent has exceeded that authority in serving points beyond the 100-mile radius in the three States first named, but merely show that reasonable men can read its certificate in the way urged by Bureau of Inquiry and Compliance; in investigation proceeding the scope of that authority is squarely before the commisssion, and it is required by Administrative Procedure Act to explain its reasons for finding that respondent does or does not possess the authority claimed.—T. I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (10-11)*.

52. Complaints.—[Vols. 17, 18].—Procedure followed by the Pennsylvania commission in bringing before the Interstate Commerce Commission situations involving carriers' alleged abuse of their interstate certificates, by operating over interstate routes tacked at New Jersey points in order to evade State regulation, is entirely proper; resolution of problems of that kind is for the ICC in the first instance, under §204(c). [See 359 US 171.]—Hudson Transp. Co. v. United States, 219 F. Supp. 43 (48)*.

Examiner properly sustained defendant rate bureau's objection, on grounds of surprise and broadening of the issues, to complainant's proposed amendment of complaint alleging violations of §5a and the national transportation policy, purportedly to clarify the issues by alleging violations of antitrust laws. It is elemental that in fairness to a defendant a complaint should state all relief sought and the basis therefor. While purpose of §5a is to give immunity from certain violations of antitrust laws, the general allegations of the complaint as filed cannot reasonably be interpreted as including antitrust violations; however, in view of that purpose, it is immaterial whether complainant actually alleged antitrust violations or only violations of §5a. —Arbet Truck Lines, Inc. v. Central States Motor Freight, 321 I.C.C. 460 (461).

Since defendants did not object to complainants' introduction of evidence concerning the preferential, prejudicial, and discriminatory nature of assailed rates as unduly broadening the issues, complaints will be considered as amended at hearing to include allegations that assailed rates and charges are and for the future will be unduly preferential and prejudicial and unjustly discriminatory.—Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (328).

If defendants' misuse of their interstate

certificates to transport essentially intrastate traffic over interstate routes did not violate the act, the commission would have no jurisdiction to entertain a complaint under §204(c). However, in considering similar subterfuge operations in 359 US 171, the Supreme Court interpreted §204(c) as empowering the commission to investigate whether any motor carrier has committed a subterfuge of any State's regulatory jurisdiction and, upon an affirmative finding, to issue a cease-and-desist order; and as pointed out in 348 US 61, if carriers persistently violate State laws the commission may protect the State's interest, either on complaint of the State or on its own initiative. Moreover, the requirement of Federal-State cooperation in motor carrier regulation, which is implicit in the Motor Carrier Act and expressly required by the national transportation policy, is sufficiently definite to support a complaint filed on behalf of a State under §204(c) and the issuance of an appropriate compliance order.—Pennsylvania Public Utility Comm. v. Hudson Transp. Co., 88 M.C.C. 745 (749-50)*.

Reference of complaints to joint board, see Brunswick Transp. Co. case, §205(a), n. 15.

53. Consolidation of proceedings.—[Vols. 15-19].—Appellee rate bureau's undertaking to be bound by the commission's conclusions in investigation into its proposed rate increases, which had not been concluded when another investigation into further rate increases in same territory was consolidated with the earlier proceeding, was nothing more than a consent to consolidation of two pending proceedings for hearing. Such so-called agreement to be bound by the decision in the consolidated case did not give rates published pursuant thereto a retrospective effect, as contended by appellant.—Lynchburg Traffic Bureau v. Smith's Transfer Corp. of Staunton, Va., 339 F. 2d 478 (480-1)*.

See also Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831, §206(b), n. 25.

As a matter of administrative discretion, the commission may consider an application separately or in combination with other applications; when applications before it conflict, however, the commission must base its decision upon the concept of fairness of opportunity to all parties involved, the effective procedures it has promulgated, and the public interest—the remedy does not have to be consolidation. In instant proceeding, granting of petitions seeking consolidation with other application cases would tend to encourage delaying tactics and the filing of dilatory petitions by unsuccessful applicants in related proceedings; moreover, petitioners will suffer no injustice and have not shown good cause to warrant disposition of matters in the separate applications on a comparative basis; petitions for consolidation, denied.—Alterman Transport Lines, Inc., Extension, 94 M.C.C. 421 (423-4).

The commission generally will endeavor to consolidate proceedings wherein protestant carriers do not hold permanent authority to provide the service sought by applicants but rely on pending application proceedings and recommended grants of authority therein; however, in instant proceedings the commodities, origin, and destination points sought in all three applications were so disparate as to make any consolidation difficult and confusing. The commission, however, is cognizant of the pending applications, and will not ignore developments therein.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 364 (368).

When applicant's petition for consolidation of its application with another proceeding, assigned for hearing 7 days after its application was filed, was received too late even to be considered and was subsequently denied by order, any consolidated consideration of the two applications is not possible.—Railway Exp. Agency, Inc., Extension, 89 M.C.C. 537 (539).

55. Full hearing.—[Vols. 9, 11-14, 16-18].—Complainant carrier was entitled to a full, fair and open hearing in consolidated commission proceeding involving an investigation, a reopened "grandfather" and an extension application, and a conversion proceeding, as a prerequisite to validity of the commission's orders. But this does not mean that the commission was required to furnish internal reports or open its confidential files to the carrier when they were requested for use other than cross-examination of any witness.—Zuzich Truck Line, Inc. v. United States, 224 F.

Supp. 457 (461-2)*.

There is no merit to plaintiff's contention that it was denied fair hearing and due process in that it was not afforded opportunity to be heard on issues on which the examiner and the commission made their determinations that its challenged operations were unlawful. The issue of unlawfulness certainly encompassed the issues relating to derivation of authority for the questioned operations, such as tacking, segmentation, or interpretation of city street certificates; and the record discloses that plaintiff had ample opportunity to defend and substantiate its position on all such related issues.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (209)*.

See also Strickland Transp. Co. v. United States, §212(a), n. 30.

Although investigation proceeding was originally designated to be handled without oral hearing on facts stipulated by the parties, reopening thereof for oral hearing requested by certain parties, who were permitted to intervene, was not error; in the exercise of its administrative discretion, the commission may assign a proceeding for further hearing or rehearing at any time while it is pending. The commission's investigatory authority vests it with the power to hold hearings to gather the relevant facts, and the rule of administrative discretion is equally applicable to proceedings under modified procedure. Also, it is significant that intervener filed no reply to the requests for oral hearing, nor objected thereto at the time; further, it failed to show how it has been adversely affected by such hearing. —Schreiber Trucking Co., Inc.—Investigation. 91 M.C.C. 91 (92-3, 94-5)*.

Nor was it error to overrule intervener's request for a continued hearing to introduce rebuttal testimony when intervener was unable to identify witnesses or state why they were not available, what their testimony would be, and whether testimony would be repetitive.—Id., p. 95.

Though defendant requests that, if the commission adopts the joint board's findings concerning unlawfulness of certain of its charter operations conducted under claim of incidental §208(c) rights, the matter be referred to a hearing examiner for hearing de novo, it has presented no new fact or legal ground which could require different conclusions from those already made. Rehearing or hearing de novo is not warranted.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (905).

Requests for reopening of proceedings involving propriety of use of plans I and III TOFC service by motor carriers of automobiles for further hearings to receive evidence of alleged changed economic conditions resulting from introduction of hybrid TOFC plans and widespread use of multilevel rail cars, denied when present records contain sufficient information and argument for determination of some of the major problems presented, and no useful purpose would be served by delaying decision thereon, especially in view of recent institution of a general investigation of TOFC service in which the whole picture of such substituted service will be examined.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (408).

There is no merit to contention of Contract Carriers Conference that it has not been afforded opportunity to be heard in opposition to proposed §195.3(a) of hours-of-service regulations, as amended; nothing of record indicates that its position regarding the 13-and 2-hour limitation adopted would have been any different from that it took respecting the originally proposed 12-hour limitation, since it opposed any change in the present regulation.—Qualifications of Employees and Safety of Operation, 89 M.C.C. 19 (22).

60. Parties and notice.—[Vols. 13-19].—While the Bureau of Inquiry and Compliance was directed to participate "for the purpose of presenting evidence and making representations on the issues involved" in complaint proceeding alleging that defendants, collectively, engaged in or aided and abetted the performance of unlawful motor carrier, freight forwarder, and broker operations, it is not a complainant, and the commission did not become a party complainant by directing such Bureau participation. Furthermore, the commission need not institute an action in court; it may order such participation and hold the proceeding under §§17(3), 204(a)(6) and (c), and 403(a) and (f).—Natl. Motor Frt. Traf. Assn., Inc. v. Internatl. Shippers, 94

M.C.C. 440 (441, 448).

Sugar broker of Peoria, Ill., is a proper party respondent in investigation proceeding involving transactions of carrier, refineries, and brokers in the purchase and resale of sugar; while record shows that respondent's place of business is at Springfield, Ill., evidence supports conclusion that it has offices both at Peoria and Springfield.—Utley Lumber Co., Inc., Investigation of Operations, 94 M.C.C. 458 (461).

Both carrier respondent and affiliated corporation are a single entity for purposes of investigation when both are completely controlled by the same brothers and, apart from functioning of the carrier's employees as a part of the affiliate's activities, latter's operation would be almost nonexistent. Although attempt has been made to keep separate the operations of the two companies, the distinction must be regarded as merely technical and formal in view of the total picture presented by the record.—Schirmer Transp. Co., Inc.—Investigation, 91 M.C.C. 869 (875)*.

Petition of all parties of record that new leasing company be made a respondent in investigation proceeding, granted when it is and has been leasing equipment to shipper in the same manner and under same conditions as prior lessor; sufficient cause is thus shown for subjecting it to any order entered.—Schultz Transit, Inc., Investigation of Operations, 89 M.C.C. 305 (307-8)*.

Order instituting investigation under §§ 204(c) and 212(a) of respondent's failure to comply with certain orders and regulations of the commission was supplemented by a letter from the Bureau of Inquiry and Compliance informing respondent of evidence it intended to present at hearing. Respondent was thus afforded adequate and timely notice of the legal authority under which the hearing was to be held and of the specific nature of the violations with which it would be charged.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (949-50)*.

While statutory authority referred to in first notice of rulemaking proceeding might have included §204(a)(1), reference to §216(e), providing that in investigations on its own initiative the commission shall determine and prescribe the lawful charge or the lawful rule, regulation, or practice, is sufficiently precise to apprise interested persons of its legal authority to issue proposed rule.—Detention of Motor Vehicles—Middle Atl. & New England, 318 I.C.C. 593 (594)*.

62. Appearance and failure to appear.—[Vols. 18, 19].—Rule 1.7 of Rules of Practice does not preclude appearance in an investigation proceeding by a rate bureau in its own name through an authorized representative, since that rule does not relate to appearances, but merely provides that only persons, not corporations or firms, may be admitted and recognized as practitioners before the commission.—Arbet Truck Lines, Inc. v. Central States Motor Freight, 321 I.C.C. 460 (465).

65. Answer; sufficiency; effect.—[Vols. 17-19].—Although applicant failed to reply to protestants' exceptions within time specified in joint board's report and order, it petitioned for permission to file a late-filed reply; as error of its counsel in believing that he had 20 days in which to file such reply, instead of the 10 days allowed, is understandable, and since the reply was received within 5 days of the date due and caused no material delay in disposition of the proceeding, requirement in the commission's notice which accompanied the board's report is waived and the reply accepted for filing as part of the record.—Capitol Truck Lines, Inc., Extension, 88 M.C.C. 212 (213).

For the same reasons, and because the material contained in the reply is generally proper argument in light of the exceptions, protestants' motion to strike is overruled; since the commission's conclusions are based on the facts of record and the law applicable thereto, protestants' rights will not be prejudiced.—Id., p. 214.

75. Official notice.—[Vols. 9, 11-19].—A regulatory agency has the right to take official notice of reports filed with it by a regulated company.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (313)*.

The commission may take official notice of existence of statutes in many states expressly requiring segregation by race in facilities used in transportation of passengers in interstate commerce.—State of Georgia v. United States, 201 F. Supp. 813 (815)*.

The commission may consider post-hearing

changes in material facts; therefore, unopposed request is granted for taking of official notice of new tariff provisions, which establish that the practice of exchanging pallets cannot alter transportation charges which shipper would pay if its pallets were transported instead of being exchanged with carrier.—Legality of Pallet Exchange Agreement —Kraft, 322 I.C.C. 439 (442).

The commission takes official notice of short-highway miles listed in mileage guide of Household Goods Carriers Bureau.—Plastics and Chemicals from Midland, Mich., to Chicago, 318 I.C.C. 105 (106).

Under appropriate circumstances the commission may take official notice of prior reports in a proceeding, so that all pertinent facts can be collected upon which a decision should be based.—St. Louis, Mo-East St. Louis, Ill., Commercial Zone, 95 M.C.C. 519 (522)*.

120. Motions.—[Vols. 12, 16, 18, 19].—Though applicant's reply purports to contain a "motion to strike" matters in protestant's exceptions, it is not stated in detail or addressed to any particular portion of the exceptions, thus does not constitute a valid motion to strike.—Blythe Extension—Florida, 89 M.C.C. 195 (196).

See also Armored Carrier Corp. case, §205(a), n. 15.

126. Burden of proof.—[Vols. 15-19].—The burden of proving that carrier which holds no intrastate authority between considered Pennsylvania areas transports traffic between them over interstate routes through New Jersey as a subterfuge to evade State regulation was on complainant State commission, not on carrier, which admittedly is operating under validly combined interstate certificates. Apart from testimony offered to support its position that considered routes are circuitous and somewhat long, the State commission offered no direct evidence of bad faith on carrier's part, whereas carrier showed that it commingled the relatively few shipments concerned in the challenged transportation with interstate shipments for reasons of operating efficiency and economy. Since the commission bottomed its finding of bad faith solely on the circuity of such routing, this unwarranted conclusion must be rejected; cease-and-desist order reversed.—Jones Motor Co. v. United States, 218 F. Supp. 133 (137-8)*.

See also New York, N.Y., Commercial Zone, NTP, n. 5 *Commercial zones.*

Although respondents do not have the burden of proving lawfulness of rates in effect prior to institution of the investigation, motor carrier respondents have failed to overcome the prima facie showing by Bureau of Inquiry and Compliance that considered rates are unreasonably low because they fail to cover out-of-pocket costs; rates under investigation found to be unlawful.—Petroleum and Products from Oklahoma to Illinois, 318 I.C.C. 425 (428).

See also Terminal Charge on Order Bills of Lading Shipments, APA, 5 USC *Burden of Proof.*

Since considered rates were in effect when investigation was instituted, respondents do not have the burden of proof; however, although purpose of investigation was to afford interested parties opportunity to guard against possible adverse effects of rates of uncertain lawfulness, no evidence was submitted by any of the parties; thus the rates are not shown to be unlawful.—Meats and Packinghouse Products from Chicago to South, 315 I.C.C. 699 (700).

205. Proposed reports.—[Vols. 14, 15, 17, 19].—The commission is not required to accept examiners' recommendations nor the informal opinions expressed by one of its employees; therefore, it did not err in construing carrier's certificate contrary to examiners' recommendations and to an informal ruling.—U. S. A. C.. Transport, Inc. v. United States, 235 F. Supp. 689 (693)*.

See also Middlewest Motor Freight Bureau v. US, APA, 5 USC *Procedure.*

Incorporation of examiners' factual statements considered by the commission in arriving at its conclusions, by reference in its decisions to the examiners' reports, is proper.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (871, Note 7)*.

The commission is not bound to accept the examiner's findings and may reject his recommendations; not only is it at liberty to do so, but it is required to reach its own conclusion on the evidence.—Robbins v. United States, 204 F. Supp. 78 (81, Note)*.

See also Somerset Bus Co. case, §205(a), n. 15.

Although examiner's recommended report does not contain the usual discussion and conclusions on which his ultimate findings are based, the record is relatively short, the facts are not in serious dispute, and the positions of the parties are complete and understandable despite such deficiency. While the commission could remand the matter to the examiner for preparation of a technically complete report, such action would only result in unduly delaying the ultimate decision; accordingly, the commission considers the evidence of record de novo.—Mitchell Transport, Inc., Extension, 94 M.C.C. 450 (451-2).

In view of indefinite postponement of effective date of cease-and-desist order issued in complaint proceeding pending final determination of Canadian carrier's application for authority between international boundary and Buffalo and Niagara Falls, N.Y., omission of hearing officer's report in latter proceeding was a sensible and reasonable application of administrative discretion and in no way prejudicial to protestants.—Fess Transport, 91 M.C.C. 924 (926)*.

See also North American Van Lines case, §17(5), n. 15.

206. Exceptions.—[Vols. 15-19].—Though division 1 did not separately discuss each of plaintiffs' exceptions to examiner's report which the division adopted as its own, it correctly found that the exceptions did not raise any new issues of fact or law not adequately considered by the examiner; therefore the commission was not required to discuss the issues further.—Deioma Trucking Co. v. United States, 233 F. Supp. 782 (783)*.

While exceptions filed by 3 respondents did not conform to rule 1.96(a) of Rules of Practice in that they did not refer to portions of the record relied upon for support, but merely stated ultimate conclusions contrary to those arrived at by the examiner, since substance of exceptants' contentions is clear, they will be considered; however, exceptions of one respondent, which clearly constituted new evidence contrary to rule 1.86, will not be considered.—Transport Rental Systems, Inc., Investigation, 94 M.C.C. 402 (405).

Though exceptions of two protestants are not specifically stated or numbered separately, contain no reference to the record, and include no corrected findings as required by rules 1.91(e) and 1.96 of the Rules of Practice, and such failure is not condoned, no purpose would be served by stricking them in view of the issues being reasonably clear. And statements sought to be stricken from joint replies to respondent's exceptions consist merely of conclusions and arguments of counsel drawn from facts of record, which may be presented as such. Respondent's motions to strike denied.—Dixie Ohio Exp., Inc., Investigation and Revocation, 94 M.C.C. 625 (629-30)*.

Requests for the Commission's official notice of matters of public record, and arguments in support thereof, may be presented on exceptions.—Colorado Arizona-California Exp., Inc., 92 M.C.C. 89 (91)*.

Under rule 96(b) of the Rules of Practice, any party may file exceptions to a proposed report even though no previous appearance has been entered. Therefore, protestants' petitions, which request that exceptions filed by the proponent who submitted no evidence in support of proposed reduced rates be returned because they contain new matter, are denied, except that the new matter therein will not be considered.—Machinery and Equipment, Central, South, Midwest, 316 I.C.C. 236 (237).

Although time for filing exceptions was extended at request of applicant's counsel and exceptions were filed on the extension date, counsel failed to notify other parties of the time extension allowed, as required by Rule 1.21(b) of Rules of Practice. While the exceptions have been considered, counsel is cautioned that failure to observe that requirement may result in rejection of future pleadings.—Dennis, 92 M.C.C. 135 (136).

Since assertions in applicant railroad's exceptions concerning its relations with motor carrier which formerly performed auxiliary service for it are not considered because not substantiated by the record, position of that carrier and protestants will not be prejudiced by their continued presence and no good purpose would be served by granting motion to strike.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (26).

Applicants were advised that their "peti-

tion to set aside proposed report and order," submitted within the time allowed for filing exceptions, would be accepted as exceptions if the prescribed number of copies were furnished together with a certificate of service in accordance with the Rules of Practice; however, because of their failure to supply such certificate in time, the pleading was not perfected until after the recommended order denying the application became effective by operation of Law. Thereafter, it was accepted as a petition for reconsideration.—Sparacino, 91 M.C.C. 349 (349-50)*.

Although one protestant failed to reply to applicant's exceptions within time provided by Rule 1.23(a) of Rules of Practice, its late-filed reply does not present any new issues and consideration thereof should in no way prejudice applicant; therefore Rule 1.23(a) is waived and tendered reply accepted for filing as part of record for consideration.—Nationwide Carriers, Inc., Extension, 89 M.C.C. 663 (664)*.

Embraced proceeding handled under modified procedure, in which the parties waived issuance of a recommended report, was submitted subsequent to effective date of the recommended report; as a result, protestants' statements in exceptions relative to the embraced proceeding are not responsive to anything in the recommended report; motion to strike such statements, granted.—Cement and Mortar—Ill. & Mo. to Ill., Ind., Iowa, & Ky., 321 I.C.C. 166 (167).

Pursuant to Rule 1.86 of Rules of Practice, motion to strike certain statements in intervener's exceptions, on ground that matters referred to are not properly of record, is sustained when no special permission respecting such statements was granted.—Assembling Rates at Charlotte and Greensboro, N.C., 318 I.C.C. 429 (430).

Exceptions of one of two applicants for similar authority, which raise issues pertinent only to proceeding on the other application, to which it is not a party, may not be considered. —Dealers Transit, Inc., Extension, 88 M.C.C. 375 (376).

Applicant's failure to except to examiner's recommended denial of a portion of his claimed "grandfather" rights should not be considered a waiver of such rights, which are statutory.—Hollebrand, 88 M.C.C. 685 (687)*.

Since protestant's authority to transport acids does not embrace vinegar, it has no standing to object to examiner's recommended grant of authority to applicant to transport vinegar between points served by protestant. —Eirckson Transport Corp. Extension, 92 M.C.C. 122 (124).

215. Modified procedure.—[Vols. 17-19].—Pursuant to rule 1.50 of the Rules of Practice, facts asserted in any pleading filed under modified procedure must be sworn to by persons having knowledge thereof, which fact must affirmatively appear in the affidavit. Evidence pertaining to one motor carrier's claimed line-haul costs, which was presented through a copy of a telegram to traffic manager of principal proponent of considered rates, failed to meet that requirement of rule 1.50 when it was not sworn to by any officer or employee of the carrier.—Hides and Pelts from Texas to Ill., Mo., and Wis., 316 I.C.C. 243 (244).

See also Davis & Randall, Inc. v. United States, APA, 5 USC *Hearing*.

The rule of administrative discretion to hold a hearing to gather relevant facts in an investigation and, also, to assign a proceeding for further hearing or rehearing at any time while it is still pending, is equally applicable to a proceeding handled under modified procedure.—Schreiber Trucking Co., Inc.—Investigation, 91 M.C.C. 91 (94-5)*.

Examiner's acceptance of complainant's evidence consisting of a Coast and Geodetic Survey report as establishing, prima facie, that Lincolnton, Ga., is beyond defendant carrier's authorized radius of 100 miles from Atlanta did not violate any of defendants' legal rights or privileges; under Rules of Practice governing modified procedure, defendants could have requested oral hearing for cross-examination of persons submitting verified statements and exhibits, and they were given opportunity to submit verified statements and exhibits to refute complainant's evidence; argument that they could have exercised those legal rights but chose not to do so is entitled to no weight.—Hennis Freight Lines, Inc. v. Ohio Southern Exp., Inc., 88 M.C.C. 168 (170-1).

While defendants had no duty or legal obli-

gation to submit evidence in rebuttal to complainant's verified statements, in following that course of action they were aware that, should complainant establish a prima facie case, they would receive an unfavorable examiner's report and his recommended order could contain a provision ordering them to cease and desist from unauthorized operations.—Id., p. 171.

226. Prehearing conferences.—[Vol. 18].—Protestants' request that report of the commission's field staff (prepared from facts and opinions obtained at informal prehearing conference of interested parties) be incorporated in the record, denied. While notice of the prehearing conference stated that no oral hearing was contemplated, the matter was subsequently assigned for formal hearing; and when such procedure is followed, the issues are considered de novo at the hearing and no weight can be given to preliminary administrative handling. Therefore, it is clear that disclosure of the field report and its receipt as evidence would be a grossly improper use of administrative discretion; furthermore, since protestants do not allege that facts were presented at the prehearing conference which were not introduced in evidence at the formal hearing, it is clear that they will not be prejudiced by denial of their request.—Chicago, Ill., Commercial Zone, 88 M.C.C. 329 (331)*.

250. Investigations by commission.—[Vols. 14, 15, 17-19].—See also Burlington Truck Lines v. United States, §212(a), n. 10.

Disclosure of grand jury evidence for use in investigations by administrative agencies, see Grand Jury Proceedings, 309 F. 2d 440.

The commission's power to investigate whether respondent has failed to comply with any of its statutory obligations is expressly conferred by §204(c), and reference to §212(a) in order of investigation is to apprise respondent of the statutory basis for penalties or sanctions that may be invoked if there is found to be a willful violation of commission regulations or willful failure to comply with an order entered as result of such an investigation. Without §212(a), any order entered under §204(c) would be ineffectual to compel compliance; and order instituting instant investigation under a combination of §§204(c) and 212(a) does not provide for any action or penalties not expressly authorized by both.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (948-9)*.

Also, contrary to respondent's contention that instant investigation should be dismissed because procedural requirements of §9(b) of Administrative Procedure Act were not followed, the right to notice and the opportunity to achieve compliance granted by §9(b) is expressly made inapplicable to cases of willfulness. And since order instituting the investigation specifies that respondent's certificates may be suspended or revoked only for willful violations, the necessity of a showing of "willfulness" as a prerequisite to suspension or revocation clearly exempts the investigation from those provisions of APA—Id., p. 949.

As purpose of investigation is to determine whether respondent is conducting operations for which authority is required, the commission's right of inquiry is not confined strictly to the geographical scope of order instituting the investigation. Use of "including" prior to naming of States in that order evinces intent to consider operations in other States besides those specified.—Kapke Investigation of Operations and Practices, 91 M.C.C. 377 (387).

See also Pennsylvania Public Utility Comm. case, n. 52, above.

Inasmuch as investigation to determine whether respondent is unlawfully transporting property not authorized by its certificate is authorized by §§204(c) and 212(a) and its legality is conceded by respondent, contention that the proceeding should be dismissed on ground that the commission, acting in dual capacity as prosecutor and judge, is likely to be biased and that a court action would afford a more impartial adjudication, is deemed to be without merit.—J. B. Acton, Inc. —Investigation and Revocation of Cert., 89 M.C.C. 59 (61)*.

There is no merit to protestant's argument on exceptions that the commission should initiate an investigation on its own motion into the question of removal of the §203(b8) exemption at New York and Philadelphia as a solution of the problems of local competition of regulated with exempt carriers. Protestant's petition in instant proceeding for re-

moval of the exemption at New York was rejected without prejudice to its filing of a petition for reopening of the New York commercial zone investigation, but it has filed no such petition.—Distribution Rates in Eastern Central Terr. Cities, 319 I.C.C. 410 (416-7).

The commission is empowered, upon an adequate record, to promulgate leasing regulations which may materially affect the financial arrangements between authorized carriers and lessors of equipment. If protestants believe that the use of leased equipment has a demoralizing effect on the transportation industry, and that use of owner-operators should be curbed or prohibited, they may petition the commission to institute an appropriate rulemaking proceeding.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (677).

Matters raised concerning spotting of trailers and requirement of observance of a detention rule by other than common carriers are beyond scope of proceeding on proposed rule for determining charges for detention of vehicles by consignors or consignees, as indicated by carrier conference's petition, the public notice, and the order of investigation.—Detention of Motor Vehicles—Middle Atl. & New England, 318 I.C.C. 593 (606)*.

Rail protestants' request for investigation of rates of two other motor carriers identical with that proposed, on ground that otherwise they would be compelled to reduce their potentially competitive rate, denied, since they have failed to show that they are unable to compete for involved traffic at reasonable rates or that complaint proceeding would not be more appropriate.—Sheet Steel, Galvanized—St. Louis to Marshalltown, Iowa, 318 I.C.C. 589 (590).

See also Pennsylvania Truck Lines case, §206(b), n. 25.

Following examiner's findings in report on prehearing conference that both shippers and eastern motor carriers are now opposed to prescription of minimum rates on iron and steel articles, that pendency of instant investigations has had a stabilizing effect on the motor rate structure and acted as a deterrent to rate cutting, that findings in prior reports have provided a standard of minimum rates with which to compare proposed reductions, and that the growth of rail "piggyback" service has substantially changed the competitive situation, investigations of iron-and-steel rates of motor and rail carriers in eastern territory are discontinued.—Iron and Steel Articles—Eastern Common Carriers, 314 I.C.C. 755 (757, 758)*.

See also Johnstown Motor Freight, Inc., case, §207(a), n. 10.

251.——Entry of order.—[Vol. 19].—Though findings and resulting orders in investigation by the commission to determine lawfulness of charges assessed on shipments of household goods during certain periods were declaratory in nature, they followed an adversary proceeding in which the critical question was sharply disputed. The commission sought by its investigation to remove any uncertainty as to applicability of the tariffs under consideration because of inadvertent omission of a footnote; it ruled against respondents in the administrative proceeding and found certain past charges made contrary to that ruling to be in violation of §217(b); it then ordered the proceeding discontinued, which, following denial of rehearing, constituted a final order. —National Van Lines, Inc. v. United States, 326 F. 2d 362 (367)*.

Such a determination, made under statutory safeguards and subject to judicial review generally, cannot be said to have no legal effect. By not making the refunds the commission found should be made, the carriers have already been found to be in continuing violation of §217(b), which could well jeopardize their certificates or permits to do business. Moreover, the commission ruling could serve as prima facie evidence against the carriers in actions by them for refund of payments deducted by the Government on basis thereof, and in suits by shippers for refunds the commission report (incorporated in the final order) would be available to the courts for their guidance. In its present posture the order has not removed any uncertainty, and until it is either changed by the commission or judicially reviewed by a court, the confusion will continue; order of the district court dismissing carriers' class action seeking review of the order, reversed and the cause remanded for a hearing on the merits.—Id., pp. 373-4.

Record of proceedings before the commission amply supports its findings in investigation proceeding that the policy of requiring racial segregation in facilities used for interstate commerce has been practiced on such a regular basis that case-by-case action initiated by individual complainants is not an adequate remedy; and the commission had power to implement §216(d) by issuance of a general order prescribing regulations to prevent race discrimination between passengers in vehicles or terminal facilities when used in interstate commerce.—State of Georgia v. United States, 201 F. Supp. 813 (815)*.

While certain of defendants' past practices violated the commission's regulations governing lease and interchange of vehicles, to extent that they amounted to an unlawful lease of one defendant's operating rights to the other, the record establishes that such improper activities were not performed with any willful intent to violate the regulations, and in any event have ceased. As defendants' subsequent and present arrangements appear to be in conformity with the regulations, no useful purpose would be served by entry of an order requiring them to cease that which has already been terminated.—Whitefield Tank Lines, Inc. v. Springer Transfer Co., 96 M.C.C. 285 (291-2).

Where the end result of investigation proceeding will be the entry of a cease-and-desist order requiring respondent to refrain from any violations of the act found to exist, such action is remedial in nature, since effect of the order is, not to punish or fasten liability on respondents for past conduct, but to ban specific practices for the future in accordance with the general mandate of Congress. A cease-and-desist order of that nature is not a penalty or forefeiture within provisions of 49 USC §47; motion to dismiss investigation, on ground that Bureau of Inquiry and Compliance's calling respondent as a witness and concurrently granting him immunity from any penalty or forfeiture vitiates the proceeding because it contemplates a punitive order, is therefore overruled.—Farmers Feed & Supply Co.—Investigation of Operations, 96 M.C.C. 409 (412, 413)*.

The commission is empowered by §204(c) and the requirement of Federal-State cooperation in the national transportation policy to require a motor carrier to cease and desist from subterfuge operations conducted under color of interstate authority to evade State regulation (citing 348 US 61 and 359 US 171). Defendants' conduct of essentially intrastate operations over physically interstate routes specified in their certificates is an attempt to defeat Pennsylvania laws and is not authorized by their certificates; cease-and-desist order entered enjoining defendants from using their interstate certificates to evade or subvert lawful regulation by the Commonwealth of Pennsylvania,—Pennsylvania Public Utility Comm. v. Hudson Transp. Co., 88 M.C.C. 745 (748-51)*.

The commission may order anyone to cease engaging in unauthorized operations, and may order participants who are, as stated in §2 of Elkins Act, "interested in or affected by" such unlawful operations to cease their participation therein. It is therefore unnecessary to decide which of three respondents controlled the instant operations found to be unlawful and thus was conducting rather than participating in them; all three should be ordered to cease and desist from conducting or participating in those operations. And though the involved operations are no longer being performed, since they are found to be unauthorized it is still deemed necessary to enter such an order.—Great Western Motor Lines, Inc. —Investigation, 96 M.C.C. 522 (525).

Although individual controlling corporate respondent found to be engaged in unlawful for-hire operations is not named a respondent, and no order may be entered against him, the principles set forth in report on investigation are applicable to any activities he may pursue in future, and entry of a cease-and-desist order against the corporation is appropriate. Moreover, as anyone directly connected with the unlawful operations must be considered a participant therein, the order should apply to all additional respondents, including a "drivers' service" said to have disbanded, but as to whose dissolution de jure there is no formal evidence.—American Equipment Rental, Inc.—Investigation, 96 M.C.C. 383 (387).

Since principal respondents' transportation of sugar is found to be unauthorized for-hire

carriage rather than incidental to a bona fide commercial noncarrier enterprise, cease-and-desist order is directed to all interstate sugar transportation performed by them, without regard to whether they transport shipments to their warehouses or to broker-arranged customers, but is not directed to their bona fide warehousing or local distribution of sugar. And since respondent brokerage company has profited in utilizing services of the principal respondents and has had full knowledge that their operations constitute for-hire transportation service, it must be deemed to be interested in such operations within meaning of §2 of Elkins Act; cease-and-desist order entered against it also.—Stewart—Investigation of Operations, 89 M.C.C. 281 (288-9).

Although respondent carrier's recent efforts in establishing and maintaining compliance with the statute and the commission's regulations are commendable, its admitted past violations with respect to rate concessions, improper description of commodities on freight bills, and extention of credit to shippers, require entry of cease and desist order to assure continued future compliance. —Silver Line, Inc., Investigation and Revocation, 96 M.C.C. 173 (176, 177).

In addition to defendant shipper association found to have engaged in unauthorized for-hire motor carrier operations, and equipment-leasing company found to have participated therein, cease-and-desist order should be issued only against those officers, employees, and board members not known, at time of the hearing, to have ended their connection in such capacities with defendant association. While most of the shipper defendants were identified as having been members of the association, the evidence fails to show specifically, or at all, in which of its functions (freight forwarding or motor carriage) they may have participated, and in most instances, whether they tendered any shipment to it.—Natl. Motor Frt. Traf. Assn., Inc. v. Internatl. Shippers, 94 M.C.C. 440 (447-8).

Termination of unlawful common control of two carriers in violaton of §5(4) was in response to a field investigation instituted by the commission under §§5(7), 204(c) and 212(a) rather than the voluntary act of the parties; therefore, in view of the long-continued nature of the violation, the close friendship of individuals controlling the two carriers, and the demonstrated disinterest of acquired carrier's president and owner in its operation, entry of a cease-and-desist order enjoining resumption of the control violation is deemed advisable. Issuance of such order cannot possibly injure any of respondents if in fact they do not continue or resume the unsanctioned control of one carrier in common interest with the other.—Jimmy Stein Motor Frt. Lines, Inc. v. Mecury Frt., 93 M.C.C. 635 (642).

As evidence respecting respondent dairy company's transportation of salt and canned goods is insufficient to permit any conclusion as to its lawfulness, cease-and-desist order is issued only against its sugar operations, which are found to constitute unlawful for-hire carriage; however, it is admonished to carefully examine its present and future operations in light of the commission's discussion, so as to avoid any unlawful transportation.—Clearfield Cheese Co., Inc. —Investigation, 92 M.C.C. 504 (510)*; and since the record was not earlier and more fully developed respecting the past pattern of respondent refiners' and broker's dealings with others engaged in unlawful for-hire carriage in guise of private carriage, order entered enjoins only their participation in the principal respondent's sugar operations; but they , too, are admonished to exercise care in their future dealings to avoid entering into similar transactions involving unlawful for-hire carriage.—Id., p. 510.

Respondent packing company ordered to cease and desist from all transportation of sugar under described buy-and-sell operations from east and south coast sugar refineries to points in destination States served in June 1960, without regard to whether such sugar is transported to a customer or to its Indiana warehouses. Such order is not directed to its transportation of sugar used in its factory or retailed in its supermarket, or to its warehousing of sugar, and should not affect its right to distribute sugar from a warehouse provided such operations are conducted as a primary business, or its right to perform transportation within scope and in furtherance of a valid nontransportation business.Morgan Packing Co., Inc.—Investigation of Operations, 92

M.C.C. 48 (61).

Respondent sugar refiners and their agent brokers have participated in and are interested in the principal respondent's unlawful sugar operations; their dealings with it have contributed to success of those operations and they themselves have benefited therefrom; in addition, they have full knowledge of every significant aspect of such activities and generally know the ultimate destination of every shipment of sugar picked up by that respondent in those operations. It is unnecessary to find that they knew or should have known that the principal respondent's sugar operations were unlawful before they may be ordered to cease and desist from participating with it in its buy-and-sell activities; however, because the record was not earlier and more fully developed respecting the past pattern of respondent refiners' dealings with others engaged in unlawful for-hire carriage in guise of private carriage, order entered conforms with that issued in 82 MCC 237.—Id., p. 61.

While entry of a cease-and-desist order against participating shipper is current practice in cases of unauthorized for-hire service under purported lease arrangements, recommendation to discontinue proceeding as to the shipper is consistent with commission's prior policy, and order against shipper-respondnt which has not filed any pleadings on exceptions would be inappropriate at this time. However, shipper is admonished that any willful evasion of regulation by any person, including a shipper, is a misdemeanor under §222(c).—Zirbel Transport, Inc., Investigation and Revocation, 91 M.C.C. 705 (710).

It is not important whether shipper respondent is using the title respondent's unlawful service westbound, or in engaging with latter in accomplishment of two unlawful for-hire operations, since regradless of shipper's participation the unauthorized transportation in both directions is fully attributable to the title respondent; order to cease and desist from the unlawful transportation westbound is entered against both. However, since order of investigation and prehearing notice indicated that the investigation would concern only the (westbound) transportation of lard, an order to cease and desist from the (eastbound) transportation of wine would be improper. Title respondent is admonished, however, that its continued for-hire transportation of wine will subject it to penalty provisions of the act.—Center America Corp.—Investigation of operations, 88 M.C.C. 740 (744).

Although respondent has taken prompt action to correct past failures to comply with orders and regulations respecting identification of trip-leased equipment, disclosure of shipments on express receipts, and obtaining and keeping on file medical certificates, logs, and vehicle condition reports from drivers of trip-leased equipment, and has taken reasonable steps to prevent their recurrence and avoid other violations, it is still far from being in satisfactroy compliance with hours-of-service requirements. Therefore, to avoid necessity of a new proceeding should any of such violations be continued or resumed, order is entered requiring respondent to cease and desist from all violations discussed, including those terminated prior to hearing, and commanding it to achieve and continue compliance with such orders and regulations, the order to remain in effect for 1 year, during which the proceeding will be held open for consideration of suspension or revocation of respondent's certificate if compliance is not reasonably forthcoming or is not sustained.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (950)*.

And respondent's acceptance of certificate granted in extension proceeding will be deemed to constitute agreement by it that order entered in investigation proceeding shall apply to that certificate and shall subject it also to possible suspension or revocation or to any further order that the commission might subsequently enter in the investigation.—Id., p. 951.

While the for-hire transportation found to be unlawful has been discontinued, entry of a cease-and-desist order is necessary to insure that respondents will not resume such transportation in the future. It is also desirable that respondents and other carriers and shippers contemplating or participating in such operations be apprised of their unlawful character and of the fact that willful evasion of motor carrier regulation is a misdemeanor under §222(c).—Kapke Investigation of Operations and Practices, 91 M.C.C. 377 (380-1); similar-

ly, since unauthorized contract carrier operation could be resumed at any time, without a cease-and-desist order, order is entered against corporate respondent and one individual respondent. However, though the other individual was equally involved in the operations, no order may be entered against him as he was not served with notice of the investigation.—Western Shippers Assn., Inc.—Investigation, 88 M.C.C. 575 (577, 578).

Though the joint board found that respondent's unauthorized transportation of shingles and shakes was performed under an honest misapprehension that they were within exemption of §203(b6), and there is no evidence that he has continued such transportation since being advised of its probable illegality, cease-and-desist order is entered.—Everett—Investigation of Operation, 88 M.C.C. 784 (785, 788).

While mere fact of respondent's discontinuance, prior to hearing, of its unlawful for-hire transportation of certain commodities not within scope of its primary business as a dealer in feed and flour ingredients and wholesale grocery items does not warrant dismissal of investigation as to those operations, whether any purpose would be served by entry of a cease-and-desist order against their performance depends on such factors as respondent's voluntary discontinuance of the questionable operations, its good faith in performing them, its cooperation with Government officials, and sincerity of its professed intention not to engage in those practices in future. In determining that question conclusions of the trial examiner who heard the evidence are entitled to great weight.—Smith Grain Co., Inc., Investigation of Operations, 86 M.C.C. 767 (773).

Although the commission has broad discretion to determine whether or not a cease-and-desist order should be entered, that discretion is subject to a rule of reason which requires more than a mere suspicion, contrary to the evidence and the finding of the trial examiner, that a resumption of discontinued practices may reasonably be expected. No reason appears for disturbing examiner's conclusion that an order respecting those particular operations is unnecessary.—Id., p. 773.

However, although respondent is a private carrier in transporting sugar sold by it directly from its warehouses, where sales are arranged by a broker its primary economic function is to provide transportation of the sugar for the broker or latter's customer; such transportation is unauthorized for-hire carriage and respondent is ordered to cease and desist therefrom.—Id., p. 772, 773.

Respondent dairy company's backhauling of sugar being found to constitute unauthorized for-hire carriage not in furtherance of its primary business, cease-and-desist order is directed against all of its transportation of sugar in interstate commerce, whether to its warehouse or to customers, but not against its warehousing of sugar at Milwaukee or local distribuion therefrom.—Meinerz Creamery Co.—Investigation of Operations, 88 M.C.C. 77 (85).

Cease-and-desist order is also entered against respondent sugar refiners and brokers directing them to abstain from participating in any operation of the character found to be unlawful; their dealings with the dairy company have contributed to the success of its sugar transportation activities, and entry of order will do no more than require them to stop using the service found to be unauthorized; and its is unnecessary to find that they knew or should have known that the dairy company's activities were in violation of the act before they may be ordered to cease and desist from dealing with it, since their own dealings constitute participation in violation of the licensing requirements of the act.—Id., p. 85-6.

Respondent's furnishing of driveaway service for private automobiles from Cleveland to stated destinations, utilizing nonprofessional drivers, being found to constitute unauthorized common carriage for compensation in violation of §206(a)(1), cease-and-desist order entered.—Spencer—Investigation of Operations, 88 M.C.C. 243 (246)*.

Section 204. (d) [*§304(d) U.S.C.*] Application of sections 14 and 16(13) of this title.—[Unchanged. See Vol. 11, p. 9393,]

Amendment, see footnote, p. 9393.

Notes of Decisions

Volume 9-p. 7939; Volume 11—p. 9393; Volume 12—p. 10369; Volume 13—p. 11060; Volume 14—p. 11583; Volume 15—p. 12187; Volume 16—p. 12835; Volume 17—p. 13527; Volume 18—p. 14323; Volume 19—p. 15565.

1. Reports of the commission.—[Vols. 9, 12-15, 17-19].—Part I, §14(1), n. 1. See also APA, 5 USC, Reports, below.

Although the commission is required by statute to make a written report setting out its findings, conclusions and decision, together with its reasons therefor, it is not required to make detailed findings of fact; it is only necessary that the essential basis of its order appear in the report so that the court is satisfied that it has performed its function. Thus, the commission is not required to make specific subsidiary findings with respect to "willfulness" of intervenor-applicant's past unlawful operations when that issue was not of "manifest importance in determining applicant's fitness; record clearly shows that adequate consideration was given to the issue of willfulness; and specific subordinate findings in the report provide adequate and rational support for the commission's decision and order granting the authority sought; sustained.—Armored Carreir Corp. v. United States, 260 F. Supp. 612 (615-7)*.

The commission need not refer in its reports to all the evidence presented in the proceeding; and it is not required to discuss each item presented to it nor to evaluate separately the testimony of each witness.—E. B. Law and Son, Inc. v. United States, 247 F. Supp. 846 (849)*.

If the reviewing court is to rule, with any degree of certainty, that the commission did not act arbitrarily in denying plaintiff's application for authority to operate proposed limousine service, its opinion must be clarified. While neither a detailed anaylsis nor an opinion written with special proficiency is required, the commission must make sufficient explanation to enable the parties and the court to comprehend its action. The opinion under review is so drafted as to require speculation on the court's part to pin down the theory on which plaintiff's application was denied; reversed and remanded for further proceedings not inconsistent with the court's opinion.—Arrow Line, v. United States, 256 F. Supp. 608 (612)*.

See also Dixie Ohio Express, Inc. v. United States, §207(a), n. 24.

In denying part of the authority plaintiff sought, the commission may have been justified in concluding that existing carriers should be protected and that public convenience and necessity required that plaintiff not be authorized to serve points which two existing carriers had authority to serve; however, it made no specific findings directed to a choice between plaintiff and the existing carriers, other than its conclusion that proposed service would be competitive and that there was no clear showing of inadequacy of present service. This is not sufficient, particularly in view of its findings as to need for proposed service. In order to review the commission's action, the court must know the basis for it; portion of the commission order which partially denied plaintiff's application must be set aside and the cause remanded to the commission for action in accordance with the court's opinion.—Vincent Montone Transp., Inc. v. United States, 231 F. Supp. 484 (488-9)*.

10. Production of record by commission.—[Vol. 16).—The commission is not required to furnish internal reports or open up its confidential files to complainant carrier (respondent in consolidated commission proceeding involving an investigation, a reopened "grandfather," and other proceedings) to be used for the stated purposes of determining whether the investigation was undertaken as result of a field investigation or on complaint of another carrier and to ascertain the interpretation placed on carrier's permit by the commission's employees while in the process of handling the "gandfather" application. Decision in Jencks v. United States, 353 US 657, is wholly inapplicable in action to enjoin and set aside the commission's orders; and the Jencks Act, 16 USC §3500, is not helpful

to complainant as it applies only to discovery in a criminal prosecution.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (461-2)*.

Even assuming that it might have been proper procedure to have at least turned over the commission's files to the trier of facts for an *in camera* inspection of the documents so as to determine which ones were not confidential and clearly relevant to the issues before him, carrier made no request for such an inspection.—Id., p. 462.

Section 204. (e), (f). [§ *304 (e), (f) U.S.C.]* Use of motor vehicles not owned by motor carriers.—[Unchanged. See volume 17, p. 13527.]

Notes of Decisions

Volume 18-p. 14324; Volume 19—p. 15566.

2. Construction and interpretation.—Long continued and unvarying practice of the commission and of Congress in treating "perishable property" and "livestock" as separate, distinct, and mutually exclusive terms has imparted to those terms, particularly when used in juxtaposition in same statutory setting, the character of terms of art; thus in the relation between §§204(f) and 203(b6), "perishable property" in former excludes "livestock" in latter and, conversely, "livestock" is not embraced in "perishable property." Context of the act does not call for any interpretation different from meaning imparted to the words in question by their long legislative and administrative construction; and this construction is entirely harmonious to the two sections.—Atchison, T. & S.F. Ry. Co. v. Unites States, 209 F. Supp. 35 (42)*.

In construing §204(f), the commission was bound as a matter of law to follow the meaning which "perishable property" has acquired as a term of art, particularly since its own 70 years of construction had contributed to that meaning; it was not free to depart from its long and unvarying construction. Moreover, the ambiguity which the commission professed to find was not a real ambiguity, since an entirely clear and nonambiguous construction was immediately at hand for precise application. As perishable property does not include livestock, and the commission was not faced with a problem of ambiguity, the commission erred in consulting the legislative history of §204(f); in such circumstances, legislative history may not be consulted to change the plain meaning of words thus established. —Id., pp. 42-3.

10. Leasing and interchange of vehicles.—[Vols. 18, 19].—Defendant motor carrier was not liable for negligence of owner-driver of tractor which carrier leased from him and which collided with an automobile, injuring plaintiffs, when, since owner-lessor was driving his tractor home after completing his work for carrier and while off duty, he was not engaged in his employer's business, nor was he doing anything for the employer's benefit. The commission's leasing regulations do not impose liability on a motor carrier using leased equipment for negligence of the owner-driver thereof greater than the liability imposed when the carrier's equipment is being operated by its employee-driver. Therefore, viewing the evidence in light most favorable to plaintiffs, lower court did not err in granting summary judgment in favor of defendant carrier.—Wilcox v. Transamerican Freight Lines, Inc., 371 F. 2d 403 (404-5)*.

Liability rested on both lessee interstate carrier and lessor intrastate carrier, for purposes of pending tort action arising from truck-automobile collision which occurred while driver of leased tractor and trailer (lessor's employee) was returning that equipment to lessor pursuant to lessee's instruction. At the time of the accident the driver had not abandoned the service of either lessee or his

employer, but was continuing to act for their mutual benefit and was subject to their joint control, even though lessee's decal had not been removed from the equipment, and it did not have a receipt for possession from the owner, as required by the commission's leasing regulations; and the mutually beneficial lease had no provisions respecting exclusive possession, control and use or the assumption of liability. However, failure to include such provisions in the lease would not excuse lessee from liability it might otherwise have; and lessee's liability would not release lessor if, at time of the accident, it held a joint right of control over the driver.—Vance Trucking Co. v. Canal Insurance Co., 249 F. Supp. 33 (35-8, 39).

While lessee had used considered equipment and driver to transport a shipment of tobacco, except for duration of lease of, or compensation for, a vehicle used in hauling "exempt commodities," all of the commission's leasing regulations are applicable without regard to the commodity hauled. Therefore, since obviously the statute and regulations issued thereunder are not designed to excuse a party from liability which he might otherwise have, a finding that lessee is responsible under the act and regulations does not preclude a finding that lessor was also responsible. Lessor and lessee, and their insurers, must defend the tort action which precipitated controversy as to agency of driver of the leased equipment at the time of the accident.—Id., p. 39.

Although a written form of trip lease was used for convenience to outwardly satisfy requirements of the commission, agreement between an intrastate and an interstate carrier under which they combined their resources, former's equipment and regular driver and latter's interstate authority, vehicle identification markers, and services on bill of lading, bookwork, etc., was not a lease in the true sense of the word. At most, there was only an arrangement between them whereby they could jointly deliver gasoline from North Carolina to Virginia for compensation; public liability provisions in the lease disregarded.—Carriers Insurance Exchange v. Truck Insurance Exchange, 203 F. Supp. 764 (765-6, 768)*.

It is immaterial whether the explosion which occurred during delivery of the gasoline was due to defect in portable pump used for unloading or to negligence of the driver; a question of public policy is involved. Lessor and lessee deliberately engaged in a dangerous enterprise in violation of the statute and the commission's leasing and safety regulations promulgated thereunder, and, consequently, neither should be relieved of complete liability for the results thereof when closeness of the wrongful conduct to the final unfortunate result is so manifest. The public policy inherent in the protection of the public is predominant. Affirmed.—Id., 310 F. 2d 653 (656-8)*.

Defendant is an "authorized carrier" as that term is used in the commission's leasing regulations, and as such is prohibited by §207.6(a) thereof from leasing equipment with drivers to private carriers or shippers. As that prohibition allows for exceptions only with respect to §203(b7) and (b8) of the act, no other exceptions apply, so that, even assuming exempt status under §203(b5) of cooperative to which defendant purportedly trip-leased vehicles with drivers, or assuming exempt status of the commodity transported (which defendant is not authorized to handle), the attempted leasing of equipment to the cooperative would continue to be legally prohibited by the leasing regulations. Moreover, the purported leases explicitly imposed all characteristic burdens of the transportation business on the purported lessor (defendant), and the operations were in fact conducted under its control (citing 368 US 370); such arrangements were therefore totally illegal by their very provisions and amounted to nothing more than specific contracts of transportation.—United States v. Lowther Trucking Co., 229 F. Supp. 812 (815-6).

The commission erred in holding that " perishable property" as used in §204(f) is ambiguous, erred in resorting to legislative history for construction of those words, and erred in holding that those words include in their meaning "ordinary livestock" in §203 (b6); therefore holding that private carrier's "trip-leasing" of equipment with drivers, after transportation of its own fresh meat and packinghouse products, to regulated carriers for

return hauls was within provisions of §204(f)(1), and the commission's leasing regulations issued pursuant thereto, must be set aside. Enforcement of the commission's order permanently enjoined, and the matter remanded to the commission.—Atchison, T. & S. F. Ry. Co. v. United States, 209 F. Supp. 35 (39, 42-3, 45)*.

Prior to amendment of September 15, 1961, exemption granted under certain conditions by §207.3 of the commission's leasing and interchange regulations from the requirements of those regulations, including §207.5 which expressly governs interchange of equipment by connecting carriers, was held valid by the Supreme Court (344 US 298); and that amendment did not change its validity. The "Red Book Plan," under which participating heavy haulers interchange loaded vehicles with drivers, is not shown to violate the act or the commission regulations, and plaintiff has not shown that members of that plan are unable or unwilling to meet the requirements of §207.3 of the regulations.—Robbins v. United States, 204 F. Supp. 78 (82, 83)*.

In order for equipment-leasing arrangements to be lawful, the carrier under whose rights the leased equipment is operated must assume full responsibility for the direction, conduct, and operation of such equipment while in its possession; unless that is done, the operation is that of the carrier owning the vehicle, and any movement over routes of the putative lessee would be unlawful. Although protestants question the validity of applicant's equipment-leasing arrangements, record does not provide sufficient facts for making such a determination; however, applicant is cautioned to ensure that its leasing arrangements are in compliance with those principles and with the commission's regulations.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (474-5, 479-80).

See also Barsh Truck Lines case, §207(a), n. 25 *Fitness*.

Under present equipment-lease contract, applicant-lessee has full direction and control of the vehicles, drivers, insurance, and the disbursement of operating expenses—albeit the latter will be reimbursed to it by the lessor. It is also noted that the lessor of equipment to applicant is 50 percent owned by applicant's two primary stockholders; thus, the favorable credit arrangement in the lease contract, including provisions (1) that lessor be obliged, at applicant's option, to provide an advancement sum for the reimbursement of operating expenses due applicant, and (2) the temporary withholding of payment of the rental fee by carrier in certain circumstances, seems nothing more than a liberal extension of credit by the leasing company to carrier. Applicant's operations under the lease conform to the requirements of the act and the commission's rules and regulations thereunder.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 361 (362-3).

Vendor's transportation of bulk cement, performed in tank vehicles of an intrastate carrier under a lease of equipment with drivers, is not shown to have violated the commission's lease-and-interchange rules or to have constituted an unauthorized operation by lessor. Evidence is inadequate to establish that the intrastate lessor, rather than vendor, had actual dominion, control, and responsibility to the shipping public for the operations performed in its vehicles; on the contrary, vendor held out to the public to perform the service, and when a shipper had traffic to be moved it contacted vendor rather than the intrastate carrier.—Steel Transp. Co., Inc.—Purchase—Barry Transports, 93 M.C.C. 773 (776).

Vendee's lease of equipment to vendor under their joint-line operation appears to have been conducted in full compliance with the commission's lease-and-interchange regulations when protestants raised no objection to, and did not attempt to discredit, testimony of vendee's president that the equipment leased was completely under vendor's control and responsibility and that it complied with requirements as to drivers' logs and inspection of vehicles.—Cassens Transport Co.—Purchase—Speedway Transports, Inc., 90 M.C.C. 159 (165).

As stated in the prior report, the requirement of a written lease signed by the parties or their authorized agents or employees, a copy thereof to be carried in the leased equipment while it is in lessee's possession, is necessary to assure the objectives of §207.3(a) of the leasing regulations, including the fixing of

legal responsibility and control in the operation of vehicles leased by authorized carriers thereunder so as to assure effective implementation of the motor carrier safety regulations. Furthermore, there is no more easily ascertainable or appropriate time for the lessee's assumption of responsibility and control of the equipment than at the conclusion of the required inspection by lessee before its use.—Lease and Interchange of Vehicles by Motor Carriers, 89 M.C.C. 683 (684)*.

However, on reconsideration, it is not deemed necessary, or most reasonably calculated to further certainty, to designate the completion of a like inspection by lessor as the time when lessee's responsibility and control is terminated and lessor's reestablished. An inspection of leased equipment after use is not now required by the rules, and may not be immediately feasible or practicable in all circumstances. In any event, such an inspection requirement should more properly be the subject of a separate proceeding. Return of equipmnet to the owner or constructive owner should be made as easy as possibie consistent with the public's interest in certainty respecting control and responsibility; therefore, §207.4(a)(3) is modified so as to provide that lessee's responsibility shall terminate when lessor or its representative gives lessee or its representative a receipt specifically identifying the equipment and stating date and time of day possession thereof is retaken.—Id., pp. 684-5.

One contract carrier's trip-leasing of vehicles to another for delivery of shipments to points first carrier is not authorized to serve violates §207(a)(3) of the commission's leasing regulations, which provides that minimum duration of an equipment lease shall be 30 days. Nor does such operation involve an interchange of equipment permissible under §207.5 of the regulations, since that section does not apply to contract carriers.—Connell Transport Co., Inc., 95 M.C.C. 312 (314-5).

See also Kendall Co. case, §206(a)(1), n. 50.

Respondent's lease of all vehicles of another carrier for a 13-month period was obviously on an "as needed" basis when lessor continued to perform its own operations with the same equipment. Upon respondent's transmission of pickup orders to lessor, latter's vehicles and drivers were dispatched to pick up the loads from respondent's contracting shipper, and after delivery lessor forwarded the transportation papers to respondent. Lessor kept the drivers' logs and medical certificates in its files and did not transmit them to respondent; no receipts evidencing assumption and relinquishment of possession of the vehicles were issued by either party, and only occasionally were respondent's placards displayed thereon when used in its service. Clearly, respondent did not have exclusive possession, control, and use of the vehicles and did not assume complete responsibility for them, and they remained at all times under lessor's dominion. These practices violated §207.4(a), (b), and (c) of the leasing regulations.—C & R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (679, 680).

The parties further failed to comply with requirements of §207.4(a) when respondent had no copies or records of the leasing agreement, and there is no showing that copies thereof were properly distributed to the parties involved, or that either a copy of the lease or the substitute certificate permitted by §207.4(d) was carried on the equipment used. Also, in leasing equipment to its contracting shipper, without first having obtained the commission's approval, respondent violated §207.6(b) of the regulations. Cease-and-desist order entered, and respondent admonished that future violations of the nature disclosed will invite drastic penalties.—Id., pp. 680, 681.

The regulations for lease and interchange of vehicles in no way affect the basic proposition that a motor carrier receiving traffic from another through interchange of vehicles with drivers must have and exercise control over operation of such equipment while in its possession. A mere paper agreement purporting to vest control in a connecting carrier is not enough; the carrier under whose rights the interchanged equipment is operated must in fact control the service to same extent as if it were the owner of the vehicle, and must control the vehicle to extent necessary to assume full responsibility to the shipper, the public, and the commission.—Dealers Transit, Inc.—Control and Merger, 93 M.C.C. 611 (619).

Under a separate agreement, survivor in

proposed merger leases its equipment with drivers to liquidating carrier from origin to destination, performing both pickup and delivery and billing and collecting of charges, paying liquidating carrier a percentage of revenues based on miles traveled under its rights. As the only witness presented to stand cross-examination on liquidating carrier's operations had little knowledge of its day-to-day operations and no knowledge of location of inspection station established at the carriers' common gateway or of identity of person relied on to inspect and placard the equipment, there is ample reason to doubt that liquidating carrier exercised any control over survivor's equipment and drivers while operating in former's territory; and cross-examination of applicants' witnesses was piercing enough to rebut any presumption that the purported interline operations were lawful.—Id., pp. 618-9, 620.

Purported interchange of vehicles between merger applicants violated the leasing rules, which require an independent inspection and transfer of control and responsibility to lessee, when the interchange movements were performed wholly with survivor's equipment and drivers, the same agent performed inspections for both carriers and signed the interchange agreement on behalf of both, or inspections for liquidating carrier were performed by employees of survivor; also, rental for former's use of latter's vehicles was not kept separate from revenue divisions between them, as required by the leasing rules. Such interchange was a mere fiction and the movements were controlled throughout by survivor, giving rise in effect to survivor's unlawful leasing of liquidating carrier's operating rights.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (424-5)*.

Record also establishes that merger survivor and another carrier, of which it had unlawfully acquired control, similarly violated the leasing rules over a period of years; however, those violations have terminated and the related investigation proceeding is discontinued as to the second carrier. The two carriers are reminded, however, that, if joint operations are resumed, the investigation will be reinstituted should they fail to comply fully with the leasing rules and maintain operations separately and independently of each other.—Id., pp. 425-6.

When vendee made arrangements for interline of traffic with vendor, handled all paperwork concerning actual movements, and provided all equipment, with drivers paid by it, paying vendor $25 for each load moving under his rights, and there is no showing that vendor participated in arrangements for, or paid for, vehicle inspections, nor is it affirmatively shown that he even knew a vehicle was moving under his rights until the movement was completed, or performed any service in connection therewith, or treated drivers as his own employees, the evidence falls far short of showing compliance with the commission's lease and interchange rules, but shows instead that vendor's claimed bulk operations were commenced and continued under vendee's direction and control.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (427-8).

Following execution of purchase agreement, transferor's operations were almost entirely conducted by trip leases of transferee's equipment under arrangement whereby transferee retained 94 percent of revenues realized, paid all expenses of the physical operation, and employed and exercised sole control over the drivers. While the parties maintained paper compliance with the lease-and-interchange regulations, the vehicle arrangement was in fact used as a means of unlawfully leasing transferor's operating rights to transferee, and it would be improper in the circumstances to find a bona fide agency relation between transferor and transferee, who conducted the actual operations. Should the parties desire to continue such operations under a bona fide vehicle leasing arrangement, transferor must establish and maintain a degree of direction and control compatible with his status as a certificate holder, i.e., he must operate as a carrier.—Burns Motor Freight, Marlington, W. Va., Transferee, 93 M.C.C. 629 (633-4).

Even though a purported lease of equipment may comply in all respects with the commission's leasing regulations, it does not follow that activities carried on under such arrangements may not violate other provisions of the act, particularly §§5(4) and 206(a).

Arrangement whereby a bulk hauler leased tank trucks to a general-commodity carrier, not for purpose of augmenting latter's fleet to handle additional traffic generated by it, as contemplated by the leasing regulations, but primarily to enable the bulk hauler to solicit traffic for its vehicles which would otherwise move empty, is found to have resulted in an unlawful lease of a portion of the general-commodity rights and in unauthorized for-hire transportation by the bulk hauler, in violation of both those sections.—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (384-5)*.

While under §207.3 of the leasing regulations an equipment lease need not be reduced to writing, the parties are still subject to §207.4(c) and (d) which require, in addition to an identifying placard, that unless a copy of the lease arrangement is carried on the vehicle a statement by the authorized carrier certifying that the equipment is being operated by it shall be carried thereon during the period of the lease. Administrative Ruling No. 104 interprets those provisions as allowing a carrier to choose whether it will make a written contract and carry it on the vehicle, or prepare and carry a certificate; it must do one or the other. Since it is not shown whether the certification requirement was met by parties to considered lease, they are admonished to give due consideration thereto in any lawful lease arrangement they may negotiate in future.—Id., pp. 385-6.

Under terms of leasing arrangement under which secondary movement of automobiles from St. Louis to Tulsa, Okla., under rights of respondent Haulers, is performed with equipment owned by respondent Speedway, which performs the initial movement to St. Louis, or with equipment previously leased to Speedway by Haulers, the vehicles leased from Haulers pass into Speedway's possession and under its full control and responsibility; such arrangement appears to be in no way illegal or contrary to the commission's leasing rules, and under rules 207.2 and 207.4(a)(4)(i) Speedway may be considered the owner of the equipment leased or subleased to Haulers.—Stewart—Investigation of Operations, 87 M.C.C. 681 (689).

However, technical compliance with the leasing and interchange regulations does not necessarily a lawful operation. A mere paper agreement that control is vested in the connecting carrier is not enough: a carrier under whose rights the interchanged equipment is operated must control the service to the same degree as if it were the owner of the vehicles, and must control the vehicles to the extent necessary to assume full responsibility to the shipper, the public, and the commission for transportation performed therewith. It is apparent that Haulers, which leases all its equipment from Speedway, does not exercise full and effective control over the transportation performed under color of its operating rights; moreover, it not only pays nothing for the privilege of trip-leasing equipment from Speedway, but receives a percentage of the revenue for permitting latter as ostensible trip-lessor to operate over its routes. Therefore, no lease of equipment exists, and the purported interchange arrangement is essentially an unlawful lease of Haulers operating rights.—Id., pp. 695-6.

Regulations of the Commission

27 FR 6546, July 11, 1962, Part 207: Lease and Interchange of Vehicles by Motor Carriers, §207.3 Exemptions—(a) Equipment used in the direction of a point which lessor is authorized to serve, modified, effective Aug. 13, 1962.

28 FR 264, Jan. 10, 1963, Part 207: Lease and Interchange of Vehicles, §207.4(a)(3) amended by addition thereto of subdivision (iii) Ice and snow control purposes, effective on date of service.

28 FR 827, Jan. 29, 1963, Part 207: Lease and Interchange of Vehicles, §207.10 revoked, effective March 5, 1963.

NOTE: For Republication and Redesignation of Regulations, see 32 FR 20003, Dec. 20, 1967.

33 FR 2847, Feb. 10, 1968, Part 1057 [former Part 307, formerly Part 207]: Lease and Interchange of Vehicles, §1057.4 (a)(3)(i) and (a)(3)(ii), §1057.4(c) and (d), and §1057.5(d) and (f) amended, effective Feb. 12, 1968.

Section 204a. *[§ 304a U.S.C.]* **Actions for recovery of charges; limitation of actions; definition; effective date.**—[Unchanged, except by the act of Sept. 6, 1965, Pub. L. 89-170, §6, 79 Stat. 648, which amended paragraph (2) to read as set forth below; and which renumbered paragraphs (5), (6), and (7) as par-

agraphs (6), (7), and (8), respectively, and added new paragraph (5), below. See vol. 18, p. 14372.]

(2) For recovery of reparations, action at law shall be begun against common carriers by motor vehicle subject to this part within two years from the time the cause of action accrues, and not after, and for recovery of overcharges, action at law shall be begun against common carriers by motor vehicle subject to this part within three years from the time the cause of action accrues, and not after, subject to paragraph (3) of this section, except that if claim for the overcharge has been presented in writing to the carrier within the three-year period of limitation said period shall be extended to include six months from the time notice in writing is given by the carrier to the claimant of disallowance of the claim, or any part or parts thereof, specified in the notice.

* * * * *

(5) The term "reparations" as used in this section means damages resulting from charges for transportation services to the extent that the Commission, upon complaint made as provided in section 216(e) of this part, finds them to have been unjust and unreasonable, or unjustly discriminatory or unduly preferential or unduly prejudicial.

* * * * *

Historical Notes

The commission recommends that §§204a and 406a be amended to make motor common carriers and freight forwarders, respectively, liable for payment of damages in reparation awards to persons injured by them through violations of the act.—Annual Report, 1962, p. 203; renewed, Annual Report, 1963, p. 19, Annual Report, 1964, p. 70.

30 FR 16050, Dec. 23, 1965: In view of enactment of Public Law 89-170, Sept. 6, 1965, the commission has approved a method by which motor carriers may be authorized informally to pay reparations to shippers in uncontested cases where the carrier is agreeable to making adjustments.

Historical Notes, see vol. 16, p. 12835; vol. 17, p. 13528; vol. 19, p. 15569.

Notes of Decisions

Volume 15—p. 12188; Volume 16—p. 12835; Volume 17—p. 13528; Volume 18—p. 14328; Volume 19—p. 15569.

10. Claims of and against Federal Government.—[Vol. 19].—Carrier's suit in Court of Claims for undercharges on that part of its transportation of Government shipments which occurred wholly within Germany is barred by statutory 3-year period of limitations when, by becoming a party to a §22 quotation containing rates on household goods between points in the United States and points in Germany, it had subjected itself to that time limitation provision. Shipments moved on Government bills of lading which referred to that §22 quotation and covered complete movement from origin to destination, plaintiff's bills were paid (pursuant to §66) on basis of the §22 rates for each of three legs of the trips, and its claims for undercharges on that part of services furnished abroad were submitted more than 3 years after payment. Adoption of plaintiff's view that, since transportation for which recovery is sought occurred in Germany, its suit is gov-

erned by 6-year limitation period in 28 USC §2501, would require splitting its single cause of action and the application of two statutes of limitation to a single contract of carriage. Plaintiff's petition dismissed.—Von Der Ahe Van Lines, Inc. v. United States, 358 F. 2d 999 (1000-2).

The 1958 amendment of §204a, limiting the Government's right of affirmative action to recover overcharges to 3 years, applies only to transportation performed and payments made after August 26, 1958, and does not affect claims for overcharges collected prior to that date.—Strickland Transp. Co. v. United States, 334 F. 2d 172 (179, Note 15)

Government's action for recovery of stipulated overcharges against ultimate distributees of assets of motor carrier which had transported the shipments (but subsequent thereto had ceased to do business) was not barred by two-year limitation of §204a because, as contended by the distributees, the bill of lading specifically subjected the Government to same rules and conditions as govern commercial shipments; those provisions clearly relate to actions to recover for damage to, or based on nondelivery of, shipments.—Stewart v. United States, 327 F. 2d 201 (205).

In action to recover amount claimed, on post audit, as overpayment on Government shipments, the Court of Claims has neither the authority to determine reasonableness of motor carrier's past charges, nor the authority to refer issue of reasonableness to the commission [citing 359 US 464]; thus, defendant is not entitled to deductions in issue on the ground that rates charged were unreasonable, or that, because the were unreasonable, they thereby became inapplicable.—Campbell "66" Express, Inc. v. United States, 302 F. 2d 270 (271-2).

20. Complaint seeking reparation.—[Vols. 15-19; was §204 (c), n. 20, vols. 11-14]. A justiciable question is presented by allegation that carrier violated its common-law duty in transporting an unrouted shipment over its interstate route at a higher rate than that applicable over its intrastate route between same points; since the issue is misrouting, not reasonableness of the rate as such, suit to recover damages in amount of difference between the two rates is not foreclosed by §216 (j), and principle of the T.I.M.E. case (359 US 464) is not controlling. Unlike ratemaking, there is no statutory procedure by which routing practices may be challenged in advance of shipment, nor is the shipper by truck given a statutory right to request a particular route of the carrier; in view of these weighty statutory differences, survival of a damage claim for misrouting is entirely consistent with the act. Absence of any judicial remedy would place shipper wholly at carrier's mercy, contrary to the overriding purpose of the act, whereas allowance of such actions gives neither an unfair advantage.—Hewitt-Robins, Inc. v. Eastern Freight-Ways, Inc., 371 U.S. 84 (86-7, 88)*.

Although the commission has primary jurisdiction over routing practices, it does not follow that the courts are without power to award damages in every instance where the commission may not award reparation. Survival of a judicial remedy under the saving clause of §216(j) does not depend on whether the commission has primary jurisdiction to decide the basic question on which relief depends; survival depends on effect of exercise of the remedy upon the statutory scheme of regulation; according to §216(j), if the remedy is inconsistent with that scheme it does not survive.—Id., pp. 88-9.

Allowance of such a damage action, unlike one involving reasonableness of rates, nowise hampers efficient administration of the act; a misrouting claim does not jeopardize stability of tariffs or certificated routes, the sole issue being whether carrier routed the shipment over the cheapest available route, or made a showing of adequate justification for not doing so. Moreover, allowance of misrouting actions should have a healthy deterrent effect on utilization of misrouting practices by motor carriers,which in turn would minimize cease-and-desist proceedings before the commission.—Id., pp. 88.

Appellant's newly devised "contract" theory is merely a novel presentation of its claim for damages on past motor carrier shipments which is barred by decision in 359 US 464; and its alternative claim, that §216(j) grants it a common law remedy for appellees' "breach of contract," ignores the teachings

of the Supreme Court in that case.—Lynchburg Traffic Bureau v. Smith's Transfer Corp. of Staunton, Va., 339 F. 2d 478 (481)*.

See also McFaddin Express, Inc. v. Adley Corporation, 363 F. 2d 546, 28 USC §1331, n. 4.

Congress did not in express terms in 1965 amendment of §204a provide more than a judicial avenue to reparations; thus, the commission's decision to anticipate voluntary settlements before resort to the courts (by establishing informal procedure for settling uncontested reparations claims against carriers), and to make a rate determination for the convenience and protection of agreeing parties, was not a necessary consequence of the statutory change. Whether the commission should have so decided and, if so, what the precise form and scope of the procedure should be were questions for exploration in formal rulemaking. Accordingly, since the commission did not comply with rule-making requirements of §4 of the APA, orders under review are invalid.—National Motor Freight Traffic Ass'n v. United States, 268 F. Supp. 90 (93, 95-7)*.

Although question of reasonableness of motor carrier rates charged for transportation of government property during latter part of World War II was referred to the commission for determination prior to the decision in 359 US 464, under that decision neither the court nor the commission has authority to pass on allegations of unreasonableness of motor carrier charges for past shipments whether or not tariffs providing rates therefor are lawfully on file.—United States v. Garner, 236 F. Supp. 632 (635).

Although under Parts I and III the commission may determine the reasonable rate on a past shipment in absence of an applicable rate, under the Supreme Court's ruling in 359 US 464 it has no jurisdiction, even in such circumstances, to determine the justness and reasonableness of motor carrier rates charged on past shipments.—Newell v. Lux Art Vans Service, Inc., 318 I.C.C. 492 (494); however, the Supreme Court's decision has no application to overcharges and undercharges, and the commission has long held that it may make an administrative determination of rates applicable on past motor shipments even though it lacks authority to award reparation; therefore, where the only issue is applicability of the assailed rates, the commission has jurisdiction to determine that issue even though a suit for overcharges has been instituted in court and the court has not requested an advisory opinion.—Id., pp. 494, 495.

The commission has no authority under Part II to consider allegations of unreasonableness, unjust discrimination, or undue prejudice in motor-carrier rates on past shipments, or to award reparation.—Koss v. A.A. Lexington Moving & Storage Co., 315 I.C.C. 355.

The commision has no authority to pass on alleged unreasonableness of motor carrier charges on past shipments, whether or not tariffs providing rates therefor are lawfully on file. Decision in 359 US 464, that such an attack is foreclosed by §216(j) because inconsistent with the statutory scheme of regulation, emphasized the built-in protections against unreasonable rates that the act gives shippers prior to movement, and decision in 371 US 84 that there is no such protection against carriers' unreasonable routing practices does not apply to rates charged on shipments transported without proper authority. Section 206 prohibits carriers' engaging in unauthorized interstate transportation, and considered tariffs contained a restrictive provision concerning participating carriers' operating authority; requirements of §217 for publication and filling of tariffs, enforceable through provisions of §§204 (c), 212, and 222, amply protect shipper prior to movement under the circumstances. Complaint dismissed.—United States v. Garner, 319 I.C.C. 383 (388)*.

95. Limitation provisions, generally.—[Vols. 18, 19].— Two-year limitation of §204a on suits against motor carriers, at time stipulated overcharges were made on Government shipments, is not applicable in Government's action for recovery of those overcharges against ultimate distributees of assets of the motor carrier which, subsequent to period in which the claims arose, had ceased to do business. Statute of limitations does not apply to the United States in absence of a clear and manifest intent that it shall apply. Congress, in amending §204a and 49 USC §66 in 1958,

specifically made the limitation provision applicable to the United States under both sections; this indicates that Congress did not intend the United States to be bound by the two-year limitation of the statute prior to that amendment. [Citing 271 F. 2d 597 and 184 F. Supp. 42.]—Stewart v. United States, 327 F. 2d 201 (204).

While some shipments are barred as result of complainant's failure to file timely suit to recover claimed overcharges, others may not yet be barred by expiration of the 3-year limitation period, and the commission has discretion under §5(d) of Administrative Procedure Act to consider the issues presented as to such shipment.—Bemis Bro. Bag Co. v. Felten Truck Line, Inc., 316 I.C.C. 417 (418).

98. Complaints within 6 months after declination.—[Vol. 17].—Although §204a extends the statute of limitations to permit filing of an action at law to recover overcharges within 6 months after disallowance of the overcharge claim by carrier, since the 6-month extension period has expired and no suit for alleged overcharges has been commenced, the 3-year statute of limitations governs; pendency of a proceeding before the commission does not toll the statute for instituting actions at law. Furthermore, as to any shipments barred by statute, as a result of failure to file suit within the limitation period, the defense of the statute may not be waived; therefore, while defendant indicates willingness to refund any overcahrges found to be due, voluntary payment of any such claims would violate the prohibitions against unjust discrimination in the act.—Bemis Bros. Bag Co. v. Felten Truck Line, Inc., 316 I.C.C. 417 (418).

Section 205. [*§305 U.S.C.*] Administration. (a) Joint board; composition; references of matter to boards.—[Unchanged. See vol. 11, p. 9395.]

Amendments, see footnotes, vol. 9, p. 7941, 7942, vol. 11, p. 9395, Historical Note, vol. 17, p. 13530.

Notes of Decisions

Volume 9—p. 7942; Volume 11—p. 9396; Volume 12—p. 10371; Volume 13—p. 11062; Volume 16—p. 12836; Volume 17—p. 13530; Volume 18—p. 14332; Volume 19—p. 15571

2. Construction and interpretation.—[Vol. 19].—Application for authority to transport express in pup semitrailers in conjunction with passenger-carrying vehicles between Memphis and Jackson, Tenn., was properly assigned to joint board which includes a member from Arkansas, since West Memphis, Ark., is within the Memphis commercial zone. While applicant is limited in handling express as a passenger carrier to corporate limits of the communities served, and in proposed separate but related service might not intend to perform pickup and delivery outside the Memphis corporate limits, it has actually applied for authority to transport freight, which authority, if granted, would include the privilege of providing pickup and delivery services in the commercial zones of the municipalities involved.—Continental Southern Lines Extension, 88 M.C.C. 547 (549).

15. Jurisdiction of joint board.—[Vols. 11-13, 16-19; §205(b), v. 9].—When defendant's motion to dismiss complaint or strike certain portions thereof was overruled by the commission before the matter was assigned to a joint board for hearing, the board has no authority to reconsider that motion.—Armored Carrier Corp. v. B.D.C. Corp., 92 M.C.C. 665 (666).

The joint board to which broker application was referred exceeded its authority when it not only recommended that such application be denied, but went further and changed the nature of the entire proceeding in recommending that motor carrier authority be granted to a different applicant controlled by original applicant, inasmuch as no motor carrier application had been referred to it for hearing; latter recommendation must therefore be considered a nullity. Furthermore, though the broker application was correctly referred to a single-State joint board because the brokerage operation would have been conducted in a single State, the motor carrier operation recommended involves several States; and an

application for such motor operations must be referred to an examiner or, in the commission's discretion, to a joint board composed of members from the States in which the motor operations are to be conducted.—Anderson, 89 M.C.C. 786 (787-8).

Though applicant recommended by joint board to receive authority sought by three bus companies urges that the board's recommendation should be followed because it is intimately familiar with local conditions, and the commission gives careful consideration to conclusions and recommendations of joint boards in such local situations, it is clear beyond doubt that Congress, in providing for hearing by joint boards in matters involving three States or less, did not intend the commission to relinquish or subordinate its decision-making power and responsibility.—Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (115)*.

Joint board had jurisdiction to entertain complaint alleging unlawful charter operations although questioned operations involve more than 3 States; and defendant was not denied a valuable property right because the hearing did not have a duly appointed hearing officer. The commission has statutory discretion, when operations in issue involve more than 3 States, to refer proceedings involving suspension, change, or revocation of certificates, and also complaints of violations of requirements established under §204(a), to a joint board for appropriate action and hearing; however, such proceedings must be referred to a joint board when the operations involve no more than 3 States. Further in absence of direct evidence of fraud or deception, the commission is not obliged to go beyond the face of the complaint in determining whether reference to a joint board is mandatory, i.e., scope of the pleadings determines, even though evidence adduced after commencement of hearing reveals operations involving more than 3 States.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (902-3).

Consideration of a practice of protestant which allegedly prevented some patrons from using existing common carrier service was relevant to determination of whether existing service is adequate and was not beyond scope of matters pertinent to issues before the joint board in application proceeding.—Kirk, 89 M.C.C. 587 (588).

30. Rules for conduct of hearings.—[Vols. 9, 11-13, 16, 18, 19].Joint board's ruling that shipper witnesses must corroborate their testimony as to adverse experience in use of existing carriers from shipping documents required a degree of specificity and corroboration not usually exacted from such witnesses by the commission, but that ruling promoted orderly development of an extremely lengthy record and, also, a more concise and useful record. Applicant had ample opportunity to advise its witnesses to bring such documents, and it presented witnesses who amply supported their testimony with shipping documents. Also, it is within proper discretion of the board to determine whether to receive witnesses' opinion as to "need" for proposed service; while it is common practice for witnesses to be asked, and to give, their opinion as to need for the service, such testimony adds little or nothing to the record, and in a strict sense such a question involves a matter of law. Nor was applicant prejudiced by the board's ruling curbing the time alloted it for completion of its case-in-chief; that board's action was within the mandate of rule 1.76 of the Rules of Practice.—Braswell Freight Lines, Inc., Extension, 95 M.C.C. 457 (459-60)*.

Section 205. (f) [*§ 305 (f) U. S. C.*] Joint hearings with State authorities; offices for boards and State Commissions.—The commission is authorized to confer with or to hold joint hearings with any authorities of any State in connection with any matter arising in any proceedings under this part. The commission is also authorized to avail itself of the cooperation, services, records, and facilities of such State authorities as may be practicable, in the enforcement or administration of any provision of this part. [1]In addition, the commission is authorized to make cooperative agreements with the various States to enforce the economic and safety laws and regulations of the various States and the United States concerning highway transportation. From any space in the Interstate Commerce Commission Building not required by the commission, the Government authority controlling the allocation of space in public buildings shall assign for the use of the national organization of the State commissions and of their representatives suitable office space and facilities which shall be at all times available for the use of joint boards created under this part and for members and representatives of such boards cooperating with the commission or with any other Federal commission or department under this or any other act; and if there be no such suitable space in the Interstate Commerce Commission Building, the same shall be assigned in some other building in convenient proximity thereto. (Aug. 9,

[1]New sentence added at this point by act of Sept. 6, 1965.

1935, c. 498, 49 Stat. 548; Sept. 18, 1940, c. 722, §20, 54 Stat. 922; Sept. 6, 1965, Pub. L. 89-170, §1, 79 Stat. 648.)

Historical Note

The commission urges early enactment of legislation which could promote increased cooperation between State and Federal authorities in highway enforcement activities.—Annual Report, 1964, p. 74.

Regulations of the Commission

31 FR 16402, Dec. 23, 1966, Part 177a: New Part 177a Cooperative Agreements with States, §§177a.1 through 177a.7 added as set forth, effective upon publication in Federal Register.

32 FR 385, Jan. 13, 1967, Part 177a: Cooperative Agreements with States, to correct clerical errors in order published at 31 FR 16402, corrected Part 177a, §§177a.1 through 177a.8 is republished effective upon publication in Federal Register.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 13282, Sept. 20, 1967, Part 277a [formerly Part 177a]: Cooperative Agreements with States, §§277a.1 through 277a.8 amended to delete reference to safety laws and regulations concerning highway transportation, those commission functions having been transferred to Department of Transportation.

32 FR 13512, Sept. 27, 1967, Part 277a: Cooperative Agreements with States, §277a.2 corrected.

Section 205. (g) [*§ 305 (g) U. S. C.*] Court review of commission's orders; compelling commission to take jurisdiction.—[Unchanged. See vol. 11, p. 9401, vol. 15, p. 12189.]

Amendments, see footnotes, vol. 11, p. 9401, vol. 15, p. 12190.

2. Construction and interpretation.—[Vols. 10-14, 17-19].—The commission's consistent position since enactment of the Motor Carrier Act that, to come within the exception contained in the second proviso of §206(a)(1), there must be a State board having power to grant or approve certificates authorizing intrastate operations, and that the carrier must have obtained an intrastate certificate from that board, was upheld in 35 F. Supp. 136. Congress also has recognized that interpretation in various reports on proposed amendments to this section, a Senate committee report in 1961 stating that under the existing proviso the right of an intrastate carrier to engage in interstate commerce is automatically obtained by filing its intrastate certificate with the commission, whereupon it is authorized to engage in interstate commerce to the same extent that it may operate in intrastate commerce under the certificate filed.—Daniels v. United States, 210 F. Supp. 942 (947-8, 949)*.

As a general rule legislative intent must be ascertained from text of the statute if the words are clear and unambiguous; but where the literal words bring about an absurb or futile result, or one plainly at variance with purpose of the legislation as a whole, legislative purpose is followed rather than the literal words. In construing a not unambiguous statute, all relevant light shed on the purpose of Congress may be used, including committee reports, statements of committee members in charge of the bill, and interpretation by the executive department or agency charged with its administration and enforcement. Intent of Congress cannot be ascertained from wording of the single-State proviso, and the court may properly consider its legislative history, the commission interpretation consistently followed for over 25 years, and subsequent congressional committee reports recognizing that interpretation. In light of those aids, the commission correctly rejected plaintiff's application for registration of his "interstate" permit issued by the State.—Id., pp. 949-50.

Nothing in the 1962 amendment which deleted the second proviso of §206(a)(1) and prescribed procedures whereby common carriers operating within a single State may engage in interstate operations within the State, or in legislative history thereof, supports plaintiff's position that prior thereto he was entitled to benefit of the proviso exemption; both before and after that amendment an intrastate certificate forms the basis for acquisition of interstate rights within the State, and no grant of interstate rights to a carrier who has no corresponding intrastate rights in contemplated.—Id., p. 951.

In providing for "grandfather" rights Congress intended substantial parity between future operations and prior bona fide operations. But "bona fide operation" is not completely convertible with "good faith" as used in other contexts, and the test thereof is neither wholly objective nor wholly subjective. One criterion is objective—the service must have been actual, physical, and substantial, not merely proposed or offered; another is subjective—the operation must not have been in defiance of law; and besides those two readily identifiable elements there is a large gray area wherein a certain factor or attitude may or may not vitiate bona fide operation. Mere infraction of law, without defiance, may be weighed as a factor relevant to determination of bona fide operation; this presents an issue of fact or a mixed question of law and fact for the commission to decide and does not automatically compel a finding one way or the other; and where a carrier seeks enlargement of its "grandfather" certificate precisely because it has exceeded that authority continuously since before date of issuance,the fact of such continuous violation is not enough alone to vitiate bona fide operation.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (650-1)*.

Since Congress's power over interstate commerce is plenary, it could in 1935 have recognized as valid certificates, such as respondent's Montana "interstate" certificate, which were of no force or effect when issued, and could have made State-issued interstate certificates eligible for filing under the second proviso. Neither the language of the statute nor its legislative history evinces any such intent; the contrary is indicated by definition of "State board" in §203 (a) (2) as a body having jurisdiction to grant certificates for transportation in intrastate commerce; and it is significant that in 1938 the proponents of an amendment to make no distinction between

intrastate and interstate operations conducted wholly within a single State were unsuccessful.—Daniels—Investigation of Second Proviso Eligibility, 88 M.C.C. 357 (361, 362)*.

And dictum of the Montana Supreme Court in its decision holding that State board's cancellation of respondent's certificate attempted without due process to deprive him of the right granted to operate in interstate commerce, that the Motor Carrier Act would not affect interstate certificates granted prior thereto, would apply only to whatever rights respondent might have under Montana law by virtue of his certificate. The Montana court has no jurisdiction to determine respondent's rights under the Interstate Commerce Act, as Congress has left such determinations to the commission and the Federal courts.—Id., pp. 358, 363.

25. Injunctions; operation without certificate.—[Vol. 10].—See I.C.C. v. AAA Con Drivers Exchange, Inc., case, §203(c), n. 3.

26. Intrastate certificate.—[Vols. 10-19].—Effect of repeal of single-State proviso, see §206(a)(6), (7), n. 2.

Amendments to §206(a), repealing the second proviso of paragraph (1) and enacting the registration provisions of paragraph (6) and "grandfather provisions of paragraphs (7)(A) and (7)(B), clearly indicate that they were to become effective on Oct. 15, 1962. Public Law 87-805 bears the notation "Approved October 15, 1962," and references in paragraphs (6) and (7) to the date of enactment thereof were codified as "on" or "on and after" Oct. 15, 1962. Statutes rarely show the hour of approval by the President, and the general rule appears to be that, absent a record of the exact time of enactment, a statute is regarded as in effect from the first moment of the day on which it was enacted. Plaintiff therefore could not have acquired any rights under the second proviso of §206(a)(1) when its State permits were issued and it began operations thereunder after the statute eliminating that proviso took effect, even though the permits were issued on October 15 and it began operations immediately.—Central Maryland Lines, Inc. v. United States, 240 F. Supp. 254 (257)*.

Moreover, while the second proviso excused a carrier operating in intrastate commerce under a State permit from obtaining a certificate from the commission to operate in interstate or foreign commerce, it provided that such transportation should otherwise be subject to the commission's jurisdiction under Part II; and there was nothing in the wording of that proviso to support a conclusion that it created any vested rights. Plaintiff's registration statement was filed on October 16, the day after all rights to engage in interstate or foreign commerce under the second proviso had terminated; its right to operate in interstate commerce therefore never vested under the second proviso, and it must now conform to the requirements of §206(a) as amended before it may engage in such operations. The commission's rejection of plaintiff's registration statement, sustained.—Id., pp. 257-8.

The [former] second proviso of §206(a)(1) must be construed in light of other pertinent provisions of the act which declare the national transportation policy, particularly §5(4); that proviso means only that, once a State has determined that a carrier's operations serve public convenience and necessity, it need not obtain a certificate from the commission for interstate transportation within the State. The commission's use of its BMC-75 statement to ascertain whether a carrier is entitled to second proviso authority is well within its power; there is nothing in wording of the proviso requiring conclusion that rights thereunder vest by statute; rather, it is the better construction to view a commission determination that the conditions have been met as a prerequisite to such authority. Illegal control by a multistate carrier means that the purported proviso carrier was not lawfully engaged in interstate commerce and thus was disqualified from carrier status.—Hart v. I.C.C., 226 F. Supp. 635 (639, 641)*.

The second proviso of §206(a)(1) was but one of three methods by which interstate operating rights could be acquired or confirmed, and plaintiff himself utilized the "grandfather" provisions of the first proviso and a §207 application for new authority. The only reasonable construction of the second proviso consistent with the policy of the act is that adopted by the commission, i.e., to authorize

common carriers holding intrastate certificates to obtain interstate authority over the same route without proof of public convenience and necessity under §207; and the 1962 amendment which deleted the second proviso and prescribed procedures whereby single-State carriers may engage in interstate operations within the State did not change the requirement of an underlying intrastate certificate as the basis for such rights. Plaintiff seeks registration of a State certificate which authorizes "interstate" operation only and does not cover any intrastate operations; nor does he hold any other intrastate authority for the same route; the commission properly rejected plaintiff's attempt to register his State certificate.—Daniels v. United States, 210 F. Supp. 942 (950, 951)*.

The former single-State exemption proviso of §206(a)(1) having been repealed by enactment of Public Law 87-805 on October 15, 1962, Form BMC-75 statement tendered on October 16 could not lawfully be accepted.—Central Maryland Lines, Inc.—Second Proviso Eligibility, 92 M.C.C. 737*.

Unlawful common control of a single-State and a multiple-State carrier having been terminated by voluntary acts of the parties, condition imposed on the carriers' pooling arrangement requiring the single-State carrier to discontinue all operations in interstate commerce under single-State exemption is eliminated and it is again entitled to operate under the proviso.—Freeport Fast Frt., Inc., and Liberty Trucking Co.—Pooling, 90 M.C.C. 510 (513-4)*.

See also Dodds Truck Line purchase case, §5(2), n. 48 *Conditions imposed.*

Two single-State carriers having been found in investigation under §5(7) to have been unlawfully controlled in common interest with a multiple-State carrier from inception of their interstate operations under color of single-State exemption, such operations were from their inception, and are continuing, in violation of §206. And in light of the surrounding circumstances, changes in their ownership, management, and operating practices which could make the three carriers independent of each other, so that single-State carriers' operations would be lawful under the proviso and without certificates from the commission, are of doubtful feasibility. Accordingly, as the commission's authority to require persons found to be violating §5(4) to take such action as it deems necessary to prevent continuance of such violation is clear, the two single-State are required by order in the investigation proceeding to discontinue all operations in interstate or foreign commerce.—Nigro Freight Lines, Inc.—Purchase—Coady Trucking Co., 90 M.C.C. 113 (120, 121).

Circumstances under which acquisition of intrastate carrier's capital stock by its present owner was negotiated and financed by individual controlling a multistate carrier, the role played by that individual in its operations and management, and the nature of its operations in close proximity with those of the multistate carrier, conclusively show that its operations were actually controlled by that individual before and after it filed its BMC-75 statement and were not those of a bona fide independent going concern. It was therefore not entitled to exemption under the single-State proviso and its interstate operations were unlawful from their inception; all its operations in interstate or foreign commerce must be discontinued immediately.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (533-4)*.

Respondent's filing of a Form BMC-75 statement of intent to conduct operations in interstate or foreign commerce in Illinois corresponding to those authorized in its Illinois intrastate certificate, under authority of the second proviso of §206(a)(1), is without force and effect because respondent is managed and controlled in a common interest with a multiple-State carrier and, therefore, is not entitled to operate under the second proviso. Although respondents consented at the hearing to cancellation of the second proviso filing, submitted over 4 years earlier, respondent's Form BMC-75 statement is rejected; both respondents ordered to cease and desist from the operations found to be unlawful.—State Transport Co.—Investigation of Practices, 91 M.C.C. 373 (375-6).

Although applicant is at present lawfully operating within Ohio under single-State exemption, as result of recent grant of authority between points beyond Ohio it will no longer be eligible to claim benefit of the provi-

so, and principle of the Day case (53 MCC 672) is therefore inapplicable to its application for certificate to continue the proviso operations.—Pedler—Control—All States Freight, Inc., 90 M.C.C. 491 (498).

Although language of phrase in the second proviso, "if there be a board in such State having authority to grant or approve such certificates," is ambiguous, "such" cannot refer to the immediate antecedent phrase" a certificate authorizing the transportation *** in interstate or foreign commerce," since latter may be issued only by the commission [citing 3 MCC 497]; the second proviso phrase "to grant or approve such certificates" should be read in pari materia with the phrase "to grant or approve certificates *** in intrastate commerce" in the definition of "State board" in §203(a)(2); thus read, the language of the proviso means "to grant or approve certificates of public convenience and necessity in intrastate commerce."—Daniels—Investigation of Second Proviso Eligibility, 88 M.C.C. 357 (359-60, 361)*.

Since the States may not regulate interstate or foreign commerce on economic grounds [267 US 307 and 2 F. Supp. 488], a State certificate was not a condition precedent to interstate operations before the Motor Carrier Act, and prior to that act respondent could have conducted interstate operations without the Montana "interstate" certificate in issue. However, a certificate of public convenience and necessity grants authority for operations which cannot lawfully be performed in its absence; respondent does not hold such a certificate; the document issued by the State prior to the Motor Carrier Act and purporting to authorize interstate operations is thus a nullity and may not be accepted as a basis for legitimate interstate operations under the second proviso.—Id., pp. 359, 361, 363.

50. "Grandfather" clause; bona fide operation.—[Vols. 10-15, 18, 19].—Whether plaintiff has engaged in bona fide operations continuously since the "grandfather" date, except for interruptions in service beyond his control, is a question of fact for the commission to determine; and, Congress having intrusted to the commission the power to determine those issues of fact, the scope of judicial review is limited to ascertaining whether there is warrant in the law and the facts for the commission's action.—Melman v. United States, 231 F. Supp. 503 (506)*.

Mere fact that plaintiff engaged in operations in interstate transportation prior to June 1, 1935, and after that date between certain points, or within certain areas, would not of itself entitle it to receive, as a matter of right, a "grandfather" certificate embracing all of the same points and areas; it was only entitled to have operating authority which assured a substantial parity between the future operations and prior "bona fide" operations. The commission had broad discretion to determine and delineate "grandfather" rights, and there is nothing of record indicating an abuse of that discretion whereby plaintiff was unlawfully deprived of rights which it should have had. Moreover, if public convenience and necessity can be shown for authority which plaintiff claims it is justly entitled to, it is not precluded from obtaining such authority pursuant to §207(a); if that cannot be shown, it would be contrary to sound public policy to allow it to obtain enlargement of its "grandfather" rights at this late date.—Cardinale Trucking Co. v. United States, 232 F. Supp. 339 (346, 348)*.

"Grandfather" rights determined many years ago should not be modified in absence of positive evidence of a miscarriage of justice. Abstract of eastbound shipments by plaintiff's predecessor, presented at hearing on plaintiff's petition for modification of its certificate to authorize eastbound transportation of general commodities from two intermediate points on its Cincinnati-Charleston, W. Va., route, shows only one shipment—a cargo of stoves—from one intermediate point prior to June 1, 1935, and 15 shipments of general commodities during the succeeding 18 months, 8 from Cincinnati and 3 and 4 each from the intermediate points. Though plaintiff has the burden under §206(a) of proving that the operations in question were actual and substantial, it declined to produce any additional evidence on that point. On the record before it, the commission's conclusion that such shipments were not substantial was reasonable; the commission's refusal to reopen the "grandfather" proceeding, sustained.—Keystone Motor Exp., Inc. v. United States,

228 F. Supp. 793 (796, 798-9)*.

See also United States v. W. J. Dillner Transfer Co., §222(b), n. 14.

In denying modification of plaintiff's "grandfather" certificate because it was unable to find that operations claimed to have been performed since prior to June 1, 1935 "have been bona fide since that time," the factor which the commission considered dispositive of bona fide operation was whether plaintiff did or did not read the certificate; this apparently insists on a one-to-one correlation between the concepts of "bona fide operation" and "good faith," and specifically rules that good-faith operations require that authority issued be read. Such an exclusive rule not only finds no support in the reported cases, but it goes beyond the elements of common sense and validity by arbitrarily excluding various unusual and marginal cases (and plaintiff's case may well be one) from the realm of bona fide operation. That ruling is found to be an erroneous statement of the law and an inadequate substitute for actual findings as to whether plaintiff failed to read the certificate and whether the circumstances precluded establishment of bona fide operations.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (650, 651)*.

The commission's alternate conclusion, that if the certificate was read the involved operations could only have been conducted in willful violation of the act, flies in the face of a specific finding by the joint board (whose findings of fact Division 1 found "correct in all material respects" and adopted as its own) that plaintiff's operations were apparently not willful and were openly conducted under a misapprehension as to scope of its certificate. Thus it is at best not clear what the commission has purported to find, or, at worst, the finding of willfully unlawful operaion is wholly arbitrary. For these reasons, the commission's order denying plaintiff's petition must be vacated and the cause remanded for further proceedings.—Id., pp. 651-2.

Principles enunciated in 315 US 15 and 475 for determining issues of past bona fide operations under the "grandfather" clause of the Motor Carrier Act of 1935 are equally controlling in cases under the similar clause of the Transportation Act of 1958, and the Supreme Court's concern with applicant's holding out is highly relevant. Though, strictly speaking, the test under the 1958 act is bona fide operation on and after May 1, 1958 (except for interruptions beyond the carrier's control), and instances of actual service between given points both before and after the critical date are strong evidence of bona fide operation, both courts and commission have long conceded that a holding out to provide service, accompanied by some representative service, may also be evidence of operation.—Jarman v. United States, 219 F. Supp. 108 (115-6)*.

In granting plaintiff only point-to-point authority the commission largely ignored both those factors. Plaintiff's small size and the fluctuating character of his frozen-foods traffic warrant reconsideration of his application under the area-of-service concept applied by the commission in other proceedings. Moreover, since the 1958 act sets no cut-off point for evidence of service rendered after the "grandfather" date, any evidence of service since the 1959 hearing which might tend to change the picture of plaintiff's operations should be considered. The commission's order set aside and the case remanded for rehearing and further consideration in accordance with the court's views.—Id., pp. 114, 116, 117, 118.

Purpose of the "grandfather" clause is to assure substantial parity between an applicant's future operations and prior bona fide operations, and the commission may not atomize its operations during the "grandfather" period, but must view them as a whole in arriving at the nature and extent of its bona fide operations. In that connection, an applicant's holding out and solicitation throughout the "grandfather" period are matters properly to be considered; the very definition of "common carrier by motor vehicle" in §203(a)(14) contemplates consideration of holding out as a standard. Refusal to consider proper holding out and solicitation in connection with actual service during the "grandfather" period would freeze carriers into the precise pattern of their prior activities and thereby materially alter the basic characteristics of their service; decisions in 315 US 15 and 475 and 211 F. Supp. 280 support the rule that proper holding out and solicitation are standards to

be considered in hearings on "grandfather" applications.—Frozen Food Exp. v. United States, 219 F. Supp. 131 (137, 139)*.

See also Denton Produce, Inc. v. United States, and Willis Shaw Frozen Exp., Inc. v. United States, cases, §203(b), n. 50 *Act of 1958*.

While issuance of a certificate under the "grandfather" clause is dependent upon bona fides of previous operations to be determined by the commission, and the Supreme Court has held that the commission is empowered to impose territorial limitations on a certificate issued thereunder to assure "substantial parity" between future and prior bona fide operations, the "grandfathe. ' provisions do not authorize imposition of similar restrictions on a certificate issued in conversion proceeding under §212(c).—J. B. Montgomery, Inc. v. United States, 206 F. Supp. 455 (460)*.

See also T. I. M. E. Freight, Inc.—Merger, case, §206(a)(6), (7), n. 50.

In order to obtain rights to perform claimed operations under the "grandfather" clause, applicant must establish that it and its predecessor have engaged, on and continuously since June 1, 1935, in bona fide operations for which authority is sought; moreover, "grandfather" rights which were determined many years ago should not be modified except where there is definite and positive evidence that a miscarriage of justice has occurred. Therefore, since no probative evidence was tendered which would justify a broader grant of authority than heretofore made, and there is no showing that authority granted in the "grandfather" proceeding was not fully responsive to the proof adduced therein, carrier's petition seeking reopening of its "grandfather" proceeding, for a three-fold modification of a portion of its certificate, must be denied.—Dixie Ohio Exp., Inc., Investigation and Revocation, 94 M.C.C. 625 (627, 632-5)*.

"Bona fide operation" means substantial, as distinguished from incidental, infrequent, or sporadic service, and a mere holding out to perform service, without actual operation commensurate therewith, does not constitute bona fide operation. Six eastbound shipments over involved route of commodities other than gas in cylinders, rubber tires, and stoves, all of which moved subsequent to the "grandfather" date and none prior thereto, do not meet the test of bona fide operation, and no shipments of stoves were transported during a 9-month period prior to filing of "grandfather"' application. Moreover, the "grandfather" applicants (petitioner's predecessors) expressly sought eastbound authority only for gas cylinders and tires, which was granted; no greater authority would be justified upon reconsideration; petition for reopening denied. —Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (574)*.

Movements of petrochemicals after 1946 do not fulfill requirements of the "grandfather" provisions of the 1935 act, and afford no basis for modification of applicant's "grandfather" authority to transport general commodities, except liquid petroleum products, in bulk, in tank vehicles, so as to enable it to transport petrochemicals.—Consolidated Freightways Corp. of Del. Extension, 92 M.C.C. 443 (449-50)*.

A single shipment before, and a single shipment to the same point after, the "grandfather" date have been deemed sufficient to constitute bona fide operation as to that point; and actual, consistent, and frequent shipments to a number of points in an area or State satisfy the criteria for broad grants of authority; where substantiality of operations involved reflects a territorial operation, service from and to the same points both before and after the critical date is not necessarily prerequisite to territorial authority.—Hollebrand, 88 M.C.C. 685 (687)*.

Although applicant requests that the number of vehicles it was operating at time of hearing in September 1959 be considered in determining scope of its past operations, approximately 100 tractors and trailers were acquired and used in expanding its operation after filing of its "grandfather" application in December 1958; since the Transportation Act of 1958 confers no "grandfather" rights for operations commenced after May 1, 1958, the increased number of vehicles operated by applicant subsequent to that date will not be considered as probative evidence of extent of its past "grandfather" operations.—Home Transfer & Storage Co., 88 M.C.C. 223 (231)*.

Although the term "bona fide operation" in §7(c) of Transportation Act of 1958 is not susceptible of exact definition, it has consistently been construed to denote substantial as distinguished from incidental, sporadic, or infrequent service.—Denton Produce, Inc., 89 M.C.C. 301 (302)*; a "grandfather" applicant must establish that it or its predecessor has been engaged in bona fide operation in transportation of the commodities for which authority is sought, on and continuously since May 1, 1958. A mere holding out to serve or intent to conduct operations is not sufficient. —Northwest Fisheries Transp., Inc., 89 M.C.C. 324 (326)*.

An applicant for authority under the "grandfather" clause must establish by competent evidence a continuity of operations beginning at lease on the statutory date and continuing thereafter except for significant interruptions of service over which applicant had no control. Except for the implication in his filing of a "grandfather" application, one applicant does not allege that he was engaged in transportation of the involved commodities on and continuously since May 1, 1958; another applicant admittedly ceased operations in 1957, and his assertion that he was unable thereafter to obtain traffic for lack of authority has little significance since it was within his power to compete for traffic moving by other carriers who were in a similar position. Neither of the applicants adduced any evidence which would show operations on and subsequent to the critical date, and conclusion is inescapable that they were not in bona fide operation on that date.Denied.—Cox, 89 M.C.C. 545 (548)*.

Applicant has failed to establish that during the critical "grandfather" period it was a bona fide for-hire carrier of return loads of bananas in connection with southbound private carriage; though its apparent round-trip lease of vehicles and employment of drivers are strong formal indicia of its control over the northbound movement, whether in practice it exercised any real control as a common carrier for compensation is open to serious doubt; agreement with lessor limited northbound use of the behicles to empty moves or to transportation of property of which lessor was owner, lessee, or bailee, and did not govern day-to-day operations; prior to December, 1958, apparently only lessor kept records of banana shipments, which tend to show him as broker or seller thereof in his own right, and there is nothing to indicate that he was formally applicant's agent in such transactions.—Kendall Co., 88 M.C.C. 364 (367).

Nor do applicant's relations with drivers utilized strengthen its claim to have been a for-hire carrier; instead of a salary or wages, they were paid an unvarying sum of money for each trip, which seems to have been nothing more than a part of the financial accounting on the arrangements and understandings between applicant and lessor. There is no reliable evidence that applicant during or prior to 1958 held out as a for-hire carrier to the public generally, to lessor, or to any other individual; "grandfather" application denied.—Id., p. 367-8.

52.——Interruption of service.—[Vols. 10-15, 19].—The commission's finding that plaintiff's first interruption of service for a period of over 10 months, due to financial difficulties, was within plaintiff's control is not without precedent. Holding in 316 US 74 that the commission was warranted in holding as a matter of law that an interruption due to bankruptcy was not one over which the applicant had no control within meaning of Motor Carrier Act is determinative of similar issues arising under the Transportation Act of 1958, and the commission's action in denying plaintiff's "grandfather"application is supported by the record. Fact that the interruption in service commenced 8 1/2 months subsequent to the "grandfather" date does not alter the situation; under the statute the requisite absence of interruption of service continued to date of hearing, and there is no showing of arbitrary delay on the commission's part in passing on the application.The order sustained.—Melman v. United States, 231 F. Supp. 503 (506)*.

While the commission may justly question the relevance of shipments which follow a long interval without service, in its reconsideration of plaintiff's application under "grandfather" clause of the Transportation Act of 1958, following remand, it should consider whether peculiarities of the frozen food traffic may not justify some interruptions; al-

lowance in that statute for interruptions in service over which the applicant had no control may contemplate just such a situation. Moreover, the 1958 act sets no cut-off point for evidence of operations after the critical date; and, in view of indications that substantial service may have been rendered at certain points since the hearing on plaintiff's application, any evidence which might tend to change the picture of scant or nonexistent operations should also be taken into account. —Jarman v. United States, 219 F. Supp. 108 (118)*.

Admitted curtailment of "grandfather" operations by substituted applicants' predecessor, as result of decision in 84 MCC 393 that frozen potato products were not exempt commodities and could not lawfully be transported without appropriate authority, was not an interruption of service beyond its control. That decision only deprived it of certain traffic to which it was not entitled, and precluded it from continuing to haul mixed loads of nonexempt and previously exempt traffic, and its loss of that nonexempt traffic is attributable to its decision to handle such mixed loads in the first instance.—Refrigerated Service, Inc., 92 M.C.C. 311 (314)*.

Interruptions in service are not a bar to grant of "grandfather" authority where there is specific evidence to indicate that they were caused by factors over which applicant had no control; but interruptions of 2 or 3 years are not adequately explained by general assertions that origins of the subject commodities vary with changing weather conditions and crop rotation practices of growers in the area involved.—W. J. Digby, Inc., 89 M.C.C. 122 (123)*.

Although applicant was engaged in transportation of bananas from before May 1, 1958, until January 1959, he then lost possession of his vehicles owing to financial difficulties and ceased operation for a period of 10 1/2 months, until operations were resumed in his name under an agency arrangement with another carrier. That arrangement lapsed in February 1960 upon reorganization and temporary cessation of operations by that carrier, and applicant's operations were not again resumed until the following June, when he entered into a similar arrangement with an individual. While the commission has sometimes been liberal in attributing pertinent interruptions to causes beyond an applicant's control, and the second interruption might conceivably be so attributed, the first interruption, attributed by applicant solely to financial difficulties without further elucidation, impels finding, under a long line of precedents, that the cessation was within applicant's control. Applicant found not entitled to "grandfather" certificate under §7(c) of Transportation Act of 1958.—Melman, 94 M.C.C. 346 (347-8)*.

54.——Irregular routes.—[Vols. 10-14, 19]. —Characteristics of the transportation service involved, and the geographical area serviced, are relevant to territorial scope of operating authority that may be granted under the "grandfather" clause. While the test of bona fide operation within a specified "territory" includes actual rather than potential or simulated service, it does not necessarily restrict operations to the precise points or areas already served. Also, irregular or sporadic trips may be due to characteristics of the irregular-route service, which may have restricted the operation to a few points in a wide area which the carrier held out to serve.—Winter Garden Co. v. United States, 211 F. Supp. 280 (285)*.

See also Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831, §204(b), n. 6.

56.——Only established service covered by clause.—[Vols. 10-13, 15, 19].—When general commodities are involved in a "grandfather" proceeding, no specific finding is necessary for the transportation of household goods. Commodities transported by applicant for "grandfather" authority between numerous points in Alaska embrace the commodity description with noted exceptions; also, the record shows that, while applicant's transportation of household goods has not been extensive, he has transported several representative shipments in which he performed a packing and crating service. Accordingly, the board's findings and recommended grant of the general commodity authority, without a specific finding as to transportation of household goods, were not in error.—Knudsen, 94 M.C.C. 339 (341, 343).

Section 206(a). (2), (3) Traffic moving to and from Territories and Possessions; "grandfather" provisions. [Unchanged. See vol. 15, pp. 12190-12191.]

Historical Note, see vol. 17, p. 13532.

Notes of Decisions

Volume 18—p. 14342.

Section 206 (a). (4), (5) Traffic moving from, to and within Alaska; "grandfather" provisions.—[Unchanged. See vol. 19, pp. 15580-15581.]

2. Construction and interpretation.—The language of §206(a)(5) providing that, where Alaska "grandfather" rights have been established, "a certificate shall be issued authorizing such operations without requiring further proof that public convenience and necessity will be served thereby, and without proceeding," is undeniably clear and means precisely what it says. The commission, having found that each of two affiliated applicants met the requirements of the act, and having found each of them to be entitled to a certificate authorizing such operations, was required by the mandatory wording of the statute to issue a certificate to each "without further proceeding."—Alaska Van & Storage Co. v. United States, 240 F. Supp. 501 (503)*.

History of the grandfather" provisions of §206(a)(4), coupled with omission therefrom of the words "bona fide operations," manifests intent of Congress that they be liberally construed, in accordance with what was deemed to be the economic interest of Alaska and in consideration of a presently sparse flow of traffic. However, it is equally clear that the liberal construction of the statute intended by Congress was aimed at substantiality of the operations and not the mode of transportation. It was not to be required that a large and steady flow of traffic be established before the "grandfather" clause would appiy, but this has no reference to whether or not a motor vehicle must be involved in the operation. The statute expressly and impliedly refers to motor vehicles, and any liberal construction is and must be applied only to motor vehicles, lest construction turn to destruction of the words themselves. The commission has no power under the "grandfather" provision to grant a certificate for continuance of operations other than that of motor vehicles.—Andrews Van Lines, Inc. v. United States, 240 F. Supp. 763 (766-7)*.

The same act which added the Alaska "grandfather" provisions, by adding §303(e)(3) to the Interstate Commerce Act, continued the jurisdiction of the Federal Maritime Board over the water portion of motor-water-motor operations of motor common carriers between Alaska and the 48 contiguous States; and plaintiffs' operations, involving water transportation from a Washington to an Alaska port, come within the Board's definition of a water common carrier in 6 FMB 245. In face of the express wording of the state, i.e., "motor vehicles," and the fact of the Maritime Board's jurisdiction over the intercoastal shipping, plaintiffs' contention that the mode of transportation outside U.S. territory should be reduced to a common denominator, so that the fact that shipments of some kind have been made would render plaintiffs eligible for benefits of the "grandfather" provisions, must be rejected; plaintiffs' use of water transportation is simply beyond the commission's jurisdiction and is not relevant to any proceeding for relief under the Alaska "grandfather" provisions.—Id., pp. 767-8.

Transportation by water, rail, or air is not transportation by motor vehicle and cannot form the basis for a grant of authority under "grandfather" provisions of the act, since the commission is without authority to grant certificates under §206(a) except in respect of operations by motor vehicle. In addition, applications for Alaska "grandfather" authority between Seattle, Wash., and points in the 48

contiguous States, or for authority to operate to and from Hawaii, are beyond the scope of the "grandfather" provisions of §206(a)(4) and (5).—Mollerup Van Lines, 95 M.C.C. 338 (340, 342)*.

Furthermore, certificates granted under §206(a)(4) must be limited to authorization of service to and from points within the 48 contiguous States which applicants were certificated to serve prior to the date Alaska was admitted to the Union, and then only to the extent that under such certificates they were authorized to perform "within the States" all transportation required for through motor vehicle transportation by the carriers to or from places in the territory of Alaska.—Id., p. 342.

The only operations contemplated by §206(a)(4) which would entitle a performing carrier to "grandfather" authority are those involving through movements to or from Alaskan points from or to points in the other States. While, on the date of enactment of the statute, applicant held a certificate authorizing operation between points in 16 of the 48 contiguous States under which service could have been rendered between those points, on one hand, and points in Alaska before it became a State, on the other, it was not engaged in providing such service on the critical date. Applicant's participation in through movements of Alaska-destined or Alaska-originated traffic was confined to transportation between points in the conterminous United States; its claimed holding out to directly serve Alaska points cannot, alone, justify grant of "grandfather" authority sought; applicant is entitled to no authority under §206(a)(4); denied.—U. S. A. C. Transport, Inc., 94 M.C.C. 399 (401).

The clear and unmistakable intent of §206(a)(4) is to enable a carrier qualifying thereunder to continue serving those points in Alaska which it served on and prior to the time Alaska became a State; and decision in 92 MCC 403 made it clear that a successful applicant for authority under §206(a)(4) must have been a holder of a certificate on July 12, 1960, authorizing operations between points in Alaska and points in the 48 contiguous States, and must have been engaged in providing such service on and continuously since the critical date.—Lynden Transfer, Inc., 94 M.C.C. 738 (743, 744)*.

In the Al Renk case, 89 MCC 91, involving a "grandfather" application under §206(a)(5), it was concluded that the intent of Congress was that Alaska "grandfather" applicants need not prove that their operations on and after the critical date were as substantial and frequent as those required in previous legislation to support a "grandfather" grant, and the commission announced a policy of using a liberal approach in assessing nature and scope of an applicant's operations in Alaska; on the other hand, it did not find tha authority would be granted where no evidence of operations during the critical period had been adduced. Subsequent commission decisions have held that carrier seeking wide territorial grant of "grandfather" authority in Alaska must show service to a sufficient number of points to be representative of the entire area sought. Scope of the "grandfather" authority to be granted the four applicants determined accordingly.—Id., pp. 743-4.

In assessing the nature and scope of an applicant's operations prior to, and since, the critical date, in order to determine whether it is entitled to Alaska "grandfather" authority, a liberal policy is followed. Considering applicant's holding out to render service between all points in the State, its overall operations in transportation of household goods, and representative shipments, the nature of its "grandfather" operations reflects a basis for grant of statewide authority, except in the Panhandle. —Sig Wold Storage and Transfer, Inc., 94 M.C.C. 471 (473); Denali Transportation Corp., 94 M.C.C. 521 (524).

The Alaska "grandfather" clauses [which became effective July 12, 1960] provide no "interim" rights for carriers which instituted operations after the critical date, August 26, 1958, since on January 3, 1959, when Alaska was formally admitted to statehood, for-hire motor carriers operating within, to, or from Alaska in interstate or foreign commerce became subject to Part II and could not lawfully so operate without temporary or permanent authority granted under then existing provisions of the act.—Alaska Truck Transport, Inc., 92 M.C.C. 787 (789, 790).

Section 206(a)(4) clearly requires that a

successful "grandfather" applicant must have been the "holder of a certificate" on the effective date thereof; the holder of temporary authority granted under §210a(a) does not meet that requirement, since such authority is not a "certificate" as defined in §203(a)(5), and §210a(a) specifically provides that a grant thereunder creates no presumption that corresponding permanent authoty will be granted. It is equally clear that, absent compelling equitable considerations, mere filing of application for a certificate cannot satisfy the statutory requirement that applicant be the "holder of a certificate" on the critical date.—Wright, 92 M.C.C. 403 (406).

The only interpretation that can be given §206(a)(5) is that it applies solely to operations wholly within Alaska, whereas §206(a)(4) deals with operations between Alaska and points in the 48 contiguous States making up the Union prior to Alaska's admission. There was therefore no error in the joint board's failure to consider applicant's claimed "grandfather" rights between Seattle and Alaska points in light of §206(a)(5).—Id., p. 404.

In enacting the "grandfather" provisions of §206(a)(5), Congress omitted the requirement for a showing of past "bona fide" operation contained in earlier "grandfather" provisions pertaining to motor and water carriers, and required only a showing of "operation" on and since the critical date, except that passenger carriers must also show compliance with applicable acts of the Territory and regulations of Alaska Bus Commission; and the Senate committee report enjoined the commission to allow "grandfather" rights that would foster economic motor operations that would in turn foster economic development of the new State.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (100-2).

In light of the known conditions prevailing in Alaska and the legislative history of §206(a)(5), omission of the customary phrase "bona fide operation" must have been deliberate, and Congress must have intended that Alaska "grandfather" applicants need not prove that their operations on and after the critical date were as substantial and frequent as those required by previous legislation to support a grant of "grandfather" authority. Protestants' argument, that a showing of more than minimal activity is required as between points where a constant flow of traffic is available to the carrier, overlooks the volume of such "constant flow," ignores the conditions under which it moves, and confuses the statutory standard of the 1960 act with that of the 1935 act.—Id., p. 102.

While the commission is aware of dangers inherent in extreme liberality in grant of Alaska 'grandfather" applications, so long as there is no trafficking in certificates—and there should be none under the commission's administration of §§5 and 212(b)—the public interest will best be served by the policies followed in instant proceeding.—Id., pp. 98, 105.

50. "Grandfather" clause; past operations.—When record showed that plaintiff's overland motor carrier operations to and from Alaska in over 2 1/2 years (which included the "critical date" of §206(a)(4)) involved only six trips, and no specific dates of any trips were shown, those six trips cannot be found to constitute such a significant amount of continuous overland operations as would entitle the carrier to an Alaska "grandfather" certificate. The commission's order denying plaintiff's application for such certificate, being supported by the substantial evidence before it, is sustained.—United Van Lines, Inc. v. United States, 249 F. Supp. 984 (985)*.

One plaintiff admitted that it performed no overland motor vehicle transportation to Alaska until some months after the critical date, and while intervening plaintiff appears to have engaged to a very small extent in such operations at and/or prior to that date, there is sufficient evidence in the record to support the commission's finding that this was not enough, even under a liberal construction, to meet the requirements of the "grandfather" provision as to continuous operation. Therefore, the court has no choice but to confirm the commission's findings respecting actual overland shipments handled by plaintiffs.—Andrews Van Lines, Inc. v. United States, 240 F. Supp. 763 (768-9)*.

There is no adequate proof of plaintiffs' purported agency agreements with Alaska truckers. To have found the type of agency

relationship necessary to support "grandfather" rights between points in Alaska, the commission must have found that plaintiffs dominated, controlled, and directed the operations to such an extent that they became, equivalently, the principals' operations. Though shipment was done with one bill of lading on one of plaintiffs' mastheads and at through rates published by them, those factors standing essentially alone are insufficient to find the alleged agency and resultant control. Evidence is sufficient to find that the Alaska "agent" was independent to a great enough extent that plaintiffs should not be allowed relief on that score. The commission's denial of both applications, sustained.—Id., p. 769.

That two applicants, each of which is a separate legal entity, are commonly controlled does not prevent them from receiving "grandfather" certificates if they were in fact engaged in two separate transportation businesses during the "grandfather" period. The commission's conclusion that affiliated applicants' Alaska operations were conducted as one transportation business since early 1961 is not supported by substantial evidence on the record as a whole and is clearly erroneous; the record shows that each held itself out to the public and to its customers as a carrier, provided required insurance coverage, represented a different national van line which originated or terminated the traffic, and made separate tenders to the military, and the commission found that each met the requirements of the act and was entitled to a certificate. The mere fact that, for reasons of economy, the two companies operated for a time out of the same facilities, using the same equipment and personnel, does not support the conclusion that they were being conducted as one business. Commission orders set aside, with direction to issue a certificate to each applicant.—Alaska Van & Storage Co. v. United States, 240 F. Supp. 501 (503)*.

While evidence submitted in support of claimed highway operation to and from points in Alaska on and prior to the critical date is not impressive and leaves much to be desired, applicant maintains that described shipments are merely representative of the service actually provided during the period, that over-the-road operations were actually conducted and that weights mentioned in exhibits are not sifnigicant because only a small portion of the shipments handled were abstracted for the record; and the abstracts of shipments handled subsequent to the critical date are more impressive, particularly in respect of volume of traffic handled since 1959. Uncontroverted evidence submitted warrants conclusion that on and continuously since the "grandfather" date applicant operated as a motor carrier of general commodities, with certain exceptions, between Seattle, Wash., and points in Alaska except southeastern part thereof; granted.—Consolidated Freightways Corp. of Del., 95 M.C.C. 757 (760)*.

Also applicant handled considerable shipments prior to and since the critical date between points in Alaska in connection with water movements through the ports of Seward and Valdez, and is entitled to "grandfather" certificate. In view of congressional intent concerning administration of considered "grandfather" clauses, authority granted should extend to all points in the new State other than those in the southeastern portion, in spite of the fact that past operations only included principal points accessible by highway from the ports of Seward and Valdez and from the Alcan Highway.—Id., p. 760-1.

Of the several applicants for Alaska "grandfather" authority, only one has conducted substantial overland operations between points in Alaska and points in the 48 contiguous States continuously since prior to the statutory date and is entitled to a certificate authorizing continuance thereof; moreover, prior to admission of Alaska into the Union, the applicant was authorized to transport household goods between points in the United States and, thus, was authorized to perform "within the States" all transportation required for through motor vehicle movement to or from points within the territory of Alaska, a condition precedent to the granting of any authority under §206(a)(4). That applicant is entitled to a "grandfather" certificate authorizing continuance of its overland operations to and from points in Alaska.—Mollerup Van Lines Alaska Grandfather Application, 95 M.C.C. 338 (343)*.

However, regardless of other considera-

tions, two of the applications must be denied in their entireties because those applicants failed to establish that they conducted any motor-carrier operations, or that they participated in any movements of household goods, to or from Alaska on or prior to the statutory date. The proposed holding out of those carriers, without any actual operation commensurate therewith, cannot form a proper basis for a grant of "grandfather" authority.—Id., p. 343.

None of the applicants ever actually conducted any operations in Alaska. Their claims to "grandfather" rights between points in that State are based on operations of Alaska-based carriers—referred to as their "agents"—which actually conduct operations there, and most of which have filed "grandfather" applications in their own names and base their claim to rights on shipments they transported for the stateside applicants and upon which latter are dependant to establish their rights. Two carriers cannot be granted "grandfather" rights arising out of the same motor-carrier operation; and record clearly indicates that all vehicular equipment used in considered operations was owned by Alaska-based carriers and none was ever leased to stateside applicants, no applicant had any physical properties in Alaska, and that all matters in the motor operations were, on the statutory date, and still are, dominated, directed, and controlled by the Alaska-based carriers. Thus, although applicants issued their own bills of lading showing through movements to and from Alaska, on through rates published by them, none of them was ever engaged in motor-carrier operations between points in that State; all the "grandfather" applications for such authority must be denied.—Id., pp. 344-5.

Evidence of past operations by applicants on and continuously since the statutory date established "grandfather" rights for the transportation of household goods betwwen all points in Alaska except those in the Panhandle south of Yakutat Bay. Abstracts of shipments of household goods and supporting original shipping documents show a consistent and continuous movement of household goods between points in the Anchorage area and points in the continental United States south of the Canadian border, with applicants' participation limited to movements within Alaska.—Alaska Terminals, 96 M.C.C. 83 (86)*.

Evidence presented in "grandfather" proceeding adequately shows that applicant in its own right has conducted operations in Alaska on and prior to the critical date, as a connecting carrier of the Alaska R., in over-the-road motor transportation of household goods shipments moving to or from points in States south of the U. S.—Canadian boundary; therefore, it qualifies as a carrier within meaning of §206(a)(5). Although major portion of its operation was in the Anchorage area and on the Kenai Peninsula, limited operations were performed to and from other sections of Alaska and, at all times, it held itself out to transport all the traffic tendered. In addition, applicant maintained terminal facilities at Anchorage, owned or leased all the equipment used, and generally directed and controlled the motor carriage. Accordingly, applicant is entitled to a "grandfather" certificate for continuance of motor transportation of household goods between points in Alaska, except those in the area specified.—Alaska Van & Storage Co., Inc.—"Grandfather" Application, 94 M.C.C. 381 (384)*.

Applicants are entitled to "grandfather" certificate authorizing continuance of their transportation of household goods between all points in Alaska, except the panhandle, other than Juneau and Haines; they have operated in Alaska on and prior to critical date in transporting shipments received from, or delivered to, carriers certified to operate in conterminous United States; the shipments move by water between Seattle and Alaska ports, thence by Alaska Railroad to and from the railheads, principally Fairbanks and Anchorage, and then by applicants' motor carriers to destination. Fact that rail service is used, in part, to facilitate movement of the traffic does not alter the conclusion that operations performed were those of applicants; applicants hold out to provide pickup and delivery to and from all accessible ports in Alaska.—Hepp and Chapados, 94 M.C.C. 475 (476-7).

But insofar as general commodities are concerned, evidence warrants a grant of territorially limited authority under "grandfather"

provisions; there is no showing of any transportation of general commodities between Seward, Anchorage, and Fairbanks, as claimed; and, although applicants recently commenced operations in the Alaska Panhandle, admittedly, the only service maintained therein was to Haines and Juneau during the "grandfather" period. Applicants' contention that they have served the claimed points when the need arose, and that since the transportation picture in Alaska changes rapidly insofar as its geographic scope is concerned, the liberal policy enunciated in 89 MCC 91 should be applied herein, is unfounded in view of their past operations.—Id., p. 477.

While protestants challenge applicant's exhibit of shipments transported in Alaska on the theory that much of its evidence only shows billing of it as a water carrier (not subject to commission regulation) and that to some extent the shipments were also used to support "grandfather" applications of the "subcontractors" discussed in 89 MCC 91, the evidence shows that applicant's operations have been so extensive that it is clearly one of the principal motor carriers in the area. And there is no merit in protestants' contention that applicant has not provided continuous service when, though its operating authority was the subject of a "lease option to purchase" for a short time, there was no cessation of motor carrier operations either by it or the temporary lessee. The basic nature of applicant's "grandfather" operations (shown by the large number of interstate shipments, numerous points served, and the evident validity of proponderance of its shipments) indicates service to points in Alaska representative of the entire State, except the Panhandle. —Alaska Freight Lines, Inc., 94 M.C.C. 200 (202-3).

Applicant's motor carrier operations in Alaska have entailed point-to-point, irregular-route service, but the habitual use of the same highway has no significance where it is the only practical route available. Also, to limit its service to points on the main highways would result in a semi-regular route status inconsistent with the character of the transportation needs of a developing area. Therefore, since considered operations have included service to numerous points representative of the entire Alaskan area (except Panhandle) which are susceptible to motor carrier operation, territorial authority should be granted accordingly.—Id., p. 203.

And the board's recommended restriction of applicant's service to transportation of shipments having a prior or subsequent movement by it as a water carrier should not be imposed, since its operation as a water carrier between Alaska and the continental United States is subject to jurisdiction of the Federal Maritime Commission and bears only an indirect relationship to considered motor carrier operations. Furthermore, such a restriction would be consistent with applicant's status as a common carrier, with the development of an effective transportation in Alaska, and with the basic objectives of the Alaska "grandfather" act.—Id., p. 203.

Although evidence is clear that applicant operated between points in Alaska and points in the 48 contiguous States since 1953, its operations have been limited to transportation of traffic from, to, or between certain ports of entry on international boundary between United States and Canada and certain points in Alaska, and are not of sufficient breadth to justify a grant of statewide authority under §206(a) (4); grant in part.—Lynden Transfer, Inc., 94 M.C.C. 738 (744)*.

If carriers seeking authority under §206(a) (5) show that they have performed a representative service throughout Alaska, a grant of statewide authority is warranted; absent establishment of this fact, the commission can only grant authority commensurate with the evidence presented. Applying this criterion to "grandfather" claims of three applicants, one is entitled to authority for all of Alaska but the panhandle, another to like authority with addition of Haines, and the third to authority for only the points and routes specified.—Id., pp. 744-5*.

While "grandfather" authority sought is worded in terms of an irregular-route operation, the evidence shows that applicant either operated a regularly scheduled service of l.t.l. traffic between fixed termini, serving intermediate or off-route points, or held himself out to perform that type of services. The services of most motor carriers in Alaska have been of an irregular-route nature and,

consequently, those who have conducted representative territorial operations have been granted area-wide authority over irregular routes; however, in the final analysis, it is the commission's evaluation of the particular applicant's "grandfather" operations that determines the type and scope of the authority to be granted. A consideration of applicant's holding out, representative shipments, and overall operations shows a contrast to irregular-route operations of other "grandfather" applicants and demonstrates an identifiable pattern of regular-route service which warrants grant of regular-route authority.—Knudson, 94 M.C.C. 339 (342).

However, in order that applicant may have the benefit of reasonable flexibility in his overall operations, authority is granted to serve off-route points within 25 miles of the described routes and, also,the three specified more-distant off-route points. In addition, since applicant has served points on another highway as far as it was previously completed and participated in shipments to southern terminus thereof via local mail boat, and as that highway is, or will shortly be, completed over its length, grant of authority to serve the entire route is justified.—Id., pp. 342-3.

Applicant has engaged in continuous motor carrier operations in Alaska for over 20 years, maintaining a terminal at Fairbanks and operating several pieces of equipment; on and continuously since the critical date, using its own facilities, it has transported household goods in interstate commerce between numerous points,and has held itself out to render service between all points, in that State. While the evidence does not indicate service to all points within the State, the nature of applicant's "grandfather" operations as to household goods reflects a basis for grant of statewide authority, except for the Alaska Panhandle; further, such grant will be consistent with the developing transportation needs of the area.—Sig Wold Storage & Transfer, Inc., 94 M.C.C. 471 (472-3).

Although applicant's president is also an officer and stockholder of another Alaska "grandfather" authority applicant, common control of the two corporations is not in issue in applicant's "grandfather" proceeding so long as the corporations are separate and distinct and each conducts its own carrier operations; in this respect, there is no evidence of any common use of facilities or equipment and no indication of any pooling or division of traffic.—Id., p. 472.

Applicants, pioneers in transporting general property in Fairbanks, Alaska area, began the transportation of household goods prior to the "grandfather" date; those shipments move in interstate commerce under single carrier bills of lading, and are generally handled by water carrier between Seattle, Washington, and Alaskan ports, thence by Alaska Railroad to points of interchange with motor carriers, including applicants. While applicants operate principally to and from Fairbanks, they undertake to transport shipments to and from all points in Alaska upon delivery to them at points of interchange with the railroad or water carriers. In this manner, applicants have transported household goods shipments to and from points in Alaska, except the Alaska Panhandle, since, on, and prior to the critical date. However, their desire to serve points in the Panhandle over newly completed highway does not justify "grandfather" authority, in absence of operations to or from such points; granted accordingly.—Denali Transp. Corp., 94 M.C.C. 521 (523-4).

Although the vice-president and the secretary-treasurer (also stockholders) of one applicant are also officers and stockholders of the other,and its president is the president and principal stockholder of a third carrier which is an Alaska "grandfather" applicant in another proceeding, evidence indicates that operations of the three carriers have been conducted separately of the other and that each has operated its own equipment and maintained its own facilities and personnel; there is no duplication in supporting data of the respective carriers, and the affiliation existed prior to the critical date. Therefore, each carrier is entitled to "grandfather" authority to extent reflected by its supporting data.—Id., p. 524.

Although examiner recommended grant of authority to applicant under §206(a) (4) between specified interior Alaska points or areas and ports of entry, it held out to serve any point in Alaska in connection with its operations between Seattle and Tacoma, Wash.,

and ports of entry in Washington and Idaho, and handled some 20,000 shipments to or from numerous Alaska points over a period of 5 years, 9 months. As the commission is charged with viewing the Alaska "grandfather" provisions somewhat liberally, applicant is entitled to "grandfather" authority between all points in Alaska and the specified Washington and Idaho ports of entry.—Lynden Transfer, Inc., 92 M.C.C. 797 (801); and though question is raised whether temporary authority issued applicant for operation in Alaska after it became a State and pending enactment of "grandfather" legislation was broad enough to cover service between Alaska and authorized points in other States, it appears that such operations were contemplated, considering applicant's permanent authority and deletion of no-tacking restriction from the temporary authority.—Id., p. 800.

To be eligible for "grandfather" certificate under §206 (a) (4) an applicant must (1) have held on July 12, 1960, a certificate authorizing operation between points in the 48 contiguous States under which service could have been rendered to and from Alaska prior to its admission to the Union, and (2) have been engaged in such operations on and since August 26, 1958 (when Alaska electorate voted to accept statehood). Applicant meets neither of those tests when he never held permanent authority under which he could have provided service within the 48 States, whether on traffic to or from Alaska, or not,and does not claim to have conducted operations between Seattle and Alaska in his own right on August 26, 1958; that part of application is accordingly denied. However, applicant has established his "grandfather" right under §206 (a) (5) to perform secondary-movement truckaway and driveaway of motor vehicles in Alaska between Seward and points on described segments of Alaska Highways 1 and 9; certificate granted.—Wright, 92 M.C.C. 403 (405-7).

Although applicant did not object to examiner's recommended partial grant of "grandfather" application, which would permit service between points on all Alaska highways that appear suitable for truck operations at present time, no cogent reason appears for excluding portions of the State where improved roadways may be located at some future time, remote as such possibility may be in some areas, considering the terrain. Authority granted between points in Alaska, as sought.—Alaska Truck Transport, Inc., 92 M.C.C. 787 (791).

Applicants Tachick have operated in Alaska since 1953, serving mostly a limited area embracing the small communities of Kenai Peninsula, with principal interstate movement to and from Seward docks, and when occasion warranted have operated to, through, and from Anchorage; while latter operations have not matched the extremely regular and blanket coverage afforded Kenai points, they are an integral part of the rounded service provided applicants' Kenai customers; general-commodity "grandfather" rights granted for irregular routes between Anchorage and Kenai points, and for regular routes between other points named, including any future highways constructed on Kenai Peninsula.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (94, 103-4).

Although applicant Renk, in his operations as a connection of water carrier subject to Federal Maritime Board, issued few if any shipping papers in his own name, he was not a mere subcontractor or owner-driver; overall record establishes within meaning of the statute a general operation sufficient to support grant of "grandfather" authority between points in Alaska except in Panhandle south of Haines; while fact that the great preponderance of Alaska's population is concentrated in the rail belt along Alaska R. makes the smaller irregular-route carriers such as applicant particularly vulnerable to through competition of the larger motor and water carriers and the railroad, applicant's operation was sufficiently flexible to remain viable after much of the inbound water traffic was diverted to different ports.—Id., pp. 94-5, 97, 99, 103.

Similar operations by applicants Unfer between Haines and Valdez on the south and Fairbanks on the north, while considerably less active, appear not unusual on the Alaska scene; there was a general holding out, with license as a carrier from the Territory or State, cargo and property damage, and liability insurance in force, bidding against others for available traffic not already committed to

through routing, and with problem of keeping vehicles and personnel busy at any task to be found; documentary evidencs supports grant of "grandfather" authority between Haines and Valdez, on one hand, and, on the other, points on or within 50 miles of described highways.—Id., pp. 94, 96.

Though most of the Unfers' Valdez operation appears to have been as connection of a water carrier, fact that delivery was made on latter's billing means little in view of manner in which most Alaska motor carriers disregarded paper; while their showing as to commodities transported is thus somewhat incomplete, they have established the fact of operation and holding out, and, considering the apparent intent of Congress in enacting the Alaska "grandfather" provisions, are entitled to a general commodity description.—Id., p. 104.

52. Interruption of service.—Nothing of record establishes any actual interruption in applicant's operations, except in the very early fifties; however, in a sense there has been a "continuing interruption" arising from the remoteness of Alaska from the rest of the country and the necessity (except for an extremely rugged overland operation) for Alaska traffic to come and go by air or sea, a circumstance giving decided advantage to those few motor carriers who could establish Stateside contacts and make advantageous arrangements for through movement with the principal water carriers and Alaska R., resulting in a virtual monopoly. Grant of "grandfather" authority is warranted.—Al Renk & Sons,Inc.—Alaska "Grandfather" Application. 89 M.C.C. 91 (103).

§206(a)(6)(7). INTRASTATE CERTIFICATE: REGISTRATION; "GRANDFATHER" PROVISIONS.—

(6) On and after the date of the enactment of this paragraph no certificate of public convenience and necessity under this part shall be required for operations in interstate or foreign commerce by a common carrier by motor vehicle operating solely within a single State and not controlled by, controlling, or under a common control with any carrier engaged in operations outside such State, if such carrier has obtained from the commission of such State authorized to issue such certificates, a certificate of public convenience and necessity authorizing motor vehicle common carrier operations in intrastate commerce and such certificate recites that it was issued after notice to interested persons through publication in the Federal Register of the filing of the application and of the desire of the applicant also to engage in transportation in interstate and foreign commerce within the limits of the intrastate authority granted granted, that reasonable opportunity was afforded interested persons to be heard, that the State commission has duly considered the question of the proposed interstate and foreign operations and has found that public convenience and necessity require that the carrier authorized to engage in intrastate operations also be authorized to engage in operations in interstate and foreign commerce within limits which do not exceed the scope of the intrastate operations authorized to be conducted. Such operations in interstate and foreign commerce shall, however, he subject to all other applicable requirements of this Act and the regulations prescribed hereunder. Such rights to engage in operations in interstate or foreign commerce shall be evidenced by appropriate certificates of registration issued by the Commission which shall be valid only so long as the holder is a

carrier engaged in operations solely within a single State, not controlled by, controlling, or under a common control with a carrier engaged in operation outside such State, and except as provided in section 5 and in the conditions and limitations stated herein, may be transferred pursuant to such rules and regulations as may be prescribed by the Commission, but may not be transferred apart from the transfer of the corresponding intrastate certificate, and the transfer of the intrastate certificate without the interstate or foreign rights shall terminate the right to engage in interstate or foreign commerce. The termination, restriction in scope, or suspension of the intrastate certificate shall on the 180th day thereafter terminate or similarly restrict the right to engage in interstate or foreign commerce unless the intrastate certificate shall have been renewed, reissued, or reinstated or the restrictions removed within said one hundred eighty-day period. Such rights shall be subject to suspension or termination by the Commission in accordance with the provisions of this Act governing the suspension and termination of certificates issued by the Commission. The Commission may impose reasonable requirements with respect to the filing with it of certified copies of such State certificates and other appropriate statements and data, and compliance with applicable requirements established by and under the authority of statutes applicable to interstate and foreign operations administered by the Commission, as conditions precedent to engaging in interstate and foreign operations under the authority of such State certificate. In accordance with such reasonable rules as may be prescribed by the Commission, any party in interest, who or which opposed in the State commission proceeding the authorization of operations in interstate or foreign commerce, may petition the Commission for reconsideration of the decision of the State commission authorizing operations in interstate or foreign commerce, and upon such reconsideration upon the record made before the State commission, the Commission may affirm, reverse, or modify the decision of the State commission, but only with respect to the authorization of operations in interstate and foreign commerce.

(7)(A) In the case of any person who or which on the date of the enactment of this paragraph was in operation solely within a single State as a common carrier by motor vehicle in intrastate commerce (excluding persons controlled by, controlling, or under a common control with, a carrier engaged in operations outside such State), and who or which was also lawfully engaged in such operations in interstate or foreign commerce under the certificate exemption provisions of the second proviso of paragraph (1) of this subsection, as in effect immediately before the date of enactment of this paragraph or who or which would have been so lawfully engaged in such operations but for the pendency of litigation to determine the validity of such person's intrastate operations to the extent such litigation is resolved in favor of such person, and has continued so to operate since that date (or if

engaged in furnishing seasonal service only, was lawfully engaged in such operations in the year 1961 during the season ordinarily covered by its operations, and such operations have not been discontinued), except in either instance as to interruptions of service over which such person had no control, the Commission shall issue to such person a certificate of registration authorizing the continuance of such transportation in interstate and foreign commerce if application and proof of operations are submitted as provided in this subsection. Such certificate of registration shall not exceed in scope the services authorized by the State certificate to be conducted in intrastate commerce, and shall be subject to the same terms, conditions, and limitations as are contained in or attached to the State certificate except to the extent that such terms, conditions, or limitations are inconsistent with the requirements established by or under this Act. If the effectiveness of the State certificate is limited to a specified period of time, the certificate of registration issued under this paragraph (7) shall be similarly limited. Operations in interstate and foreign commerce under such certificates of registration shall be subject to all other applicable requirements of this Act and the regulations prescribed hereunder. Certificates of registration shall be valid only so long as the holder is a carrier engaged in operation solely within a single State, not controlled by, controlling, or under a common control with a carrier engaged in operation outside such State, and except as provided in section 5 and in the conditions and limitations stated herein, may be transferred pursuant to such rules and regulations as may be prescribed by the Commission, but may not be transferred apart from the transfer of the corresponding intrastate certificate, and the transfer of the intrastate certificate without the interstate or foreign rights shall terminate the right to engage in interstate or foreign commerce. The termination, restriction in scope, or suspension of the intrastate certificate shall on the 180th day thereafter terminate or similarly restrict the right to engage in interstate or foreign commerce unless the intrastate certificate shall have been renewed, reissued, or reinstated or the restrictions removed within such one hundred and eighty-day period. Such certificates of registration shall be subject to suspension or termination by the Commission in accordance with the provisions of this Act governing the suspension and termination of certificates of public convenience and necessity issued by the Commission.

(B) All rights to engage in operations in interstate and foreign commerce under the provisions of the second proviso of paragraph (1) of this subsection, as in effect immediately before the date of the enactment of this paragraph, shall cease and terminate, but any carrier lawfully engaged in interstate and foreign operations on the date of the enactment of this paragraph or any carrier who would have been so lawfully engaged in such operations but for the pendency of litigation to determine the validity of such person's intrastate operations to the extent such litigation is resolved in favor of such

person, pursuant to such provisions, may continue such operations for 120 days after such date and, if an appropriate application for a certificate of registration is filed within such period, such operations may be continued pending the determination of such application. The Commission shall prescribe the form of such application, the information and documents to be furnished, the manner of filing, and the persons to whom or the manner of giving notice to interested persons of such filings. Issues arising in the determination of such applications shall be determined in the most expeditious manner and, so far as practicable and legally permissible, without formal hearings or other proceedings. A notice of intent to engage in interstate and foreign operations accompanied by certified copies of effective, lawfully issued or acquired State certificates filed with the Commission as evidence of authority to operate in interstate or foreign commerce under the provisions of the second proviso of paragraph (1) of this subsection, as in effect immediately before the date of the enactment of this paragraph, shall be conclusive proof that the applicant is lawfully engaged in interstate and foreign operations and the scope thereof. (Paragraphs (6) and (7) added by act of Oct. 15, 1962, Pub. Law 87-805, §2, 76 Stat. 911.) [See vol. 11, p. 9404; vol. 15, pp. 12190-12191; vol. 19, pp. 15580-15581.]

Historical Note

Only 50 applications under §206(a)(6) for new certificates of registration were filed during the year. There are indications that carriers prefer to obtain certificates, under §207, which can be transferred to multiple-State carriers.—Annual Report, 1965, p. 43.

2. Construction and interpretation.—Although prior to date of amendments to §206(a), which eliminated second proviso of paragraph (1) and added paragraphs (6) and (7), plaintiff might have been exempt from showing public convenience and necessity for interstate services it proposed to render in conjunction with additional authority contained in considered amendments to its intrastate certificate, it was not relieved from compliance with other regulations of the commission then in force. Thus, since at that time plaintiff had not filed a Form BMC 75 statement, as required by the commission's regulations dealing with interstate operations within a State under State authority, it could not have been "lawfully engaged in" operations under the second proviso; consequently, plaintiff was not entitled to a "grandfather" certificate of registration pursuant to §206(a)(7) covering such additional intrastate authority.—Valley Express, Inc. v. United States, 264 F. Supp. 1006 (1008-9)*.

Nor does plaintiff's lengthy struggle before the State commission to obtain the additional intrastate authority in issue constitute "litigation," within provisions of §206(a)(7)(A), which prevented it from operating in interstate commerce thereunder on the "grandfather" date. Record is not persuasive that Congress intended a figurative meaning of "litigation" as used in the statute; it intended the ordinary meaning of prosecuting or defending in court. And, while plaintiff contends that the State commission's determination was still subject to judicial review on the "grandfather" date, no judicial review had been invoked at that time; therefore, there was no litigation in the courts on that date. The commisssion's order denying plaintiff's request for "grandfather" certification of registration, sustained.—Id., pp. 1009-10.

The amendments to §206(a) which eliminated the second proviso of paragraph (1) and added paragraphs (6), (7)(A), and (7)(B) indicate clearly that they were to become effective on October 15, 1962: Public Law 87-805 bears the notation "Approved October 15,

1962," and the language "On and after the date of the enactment of this paragraph" in paragraph (6), and the reference in paragraphs (7)(A) and (7)(B) to persons engaged in certain operations "on the date of the enactment of this paragraph," have been codified respectively as "on and after October 15, 1962," and "on October 15, 1962." Moreover, it appears to be the general rule that, in absence of a record of the exact time of enactment of a statute, it is regarded as in effect from the first moment of the day on which it was enacted.—Central Maryland Lines, Inc. v. United States, 240 F. Supp. 254 (257)*.

Those amendments extended "grandfather" rights to certain carriers who on October 15, 1962, were (1) lawfully engaged in intrastate operations within a single State, and also (2) lawfully engaged in single-State operations in interstate commerce under the second proviso, or would have been so engaged but for "the pendency of litigation to determine the validity of such person's intrastate operations." Plaintiff admittedly was not engaged in any operation in interstate commerce on October 15, and there is no merit to its argument that its application for its intrastate authority, which was filed October 9, amounted to "pending litigation to determine the validity" of its intrastate operations which began on October 15. The "pendency of litigation" clause refers to litigation to determine the validity of the carrier's intrastate operations and does not include applications by the carrier to a State regulatory body for a certificate which will permit it to begin it to begin such operations.—Id., p. 258.

For purpose of the certificate exemption provisions of the former second proviso of §206(a)(1), and therefore for purposes of the "grandfather" registration provisions of §206(a)(7), as expressly indicated therein, a carrier cannot be said to have been and to be lawfully conducting interstate operations solely within a single State if it controls, is controlled by, or is under common control with a carrier authorized by the commission to engage in operations in interstate or foreign commerce outside that State, since its operations are not independent of those of the out-of-State or multiple-State carrier; and the fact that this power of control has not actually been exercised does not alter the situation.—Abramowitz—Investigation of Operations, 94 M.C.C. 213 (218-9).

As result of amendment of §206(a) by deletion of former single-State proviso of paragraph (1) and addition of paragraphs (6) and (7), principle of the Day case (53 MCC 672), which by its terms was limited to operations under the proviso, may no longer be applied as ground for denial of an intrastate carrier's application for corresponding interstate authority. However, the Day case principle was a reflection of the commission's long established policy of avoiding creation of duplicate operating rights by denying authority for operations which the carrier could perform under existing laws and regulations.—Sheridan-Indianapolis Bus Line, Inc., Extension, 92 M.C.C. 285 (286)*.

Since applicant did not use its intrastate authority to engage in interstate operations under the proviso prior to repeal thereof, it has no "grandfather" rights under §206(a)(7), and its existing intraste rights do not meet the procedural requirements of §206(a)(6) and therefore may not form the basis for issuance of a certificate of registration thereunder. And though it could possibly obtain an intrastate certificate under circumstances qualifying it for registration, neither the language of the statute nor its legislative history suggests that the §206(a)(6) procedures are intended to be the exclusive means by which motor common carriers may in future conduct interstate or foreign operations solely within a single State. Thus, since issuance of authority sought in application filed under §207(a) would not lead to creation of duplicate operating rights, there is no legal or policy bar against grant thereof.—Id., pp. 286-7.

While §§206(a)(6) and (7) specifically provide that certificates of registration shall be valid only so long as the holder is engaged in operations solely within a single State and is not controlled by, controlling, or under common control with a multi-State carrier, it is axiomatic that all provisions of the act must be read together in order to give effect to the intent thereof as a whole; it follows that the statutory mandate cannot be considered by itself but must be construed in the light of other pertinent provisions of the act. In addi-

tion, the provisions embodied in the amendments, to a substantial degree, effected a codification of established commission principles and precedents with respect to single-State interstate operations. Therefore, since both sections permit the transfer of certificates of registration, application of principle of the *Elliott* case , 38 MCC 547, to the purchase or acquisition of control by multi-State carriers of certificate-of-registration operations, and vice versa, in §5 proceedings, is not in contravention of legislative intent behind the amendments.—T. I. M. E. Freight, Inc.—Merger, 97 M.C.C. 310 (318, 322, 327)*.

Applicant single-State carrier was engaged in lawful operations under former §206 (a) (1) second proviso and, thereafter, such operations were continued under "grandfather" provisions of §206 (a) (7) until date multistate carrier took over operations under temporary authority. Such operations, both under former second proviso and the "grandfather" proviso, constituted the single-State operator a common carrier within meaning of §5(13) and it and the multistate carrier applicant have a statutory right to seek the commission's approval of proposed merger transaction; such proposed transaction must be approved if, on the merits, it is found to be consistent with the public interest. Also, under §210a, the commission may authorize continuance of "grandfather" proviso operations by multistate carriers, pending determination of proposed finance transaction under §5 or §212(b). Therefore, protestants' interpretation of §206 (a) (6), (7) as not permitting transfer of rights thereunder until certification of registration has been issued, has no support in the law.—Id., pp. 322, 327-8.

See also Sierra Distributing purchase case, §5(2), n. 110 *"Grandfather" applications.*

Interpretation in 44 MCC 325 of the former second proviso of §206(a) (1) as referring only to operations by motor vehicle, with result that it would not preclude a single-State operation by a motor carrier controlled by a railroad operating in several States, should apply equally to a carrier operating under §206(a) (7) which is affiliated with a multistate carrier of another mode. Nothing in history of the statute enacting paragraphs (6) and (7) warrants the view that Congress intended to overrule that case, and Senator in charge of the bill while under consideration stated that it would preserve all existing rights of intrastate motor carriers engaged in interstate operations under the proviso. Therefore, where §206 (a) (7) uses the word "carrier," it means a motor carrier subject to Part II. Upon consummation of approved purchase vendee, notwithstanding its affiliation with a coastwise water carrier subject to Part III, will be entitled to receive any certificate of registration issued as result of vendor's "grandfather" application.—Security Transp. Co.—Purchase—Security Truck Line, 93 M.C.C. 385 (390-1).

Although, upon consummation of purchase of vendor's State certificate, multiple-State vendee would be entitled to continue interstate operations formerly conducted by vendor under single-State proviso of §206(a) (1) and presently under "grandfather" clause of §206 (a) (7), pending issuance of certificate authorized under §207 (a), under §206 (a) (7) vendor's interstate rights would automatically expire on February 12, 1963, unless it previously applied for a certificate of registration, and vendee's right to continue the former proviso operations beyond that date is therefore contingent on vendor's filing of such application. Moreover, vendee's operation during the interim period is limited to extent of authority granted by the State certificate submitted with that application.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc. , 90 M.C.C. 797 (804).

50. "Grandfather" clause. The commission erred as a matter of law in holding, contrary to pertinent Washington statutes, regulations, and Supreme Court decisions, that operating permits issued by Washington Public Service Commission from 1935, when state law abolished certificates of public convenience and necessity and authorized issuance of permits, to enactment of 1963 law re-establishing such certificates, were in substance and effect "certificates of public convenience and necessity" within the second proviso of §206 (a) (1) and Public Law 87-805 which repealed the proviso and added §206 (a) (6), (7) to the act. During period in question, governing State laws, regulations, and decisions did not mandatorily require the State commission to con-

sider all factors pertinent to "necessity" and certainly did not require it to deny a permit for lack of a showing and finding of necessity. The commission's order granting "grandfather" certificates of registration to 11 motor carriers previously operating under such intrastate permits, being based on its erroneous holding, is also erroneous as a matter of law; reversed and set aside.—Black Ball Freight Service v. United States, 266 F. Supp. 287 (288-90)*.

Respondent has shown that prior to October 15, 1962, he was engaged in operations solely within a single State and neither was nor is commonly controlled with a multiple-State carrier owned by his father. While there is evidence of earlier practices suggesting an overall family enterprise on part of respondent and his relatives who own and control the other companies involved, such practices occurred after filing of his BMC-75 statement and were terminated upon his discovery of their impropriety, substantially before the critical date. This cessation indicates good faith on respondent's part, and the close blood relationships between persons in the involved companies was made known to the commission at time respondent's registration was accepted. There is no common ownership or management of respondent's operations and those of the multiple-State carrier, and respondent's relatives have no material financial stake in his business, or vice versa; none of the parties has legal or actual power to control the business of the other. Respondent is entitled to issuance of "grandfather" registration certificate, but he is admonished that the tests of control discussed are applicable in maintaining the validity of that certificate.—Abramowitz—Investigation of Operations, 94 M.C.C. 213 (219-20).

Protestants' contention that "grandfather" rights under this section can be preserved by the person claiming them only if such person continues operations without interruption from October 15, 1962, until such time as the certificate of registration is finally issued and that such grandfather rights are personal to the party filing the application and may not be transferred, is without merit. Not only certificates of registration, but also "grandfather" rights to operate pending issuance of such a certificate may be transferred.—T.I.M.E. Freight, Inc.—Merger, 97 M.C.C. 310 (317-9)*.

Regulations of the Commission

28 FR 867, Jan. 30, 1963, Part 179: Transfers of Operating Rights, §179.1(b) amended, and §§179.10 through 179.14 added; rules added govern transfers of certificates of registration issued or to be issued pursuant to §206(a) (6) and (7) of the act, effective on date of publication.

28 FR 1255, Feb. 8, 1963, Part 7: List of Forms, Part II, IC Act, §7.201 BF 201, Form BF-201 prescribed and approved for applications for transfer or lease of certificates of registration provided for by §206 (a) (6) and (7), effective on date of publication.

Section 206. (b) [*§306 (b) U.S.C.*] Application for certificate; form and contents.—[Unchanged. See vol. 10, p. 7978]

Historical Note

The commission recommends, in view of the prohibitions in 28 USC §1001, that §206 (b) be amended so as to eliminate the mandatory oath provision therein, and that such requirement be made discretionary with the commission.—Annual Report, 1964, p. 72.

15. Filing and verifying application; parties; notice.—[Vols. 10-19].—Although failure specifically to designate Robins Air Force Base as a service point in extension application was an inadvertent error, and evidence warrants grant of authority to serve the base as an off-route point, applicant Express Agency is admonished henceforth to designate specifically each point sought to be served in all applications for motor-carrier authority, in accordance with the defined limits of its motor-vehicle operations with respect to commercial zones and terminal areas, as set forth in 91 MCC 311.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 887 (890, 891)*.

While authority granted under §7(c) of Transportation Act of 1958 would possibly be more extensive if applicant were seeking certificate under §207(a), it elected to file an "interim" application and notice published in Federal Register so noted; consideration is therefore limited to actual operations commenced during the "interim" period.—Yeary Transfer Co., Inc., Extension, 88 M.C.C. 473 (479).

Application filed under §207, seeking modification of outstanding authority for road-building machinery to permit transportation of separate shipments of parts, was properly treated as an application rather than a modification proceeding. Applicant's prior petition for such modification was denied by order f the entire commission, and it was previously advised informally by Bureau of Motor Carriers that service for which authority is sought could not be performed under its existing certificates; moreover, as applicant's ourstanding authority is not patently indefinite or ambiguous, and it knew or should have known the extent thereof, determination of instant application does not require interpretation of carrier's existing authority.—Curtis Keal Transport Co., Inc., Extension, 89 M.C.C. 670 (672-3).

Failure to consolidate extension applications of Railway Exp. Agency and United Parcel Service did not preclude examiner's making a valid recommendation as to the latter. While territorial scope of both applications is the same, difference therein was apparent when REA's application was filed only 7 days before hearing on that of UPS; former contains none of commodity and service restrictions on UPS' proposal, but practically seeks authority for unrestricted general-commodity service, whereas UPS proposes only a specialized package delivery service; REA's application raises further question of whether unrestricted authority sought may properly be granted a railroad subsidiary. Moreover, the commission frequently grants authority to more than one carrier for overlapping services; thus, the two applications are not mutually exclusive within meaning of 326 US 327.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (736-7)*.

As certain highways over which authority is sought for operation between Washington, D. C., and Dulles Airport have not yet been completed, carrier selected to provide the scheduled regular-route service should file appropriate applications when those additional routes become more certain of completion.—A. B. & W. Transit Co. Extension, 88 M.C.C. 175 (183).

Notice: [Vol. 19].—The commission's power to grant certificates is not unlimited; one of the requirements for issuing a certificate is that notice of its proposed issuance be given to competitors, and another is that the commission first determine that there is a public need for issuing it. These two factors work hand in glove, one with the other; notice to competitors informs the commission as to existing authorized carriers in the requested area and the need for additional services proposed, and that information is sifted and weighed to determine wisdom of the grant.—Willey v. United States, 245 F. Supp. 669 (677)*.

Existing carriers must have proper notice of the true nature and purpose of a proposed service so that they may have an opportunity properly to prepare their case in opposition. And it is doubtful that sufficient notice of the transit feature of the proposal was given in the published notice of the application which merely set forth the commodities and points to be served when, in fact, applicant was seeking authority to perform the outbound leg of a storage-in-transit movement.—Willis Shaw Frozen Food Exp., Inc., Extension, 98 M.C.C. 466 (468)*; on reconsideration, however, since opposing carriers had a reasonable

opportunity to prepare their defense, conclusion is warranted that the statutory requirement of notice does not apply to the transit aspect of applicant's proposal.—Id., 100 M.C.C. 18 (20)*.

After notice of the application (designated for handling under modified procedure) had been published in the Federal Register, the proceeding was assigned for oral hearing without publication of notice to that effect; however, under rule 1.241(d) of the Rules of Practice, interested parties are entitled to notice when cases originally docketed for modified procedure are transferred to the hearing docket, and rule 1.241(c) requires persons desiring to protest an application so assigned for oral hearing to notify applicant and the commission thereof at least 10 days before the hearing. Opposing railroad filed notice of its intention to appear and protest the application, but its notice was not timely filed under rule 1.241(c); therefore, when it appeared at the hearing and sought leave to intervene, the examiner refused to let it appear in the proceeding. In light of the failure to publish a notice of assignment of the case for oral hearing, the examiner's ruling was incorrect, and rail protestant should be allowed to intervene.—Arrow Trailways, Inc., Extension, 94 M.C.C. 514 (515).

When "grandfather" application as published, although somewhat ambiguous because of partial "radial" wording therein, evidenced a desire to serve all points in Alaska, it can hardly be said that interested parties were not adequately informed that applicant intended to serve substantially all points in that State in the transportation of general commodities. Furthermore, the authority granted, being somewhat restrictive in nature, is not inconsistent with the description of authority published in the Federal Register, particularly in view of the fact that adequacy of existing service is not a relevant consideration in a "grandfather" type application.—Knudsen, 94 M.C.C. 339 (343).

Territorial authority granted for transportation of parts, etc., of road construction machinery does not constitute a broadening of applications as filed when it authorizes service only from origins specified in notice published in Federal Register; authority granted from specified Georgia points is restricted to traffic originating at points in origin States named in applications; and all authority granted is tied to a service to be performed in mixed shipments in same vehicle as part of applicant's presently authorized service, and is further restricted to service to and from points sought in the applications, albeit through a gateway.—Home Transp. Co. Extension, 92 M.C.C. 677 (686)*.

Rephrasing of grant to avoid duplication of applicant's present alternate route authority is not a substantial broadening of application and no additional publication of notice to the public is required.—West Bros., Inc., Extension, 91 M.C.C. 523 (532)*.

Assertedly defective notice in Federal Register as to elimination of gateway in no way prejudiced protestants; as competitors, they were on notice as a factual matter of applicants' gateway operations, and consideration of extension applications on that theory did not increase their burden of proof in opposition.—Mason & Dixon Tank Lines Extension, 91 M.C.C. 7 (10).

Application, as filed and published, for authority to transport "acids and chemicals" properly apprised any party who might have an interest in transportation of "grain fumigants and insecticides" of scope of the application; following 88 MCC 127, application as filed is sufficiently descriptive to include those commodities.—Cyrus Truck Line, Inc., Extension, 88 M.C.C. 447 (451).

Published notice of vendee's application for certificate covering operations conducted by vendor in Virginia under the "grandfather" clause of §206(a)(7)(B) indicated that it sought authority to operate between Lynchburg and Kenbridge, serving no intermediate points, whereas the application shows that authority for all intermediate points is desired; furthermore, underlying intrastate certificates authorize, and abstract shows an abundance of, service to and from such points. Since all the intermediate points are small towns on a rather short route, republication of the application does not appear necessary to consideration of requested intermediate-point authority; however, effective date of order granting certificate to vendee is deferred for 35 days to permit any interested

party to file a petition concerning the matter. —Overnite Transp. Co.—Purchase—Hill City Transfer, Inc., 90 M.C.C. 749 (753).

Although application for authority to transport aircraft parts not requiring special equipment or handling did not specify missile parts requiring special equipment, because applicant, the aircraft industry, and the Bureau of Motor Carriers then believed that its existing authority for transportation of airplane parts requiring use of special equipment embraced such movements, the public was given sufficient notice of the commodities for which authority was being sought. Interest of protestant general-commodity carriers would not have been more affected if notice to the public had included missiles; nor, since they could not transport commodities requiring special equipment or handling, would they have been affected by an unrestricted grant of missile parts authority.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (254, 255)*.

Nor may heavy haulers protesting petition for modification of the authority in question to specifically authorize unrestricted transportation of missile parts legitimately claim that they have been prejudiced by any discrepancy between the notice actually given and the authority for which need is found. They did not protest applicant-petitioner's earlier application for heavy-hauling authority for airplane parts, which were then mistakenly believed to include missile parts, and if applicant had been able in considered application to seek authority for missile parts as a separate commodity (which it could not do because of security restrictions), it would have shown that it was already providing a needed service thereon under color of right flowing from its existing certificate. In the circumstances, protesting heavy haulers would not now be prejudiced by a grant of authority they could not have successfully opposed at time of original hearing. However, to be abundantly fair to protesting carriers, the application, as reformed and amended in light of hearing on the petition, will be published in the Federal Register, and any interested person may file petition setting forth his cause within 30 days thereafter.—Id., pp. 255-6, 257.

Notice of application for irregular-route authority to transport magazines and periodicals did not reflect initial origin of part of the traffic involved, but rather the movement thereof from two intermediate points to the destination area. To insure that interested persons have not been misled and prejudiced by the omission of the information as to the original origins, statement of authority granted will be republished in the Federal Register and issuance of certificate withheld for 60 days from the date of such republication; during first 30 days after republication any proper party in interest may file appropriate pleading. —Kato Theatre Service, Inc., Extension, 94 M.C.C. 395 (396).

Since application as originally published sought authority for irregular-route transportation of food products from eastern origins only to Martinsville, Ind., for purpose of tacking to provide through transportation to Texas and Oklahoma, notice of authority granted from named origins to points in Oklahoma and Texas will be published in Federal Register, and 30 days from date thereof will be allowed for any interested party to file appropriate petition.—Trans-Cold Exp., Inc., Extension, 92 M.C.C. 739 (741).

Where need for service is established but published notice of authority sought was inadequate, due to an error by a member of the commission's staff in preparing the notice or to a minor or inadvertent error by applicant, the commission may provide for republication in the Federal Register of the authority to be granted commensurate with the demonstrated need, so that persons not alerted by the prior notice may have opportunity properly to protect their interests. Applicant's failure to specify Robins Air Force Base as a service point in extension application was an inadvertent error, and need for express service thereat is established; therefore, proper notice of complete scope of authority granted, including the base as an off-route point, will be published and certificate withheld for 30 days from republication date to allow any party affected by broadened scope thereof to file an appropriate pleading.—Railway Express Agency, Inc., Extension, 91 M.C.C. 887 (890-1)*.

While no useful purpose would be served

by requiring the filing of additional application for original authority sought, which was omitted from territorial description in notice of the application, as amended, which was republished in the Federal Register, grant of such authority is warranted by the evidence; therefore, since the change may prejudice parties not receiving notice thereof, a corrected notice will be published in the Federal Register and 30 days allowed for petitions by such persons prior to issuance of any operating authority.—Edwards Extension, 88 M.C.C. 566 (567)*.

Boundaries of nonradial territory authorized for transportation of additional commodities do not exactly coincide with those of radial territory described in applicant's present certificate and sought in extension application, and may in some places go beyond them. Although opposing carriers were present at the hearing and will not be prejudiced by the new boundaries, other members of the public who relied on notice of the application as published in the Federal Register may have an interest which is prejudiced by lack of proper notice; therefore, the new territorial and commodity description will be published therein and certificate withheld for 30 days from publication to allow any proper party in interest to file protest and petition for further hearing.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (736).

While unrestricted authority for transportation of experimental and display machinery and equipment is broader than authority sought to serve the single supporting shipper, grant of such unrestricted rights is justified; therefore, since members of the public who relied on the notice published in the Federal Register may have been prejudiced thereby, authority granted will be republished and certificate withheld for 30 days to allow any interested party to petition for further hearing.—Donaldson Transfer Co. Extension, 89 M.C.C. 651 (653)*; similarly, since authority granted to REA between Albany and Fonda, N. Y., goes beyond scope of the application as published, notice of authority granted will be published in Federal Register and certificate withheld for 30 days to allow any interested party to file appropriate pleading.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 227 (232).

Inasmuch as grant of authority for liquid chlorine without restrictions on type of container enlarges scope of the application beyond that published in Federal Register, members of the public who relied on the notice as published may have an interest which has been prejudiced by lack of proper notice. Therefore, the authority sought to transport liquid chlorine in containers will be republished, and any person believing himself prejudiced by grant thereof may file appropriate pleading within 30 days of such republication.—Chem-Haulers, Inc., Extension, 88 M.C.C. 1 (2).

Though primary purpose of application by irregular-route carrier is to obtain a regular route in order to interchange and participate in joint-line service, application as filed was not informative as to true nature of the destinations involved or of the total service that would be performed for supporting shipper. A simple note to effect that service at named destination was for purpose of interchange on shipments destined to certain eastern points would have been informative and more in keeping with Canon 29 of the Commission's Code of Ethics, which requires candor and fairness in presentation of causes before the commission.—Bonanza Trucking Co. Extension, 92 M.C.C. 220 (221-2)*.

On reconsideration, however, although territorial description of proposed service in the published notice was less complete than it should have been, outright denial of the application is not warranted on that basis. A number of motor and rail carriers operating in considered territory have actively opposed the application, and it appears unlikely that there are many if any other carriers whose interests are directly involved; therefore, authority may properly be granted, subject to republication in the Federal Register so that any interested person not heretofore apprised of the nature of proposed service will have an opportunity to be heard.—Id., 94 M.C.C. 620 (623-4)*.

Application as filed fails to give true notice to interested persons since it obscures the true purpose of the proceeding, which is to establish a new through operation between points in Alabama and Georgia not embraced

in carrier's regular-route authority, on the one hand, and, on the other, points it is authorized to serve in other States on its existing regular routes and off route points therefrom. Applicant and its counsel are admonished, therefore, that in the future, filed applications must be more informative and more in keeping with Canon 29 of the Code of Ethics. Application denied on other grounds.—Dixie Ohio Exp., Inc., Investigation and Revocation, 94 M.C.C. 625 (635-6)*.

When, although application purports to seek irregular-route authority from Kansas City, Kans., to points in States east thereof and the District of Columbia, applicant actually seeks to perform through single-line transportation from points west of Kansas City (by use of transit at that point) to requested destination territory, interested parties have not been afforded adequate notice by the application as filed and published of the scope of the proposed through service. Under recent criteria, applicants for irregular-route authority are required to set forth in the application, by notation or otherwise, the actual origins and destinations to be served. Absent appropriate notice and proof of need therefor, authority for such through single-line service is denied.—Willis Shaw Frozen Exp., Inc., Extension, 94 M.C.C. 495 (501, 503-5).

Application as filed and published in the Federal Register requesting irregular-route authority between Albuquerque, N. Mex., and points in Arizona could not have been reasonably interpreted as seeking authority to provide service between latter points and certain Colorado points, which applicant actually intended to provide by tacking that and its existing authorities, thus it did not constitute adequate notice to carriers who may be authorized to provide such service. Also, this is not the ordinary and accepted method of seeking an extention of irregular-route operations; and since published notice did not apprise possibly interested parties of actual nature of proposed service, application must be denied.—Denver-Albuquerque Motor Transport, Inc., Extension, 91 M.C.C. 582 (584); for similar reasons, application for authority from Wendover, Nev., to Midvale and Tooele, Utah, is denied when record shows that such authority is sought only for purposes of tacking. Application as filed could not have been interpreted as seeking operating authority from or to any points other than those actually named.—Oxborrow Extension, 95 M.C.C. 96 (97-8)*.

Following principle of 84 MCC 239 and 92 MCC 220, carriers who would perform an irregular route service involving tacking or interchange must, in filing application, inform the public as to the true nature of the proposed service.—Kreider Truck Service, Inc., Extension, 92 M.C.C. 662 (663).

Application as published in Federal Register, for authority to haul meats and packinghouse products, byproducts, and items distributed by packinghouses, did not embrace dairy products dealt in by creamery company which is not a packinghouse, and grant of authority sought for dairy products by amended commodity description submitted at hearing would exceed scope of the application as published. Republication in form now desired by applicant is not warranted when service now available to the creamery company does not appear inadequate for its limited transportation requirements as shown of record.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (636, 640).

Where application as filed sought authority for "dry bulk commodities" but traffic of sole supporting shipper either cannot be termed bulk commodities or will not be handled in bulk, potentially interested parties were not afforded sufficient notice properly to protect their interests. Although, in certain situations, republication in Federal Register of authority to be granted has been ordered where prior notice was inadequate and need for proposed service is established, instant case does not present any such situation; moreover, the difference between the authority sought and that required is too great; application denied.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 254 (257-8).

Omissions: [Vol. 12].—Though applicant apparently made no effort to correct omission of extension authority originally sought from Union City to Jackson, Tenn., from territorial description in published notice of amended application, counsel's letter asserts that elimination of such authority was not intended; as evidence shows that one shipper requires

service on shipments from St. Louis to Jackson, and the sole motor protestant has made no serious effort to meet shipper's requirements, grant of authority originally sought is warranted.—Edwards Extension, 88 M.C.C. 566 (567)*.

Parties: [Vols. 11-13, 15, 18, 19].—It was not unreasonable for the commission to conclude that, because of low volume of traffic anticipated on recently constructed highway, only one of four applicants should be authorized to provide service over the new road; its report sets forth criteria it employed in concluding which of the four was the best-qualified applicant for the route, and evidence in regard to each of the criteria was reviewed in the report. The commission's determination in favor of one applicant, and against the others, was not without a rational basis; such exercise of its wide statutory discretion to determine extent of service to be rendered cannot be disturbed by the courts.—Great Northern Ry. Co. v. United States, 209 F. Supp. 238 (240-1)*.

Considering the nature of jet thrust units for interceptor missiles, stability among the competing classes of carriers can best be fostered by withholding preference of one over another; no such preference is necessary where need is shown for two carriers to ensure prompt delivery of items essential to the missile program; authority granted both applicant which is primarily a carrier of aircraft and heavy commodities and applicant which is largely a carrier of explosives.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (6,9)*.

In determining which of two applicants is better entitled to authority sought, where service of only one is needed, among factors to be considered are (1) which produced evidence supporting the finding of public need, (2) existing authorities and operations of both, (3) location of their terminal facilities, and (4) equipment operated. While there is little difference between instant applicants in respect of terminal location or showing of public need, A's present operations embrace points in entire territory involved, and it can handle traffic in both directions except that originating in New England or middle Atlantic States, whereas B's authority is more limited territorially and is restricted almost entirely to one-way operations from Louisiana and Texas. A is thus in superior position to render efficient and economical service in connection with its existing operations, as well as having a much larger fleet of pneumatic trailers required for the traffic involved. Those factors and prior filing of its application outweigh B's limited experience in handling that traffic under temporary authority; A is therefore selected to perform proposed transporation of specified commodities from Ector County, Tex., to 25 States.—Younger Bros., Inc., Extension, 92 M.C.C. 624 (631).

In view of otherwise similar qualifications of all 21 applicants for authority to transport cryogenic liquids, fact that only 3 of the 21 operate equipment suitable for such traffic is controlling in selection of those three to perform needed services; record shows need for services of two carriers in the 30-State area applied for by most applicants and for service of a third carrier in western part of the United States. Two of carriers selected have authority for, and experience in, transportation of cryogenic liquids which entitles them to favorable consideration, and the third is the only one who actually owns cryogenic equipment. One applicant's argument that its prior application should take precedence over that of a selected carrier is without merit in instant circumstances. Carriers selected are the three best qualified applicants.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (17-8)*.

Where service of only 3 of 5 applicants for authority to transport salt from Williston, N. Dak., area to points in specified States is shown to be required, the only overriding factor in selecting the successful applicants is which can afford the optimum in service. Insofar as ability to render service is concerned, all applicants stand on equal footing except as to availability of equipment. Those in position to furnish sufficient equipment at any given time are the three whose operations are centered in the area; each has terminals at Williston, conducts extensive operations in surrounding territory, and has demonstrated ability to furnish equipment as needed; evidence is not convincing that the other two could provide equipment for the traffic when tendered. Granted accordingly.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (540-1)*.

While shipper-supported applicants do not automatically prevail over nonsupported applications, shipper support is one of several factors to be considered when choosing from a group of qualified motor carrier applicants. Recognition must also be given such factors as priority of filing, the existing authorities and operations of considered applicants, locations of terminal facilities, and the equipment operated before proper selection(s) can be made. Supporting shipper needs the service of two carriers; and on careful review of all the factors, authority is granted to the two applicants which have shipper's support and have been providing it with satisfactory service under their existing authorities.—Trans-Cold Exp., Inc., Extension, 95 M.C.C. 353 (356-7).

However, there is no reason to censure the third applicant for filing its application without the approval of supporting shipper. In light of a conversation between its representative and shipper, the carrier believed, in good faith, that shipper would support its application and, therefore, concluded it was making a legitimate request for authority at the time of originally filing its application, although subsequent events revealed that shipper support would not be forthcoming. That applicant should not have been castigated for insisting upon its right to be heard.—Id., pp. 355-6.

Where only one carrier service is shown to be needed, proper choice between several applicants cannot rest solely on basis of terminal location; other factors must be considered, such as amount and kind of equipment and facilities available, applicants' existing authorities and operations, and priority of filing. Of several applicants, the one whose application was filed first is best qualified in transporting similar commodities and in having available suitable equipment. Its nearest terminal is 14 miles away where are located facilities for cleaning tank trailers as required by shipper. Furthermore, its present operations extend throughout the destination area, and in 1962 it transported about 8,000 loads of dry bulk chemicals, including dry plastic materials whose handling characteristics are similar to that of supporting shipper's product. Considering on balance all of the factors involved, a grant to that applicant is justified.—Chemical Leaman Tank Lines, Inc., Extension, 95 M.C.C. 394 (400-1).

Record does not support authorization of six additional carriers to provide proposed service when, though the mint specifies that as many as three truckloads of silver bullion may move in a single week, projected tonnage for a year after the hearing indicated that an average of less than one truckload weekly was expected to move; also, it apparent that the service of one carrier will be adequate to meet the mint's needs. Each of the applicants is a substantial motor carrier with ample equipment and a nearby terminal, and the services they propose are substantially comparable. However, applicant Navajo handled substantial tonnage for the mint under its general-commodity authority prior to discontinuance of its service, filed its application prior to those of the other applicants, and is well qualified; considering all the circumstances of record, that applicant should receive the authority sought.—Navajo Freight Lines, Inc., Extension, 95 M.C.C. 551 (559-60).

Evidence shows need for some of the service proposed by two applicants, but potential eastbound traffic justifies certification of only one carrier. The applicant which has extensive terminal facilities in the two origin States and handles liquid chemicals from various points therein should be selected to provide additional service required, although its application was filed later than that of the other applicant. And for like reasons, the same carrier is designated to provide the westbound service shown to be needed, since it is in a superior position to render such service, notwithstanding fact that the other applicant is currently providing the service under temporary authority.—Pacific Truck Service, Inc., Extension, 94 M.C.C. 262 (266-7).

Four applications, requested by the same shipper, were all filed within 10 days of each other; such minimal variance in filing time should not be considered as controlling where volume of traffic involved does not warrant services of all applicants. Consideration of applicants' existing operations, their equipment, and terminal facilities, and the location of those States to which need for proposed service is shown provides a sufficient basis for

a fair and reasonable selection among them.—Wilson Bros. Truck Line, Inc., Extension, 94 M.C.C. 426 (431).

While evidence presented was too vague and indefinite to justify authorization of three duplicating operations, particularly where preponderance of the traffic does and will continue to move either by rail or in intrastate commerce, need exists for a single motor service for bulk shipments to certain of shipper's present and potential customers. Of three qualified applicants, the carrier selected to receive authority is presently authorized to perform some of considered transportation, maintains a complete terminal near shipper's plant, and was one of the two who first filed an application; that selection is as fair and appropriate as permitted by prevailing fact situation.—Coastal Tank Lines, Inc., Extension, 94 M.C.C. 206 (211-2).

Neither volume of supporting shipper's traffic nor its shipping problems require proposed service of both applicants in transportation of uncrated pianos from one origin to all States but Alaska and Hawaii. Authority granted applicant which already handles shipper's traffic directly to five States and by circuitous routing to the remainder; grant will merely eliminate existing circuity and will resolve its present difficulties in serving those States.—North American Van Lines, Inc., Extension, 91 M.C.C. 485 (488).

In choosing between two eligible carriers, where volume of traffic is not considerable and no need is shown for more than one, neither priority of filing nor fact that supporting evidence may have been presented on behalf of a particular applicant may be considered controlling unless other factors are equal. While first applicant has a terminal and considerable equipment stationed at considered origin, whereas second applicant customarily has only one or two trailers there, latter's equipment appears sufficient to handle the volume of traffic that will be moving; also, part of shipper's traffic is a dry bulk commodity which must move in hopper trailers and second applicant has several such trailers but first has none. Therefore, authority shown to be needed should be granted to second applicant.—Eldon Miller, Inc., Extension, 88 M.C.C. 309 (314)*.

Present need for through bus service between involved New Jersey areas and New York City does not warrant authorization of more than one carrier for either of proposed routes. Although proposals of three applicants are essentially identical respecting frequency of schedules, and all appear financially capable of providing the service, grant of extension authority to applicant recommended by joint board is not warranted when its existing routes do not serve territory along the proposed through routes, and route which it would coordinate with the primary routes is too circuitous to meet the need shown; neither priority of filing nor fact that it has temporary authority for the routes involved is controlling, and resolutions of civic and governmental organizations presented in its behalf are entitled to little weight when they were apparently formulated on understanding that it was the sole applicant, or because it was considered a taxpayer in the involved community.—Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (114-5)*.

Grant to one of the other applicants would enable it to accomplish by tacking a through service for which authority was denied it subsequent to consolidated hearing in instant proceeding; manifestly, it should not be granted authority now sought, without a restriction against such tacking, in absence of an overriding public interest, which is not shown. Public witnesses' expressed preference for that applicant or another were not based on comparison of their services; witnesses are primarily interested in reliable and adequate service, and their use thereof will not depend on which applicant receives the authority.—Id., pp. 111, 115.

Though the third applicant's anticipation of great reduction in transit time is not clearly substantiated, its proposal derives operational superiority from fact that it would serve two segments not included in the other proposals, where substantial public support for through service was demonstrated, and from its intention to operate the involved routes in connection with its present routes. Some improvement in transit time would result from greater use of express highways, and though prior report indicated that transit time over its present routes could be improved, there is no

showing that it is not rendering reasonably adequate service or that its operations could be better conducted in some different manner; such considerations should not vitiate weight to be given to probable improved transit time resulting from use of proposed routes; public interest will be best served by grant to that applicant.—Id., p. 116.

Prospective passenger traffic between Washington, D. C., and Dulles Airport near Chantilly, Va., is not shown to require scheduled regular-route service by more than one carrier, particularly in view of luxury-type, nonscheduled, door-to-door service concurrently authorized to be provided by a specialized carrier. Nor, while fact that one of two busline applicants already serves Washington National Airport is a factor to be considered in selecting the carrier to perform the scheduled service needed, is any need shown for the same regular-route carrier to serve both airports; decisive factor in selection of the other busline is that the Washington-Dulles routes are more within its operating area than that of the rival applicant, constitute a logical extension of its routes into Fairfax County, and would integrate better with its system.—A. B. & W. Transit Co. Extension, 88 M.C.C. 175 (182, 183).

Petition of contract-carrier applicant for leave to intervene in proceeding on common-carrier application for similar authority, for sole purpose of presenting a motion to strike portions of latter's exceptions which relate to matters in the contract-carrier proceeding, denied. Though both applicants had ample opportunity, neither opposed or became a party to the other's proceeding; joint consideration of both applications was not opposed by either and is in public interest; each proceeding is determined on its own merits, and the common carrier's exceptions, so far as they relate to the contract carrier's application, are not considered.—Dealer's Transit, Inc., Extension, 88 M.C.C. 375 (376, 377).

Order substituting as protestant a carrier which purchased original protestant's certificated rights at a tax sale and thereafter sought temporary authority to control the acquired operations pending final approval of the purchase, should be sustained. Such vendee has a vital and substantial interest in the application proceeding, since it is actively conducting the operations formerly conducted by the original protestant and has thus succeeded to its predecessor's interest.—Trans-Bridge Lines, Inc., Extension, 96 M.C.C. 506 (507-8)*.

The commission customarily allows carriers which do not yet hold authority but have applications pending to oppose the duplicating applications of others. Though one of two Canadian applicants for similar authority to conduct charter operations in United States holds no existing authority from the commission, it has an interest in the other's application and is a proper party protestant thereto, since if both applications are granted the resulting operations will be partly competitive.—Norton, 92 M.C.C. 82 (84).

In application proceedings under Part II the commission has consistently given consideration to the effect that grant of authority would have on existing carriers. Railway Exp. Agency's application for extension authority as a motor common carrier of express between specified points is in general similar to all certificate applications filed under Part II, and protestant short-line railroad has an interest therein to extent that it nows holds motor-carrier authority for part of the service REA seeks to perform. That interest on its face is entitled to protection, and fact that protestant is a party to a contract with REA concerning diversion of express traffic is immaterial.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 227 (230).

Though applicant objected to one protestant's participation at hearing on ground of noncompliance with Rule 1.241(c) of Rules of Practice requiring notice of intent to protest, and evidence adduced by a carrier on its own behalf will generally not be considered when it has not complied with that rule, protestant complied with the rule insofar as it filed timely copies of its notification with the commission, and asserts that such notification was in fact mailed to applicant's representative. Though applicant denies that it was received, the record does not warrant finding that the rule was in fact violated. Since that protestant has a real interest in the proceeding, and its authority coincides with that of other protestants, applicant was not prejudiced by its par-

ticipation; objection overruled.—Blythe Extension, 91 M.C.C. 827 (828-9).

The commission has always recognized interests of competing carriers in any proceeding which may result in grant of motor carrier authority and has permitted such carriers to become parties and actively participate. Although adequacy of existing service is not at issue in "grandfather" proceedings, opposing carriers aid commission to develop the record and to scrutinize evidence to insure that grant to "grandfather" applicant conforms to operations actually being conducted at time regulatory legislation became effective. In view of this long practice provided for by Rule 1.243(c) of Rules of Practice and sanctioned by the courts, rail protestants operating within territory claimed by applicant are proper parties to a "grandfather" proceeding.—M. D. Cressy Co., Inc., 91 M.C.C. 211 (212, 214).

Protestant brokers are proper parties of interest; even though authority for special operation may not be denied solely because of economic injury which brokers of round-trip tours may suffer, it is desirable that they be permitted to participate in application proceedings, since by reason of their familiarity with transportation conditions in the area and with the service offered they are able to assist the commission in developing an adequate record; they have sufficient interest to challenge an applicant's fitness and to ensure that any grant of authority conforms to the proof of public need for a new service.—Auch Inter-Borough Transit Co. Extension, 88 M.C.C. 455 (460).

Inasmuch as exceptant's notices of protest, having been dispatched 9 days prior to the date of hearing, on their face do not comply with requirement of rule 1.241(c) of the Rules of Practice that a notice of intent to protest be dispatched so as to reach applicant's representative at least 10 days prior to the hearing date, the examiner properly refused to permit exceptants to appear as protestants. Furthermore, fact that the carriers' representatives were attending a conference meeting, causing interruption in their office procedures, is not a good excuse for noncompliance with the rule as to notice; therefore, since it was within the examiner's discretion to deny their petition to intervene, filed at the hearing and alleging that fact, such action should not be interfered with under the circumstances presented.—Ringle Exp., Inc., Extension, 95 M.C.C. 602 (603,605).

Priority of filing: [Vols. 11-13, 15, 19].—Where two applicants seek same authority, but only one motor-carrier service is required, carrier selected is the one which first filed application and is qualified by its experience, availability of equipment, and general ability to perform the service.—Indiana Refrigerator Lines, Inc., Extension, 91 M.C.C. 71 (80).

Since volume of shipper's traffic does not require services of more than one carrier, authority is granted that applicant which first filed application, has shipper's unqualified support, has existing facilities at point of origin, and has rendered satisfactory service to that shipper within scope of its authority.—Trans-American Van Service, Inc., Extension, 89 M.C.C. 48 (50).

Since there is no substantial distinction in ability to provide service of the four applicants seeking to serve supporting shipper in transportation of silos to substantially the same destination territory, weight must be given to fact that initial application of one—though encompassing only glass- or enamel-lined silos—was filed approximately a year prior to those of the others; and since its later-filed application is broader in scope, the initial application is dismissed and authority granted, so far as need for the service is shown, pursuant to the later application.—C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (294-5)*.

And where 2 of the other applicants seek identical destination territory, authority is granted that one which filed its application nearly 2 1/2 months before the other's, except that grant of authority to both is justified to 2 States to which shipper's traffic volume is expected to be considerably heavier than to others.—Id., p. 295.

16. Amendment of application.—[Vols. 10-14, 17-19].—Although application seeking authority to operate over two routes between Philadelphia and New Jersey Turnpike, serving no intermediate points except on traffic to or from points beyond Philadelphia or New York City was not a masterpiece of draftsmanship, grant of authority to pick up and

discharge passengers and express along those routes, restricted against transportation of traffic originating at or destined to Philadelphia or New York, did not constitute an amendment after publication in Federal Register, contrary to rule 1.241(a) of the commission's Rules of Practice. Application's emphasis on Philadelphia and New York was to assure buslines serving Camden-New York and Camden-Philadelphia that authority requested did not cover that traffic, and there is no suggestion that plaintiff was misled or otherwise prejudiced by any difference between the application and the certificate as issued.—Safeway Trails, Inc. v. United States, 234 F. Supp. 362 (363, 364)*.

While applicant Greyhound's intention to pick up and discharge in the Camden area traffic moving to and from the South could have been more clearly stated, in view of its existing operation authority and routes Baltimore and Washington can reasonably be considered "beyond Philadelphia" in operating from Camden to the New Jersey Turnpike and then heading south; nothing in application indicates that service to those cities from Camden must be through Philadelphia. The commission's holding that there had been no amendment of the application was a reasonable interpretation of its own rule 1.241(a), and fact that there may be other reasonable interpretations does not authorize the court to reject the reasonable interpretation adopted by the commission; the commission's findings and order sustained.—Id., pp. 364-5.

Amendment of application for authority to transport agricultural implements to articles weighing not over 500 pounds is ambiguous and should not be accepted when applicant and shipper claim that certain units exceeding that weight can be transported in sections weighing less than 500 pounds. Notwithstanding rejection of the amendment, original application can be considered on its merits, even though the amendment prompted withdrawal of certain opponents; the commission is not bound by understandings or agreements of the parties which would be inconsistent with public interest and practical and effective regulation.—Kindsvater Extension, 92 M.C.C. 131 (133).

Section 7 of Transportation Act of 1958 does not preclude commission, as a matter of law, from accepting late tendered amendments to "grandfather" applications. [Herrett Trucking case, 14 Fed. Car. Cas. #81, 380.] It is within commission's discretion to allow such amendments, providing original application for authority was timely filed.—Produce Transport Dispatch, 88 M.C.C. 198 (199)*.

Although applicant, at request of a potential protestant, amended application to seek authority for transportation of liquid chlorine in 1-ton containers requiring specialized equipment, the commission is not bound by any restriction or amendment which achieves results inconsistent with public interest and practicable and effective regulation.—Chem-Haulers, Inc., Extension, 88 M.C.C. 1 (2).

Broadening scope of application: [Vols. 12, 18, 19].—The commission is not bound by any amendment permitted at hearing which enlarges the scope of an application.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (636).

When original application as published in Federal Register clearly indicated applicant's intent to provide service at Hoosick Falls, N. Y., and amendment proposed at hearing to extend terminus of one route proposed therein from North Hoosick Falls to Hoosick Falls was not objected to by any protestant at that time, scope of application is not unduly broadened thereby.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (314, Note 6)*.

In view of decision of district court, subsequent to the commission's rejection of amendment broadening scope of "grandfather" application, that it was error to refuse to accept a late-tendered amendment to an application timely filed under Transportation Act of 1958, the proceeding was reopened to permit applicant to re-offer the amendment and present additional evidence.—M. D. Cressy Co., Inc., 91 M.C.C. 211 (212, 213).

While the commission may grant authority in excess of that sought so that the certificate issued will conform to the need shown for service, such practice is not normal unless authority thus granted would be relatively minor in relation to that sought by application as filed. Although application sought authori-

ty for "dry commodities in bulk," traffic of sole supporting shipper either cannot be termed bulk commodities or would not be handled in bulk; difference between authority sought and that required to transport shipper's traffic is therefore too great for such correction of application by the commission.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 254 (257).

Although application for authority to transport jet thrust units for interceptor missiles did not seek authority for accessories used in their installation, authority limited to the thrust units themselves would not provide shipper with the complete service needed; broadening of the grant to include accessories is a minor change in the application and does not require republication thereof.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (10)[W].

Commodities: [Vols. 10, 19].—Amendment of application filed under §7(c) of Transportation Act of 1958, seeking authority to transport exempt commodities in mixed shipments with those for which "grandfather" rights were claimed, should be accepted and considered on its merits. While applicants did not offer the amendment until date of the hearing, after statutory period for filing "grandfather" applications had expired, protestants were given sufficient advance notice of their intention to do so and there was thus no element of undue surprise; also, the amendment did not so materially broaden the issues as to cause any delay, administrative or otherwise.—Produce Transport Dispatch, 88 M.C.C. 198 (199)*.

Since public convenience and necessity cannot be found to require a service which applicant is already authorized to perform, applicants' amendment of their applications prior to further hearing does not deprive commission of right to interpret their present commodity authorities or eliminate necessity thereof.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (92).

Narrowing scope of application: [Vol. 12].—Applicant's obvious intent for offering eight amendments to the applications, territorially restricting proposed operations, was founded on desire to eliminate all opposition thereto; however, as held in 83 MCC 113, such fragmenting of an application results in the public need for a particular service being subordinated to applicant's own interests, leaving an unclear picture of the authority sought and the support for the amended proposal. While considered restrictive amendments do not relate to any origin from which service is shown to be needed, and supporting shippers have not been confused by the amendments, applicants have used a proceeding before the commission to negotiate and secure their own interests without any apparent regard for public need for their services as originally proposed; the commission disapproves of such practices and strongly emphasizes that such tactics are not condoned.—Liquid Transporters, Inc., Extension, 94 M.C.C. 615 (616-7, 618).

While examiner's desire to protect interests of carriers who agreed to restrictive amendment of application is commendable, such agreements between the parties are not binding on the commission; protestants who withdraw their opposition because of examiner's acceptance of some restrictive amendment do so at their peril.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (59).

Restrictive amendments offered at time of hearing are not binding on the commission; protestants who rely on such amendments do so at their own peril and cannot be heard to complain that they were denied opportunity to oppose the application actively.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (736).

Points, routes: [Vol. 10].—The commission adopts recommendation of joint board which substituted a geographical description, in defining applicants' area of service, for a mileage-radii one stipulated to by applicants in amending their applications. Applicants do not seriously object to the geographical description, or attempt to show that under such description they could not serve all points served before and since the critical date; moreover, the grants recommended by the board are supported by the record, and interpretations of the applicants' area of service would be greatly facilitated by an adoption of the board's findings.—Denali Transp. Corp., 94 M.C.C. 521 (522-3).

18. Burden of proof.—[Vols. 10-19].—Applicant for a motor carrier certificate has not only the duty to make an affirmative showing

that proposed operation will be of beneficial value to the community but also incurs the added burden of showing that such operation is a necessity; and the latter is generally ascribed to a lack of adequate existing facilities. —Watkins Motor Lines, Inc. v. United States, 243 F. Supp. 436 (439)*; and, therefore, there was no error in the commission's failure to require affirmative proof of protesting carriers' operating authorities and their interline connections. To require such proof would place on the commission a burden of needlessly sifting through certificates of authority and interline agreements which are not even in controversy.—Curtis, Inc. v. United States, 225 F. Supp. 894 (898, 899)*.

A showing of convenience alone is not enough to meet applicant's burden of establishing by the evidence that the proposed service is or will be required by present or future public convenience and necessity; adequacy of existing service is one of the basic ingredients in such a determination, and burden is on applicant to show lack of adequate service. Grant of temporary authority in no way eases applicant's burden of proving public need; the mere fact that it may have been operating successfully and in accordance with the commission's regulations does not prove that public convenience and necessity was served.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (896-7, 899-900, 902)*.

Applicant for a certificate has the burden of satisfying the statutory requirements; it must prove its fitness and must establish by a fair preponderance of the evidence that that present or future public convenience and necessity requires the proposed operations; the same rule is applicable with respect to an extension application.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (468)*; Eazor Exp., Inc. v. United States, 218 F. Supp. 393 (394)*.

Burden is on the applicant to prove that its proposed service is or will be required by present or future public convenience and necessity.—Vincent Montone Transp., Inc. v. United States, 231, F. Supp. 484 (487)*; but since evidence of adverse effect on protestants is generally within their control, protesting carriers should come forward with information of that nature to persuade the commission to deny the application for a certificate. —Robbins v. United States, 204 F. Supp. 78 (81)*.

The burden of proof is on applicant to establish public convenience and necessity; and the examiner's statement, in report which the commission adopted, that, all factors considered, the evidence submitted by protestant (plaintiff in instant case) did not warrant partial denial of the application, did not shift the burden of proof to plaintiff but, rather, merely concluded that plaintiff's evidence did not overcome applicant's showing of need for its service. Decision of the examiner and the commission was not induced by any erroneous view of the law relating to burden of proof.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (571)*.

In seeking removal of key-point, rail-haul, and other rail-auxiliary restrictions in its motor-carrier certificates, so as to compete with independent motor carriers in the area by rendering all-motor service on motortruck billing and rates, burden was on applicant railroad to show that such modification was required by present or future public convenience and necessity; there is substantial evidence of record to justify the commission's conclusion that plaintiff failed to sustain that burden; denial of plaintiff's application sustained.—Great Northern Ry. Co. v. United States, 209 F. Supp. 230 (231, 232, 234)*.

When plaintiff presented one of its officers as its single witness in its extension application proceeding, and sought to rely on shipper evidence in proceeding on another carrier's application for similar authority in the same territory without complying with rule 1.82 of the commission's Rules of Practice, clearly the commission's finding that plaintiff had failed to prove public convenience and necessity for its service by evidence at its own hearing was not without basis.—Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831 (834, 835)*.

A contract carrier that failed to seek timely conversion of its permit to a certificate under §212(c) bears a heavier burden of proof in an application for conversion under §207. Evidence of past operations alone normally will not be sufficient because those operations

necessarily will have been restricted to service for a limited number of persons; therefore, shipper testimony demonstrating a public need for applicant's service as a common carrier should be produced.—Connell Transport Co., Inc., Conversion Application, 95 M.C.C. 312 (317, 319).

Motor carrier which controls a forwarder and is apparently managed in common therewith, and which also conducts a storage and warehousing business, has affirmative burden to establish that proposed extension operations, in light of those circumstances, meet the standard required by the national policy and the public interest as expressed by Congress, which is to supply an adequate, economical, and efficient motor service to the public without undue preference, unjust discrimination, or destructive competitive practices.—M. G. M. Transport Corp. Extension, 89 M.C.C. 699 (701).

Applicant failed to prove that it is fit properly to perform proposed operations when, based on the facts of record, it cannot be said to be in a reasonably satisfactory degree of compliance with the commission's motor carrier safety regulations; fact that it currently has an intensive safety program in effect, in an effort to eliminate violations of the safety regulations, does not establish that applicant is now fit to receive authority sought. The record shows that applicant is continuing the same type of violations which were the subject of the report in its earlier application proceeding.—Service Transport Co. Extension, 94 M.C.C. 255 (257, 258-9).

As applicants seeking authority to transport petroleum treating compounds, a recently developed product, already hold extensive petroleum products authority, they have the burden of establishing that shippers' compounds do not fall within that description.—Hugh Breeding, Inc., Extension, 95 M.C.C. 720 (725).

It is not an applicant's burden to interpret a protestant's certificate; however, under criteria announced in 72 MCC 788 and 77 MCC 602, it is incumbent on applicant to establish the composition, manufacture, and in some instances the use, of the commodities it seeks to transport.—Commercial Oil Transport, Inc., Extension, 92 M.C.C. 186 (188); Southern Tank Lines, Inc., Extension, 88 M.C.C. 594 (595); nevertheless, since vinegar is clearly not an "acid" as that term is generally understood in transportation parlance, and therefore not within protestant's authority for acids, there is no burden on applicant to establish that fact. Decision in 67 MCC 502, distinguished.—Erickson Transport Corp. Extension, 92 M.C.C. 122 (123).

Inasmuch as application to transport vermouth was protested by a carrier authorized to transport "wine," applicant was placed on notice that commodity status of vermouth might be questioned, and should have been prepared to deal with that issue; in such circumstances applicant had the burden of establishing, through expert testimony, the status of vermouth for transportation purposes.—Southern Tank Lines, Inc., Extension, 92 M.C.C. 423 (425).

In view of applicant's assertion that "varnish" produced by supporting shipper is not within protestant's authority for acids and chemicals, it is an integral part of its burden to establish through expert testimony the status of the commodity sought to be transported; lacking this, it cannot be concluded that protestant may not handle the traffic or that shipper is without adequate transportation facilities.—Maxwell Co. Extension, 88 M.C.C. 648 (651).

To warrant a grant of authority, applicant must establish that a definite and substantial need exists for its proposed service, and that such service will be utilized if it is established. Such a showing is not made when the extent to which supporting shipper would use proposed service is highly indefinite and speculative. Denied.—Burton Trucking, Inc., Extension, 94 M.C.C. 790 (792); also, though the commission has generally been less exacting with respect to evidence deemed necessary to justify a grant of authority to transport house-

hold goods, there must be some evidence of need for the proposed service and proof that the authority would be exercised if granted.—Wheaton Van Lines, Inc., Extension, 94 M.C.C. 489 (492)*.

Applicant failed to show need for proposed transportation of household goods between Alaska and points in the 48 contiguous States when it relied solely on its alleged past operations in movement of household goods for military personnel, presenting no shipper support; evidence does not show how applicant participated in those shipments, how they were routed, or whether they moved overland or through a port; however, it is clear that many shipments were transported unlawfully if, in fact, transported by applicant. Applicant's claimed past operations are not entitled to any weight in determining need for proposed household goods transportation. —Trans-American Van Service, Inc., Extension, 94 M.C.C. 248 (250-2); and as to that part of the application seeking authority to transport certain other commodities, evidence presented as to public need is too vague and indefinite to support a grant. Denied.—Id., pp. 253-4.

Before common carrier authority may be granted, it is incumbent on applicant to establish by clear and convincing evidence that there is a real need for proposed operation which existing carriers are either unable or unwilling to fulfill.—B. & C. Transp., Inc., Extension, 94 M.C.C. 326 (329); applicants, for the most part, failed to sustain that burden of proof.—Wilson Bros. Truck Line, Inc., Extension, 94 M.C.C. 426 (430); since shipper's supporting testimony is without any specificity concerning any inadequacies in existing service, it fails to meet that burden. There being no definite showing of need, the application must be denied.—Dixie Ohio Exp., Inc., Investigation and Revocation, 94 M.C.C. 625 (636)*; similarly, applicant failed to sustain its burden of proof when motor transportation needs of supporting shippers can be met by existing common carrier services which are not shown to be wanting in any material respect. Denied.—Samack, Inc., 94 M.C.C. 161 (165)*.

Since Railway Express Agency is a shipper as well as a carrier of express, its opinion of existing facilities available to it as a shipper is entitled to consideration, and it may meet its burden of proof in extension proceeding by its own expression of need for service and its dissatisfaction with existing service.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (479); however, REA should not be allowed to offer express service by motor vehicle in lieu of rail transportation without any consideration of the adequacy of other existing service. An unbroken line of cases establishes that an application by REA for motor authority to transport express is subject to the criteria which stem from Part II; and while it can meet the burden of proof under Part II by its testimony of need for service in its role as shipper, its evidentiary standards should be no less than the requirements which must be met by other shippers. —Id., 94 M.C.C. 102 (106, 107).

The commission has recognized that express service should not be tied to any particular mode of transportation; however, as held in 94 MCC 102, authorization of a proposed line-haul motor operation by REA must be justified on evidentary standards that are no less than those required of other carriers proposing a transportation service under certificated authority pursuant to Part II. That evidentiary burden is the same for any express carrier seeking such authority, whether its proposal is supported by representative user complaints regarding the underlying transportation made used to effect the express service, or by the carrier's own testimony—in its role as a user of carrier services complained of—as to need for the service for which authority is sought.—Id., 94 M.C.C. 677 (679).

Fact that record in "grandfather" proceeding under §7(c) of Transportation Act of 1958 was not completed until almost 4 years after the critical date of May 1, 1958, does not in

any way release substituted applicants (transferees of original applicant's "grandfather" claims) from necessity of showing continuous "grandfather" operations during the period since the critical date.—Refrigerated Service, Inc., 92 M.C.C. 311 (314)*.

One fundamental fact which must be established by an applicant for "grandfather" authority under Transportation Act of 1958 is that on and continuously since May 1, 1958, it has been engaged in bona fide operation as a for-hire carrier of the commodities specifically brought under regulation; in the usual case, any clear factual indication of the nature of applicant's operations should immediately satisfy its burden of proving this fact.—Kendall Co., 88 M.C.C. 364 (367).

In a "grandfather" proceeding, burden of proof in on applicant to establish the scope and character of his operations and the truth of every essential allegation in the application. Applicant admittedly transported bananas as both a private and a for-hire carrier and the presumption is strong, in absence of evidence to the contrary, that shipments on which there is no proof of payment of Federal transportation tax were transported in private carriage; and since that presumption was not overcome, applicant clearly failed to demonstrate that he transported those shipments as a for-hire carrier. Granted in part.—Lowrance "Grandfather" Application, 91 M.C.C. 440 (443)*.

Where "grandfather" authority to continue a territorial operation is claimed, an applicant must show that he has served a sufficient number of points throughout the territory which are representative of the entire area. Determination of "grandfather" rights involving household goods authority is attended with difficulties as the traffic is non-recurring and, while the evidence does not indicate service to all points within Alaska, it establishes service to numerous points representative of the entire Alaskan area, except the panhandle, susceptible to motor carrier operation.—Sig Wold Storage & Transfer, Inc., 94 M.C.C. 471 (473).

See also Al Renk & Sons, Inc.—Alaska "Grandfather" Application, §206(a)(4), (5), n. 2; and Consolidated Freightways Corp. of Del. "Grandfather" case, §206(a)(4),(5), n.50.

Existence of advantages of proposed coordinated rail-motor service is not per se a sufficient basis for granting authority sought for the motor portion thereof; applicants still have burden of proving significance of those advantages in a factual context, and a present or foreseeable future need for the service proposed.—Osborne Truck Line, Inc., Extension, 94 M.C.C. 414 (418).

Proof required of automobile haulers authorized to file petitions in lieu of applications for modification of their outstanding authorities to enable them to continue participating, by use of substituted rail service, in traffic formerly handled in all-motor movements, outlined.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (415).

Applicant's burden of proving need for proposed substituted motor-for-rail service, in highway transportation of TOFC trailers in connection with prior or subsequent rail movement, is not met if it appears that satisfactory motor carrier service is available and being used, and there is no apparent advantage in or need for additional service.—Copey Trailers, Inc., 91 M.C.C. 551 (553).

A higher standard of proof is required when an independent motor operation is proposed by a railroad or by a motor carrier subsidiary of a railroad; "special circumstances" must be shown to justify rail participation in a purely motor operation. Applicant railroad has met that burden when it shows that no other rail or motor service is now available to shippers located at points on abandoned branch line; where businesses have been established in reliance on transportation furnished by the railway, it should be permitted to continue supplying service.—Soo Line R. Co. Extension, 94 M.C.C. 19 (20, 21).

Inasmuch as service proposed by rail-subsidiary applicant is not a true substituted mo-

tor-for-rail service, since authority to serve off-rail points as well is sought, applicant must show not only that proposed service is required by public convenience and necessity but, also, that "special circumstances" exist which warrant favorable action on its application; evidence adduced falls far short of meeting that burden of proof.—Milwaukee Motor Transp. Co., Extension, 89 M.C.C. 41 (45).

The underlying policy of §5(2)(b) governs applications filed under §207 by railroad-controlled motor carriers; therefore, because it is a railroad subsidiary, applicant has a special burden to prove need for unrestricted extension authority sought, and fact that it now holds unrestricted "grandfather" authority does not render §5(2)(b) inapplicable; on the contrary, the policy of Congress reflected in latter section would seem to apply with greater force to railroad-controlled motor carriers holding unrestricted authority than to those with restricted certificates.—New England Transp. Co. Extension, 88 M.C.C. 703 (706).

Although public convenience and necessity for either elimination of a gateway or relocation of an interchange point may be found in operating economies and efficiency, an applicant seeking gateway elimination must show in addition that it is conducting a substantial competitive operation under all its pertinent authority through that gateway, and that elimination thereof will not enable it to institute a competitively different service to detriment of existing carriers, whereas one seeking relocation of an interchange need only establish additionally that the interline service through the new point will not be competitively different from that which can be performed through the present interchange point.—Blue Ridge Transfer Co., Inc., Extension, 92 M.C.C. 463 (465).

A carrier seeking relocation of an interchange point need only show, in addition to operating efficiency and economies, that interline or interchange service possible through the new point will not be competitively different from that of the present interchange point. Applicant's proposed interchange of traffic at Sacramento, instead of Oakland, would not be a new service, and would permit a more efficient and economic handling of its existing interline and interchange traffic.—Southern California Freight Lines Extension, 94 M.C.C. 467 (469).

Policy and rule of law laid down in 83 MCC 451, that an applicant seeking authority on the gateway-elimination principle, which lightens the normal burden of proof, must show that it is transporting substantially all authorized commodities from and to substantially all authorized service points, so as to be effectively and efficiently competing with existing carriers is sound and, thus, controls determination of the issues in instant proceeding. Therefore, since applicant failed to demonstrate that it is entitled to elimination of its existing gateway, it must meet the usual tests of public convenience and necessity.—Service Trucking Co., Inc., Extension, 88 M.C.C. 697 (700-1)*.

It would materially distort the concept of substituted motor-for-rail service to allow applicant railroad subsidiary, which seeks to transport traffic moving in Railway Exp. Agency's express service over a route shorter than its existing service route, to use the theory of gateway elimination, with its concomitant lesser burden of proof, to institute a motor service which would replace a less direct highway movement rather than an inefficient rail operation. Application must be considered as one involving an extension of operating rights, in which applicant must initially bear the burden of showing that the proposed service is required by public convenience and necessity. Applicant has failed to bear this burden, much less the greater one of showing special circumstances required of a railroad affiliate seeking motor carrier authority of the nature proposed; REA alone supports the application, and its evidence fails to show that existing service available to it in the area, which is partially utilized, is inadequate in any respect. Denied.—Central of Georgia Motor

Transport Co. Extension, 94 M.C.C. 6 (10-11).

Since the only permissible operations which applicant can now perform through its King City, Mo., gateway are between Kansas, Nebraska, or Iowa and the compartively limited number of authorized points on its regular routes extending generally circuitously from Kansas City to St. Joseph, Mo., thence northerly via the King City gateway area to Des Moines, it is apparent that the authority it seeks in order to provide through service between all points in its three-State radial territory, via St. Joseph, and between all points in two of those States, via Kansas City, far exceeds the scope of its existing authority and thus raises issues much broader than the mere question of operating economies. In the circumstances, it is incumbent on applicant to prove public convenience and necessity to same extent as would be required in any other application for new authority. Since it presented no public witnesses or other evidence that would meet that burden of proof, authorization of the described through service is not warranted.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (451).

Where a carrier seeking irregular-route authority for purpose of tacking or interchange has failed to inform the public in its application of the true nature of the service proposed, it must be held to the burden of proving a need for service from and to the origin and destination points shown in the application.—Kreider Truck Service, Inc., Extension, 92 M.C.C. 662 (663).

The burden is on applicant to establish that present or future public convenience and necessity require a proposed service; and the burden rests on an applicant seeking modification of outstanding authority to establish by clear, concise, and unequivocal evidence that the relief sought is warranted.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (95, 96).

An applicant proposing a new operation in a field already served by other motor carriers has the burden of proving that the existing carriers are not rendering the type or character of service which satisfies the public need, and that its proposed service would tend to correct or substantially improve that condition.—McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 250 (252).

Although in appropriate circumstances the commission has authorized existing carriers to participate equally in traffic from a new plant, where plant sought to be served by 4 carriers operating over highways within approximately 2.5 miles thereof has been in operation for over 3 years, and services of other carriers are available, applicants must establish with certainty that the existing services are inadequate to meet that shipper's reasonable transportation needs, and that their proposed services would remedy such inadequacies.—Roadway Exp., Inc., Extension, 88 M.C.C. 533 (537).

Protestant claiming ability to provide service from shipper's plant at Knoxville, Tenn., under its authority to serve the nearby point of Warcer has burden of showing that Knoxville is within the commercial zone of Warcer. —Blue Ridge Transportation Co., Inc., 89 M.C.C. 616 (619).

Although protestant holding authority from considered origins to Omaha, Nebr., has interchange agreements with carriers serving North Dakota destinations, shippers allege that neither it nor its connecting carriers has shown any interest in interline shipments; in such a situation, protestant acquires the burden of establishing affirmatively that it can handle the traffic and, also, that the interlining carriers are willing and able to transport considered traffic to North Dakota.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 657 (659)*.

Acceptance of protestant brokers' position that they are entitled, in arranging all-expense tours, to protection against direct competition of carriers holding special-operations authority would impose on carriers seeking such au-

thority a curious, and in some cases impossible, burden of proof, since in order to show that brokers' services are inadequate they would have to show that their own charter services are inadequate. Practical effect of such an anomalous requirement would be to reserve to brokers the right to satisfy future demands for new tour service—a result incompatible with requirements of the national transportation policy.—Auch Inter-Borough Transit Co. Extension, 88 M.C.C. 455 (460).

Though past operations conducted in good faith have consistently been considered some evidence of need for service, such proof, standing alone, is not enough to justify grant of authority; while the commission recognizes and appreciates the difficulties confronting passenger carriers in obtaining proof, since their customers do not have a regular and repeated need for service, some such proof is necessary to establish public convenience and necessity. Where a carrier seeks to establish the pattern of its past operations and its records are as informal as those of instant applicant, it is especially important that direct testimony, particularly of disinterested members of the traveling or shipping public, be presented so that a clear picture of the carrier's operations may be obtained.—Rose Extension, 86 M.C.C. 723 (724-5).

22. Evidence.—[Vols. 10-19].—Part I, §1(19), notes; see also §207(a), n. 25.

Probative value of evidence pertaining to a particular operation, in determining an issue of public convenience and necessity, is not affected by the fact that the operation may have been unlawful. If such operation shows a need for service, the need is nonetheless because of the fact, if it is a fact, that operating authority was lacking; thus, evidence pertaining to an unlawful operation should not be rejected because it is "insubstantial."—Best Way Motor Freight, Inc. v. United States, 253 F. Supp. 314 (319)*.

Although all possible connecting carriers did not appear as protesting witnesses, the commission's conclusion that adequate single-or joint-line service was available was not based solely on a presumption; 1958 edition of official directory, listing names of heavy and specialized haulers and containing advertisement describing Red Book Plan under which participating heavy haulers provide through service, was introduced in evidence at hearing; the commission is not unfamiliar with that plan and in absence of complaint may rely on members thereof to supply the services so offered.—Robbins v. United States, 204 F. Supp. 78 (82)*.

Since absence of an express finding of inadequacy of existing service does not invalidate an order of the commission, evidence to support such a finding is not a prerequisite to the commission's right to grant a certificate.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (570)*.

Though evidence is conflicting as to extent of likely diversion of plaintiff's small-parcel business by United Parcel Service, plaintiff's territory extends only some 75 miles out of St. Louis, while proposed service is to a much larger territory, and there is substantial evidence that much of UPS' business would be derived from shippers who have found parcel post unsatisfactory; any differences in the evidence as to value of UPS' service, availability of other service, and diversion, are not sufficient to take the case out of the area of the commission's judgment.—Id., p. 570.

When service carrier is lawfully providing to Air Force Base is regularly used by a substantial number of interstate passengers, it would be useless redundancy to require testimony that there was a substantial number of interstate passengers traveling through the Base who desire that service.—Carolina Scenic Stages v. United States, 202 F. Supp. 919 (923)*.

Although plaintiffs' application sought permit as a contract carrier and their evidence was designed to establish propriety of such a grant, the commission found the operation proposed to be common carriage and denied application on ground that plaintiffs had not

established a public need for the service that could not be adequately met by existing carriers. However, evidence relevant to contract carrier standards set forth in §209(b) often differs in type and degree from that relevant to common carrier standards of §207(a); plaintiffs could not reasonably be required to present evidence of public need for the proposed service, since such evidence was irrelevant to issues presented by their application. In treating the application as one for common carrier authority, the commission effectively denied plaintiffs opportunity to know by what standards they were to be judged; order set aside and case remanded.—Eddleman v. United States, 229 F. Supp. 231 (236-8)*.

Even though authority to operate over deviation route was disapproved, applicant for certificated authority over the same route was able to use the long-time operations over the deviation route which it had legally conducted in good faith under the Deviation Rules, before the commission ordered such operations stopped, as evidence of public need.—Strickland Motor Freight Lines Extension, 96 M.C.C. 732 (740, note).

Statements in applicant's reply not supported by record will not be considered; language objected to as scandalous and as prohibited by Rule 1.4(d) of Rules of Practice can reasonably be considered within purview of proper legal argument; motion to strike denied.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (25-6).

Motion to strike certain matter in reply to exceptions overruled, since there is no indication applicant was aware that the conclusions complained of are contrary to law or any ruling or commission finding; moreover, applicant has right to reach and urge adoption of any conclusions it deems justified on basis of evidence submitted.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (45).

Records of service performed by applicant, which were attached to his application, became part of the record as evidence under Rule 1.19 of Rules of Practice; thus, examiner erred in stating applicant had no documents substantiating his statement that he had performed proposed service from Charlotte to several of destination States.—Kiser, 89 M.C.C. 750 (755).

Letter from supporting shipper's administrative manager, confirming that its production of air cars at its South Bend plant has been discontinued and that it intends to dispose of its activities there, was made part of record by order of the commission; evidence of such changes in important facts, which have occurred since hearing and are made part of the official record, may properly be considered in determining whether authority sought should be granted.—George F. Burnett Co., Inc., Extension, 88 M.C.C. 452 (453)*.

Support of receivers is not required where shipper as a producer of cement has adequately demonstrated a need for motor service.—Orscheln Bros. Truck Lines, Inc., Extension, 88 M.C.C. 569 (573).

Since supporting shipper's witness is not attached to its division controlling transportation of petroleum products from Knoxville and Chattanooga to western North Carolina, and could not testify as to nature of shipping or transportation facilities at those points, there is no factual basis for determining whether or not any pipeline outlets that might be established in their vicinity would be within scope of applicant's present authority or the enlarged origin areas it now seeks; also, evidence of need for service from Chattanooga is completely speculative. All in all, the evidence adduced is far too vague and indefinite to justify grant of any part of application.—Petroleum Transp., Inc., Extension, 94 M.C.C. 777 (780, 781).

Although shipper witness testified concerning volume of steel traffic turned over to applicant in St. Louis area during a 10-month period, the claimed tonnage was not reflected in applicant's operating testimony for that period; applicant did not attempt to provide a basis of record for resolving those inconsisten-

cies at the hearing and must be considered to have waived its right to do so; and information contained in exceptions whereby it sought to cure the deficiency was not admitted into the record and may not be considered. Examiner's conclusion that the shipper witness was in error was logical; furthermore, volume of steel traffic transported over applicant's service routes would not provide adequate basis for a grant of the general-commodity alternate-route authority sought. —Transamerican Freight Lines, Inc., Extension, 91 M.C.C. 841 (845)*.

Protestants' tonnage figures for traffic moving not only between Chicago or St. Louis and the Dallas-Fort Worth area, but also through those points, are not properly comparable with applicant's tonnage figures for traffic originated and terminated at such points, and protestants' traffic data otherwise do not provide a proper basis for evaluating applicant's competitive effectiveness. However, it would be unrealistic to conclude that applicant, a substantial carrier, is not an effective competitor between St. Louis and Detroit (its headquarters and principal terminal) and other major markets served by it, particularly in view of confirmatory oral evidence of supporting shippers.—Id., p. 848.

Gasoline sales slips and weight station slips submitted by applicant do not show movement of commodities claimed to have been transported; though he claimed to have other documents to support his "grandfather" application, and was requested to locate them, have them abstracted, and bring such information to the continued hearing, he not only failed to do so, but, when afforded similar opportunity with specific instructions how to abstract, again failed to comply. Applicant has been given every opportunity to bring forth evidence to support his application, and his failure to do so suggests doubt that such evidence is available. Denied.—Cox, 89 M.C.C. 545 (548-9)*.

Although another applicant claimed that documents which would show operations after 1953 were found missing a week prior to hearing, it is significant that no evidence was adduced with filing of "grandfather" application of representative shipments handled from and to specific points, and no mention is made of origins or destinations served by him; it would be impossible to frame a grant of any authority in absence of such evidence; denied.—Id., p. 548.

Inasmuch as neither of air freight forwarders supporting application for authority to perform service (not within §203 (b7a) exemption) to and from certain airports holds a permit from the commission, and therefore may not utilize applicant's service, their evidence is not considered.—Nickerson, 88 M.C.C. 186 (187).

When supporting air forwarders hold no authority from commission and therefore may not lawfully tender traffic to applicant which it requires authority to handle, traffic handled for those forwarders in the past cannot be considered as traffic which would move under authority sought to serve points beyond terminal areas of the underlying air carriers.—Air Cargo Terminals, Inc., Extension, 88 M.C.C. 468 (470).

Admissibility:[Vols. 12, 19].—Exhibits supported by IBM cards, which cards were prepared in the regular course of business, were properly admissible without underlying documents. Objections to such documents, which merely are abstracts of more basic documents, must be directed to their probative value rather than to their admissibility.—Burnham Van Service, Inc., Household Goods—13 States, 98 M.C.C. 58 (61)*.

The sole qualified protestant in proceeding called, as witnesses, representatives of exceptants who were not permitted to intervene at the hearing, and offered such carriers' testimony as to their authority, willingness, and ability to perform proposed service. Such carriers were protestant's witnesses and testified in its behalf, although their testimony was also in their own interest. Since rule 1.241(c) of the Rules of Practice only applies to par-

ties, and does not limit the type of evidence which may be presented, the fact that witnesses consider themselves able to fulfill shipper's requirements is relevant to the issues involved on behalf of protestant, and may be submitted by it as rebuttal; failure of protestant's representative to testify has no bearing on admissibility of their evidence. But since protestant appeared in opposition to only part of application, evidence submitted through exceptants is relevant only to that extent. Examiner erred in not considering exceptant carriers' evidence as it pertained to authority to transport silos.—Ringle Exp., Inc., Extension, 95 M.C.C. 602 (605-6).

However, protestant, by not filing exceptions, waived any objection which it might have raised as to the examiner's failure to consider evidence offered by it through exceptants' testimony. Consequently, as no proper party complains of examiner's action, this issue is moot and will not be considered. Further, contrary to exceptants' contention, their witnesses were not entitled to have their testimony developed, or to be actively represented by their own counsel. The examiner's grant of authority adopted.—Id., p. 606.

Applicant's proposal, in response to a public need, to transport passengers directly from Camden, N. J., to Baltimore, Washington, and points south thereof without going through Philadelphia is transportation to "points beyond Philadelphia" and therefore within scope of application. As authority sought would be limited to traffic originating at or destined to points beyond Philadelphia or New York City, there is no requirement that such traffic move through either of those points, and, as Baltimore, Washington, and the other southern points are considerable distances south of and beyond Camden and Philadelphia, evidence applicable to proposed movement thereto was properly admitted.—Greyhound Corp. Extension, 95 M.C.C. 762 (769-70)*.

There is no merit to contention that applicant's evidence concerning proposed operations to Canadian points through ports of entry was improperly admitted because application did not specifically refer to such operations. Application seeks authority to operate in interstate and foreign commerce,and evidence concerning movement of either domestic or foreign traffic is clearly within its scope. Though the commission has no jurisdiction over applicant's operations within Canada or need for additional service between Canadian points, in deciding whether need is shown for authority sought to points on United States-Canadian boundary it is necessary to consider evidence submitted respecting service involving points in Canada.—Blythe Extension, 94 M.C.C. 23 (46).

And evidence relating to availability of commodity rates on considered traffic to the destination States was admissible as relevant to the question of whether or not available rates have not moved or will not move the traffic.—Id., p. 46.

Despite failure of protestant railroad's subsidiary to file notice of intent to protest application in accordance with Rule 1.241 of Rules of Practice, the fact that it is operating and considers itself able to fulfill part of supporting shipper's transportation requirements is relevant to the proceeding and may be put in evidence by a qualified protestant in rebuttal to evidence offered by applicant to prove that public convenience and necessity require the service proposed.—Younger Bros., Inc., Extension, 92 M.C.C. 624 (627).

Since Edgewater, N.J., is 4.2 miles from corporate limits of Jersey City, which has a population of over 100,000, it is within commercial zone thereof; thus, although only Jersey City was named in application, evidence of a consignee located at Edgewater was properly received.—Langer Transport Corp. Extension, 91 M.C.C. 933 (934).

Though protestant's regional manager stated on direct examination that he was familiar with availability of equipment at its Denver terminal, he stated on cross-examination that he receives no regular reports of such infor-

mation but learned the facts testified to from his subordinates—the terminal manager and dispatcher—who were not present at the hearing. Thus, his testimony was not admissible because it was based on information not within his personal knowledge, nor obtained by him in the normal course of business.—Curtis, Inc., Extension, 94 M.C.C. 728 (729).

Applicant failed at further hearing to produce evidence in support of the three grounds stated as basis therefor in its petition, but sought to introduce testimony of witnesses, some of whom testified in its behalf at prior hearing or who appeared on behalf of organizations which presented supporting witnesses at that hearing; the examiner excluded evidence sought to be introduced through those witnesses as cumulative, immaterial, or beyond scope of matters set forth in applicant's petition, or because adequate reasons for failure to present it at prior hearing were not submitted. Considering that prior hearing consumed 4 weeks and some 90 witnesses were presented, including 40 for applicant, examiner was justified in excluding testimony that was cumulative, immaterial, or irrelevant. See Rule 1.76 of Rules of Practices and §7(b) and (c) of Administrative Procedure Act.—Yellow Transit Freight Lines, Inc., Extension, 94 M.C.C. 153 (158-9)*.

Evidence presented by petitioner's witness concerning the number of rail merchandise cars operated between considered points, and the average load carried in each car, is hearsay evidence which is inadmissible because the underlying station agent reports were not prepared in the ordinary course of business. Petition denied on other grounds.—Missouri Pac. Truck Lines, Inc.—Removal of Key Points, 94 M.C.C. 146 (147-8).

Motion to strike traffic data concerning shipments handled subsequent to hearing, in applicant's reply to protestant's exceptions, granted when no provision for submission thereof was made pursuant to Rule 1.86 of Rules of Practices.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (568).

Testimony as to alleged competitive advantage of applicant partnership as result of one partner's being engaged in petroleum marketing business was properly stricken when it related to a statement by another shipper whom witness had solicited. Such testimony is irrelevant, especially as the partner referred to no longer has an interest in the noncarrier business.—Wooten and Parker Extension—Tamak Plant, 92 M.C.C. 530 (531-2)*.

Admission in evidence of a magazine article quoting an officer of petitioner's parent railroad on nature and scope of the railroad's Flexi-Van service was properly refused; statements thus sought to be introduced were plainly inadmissible under the hearsay rule.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (391).

Testimony of protestant railroad's operating witness that on specified dates its agents at Wilmington and Baltimore reported that shipments of fluorspar were transported by applicant, which at the time lacked authority therefore, is clearly hearsay and is not considered in passing on applicant's fitness.—M. I. O'Boyle & Son, Inc., Extension, 88 M.C.C. 559 (561).

Conversion of authority:[Vols. 11-13, 15, 18, 19].—Where a carrier seeks conversion of irregular-route to regular-route authority, the usual showing of public convenience and necessity must be made; however, such is not the case where carrier seeks conversion of its regular-route to irregular-route authority because, in most instances, it is already authorized to operate over several routes between its authorized points, and grant of authority consonant with its normal method of nonscheduled operation adds nothing to the operation actually being performed.—Deaton Truck Line, Inc., Extension, 89 M.C.C. 231 (234-5).

Affidavits submitted by shippers in support of applicant's purchase of vendor's irregular-route "grandfather" rights under §206 (a) (7) are entitled to weight in determination of merits of related application for conversion thereof to regular-route.—Inland Exp., Inc.—Pur-

chase—Frontier Dispatch, Inc., 93 M.C.C. 50 (53).

Though the presence or absence of any single one of the 8 criteria of regular-route operation specified in the Brady case (47 MCC 23) is not conclusive, each of such practices is suggestive of a regular-route service; the whole spectrum of activities embraced in the operations must be considered in determining the character of service performed. That an operation under irregular-route authority has taken on such rigidity that its day-to-day or week-to-week pattern may be reliably forecast is evidence of a gravitation to regular routes which is properly to be considered in determining whether an unauthorized conversion has occurred.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 88 M.C.C. 525 (529)*.

Though facts and circumstances of applicant's operation of daily through service between Twin Cities and Minot, N. Dak., a point in its radial area served from Bismarck, N. Dak., over its regular route from St. Paul to Bismarck and the only practicable route thence to Minot, will not support a finding that it has deliberately sought to destroy the irregular-route nature of its operations or that it could arrest the conversion process otherwise than by curtailing its legitimate business activities, its operations have taken on the characteristics of regular-route service. As it presently transports substantial amounts of general commodities between those termini and its service has become an integral part of the available transportation service, grant of regular-route authority from Bismarck to Minot is warranted.—Id., 92 M.C.C. 558 (563-4)*.

Cross-examination:[Vols. 11-13, 15, 19].—That the person who prepared exhibits purporting to establish applicant's financial status was not present at the hearing for puposes of cross-examination is not so material a defect in proof as to warrant a finding of financial unfitness when the exhibits were introduced through applicant's vice president, who, because of his position with applicant, was substantially familiar with financial data presented and was available for cross-examination thereon.—Schwerman Trucking Co. of N. Y. Inc., Extension, 94 M.C.C. 683 (685).

In order properly to develop a record in proceedings where applicant seeks authority for purpose of participating as initial carrier in a joint-line movement, potential interlining carriers are generally presented in support of the application. Existing carriers should have the right, by cross-examination, to establish the nature and reliabiity of the proposed joint-line service that would compete with their existing operations; but fair opportunity for such examination is not presented when the proposed delivering carriers are not participants at the hearing.—Bonanza Trucking Co. Extension, 92 M.C.C. 220 (223)*.

In determining whether documentary evidence should have been adduced to support oral testimony concerning inadequacies of existing service, the crux of the matter is whether the opposing party has had opportunity to cross-examine effectively; protestant had such opportunity when the documentary evidence could have been culled from its own business records.—T. M. Zimmerman Co., Extension, 89 M.C.C. 150 (153).

Joint board correctly denied protestant's motion to strike testimony of witnesses supporting application, on ground that it had not had opportunity to cross-examine them because, although they appeared for further hearing on date first set, protestant had not received notice thereof, and, as order rescheduling hearing did not direct applicant to have its witnesses present, they did not appear at that hearing. Right of cross-examination does not exist unless there is evidence presented, capable of being disputed, that is prejudicial to some right or interest which the asserting party has at stake; otherwise, cross-examination would serve no purpose. Supporting shippers testified to nothing from which an inference prejudicial to protestant could be drawn, and protestant does not claim

that their testimony was erroneous in any respect. Cross-examination on issue of need for proposed service would amount to no more than argument, since that issue is for the commission to decide. Further, the parties have been given opportunity to file pleadings wherein they might argue their viewpoints as to the interpretation to be given the facts.—Edwards Trucking, Inc., Extension, 92 M.C.C. 383 (384, 385)'*.

Under principles enunciated in 48 MCC 773, the examiner, at further hearing held for benefit of parties prejudiced by prior undue broadening of application, properly granted new protestants' motion to strike prior evidence of applicant and supporting shipppers because applicant did not make such witnesses available for cross-examination at the further hearing. As an alternative to issuing a decision limited by procedural considerations, however, application will be decided on its merit.—Leamington Transport, 91 M.C.C. 647 (648, 650)*.

Although applicant based its refusal to accept opportunity to cross-examine protestants' witnesses (who testified orally without prior submission of written statements) in part on overruling of its objections in a prior proceeding in which it had cross-examined a witness under similar circumstances, its inferences that had it not cross-examined that witness its objections would have been meritorious, or that it has waived any of its rights by cross-examining, are not justified by decision therein; such a holding would be contrary to intent of both Rule 1.87 of Rules of Practices (which requires only that objection be made at hearing and pressed in brief or other pleading to be preserved for consideration) and of Federal Rules of Civil Procedure, particularly Rule 46, with which the commission's rules are required by §17 (3) to conform.—Blythe Extension, 91 M.C.C. 827 (832).

Exhibits, abstracts:[Vols. 11-13, 19].—Rule that abstracts of original shipping documents, submitted to show shipments transported in the past, are inadmissible unless authenticated by underlying documents available at the hearing, has been consistently applied to abstracts prepared by computing machines for purpose of use at a hearing. An abstract, as such, inherently lacks authenticity, since its sole purpose is to set forth an abridgment of original records or douments; accordingly, to be admissible it must be supported by reliable documents or records which afford opposing parties a reasonable opportunity to test veracity of the abstracted information by cross-examination.—T.I.M.E. Freight, Inc., Extension, 89 M.C.C. 241 (242, 243).

But records or memoranda made in regular course of business are by their very nature vested with a quality of authenticity and are specifically made admissible by Rule 1.79 of Rules of Practice; opposing parties may by cross-examination of witness offering such an exhibit establish the nature, purpose, and reliability of the evidence so presented. However, intermediate business records consisting of IBM tabulating sheets, unsupported by more basic and informative documents, may be accorded little probative weight regardless of their admissibility. Rule 1.79 thus affords opposing parties adequate safeguards against consideration of unreliable evidence; business documents qualifying under that rule will be admitted, and objections thereto, where they appear to be abstracts of more basic documents, must be directed to their probative value rather than their admissibility; conclusions in the Transcon case, No. MC-110325 (Sub-No. 24), decided March 2, 1961, overruled.—Id., pp. 242, 243.

Exhibit submitted by applicant's director of freight operations, showing number of shipments and weight thereof transported between its termini during 1 month, is a monthly report compiled on IBM equipment in usual course of business and therefore admissible; other exhibits showing weight and number of shipments, as well as other information, for 5 specific days of that month, were supported by delivery receipts available at hearing; thus, as the exhibit is partially supported by under-

lying documents from which the tonnage figures shown were compiled, it may be accorded more than nominal weight.—Id., pp. 243-4.

There can be no question as to admissibility of exhibit consisting of a memorandum of savings realized in Railway Exp. Agency's motor operations between considered points under temporary authority, which was prepared under direction of its division superintendent who as result of his position was conversant with the information contained therein and was prepared to stand cross-examination thereon. The exhibit itemizes both REA's former operating expenses in handling involved traffic and those for the motor operations, lists line-haul savings from elimination of cost of rail car space, and deducts expenses incurred in separate movement of intrastate traffic. Although REA's underlying business data from which the exhibit was prepared might have assisted protestants in their cross-examination, they did not press for such data, but allowed the exhibit's admission without objection; in the circumstances, absence of the supporting data in no way diminishes the probative value of the exhibit.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 62 (69).

Abstracts of shipments transported by "grandfather" applicant were properly admitted although underlying shipping documents were not kept by him but by shipper in ordinary course of its business and turned over to applicant at hearing, where they were made available for examination by protestants. Each of the freight bills was signed on date of shipment either by applicant or by one of his drivers in shipper's office, and at hearing applicant was able to identify the freight bills and shipments they represented from the signatures thereon. Applicant had personal knowledge of his operations, including the shipments involved, and was subjected to extensive cross-examination; in view thereof, the underlying documents were sufficiently authenticated to support the abstracts.—Holomon, 92 M.C.C. 8 (12-13).

Exhibit representing shipper's file of instances in which protestant failed to place equipment as requested was compiled from typewritten reports prepared daily over a period of more than 10 years, analyzing service failures of carriers employed, which in turn was compiled from daily written reports, and was not inadmissible because of failure to produce such daily reports at hearing. There is a limit to the amount of underlying documentation required to support an exhibit; material contained in the challenged exhibit was accumulated by shipper in normal course of business and was properly admitted under the business records exception to the hearsay rule.—Blythe Extension, 92 M.C.C. 242 (243).

Exhibits showing cement traffic which would be diverted from applicant's parent railroad to independent motor carriers if application is denied were properly admitted when they were identified by the railroad's vice-president who, although he had been in its traffic department only a short time, had been employed by it for a considerable period. While exhibits were not compiled under his supervision, information was taken from records kept in his office in ordinary course of business, and he had checked records and could state that facts disclosed were correct within his knowledge.—Pennsylvania Truck Lines, Inc., Extension, 91 M.C.C. 167 (170)*.

Exhibits designed to show extent to which l.c.l traffic has declined were properly admitted in proceeding on removal of certain key-point restrictions; they were prepared from parent railroad's general statistical reports submitted monthly by agents of each station on the line, which show l.c.l. tonnage handled at the stations and number of cars required to move such traffic in and out. While a more complete breakdown of statistics might not square entirely with figures presented,the difference would probably not be great; decline in that segment of the railroad's business is consistent with experience of many railroads and is common knowledge in the transportation industry; exhibits substantially support purpose for which introduced.—Pennsylvania Truck Lines, Inc.—Key Points Re-

striction, 88 M.C.C. 505 (511).

While some shipments listed in applicant's abstract may in fact have been local or intrastate in character, they enhance his case by demonstrating the general nature of his transportation activities and his willingness to "haul anything anywhere"; also, some shipments listed were undoubtedly interstate although not so identified. While burden is ordinarily on applicant to establish the nature of shipments shown, there is no reasonable doubt that instant applicant transported general commodities in interstate commerce, and it is not reasonable to expect that in the frontier atmosphere prevailing in Alaska exact records were kept or technical niceties observed at all times; there is no need to examine each and every shipment for purpose of distinguishing between them, when the basic nature of applicant's operation is conclusively demonstrated.—Al Renk & Sons, Inc. Alaska "Grandfather" Application, 89 M.C.C. 91 (100).

In alternate-route application, where main disagreement between the parties was whether grant of the authority would allow applicant to institute a new service by avoiding terminal operations at Denver, Colo., applicant tried to explain that delays at Denver of up to 3 days, reflected in shipments extracted from its supporting exhibit, were caused by temporary personnel shortage and that the situation has been remedied. However, the exhibit covered shipments transported during a month which was 3 months before application was filed, and 6 months prior to the hearing. If applicant chose to support its application with evidence of operations it now claims were not representative, although it was free and had ample time to select a more representative period, it cannot be heard to complain should its own evidence be taken at face value.—Burlington Truck Lines, Inc., Extension, 96 M.C.C. 467 (470-1).

Examiner properly declined to consider abstract of some 2,500 shipments attached to "grandfather" application but not referred to at hearing by applicant or any other party, on ground that it did not constitute evidence. Several protests filed constituted reasonable compliance with requirement of Rule 1.19 of Rules of Practice that specific denial be made of matters contained in the application and attached exhibit, since at that time protestants had not had opportunity to inspect the underlying documents supporting the abstract. Thus, applicant had the burden of going forward with the evidence, and provisions of that rule respecting the abstract's status as evidence no longer applied; applicant was then under a duty to prove his case in the usual manner, qualifying any supporting exhibits, including that abstract, for admission in evidence.—Hughes, 89 M.C.C. 471 (477-8)*.

Furthermore, at hearing applicant introduced in evidence an exhibit listing some 8,000 shipments, for which underlying documents were available and on which he was extensively cross-examined; in view of the great number of shipments included therein and applicant's assertion that they were representative of his past operations, protestants' assumption that such abstract was duplicative and supplementary of that attached to the application is quite understandable, and it would be improper now to admit the latter in evidence.—Id., pp. 478-9.

Of thousands of shipments listed in 120 traffic exhibits submitted by protestants as subject to diversion as result of requested key-point elimination, a large number were beyond scope of the petition or would not be seriously affected by the proposals; therefore, at close of initial hearing the examiner specifically requested the parties to discuss on brief the weight to be accorded those exhibits. Only petitioner complied with that request, and as its analysis was not entirely satisfactory and time did not permit checking each shipment listed to ascertain which should be considered, the examiner properly concluded that those exhibits were not entitled to consideration.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (395-6).

At further hearing for express purpose of clarifying the traffic exhibits submitted by protestants at initial hearing, late-filed exhibits listing shipments handled on a day of petitioner's selection by two protestants who had not submitted traffic studies at initial hearing were admitted over petitioner's objection. Though there is doubt whether those exhibits come within exact terms of the reopening

orders, to strike them on such technical grounds would be unduly harsh in view of their materiality to the main issue—effect of petitioner's proposal on operations of existing carriers; examiner did not exceed his discretion in admitting the late-filed exhibits, and data therein may be considered.—Id., p. 397.

Filing after hearing:[Vol. 19].—Rule 1.86 of the commission's Rules of Practice provides that, unless expressly so permitted or required, any documents or other writings submitted after close of a hearing will not be admitted in evidence or considered. As plaintiff's petition, filed some 9 months after hearing, for leave to file a late-filed exhibit was not based on either exception stated in the rule, it would seem that it was addressed to the sound discretion of the commission, exercise of which the court may not disturb unless it constitutes a clear abuse of authority. No such abuse appears; reasons assigned by the commission for denying the petition, that evidence sought to be introduced was cumulative of that already offered, also the long delay in making the application and an unexplained gap of some 8 months in the statistical record contained in the proposed exhibit, appear not unreasonable.—Great Northern Ry. Co. v. United States, 209 F. Supp. 230 (233-4)*.

Provision having been made in the examiner's recommended report for filing of applicant's current equipment-lease contract, as a later filed exhibit, whereby applicant could show that its present operations conform to the statute and the commission's regulations, that exhibit was received in evidence.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 361 (362).

Motion to strike exceptions of one protestant and certain attachments to exceptions of another, on grounds that they constituted evidence adduced after hearing and that receipt thereof is proscribed by rule 1.86 of the Rules of Practice, granted as to the attachments; they should have been presented at the hearing and applicant afforded opportunity to cross-examine thereon. As to the challenged exceptions, that carrier is a proper party protestant and is entitled to submit exceptions irrespective of its participation in the hearing. See rule 1.96. However, certain references in those exceptions are in the nature of evidence, are akin to the stricken attachments, and therefore will also be stricken.—Sullivan Const. & Rigging Co. Extension, 94 M.C.C. 296 (298).

New and extension operation:[Vols. 12, 19].—Evidence showing that intervening defendant has been serving supporting shipper for almost 28 years, that under its existing authority it can transport pianos from shipper's Bluffton, Ind., plant directly to five States and circuitously via Chicago to the rest of United States, that it offered the only uncrated motor service available to shipper, and that grant of authority which would eliminate the circuitous routing via Chicago would reduce delays in service, together with other evidence of record, afforded sufficient justification for examiner's findings recommending grant of authority sought to intervening defendant and denial of plaintiff's application for similar authority, which the commission adopted; the commission's decision affirmed.—North American Van Lines, Inc. v. United States, 217 F. Supp. 837 (841)*.

Evidence relevant to shipper's marketing needs was unspecific in that its traffic manager, although generally well acquainted with transportation needs of the company, could not specifically testify as to projected sales to destination States. He could give, however, an approximation of shipper's tonnage and consequent motor carrier requirements; record contains a minimum of probative evidence showing that shipper has customers at destination points, whose needs will be supplied from its new distributing facilities, instead of the more distant manufacturing plants.—Mitchell Transport, Inc., Extension, 94 M.C.C. 450 (452-3).

Number of witnesses: [Vol. 11].—Although Railway Exp. Agency is an express company and therefore not a shipper in strict sense, it uses facilities of other carriers to transport the traffic which applicant railroad subsidiary seeks authority to handle over proposed extension route. Therefore, evidence of REA, which alone supports the application, concerning adequacy of transportation facilities available to it in involved area is considered; as that evidence, even in its most favorable posture, fails to show that existing service, which REA uses in part, is inadequate in any

respect, application is denied.—Central of Georgia Motor Transport Co. Extension, 94 M.C.C. 6 (11).

Since the only public witness supporting proposed pickup and delivery service within Atlanta for pool-car operators and unregulated forwarders was a representative of purported shipper association whose transportation needs were rendered moot by findings in 316 ICC 259, application must be considered devoid of public support. However, since applicant's failure of proof may be due to reliance on its claim of exemption and motion to dismiss, denial is without prejudice to refiling of application.—Atlanta Bonded Whse., Inc., 91 M.C.C. 104 (111).

While reroutings on prime machines are prepared initially by dealers, their selections are subject to supporting shipper's final approval and this, coupled with shipper's control of "parts" shipments, makes it the proper party to support application.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 356 (360).

Oral testimony:[Vols. 11, 12].—Although applicant's president testified that daily records of special and charter operations by it and its predecessor during the years 1926 through 1954 had been destroyed by a flood, testimony of two bus drivers employed by applicant and its predecessor continuously since 1927 and 1938, respectively, is probative evidence, was properly received, and should be considered, when their collective testimony shows that they were thoroughly familiar with the earlier operations performed by the predecessor and the later operations performed by applicant.—Trans-Bridge Lines, Inc., Extension, 96 M.C.C. 506 (510)*.

Joint board's admission of testimony of applicant's superintendent concerning number of express shipments handled by applicant in involved territory under temporary authority was not an abuse of its descretion and did not prejudice opposing carriers although it was based on a tally prepared especially for the hearing and underlying documents were not available for inspection. Witness had close personal knowledge of considered operation, and his testimony was subject of cross-examination and was substantiated to some extent by that of several public witnesses.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 487 (488, 489).

While presentation of documentary evidence might be deemed the "best evidence," the commission has always allowed testimony concerning transportation matters relating to supporting shipper's enterprise by those who have personal knowledge of the business and the transportation requirements of their companies; moreover, requirement of rule 1.83 of the Rules of Practice that underlying documents must accompany an abstract offered in evidence does not obtain when notes are used in giving oral testimony and the opposing party has means available to cross-examine effectively. Accordingly, testomony of shipper's general traffic manager concerning inadequacy of existing service, based on notes from company's records, was properly admitted.—T. M. Zimmerman Co., Extension, 89 M.C.C. 150 (153).

The examiner erred in not allowing applicant to use abstracts of his business records to refresh his memory; witness had some recollection of movements involved and the attempt to refresh his recollection was within bounds of permissive direct examination. The writing was not intended to be offered itself and the testimony would be what the witness said, not the writing, thus preserving all of the rights of cross-examination, while guaranteeing against the imposition of false evidence. Furthermore, use of an abstract for such purpose is allowable under rule 1.75 of the Rules of Practice and, also, 249 F. 2d 129 and 162 US 687.—Kiser, 89 M.C.C. 750 (753-5).

Testimony of protestants' witnesses regarding tonnages and transit times between points pertinent to application for gateway elimination was properly admitted, without underlying documents, when it was adduced through persons having close personal knowledge of operations of carriers they represented; witnesses were subjected to cross-examination, and joint board had opportunity to evaluate their testimony in light of their demeanor. Such evidence consisted largely of approximations and is weighed accordingly. —Centralia Cartage Co. Extension, 91 M.C.C. 749 (750).

There was not error in the examiner's allowing witnesses for protestants who were

not represented by practitioners to testify orally in narrative form. The Rules of Practice provide sufficient safeguards to protect interests of all parties, so that this method of testifying is not in itself detrimental to any. While use of written statements greatly facilitates the making of rulings as well as brevity and clarity and their use is preferable to unprepared oral narrative testimony, use of prepared statements is not required by Rules of Practice and, absent usual circumstances, a party is not prejudiced when witness presents testimony in extemporaneous and narrative form.—Blythe Extension, 91 M.C.C. 827 (831-2).

Record in other proceedings: [Vol. 19].—Whether or not the commision might have considered shipper evidence in another proceeding, wherein authority to provide similar services in the same territory was sought, in deciding plaintiff's application case, it was not required to do so; plaintiff made no attempt to comply with rule 1.82 of the commission's Rules of Practice, yet, in view of the many protestants in plaintiff's case and the large record in the other proceeding, compliance with that rule was in no sense a mere technicality.—Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831 (834, 835)*.

Exhibit consisting of certified transcript of testimony of supporting shipper's witness as given by same witness at hearing in a different proceeding is admissible, notwithstanding different destinations in same State were involved; although present applicant was not a party of record in that proceeding, he was called to testify in behalf of a protestant therein; exhibit is admissible, subject to objection, under Rules 1.78 and 1.82 of Rules of Practice, and objection to it as "irrelevant and immaterial" is not well taken.—Blythe Extension—Florida, 89 M.C.C. 195 (196).

Applicant presented only one witness, its representative, in support of application covering an extremely large area conaining 8,989 municipalities, intending to rely for public support entirely on evidence in another proceeding seeking similar authority in the same area. However, consolidated consideration of the two applications, as requested, is not possible; evidence adduced by applicant in its initial presentation would not warrant grant of any authority.—Railway Exp. Agency, Inc., Extension, 89 M.C.C. 537 (539-40).

In view of the fact that applicant filed no exceptions to report and recommended order on another application it filed subsequent to issuance to recommended report and order in instant proceeding, and the record in that proceeding showed that applicant had continued to provide the service found to be beyond the scope of its present certificate in the instant proceeding, it is evident that applicant has not ceased its unlawful operations even though it did not except to instant examiners' conclusion that it held no authority for such service. —Kennedy Motor Lines Inc., Extension, 95 M.C.C. 499 (502-3).

Joint board properly sustained objection to receipt in evidence of applicant's exhibit containing testimony of Department of Defense, as recorded in prior consolidated proceeding on two other applications, relating to need for additional motor service at military reservation. Nevertheless, the application should not be denied; need for additional service to all points in the reservation is plainly shown, and Department of Defense, being primarily interested in service, does not support any specific carrier.—Whitfield Transp., Inc., Extension, 95 M.C.C. 576 (582-3)*.

Though evidence of record in another proceeding is not admissible except in compliance with the Rules of Practice, there is no question but that the commission may refer to its conclusions and findings in prior reports; although the commission is not bound by factual determination of joint board in a prior proceeding that protestant's service in area now sought by applicant was adequate, it may be noted that that finding was based on evidence of one of applicant's principal supporting shippers.—Howard Sober, Inc., Extension, 88 M.C.C. 755 (758).

Rule 1.82 of Rules of Practice makes no provision for incorporation into the record of material extracted from protestant's applications seeking expansion of its authority; motion to strike that portion of applicant's reply to protestant's exceptions, granted.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (567-8); and reference by protestant in its reply to applicant's exceptions to evidence presented in an unrelated proceed-

ing by a non-protesting carrier is improper. Motion to strike such evidence is granted.—Canzano, 95 M.C.C. 568 (570)*.

Motion to strike from protestant's exceptions all reference to affidavits, testimony, or pleadings in another case, granted; applicant was not a party to that proceeding and had no opportunity to cross-examine witnesses or file pleadings; further, evidence referred to concerned matters outside scope of instant proceeding in that it involved service for a different manufacturing plant and it is not clear whether same commidities were involved.—S & S Trucking Co. Extension, 91 M.C.C. 239 (241).

Self-serving, indefinite, unsupported statements: [Vols. 11, 12, 19].—Applicant is not entitled to a territorial grant of "grandfather" authority on basis of its uncorroborated, self-serving declaration that the shipments shown in its abstract are merely "representative" of its overall operations, when nature of their representativeness is not shown; this is not to cast doubt on applicant's veracity, but only to make a clear that some confirmatory or explanatory evidence is required. In absence of such evidence, abstracts of "representative" shipments introduced in evidence do not warrant the broad grant of territorial authority sought.—Home Transfer & Storage Co., 88 M.C.C. 223 (230-1)*; similarly, grant of "grandfather" authority may not be based solely on applicant's uncorroborated testimony of vague and self-serving statements.—Cox, 89 M.C.C. 545 (548)*.

In absence of any shipper testimony as to public need for transportation of a given commodity, applicant's testimony of what a third party will need in way of transportation service is insufficient, without supporting evidence, to justify a grant of such authority.—Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 521 (523).

Weight of evidence: [Vols. 12, 13, 19].—Question of financial connection between applicant and one of its supporting witnesses in the application proceeding was one of credibility and was for the commission; the commission could give as much or as little weight as it saw fit to the testimony of that witness.—Refrigerated Transport Co. v. United States, 214 F. Supp. 536 (539)*.

While the commission may not capriciously ignore evidence, it is not bound to accept the evidence of an applicant at its face value.—Robbins v. United States, 204 F. Supp. 78 (81)*.

Supporting shipper positively asserts that past service has not been satisfactory, and that it was prepared at hearing to detail evidence of many instances of past service failures on part of that carrier; latter, though a party of record, has put forward no evidence tending to contradict shipper's serious allegations, which are therefore entitled to full credence.—Souther Tank Lines, Inc., Extension, 88 M.C.C. 127 (140)*.

See also Bell Transp. Co., Extension, §207(a), n. 25 truckaway.

Testimony of shipper's witness regarding instances of protestants' failure to supply vehicles upon request is not persuasive that they failed to render reasonably prompt service when, on cross-examination, he conceded that two dates cited were Sundays when shipper's plant does not operate and that all dates referred to were scheduled delivery dates and not actual dates when requests were made. Witness had no recollection of actual dates on which equipment was requested; moreover, he could not recall ultimate disposition of the shipments in question, or the destinations for which equipment was needed, and he admitted that in some instances shipper cancelled requests for equipment or failed to use vehicles furnished.—Curtis, Inc., Extension, 94 M.C.C. 728 (730).

In computing the comparative monthly cost of operation, to show economies that could be effected by proposed motor express service, Railway Exp. Agency based the expense attributed to performing line-haul service in the area by motor vehicle on a 6-month average figure for a "similar motor operation" in another and undisclosed area. As no data concerning distance, number of stops, or other factors relevant to the latter operation were submitted, the figure used has no value for comparative purposes.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 102 (105).

See also the T.I.M.E. Freight case, under *Exhibits, abstracts*, above.

Exactness of applicant's memory as to operations conducted in the early fifties is of no

material importance where the critical date is August 26, 1958; but since record is clear that he did operate throughout the later fifties, his operations in the early part of that decade are of some interest as background and tend to show nature and continuity of his activities.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (99).

Lists of shipments proffered to establish transportation between points in Alaska during the critical period had no evidentiary value to support claim of "grandfather" rights when they merely showed origin and destination of particular shipments and failed to indicate the portion of such movement which was actually handled by applicants or the points between which respective applicants actually moved shipments. Furthermore, in some instances, shipments were made through the port of Seattle which applicants were not authorized to serve; and, with a few exceptions, the lists fail to disclose the Alaskan points between which motor vehicle transportation was utilized as distinguished from rail service provided by the Alaska Railroad.—Mollerup Van Lines, 95 M.C.C. 338 (342)*.

Copies of tarriffs filed with the commission or the Federal Maritime Board, and military rate tenders filed with and approved by the Department of Defense have value to establish "grandfather" rights between Alaska and points in the South-48 States only to the extent of showing some sort of a holding out on applicant's part to perform the service (not necessarily motor service) at the time indicated. In many instances, moreover, the tariffs and tenders bear effective dates subsequent to the "grandfather" date and are of little probative value.—Id., p. 342.

Evidence of past transportation of mixed shipments of exempt and nonexempt commodities was properly rejected as support for claim of "grandfather" rights under Transportation Act of 1958, since the commission's consistent holding that such commingling of exempt and nonexempt traffic is unlawful without appropriate authority has been sustained by the courts.—Hughes, 89 M.C.C. 471 (477)*.

Shipments which moved between points in a single State have no weight in determining "grandfather" rights when it is not convincingly shown that they constituted a portion of any through movement in interstate or foreign commerce.—Home Transfer & Storage Co., 88 M.C.C. 223 (226)*.

No weight can be given shipper's oral statement that nonavailability of motor service resulted in an estimated loss of 10 percent of its business during past year, when it is not supported by any documentary evidence and such loss of business cannot otherwise be inferred from the record as a whole; nor may any weight be given examiner's conclusion that abandonment of a rail branch line caused shipper to look elsewhere for substitute transportation service, when such abandonment did not affect the movements involved.—Ruan Transport Corp. Extension, 88 M.C.C. 123 (125).

Verified statements, particularly when they deal in generalities and are phrased in more or less indentical conclusory words, are not as persuasive as testimony of individual public witnesses who testify extemporaneously and in some detail of their transportation requirements in the traditional manner. However, applicant which in reply urges that 51 verified statements submitted by another in support of proposed local interairport bus operation be not considered did not object thereto, its right to cross-examination was preserved, and those statements should be considered for whatever they are worth.—A. B. & W. Transit Co. Extension, 88 M.C.C. 175 (180).

See also Somerset Bus Co. case, n. 15 *Parties*, above.

Testimony of witnesses representing nonprofit organizations as to transportation needs of undesignated shippers and receivers at points on proposed extension route is too vague and general to be accorded substantial probative weight. Also, little weight can be accorded testimony of shippers not located within commercial zone of any of involved service points, since applicant would be unable to serve them directly.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 487 (489).

Crude oil is being transported in private carriage from two Colorado origins to plant of one supporting shipper under an expiring exchange agreement, and if successful in renewing that agreement or obtaining new

agreements for direct purchase of crude oil from Colorado producers, it would use proposed service only to supplement such private carriage; though same shipper also expressed general interest in possibility of obtaining condensate from Colorado origins, it failed to specify either location of such origins or volume that would move therefrom; such evidence is too vague and speculative to warrant grant of authority.—Bridge Extension, 88 M.C.C. 108 (112-3)*.

23. Official notice; res judicata; stare decisis.—[Vol. 19].—A regulatory agency has the right to take official notice of reports filed with it by a regulated company.—P. Saldutti & Son, Inc. v. United States, 209 F. Supp. 307 (313)*.

An administrative body, such as the commission, is not bound by the rule of stare decisis; and inconsistency of its holding with prior holdings in and of itself does not make the decision arbitrary.—Watkins Motor Lines, Inc. v. United States, 243 F. Supp. 436 (443, note)*; nor does inconsistency of the commission's decisions, in and of itself, render them unreasonable.—U.S.A.C. Transport, Inc. v. United States, 235 F. Supp. 689 (693)*.

Doctrine of stare decisis does not apply to decisions of administrative bodies, but consistency of administrative rulings is essential, for to adopt different standards for similar situations is to act arbitrarily.—Dixie Highway Exp., Inc. v. United States, 242 F. Supp. 1016 (1021)*.

Although the commission cited 83 MCC 411 as its authority for holding that plaintiff's operations in 1955 and 1956 were too remote from the "grandfather" date (May 1, 1958) to have any probative value, to apply the result in that case to the case at bar, particularly where the commodity involved may have wholly dissimilar transportation and marketing characteristics, appears truly arbitrary. What is too remote to have probative value in one case may not be so in another; shipments in 1955 and 1956 may or may not be too remote from May 1, 1958, but such a determination is not to be treated as a question of law decided in prior cases, because it is a question of facts which must turn on the circumstances of the case at bar and not those of an unlike previous case.—Hale Distributing Co. v. United States, 221 F. Supp. 266 (270)*.

The courts are not concerned with alleged inconsistency with findings made in other proceedings before the commission.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (902)*; thus, fact that a new administrative decision departs from the rule of an earlier one does not require corrective action by a reviewing court. The court must decide whether the commission correctly applied the law, not whether it followed its own precedents.—Yale Transport Corp. v. United States, 210 F. Supp. 862 (864)*; therefore, there is no basis for reversal in the contention that the commission departed from its decisional precedents in granting irregular-route authority to plaintiff's competitor.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (571)*.

Plaintiff's apprehension that the commission's consideration of the scope of its authority, in passing on applications of another carrier, may be res judicata as to its pending commission proceeding seeking interpretation of its certificate is not warranted. In application proceedings the commission under the law acts on a finding of public convenience and necessity, and this necessarily implies that needs of the public may change from time to time; therefore, the commission is not ruled by res judicata as that term is used by courts as a rule of precedence. Power of an administrative agency to reconsider its own findings or orders has no relation to, and is not affected by, the doctrine of res judicata; agency is not bound by its own prior determinations, though the courts may take those determinations into consideration.—Worster Motor Lines, Inc. v. United States, 226 F. Supp. 603 (607-8)*.

The commission's rulings in prior proceeding in which same applicant sought similar authority are in no sense binding on it in instant proceeding; the doctrine of res judicata can have no application to a proceeding which involves a determination of present or future public convenience and necessity; courts and administrative agencies have, and must have, power to change their minds. Moreover, in the present case the commission was not holding a rehearing on the prior application,

but had before it an entirely new record based on additional facts and changed conditions.—Edwards Motor Transit Co. v. United States, 201 F. Supp. 918 (923, 925)*.

See also United Van Lines, Inc. v. United States, 28 USC §2325, n. 48.

Official notice is taken of definition of ammonium nitrate-carbonate mixtures in report of U.S. Interagency Committee on Hazards in Transportation of Ammonium Nitrate, in order to resolve discrepancy between quasi-expert testimony as to lawfulness of transportation of nitro carbo nitrate in bulk and the commission's regulations governing transportation of dangerous articles.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (756-7).

Even though several carriers, recently authorized to provide a portion of proposed service, are not protestants in instant proceedings, the commission may take official notice of its outstanding grants of authority.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 364 (371); New York Central Transport Co. Extension, 91 M.C.C. 161 (164)*; and official notice is taken of the authority of protestant's connecting carrier to transport household goods between points in 38 States and the District of Columbia.—Wheaton Van Lines, Inc., Extension, 94 M.C.C. 489 (492)*.

A certificate of authority is a public document of which the commission may take official notice whether offered in evidence or not; thus, inclusion of summary of protestant's operating authority in its properly filed exception is not objectionable.—Sullivan Const. & Rigging Co. Extension, 94 M.C.C. 296 (298).

Temporary authorities issued by the commission are matters of official record of which it may take official notice. And requests for the commission's official notice of matters of public record, and arguments in support thereof, may be presented on exceptions.—Colorado-Arizona-California Exp., Inc., 92 M.C.C. 89 (91)*.

The commission takes official notice of its records showing certificates, and restrictions therein, covering authority with which applicant proposes to tack certain authority sought in instant application.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (316, Note 7)*.

Official notice is also taken of applicant's present operating agreement with owner and other railroads, approved in 308 ICC 545, as well as prior agreements approved in 275 ICC 739 and 291 ICC 11.—Id., p. 320, Note.

Official notice may properly be taken of commission documents, such as a motor-carrier accident report.—Blythe Extension, 92 M.C.C. 242 (243).

The commission takes official notice of certain intrastate authorities issued applicants subsequent to hearing, and petition of one applicant to introduce evidence thereof is denied pro forma.—A. B. & W. Transit Co. Extension, 88 M.C.C. 175 (175-6, footnote).

Inasmuch as described circumstances lend only a patina of truth, which is speedily dispelled on closer scrutiny of the facts and applicable law, the applicant's contention that contradiction and discrimination result from the grant of authority in another proceeding (decided 13 days earlier) and the denial of its application for similar authority, and since there is no evidence of "possible" improprieties, consideration is confined solely to the record at hand. Thus, the commission adheres to and affirms its longstanding rule that, when practicable, each case should be considered and determined on its own merits and its own record; that rule is particularly applicable where, as in instant circumstances, an unsuccessful applicant seeks to benefit from mere existence of surface similarities between applications heard on separate records.—Convoy Co. Extension, 91 M.C.C. 461 (460-1)*.

Although the matter might be viewed somewhat differently were it one of first impression, Division 1 feels constrained to accept conclusion reached by the entire commision in 86 MCC 447 that, regardless of form of authority applied for, only common-carrier authority should be granted applicants seeking to participate in cement traffic which has recently become available to the motor-carrier industry. While that decision was concerned only with needs of the cement industry in a number of eastern States, the same considerations apply to considered movement in the South.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (305-6).

See also Service Trucking Co. case, n. 18, above.

Denial of earlier petition to amend applicant's "grandfather" certificate to include additional commodities, as now sought by extension application, is not conclusive on interpretation of the commodity descriptions and should not govern disposition of the issue; such denial was based on carrier's failure to furnish proof of its operations, and that evidence is now before the commission.—Jetco, Inc., Extension, 91 M.C.C. 673 (676).

See also the Hughes case, §203(b), n. 50 *Act of 1958*.

25. Hearing, generally.—[Vols. 12-19].—See also §17(6), n. 10.

Plaintiff was accorded a full and fair hearing on the issue of interpretation of its certificate authorizing transportation of aircraft and aircraft parts when it filed an application for authority to transport missiles and missile parts and, coupled therewith, a motion to dismiss on the ground that its certificate authorized transportation for which authority was sought. Procedure used by plaintiff is a method of obtaining in a plenary proceeding interpretation of operating authority; and examiner's failure to render an express ruling on the motion has no legal significance, since a ruling was implicit in his finding for plaintiff on the interpretation issue.—U. S. A. C. Transport, Inc. v. United States, 235 F. Supp. 689 (691-2, 694)*.

While the commission, in accordance with procedure established in 91 MCC 395, denied hearing on question of convenience and necessity in connection with automobile carrier's petition for modification of its "initial-movement" certificate, so as to permit railroads to do part of its hauling in TOFC or MLRC service, need for carrier's service had already been established and it continued to supply that need just as before except for substitution of rail for motor carriage for part of the way. Record contains no statement as to nature of testimony protesting carriers would produce before the commission; nor does the court find any such statement in the briefs filed. However, in dismissing instant complaint, the court does not set a precedent for future application wherein it might clearly appear there is relevant testimony that the commission should consider.—Motor Convoy, Inc. v. United States, 235 F. Supp. 250 (251, 253)*.

That the commission, in denying plaintiff's application and granting authority sought to a different applicant, acted on evidence 2 1/2 years old, and that its decision was the third in a row of different decisions on same record, do not in themselves give rise to any right to reopening of the record for rehearing. It was clearly within the commission's competence to weigh plaintiff's allegations, in its petition for rehearing, as to changes in conditions and circumstances since close of hearing against matters alleged in answer filed by the successful applicant, and examination of the petition and answer discloses no reason for finding that the commission acted arbitrarily or capriciously in denying rehearing. Viewed individually or as a whole, the circumstances alleged by plaintiff are not of a level of importance that would deprive the commission of exercise of its discretion to deny the petition; the commission's orders sustained.—Suburban Transit Corp. v. United States, 215 F.Supp. 717 (725-6)*.

The court recognizes the general principle laid down in 326 US 327, that an administrative agency should not grant one application for a license without some appropriate consideration of another bona fide and timely filed application to render the same service, as a basic requirement for fair play; however, this does not mean that such agencies are placed in a procedural straitjacket. The requirement is that comparative consideration of such bona fide and timely filed applications be had, not that it should be had in some particular manner; whether this should be given through consolidation, by separate consideration of each application, or in still other ways, is normally for the agency to determine.—Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831 (834-5)*.

The commission was amply justified in considering plaintiff's extension application and that of United Parcel Service, covering similar service in the same territory, in sepatate hearings. In view of larger scope of plaintiff's application, as well as the issue of its railway affiliation, the commission's determination to proceed in that manner violated no legal right of plaintiff when UPS' application was not granted before plaintiff's application was be-

fore the commission for consideration. Plaintiff was not entitled to a consolidated hearing as a matter of law if some other suitable method of comparative consideration of both applications was afforded.—Id., p. 835.

The facts of plaintiff's operation as a small carrier of frozen foods justify grant of area-wide instead of point-to-point "grandfather" authority, but exact extent of origin and destination territories is for the commission to determine. Though rehearing might not be justified if the commission's decision appeared sound on basis of all information before it, the Transportation Act of 1958 sets no cut-off point for evidence of service rendered after the "grandfather" date, and the court is concerned that the remand should afford a true picture of plaintiff's traffic, including any shifts therein, since the 1959 hearing. Reopening is justified by need for thorough reconsideration, which would exist even if plaintiff were not allowed to present additional evidence. Remanded for rehearing and further consideration in accordance with the Court's views.—Jarman v. United States, 219 F. Supp. 108 (114, 117, 118)*.

Inasmuch as protestant was fully represented at both the initial and continued hearings, though its evidence was presented at former and other counsel covered its interests at latter, its "Preliminary Objection" (in its reply to applicant's exceptions) to receipt of applicant's further evidence at the continued hearing was proper; and its request in the reply that application be denied in all respects was also proper, since it appears to be a general statement of position based on protestant's appraisal of the record.—Canzano, 95 M.C.C. 568 (570-1)*.

Request for further hearing to clarify protestants' traffic studies in accordance with criteria applied in 89 MCC 389, denied. Such clarification in manner requested would not require any change in the examiner's recommended findings, in view of evidentiary defects in petitioner's presentation, and the evidence considered in the light of the exceptions and replies thereto does not warrant a result different from that reached by the examiner.—Missouri Pac. Truck Lines, Inc.—Removal of Key Points, 94 M.C.C. 146 (147).

The commission is not inclined to reopen proceedings for further hearing every time additional evidence is offered after a hearing has been closed. Litigation must end. Appli cant's petition for further hearing to present in evidence facts—relating to new demands for bulk delivery—which have occurred since the hearing is, therefore, denied. An applicant's remedy in such cases is to file a new application.—O'Boyle Tank Lines Extension, 89 M.C.C. 499 (501); applicant was afforded ample opportunity for submission of evidence at 3 days of hearings and, at that time, gave no indication of need for additional hearing. Testimony of seven more shippers it seeks to present is clearly cumulative; therefore, in absence of any showing of good cause, its petition for further hearing is denied.—Colorado-Arizona-California Exp., Inc., 92 M.C.C. 89 (91)*.

Request by one of five applicants seeking similar authority for further hearing to show that its operations and needs of supporting shipper are responsive to each other, denied; scope of applicant's operations is a matter peculiarly within its knowledge rather than that of shipper, and it produced very substantial evidence concerning its operations at two separate hearings; shipper's needs for service are completely described of record, and it expressed a strong desire for that applicant's service; further hearing would therefore serve no useful purpose.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (541)*.

Further hearing to receive evidence of applicant's operations under temporary authority is not warranted when examiner's report, adopted by the commission, reveals that he accepted shipper's projected traffic volume (which far exceeds the volume sought to be shown on further hearing), yet concluded that applicant had failed to show a public need which could not be met by existing carriers; the proffered evidence therefore would not change or vitiate the essential validity of that conclusion.—Convoy Co. Extension, 91 M.C.C. 461 (464)*.

Further hearing for introduction of evidence concerning operations of opposing carrier whose witness was unable to attend hearing would serve no useful purpose nor add anything of sufficient probative value to justify additional delay in disposition of applica-

tion; authority of that carrier is a matter of record, and its operations within scope thereof are substantially the same as those of other opposing conference members.—Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (268-9)*.

Protestant's request for further hearing or investigation (1) to determine amount of standby charge provided for, in addition to a mileage allowance, in applicant's agreement with its parent railroad, to compensate it for providing equipment at complete disposal of the railroad, and (2) to determine whether such charge is excessive and imposes an undue burden on the railroad's 1.c.1. service, denied. Though in certain circumstances amount of the standy charge and question of resulting double profits might be pertinent,issues in proceeding on elimination of certain key-point restrictions on applicant's authority turn on savings in operating costs and more efficient utilization of equipment, rather than on the railroad's 1.c.1. deficit.—Pennsylvania Truck Lines, Inc.—Key Points Restriction, 88 M.C.C. 505 (512-3).

36. Laches.—[Vols. 13, 17].—Contention that plaintiff's action is barred by the doctrine of laches is without merit. Laches is not merely a question of time; it is a question of diligence; and facts of record indicate no lack of diligence on the part of plaintiff. While it is true that plaintiff's effort to set aside the considered certificate came after a lapse of 15 years, it is also clear that he had no knowledge of its existence at the time of issuance due to failure of applicant therefor to notify plaintiff's predecessor, and that the authority was hidden for that entire time because of dormancy. As soon as plaintiff learned of existence of the certificate, he immediately sought to have the commission revoke the part thereof which is duplicative of his own certificate.—Willey v. United States, 245 F. Supp. 669 (676)*.

Regulations of the Commission

27 FR 12188, Dec. 8, 1962, Part 7: Form BOR 99 Application for Motor Carrier "Grandfather" Certificate of Registration by motor common carriers having, on Oct. 15, 1962, State certificates filed with and accepted by the commission under former second proviso of §206 (a) (1), required to be filed on or before Feb. 12, 1963.

28 FR 3534, Apr. 11, 1963, Part 7 List of Forms, Part II, and Part 210 Exemptions: §7.75 BMC 75, canceled, and §7.100 BOR 100, prescribing Form BOR 100, added: and §210.10 Interstate operations by motor common carriers within a single State, revised, effective on date of order.

29 FR 5801, May 1, 1964, Part 2a: Special Rules of Procedure Governing Conversion of Irregular-route to Regular-route Motor Carrier Operations, §§2a.1 through 2a.6 prescribed, effective on date of publication in the Federal Register.

31 FR 6058, April 20, 1966, Part 7 List of Forms, Part II, Form OP-OR-9 Application for Motor Carrier Certificate or Permit, prescribed and approved for use, Form BMC 78 Application for Motor Carrier Certificate or Permit, discontinued; §7.78 OP-OR-9 revised as set forth, effective May 20, 1966.

Section 207. [§*307 (a) U.S.C.*] Issuance of certificate.—(a) Issuance authorized to qualified applicants for regular routes and between fixed termini.—[Unchanged. See vol. 10, p. 7988.]

Historical Note, see vol. 16, p. 12842, vol. 18, p. 14365, vol. 19, p. 15609.

Historical Notes

In view of creation of the Department of Transportation by Public Law 89-670, effective April 1, 1967 (32 FR 5453), the Commission and the Department of Transportation entered into a Memorandum of Agreement on April 3, 1967 (32 FR 5744, Apr. 8, 1967) for the purpose of accomplishing continuity, laison, coordination, and support with respect to transferring from ICC to DOT personnel and functions concerned with (1) motor carrier safety matters; (2) certain pending ICC proceedings; (3) pending court cases transferred to DOT; (4) housekeeping operations for ICC personnel transferred; (5) access to, and provision of, reports and other documents, and (6) liaison and cooperation between ICC and DOT.

The commission recommends that part II be amended to authorize the commission, after opportunity for hearing, to deny certificates, permits, licenses, or other operating authority when, in application proceedings, perjury, or subornation of perjury, has been committed before the commission, and the commission finds that the director, officer, or person convicted of such crime has such an interest in the business that the conviction affects the fitness of the carrier or broker.—Annual Report, 1962, p. 207.

Notes of Decisions

Volume 10—p. 7988; Volume 11—p. 9432; Volume 12—p. 10390; Volume 13—p. 11071; Volume 14—p. 11589; Volume 15—p. 12195; Volume 16—p. 12842; Volume 17—p. 13537; Volume 18—p. 14365; Volume 19—p. 15609.

5. Construction and interpretation.—[Vols. 10-19].—Applicant's proposed limousine service between Hartford, Conn., and New York City which was to be a 7-passenger, non-stop, semi-scheduled service, over irregular routes, by reservation, door-to-door, year round, and from anywhere within Hartford County to anywhere within the five Boroughs of New York City, or the reverse, contemplated a "special operation" within meaning of §207(a), since that category is a catch-all of passenger service not ordinary or "charter," and since proposed service is neither over "a regular route or routes" nor "between fixed termini" (although lacking only one would do).—Arrow Line, Inc. v. United States, 256 F. Supp. 608 (609-11)*.

The commission has broad administrative discretion in certifying carriers. Its function is not only to appraise the facts and to draw inferences therefrom but also to bring to bear upon the problem an expert judgment and to determine from its analysis of the total situation on which side of the controversy the public interest lies. Therefore, a reviewing court has no authority to substitute its judgment for that of the commission.—Petroleum Carriers Corp. v. United States, 258 F. Supp. (615)*; on the other hand, judicial deference to expertise is not boundless, as expertise alone is not sufficient to sustain a decision. The commission's action must be supported by substantial evidence and must be within the statutory limits placed on its powers by Congress.—Campbell Sixty-Six Exp., Inc. v. United States, 258 F. Supp. 529 (532-3)*.

The congressional purpose in passing the Interstate Commerce Act was not to allow any carrier who could make a profit to enter into competition with other carriers, but rather to allow the commission to make a determination in the public interest.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (902)*; that statute has established the commission as the guardian of the public interest in determining whether certificates of convenience and necessity should be granted, and has entrusted it with a wide range of discretionary authority in performing its duty. And, in reviewing its action on an application, the function of the reviewing court is limited to ascertaining whether the commission's findings are supported by substantial evidence.—Eazor Exp., Inc. v. United States, 218 F. Supp. 393 (395)*.

While there is some authority for the commission's apparent view that a showing of inadequacy of the present service of protestants is indispensable to the ultimate finding of public convenience and necessity for proposed (or existing) service, the better rule is embodied in the more numerous cases to the contrary, which show that inadequacy of present service is not a term convertible with "public convenience and necessity," but is only one element to be considered in arriving at the broader determination of public convenience and necessity. Even apart from the cases cited, it appears to be the more reasonable view that the narrower conceptual element of inadequacy of present service was not intended to be imposed as a straitjacket on the process of determining the broader interests of public convenience and necessity in effectuation of the national transportation policy.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (652, 653)*.

The commission is not without power to grant requested authority "merely" upon a clear showing of future necessity without affording existing carriers opportunity to meet the increased demand; the law is clear that future, as well as present, public convenience and necessity suffice to warrant the commission's authorization of new motor carrier operations.—Campus Travel, Inc. v. United States, 224 F. Supp. 146 (148)*.

Congress has never attempted to define "public convenience and necessity," but has left interpretation thereof to the administrative and judicial bodies. The commission's assumption that it is its duty to make findings

of fact and apply thereto its expert judgment in determining public convenience and necessity within framework of the Interstate Commerce Act has long had the sanction and approval of the federal courts (citing 315 US 475); it not only has the duty and authority to establish standards and tests to facilitate its determination of the existence, or lack, of public convenience and necessity, but it is free to alter its policies and standards when the necessity, in its judgment, arises.—Youngblood Truck Lines, Inc. v. United States, 221 F. Supp. 809 (817, 818)*.

Congress has delegated exclusively to the commission a wide latitude of discretion in determining public convenience and necessity; public convenience and necessity is not defined by the statute, and the purpose of Congress was to leave it to the commission authoritatively to decide whether additional motor service would serve public convenience and necessity; this gives the commission administrative discretion to draw its conclusion from the infinite variety of circumstances which may occur in specific instances. [Citing 326 US 60.]—Edwards Motor Transit Co. v. United States, 201 F. Supp. 918 (921)*; however, a basic ingredient in determination of public convenience and necessity is, and has consistently been held to be, whether existing facilities are inadequate to meet present or future transportation requirements.—Curtis, Inc. v. United States, 225 F. Supp. 894 (898)*.

The issue of public convenience and necessity is a matter peculiarly requiring the exercise of the commission's judgment in the field of transportation. In the consideration of applications the commission is not restricted to an evaluation of the facts, but is exercising an expert judgment or discretion with respect to a transportation question, and it is its duty by so doing to determine on which side of the controversy the public interest lies. Public convenience and necessity is not an issue resolved with mathematical precision; it was the purpose of Congress to leave to the commission the questions of whether additional motor service would, under certain circumstances, serve public convenience and necessity, and the court cannot, except under certain limited conditions, usurp the administrative functions of the commission by setting aside its lawful orders upon the court's conception of whether the administrative power has been wisely exercised.—North American Van Lines, Inc. v. United States, 217 F. Supp. 837 (840)*.

That United Parcel Service's parent company and its carrier affiliates were not made parties to UPS' §207 application and that approval of the corporate control involved was not sought therein pursuant to §5(2) did not deprive the commission of jurisdiction to grant UPS a certificate; §207, which is in Part II of the Act, requires the applicant to "conform to the provisions of this part," and §5, which is in Part I, is not part of the division containing §207; thus, §207 does not specifically require an applicant to conform to §5, nor can such requirement be fairly implied.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (572)*.

See also Hart v. I.C.C., §5(2), n. 110 *Certificate under §207.*

Section 207 recognizes three distinct types of motor passenger service: (1) operations over a regular route or routes between fixed termini, (2) charter operations, and (3) special operations, and the latter has consistently been regarded a catchall classification which may include almost anything that is neither a charter service nor one of the "usual" operations of ordinary regular-route passenger carriers. Also, while the proviso to §207(a) authorizes the issuance of certificates for conducting special operations over irregular routes, it does not prohibit the granting of special-operations authority over regular routes. Thus, there are two types of regular-route authority to transport passengers: special-operations authority (which creates no incidental charter rights) and the "usual" or "ordinary" regular-route authority. Accordingly, when regular-route authority is granted, incidental charter rights are thereby created unless such authority is limited to "special operations" either expressly or by language of similar import.—Arrow Lines, Inc. v. Connecticut Limousine Service, Inc., 96 M.C.C. 1 (5-6).

Under provisions of §207(a), that an applicant for operating authority must establish that he is fit, willing, and able properly to perform proposed service and to conform to

provisions of the act and the commission's rules and regulations thereunder, a finding of fitness is a statutory prerequisite to a grant of authority. Primary purpose of the fitness provision is to protect the public from carriers whose conduct demonstrates an unwillingness to operate in accordance with the requirements of regulation. While applicant argues that his unlawful operations should not be a bar to a grant of authority because he has paid his debt to society in a criminal action, the record affords no basis for a finding that he is fit to receive the authority sought and, therefore, no authority may be granted.—Jones, 96 M.C.C. 100 (103).

6. Restriction of operations.—[Vols. 10-19].—It has long been the policy of the commission to impose a restriction upon a grant of motor carrier authority only upon a clear showing that such restriction would protect protestant carriers from unintended or unwarranted competition, or serve some other useful purpose. Therefore, since such a showing has not been made, authority granted will not be burdened by the restrictions proposed by protestants.—Ryder Truck Lines, Inc., Extension, 96 M.C.C. 771 (779-80); similarly, since protestant cannot provide the service, and it has made no showing of a material adverse effect upon existing carriers, no restrictions are imposed on authority granted.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 364 (369).

Restriction of authority granted for irregular-route transportation of certain agricultural machinery to plant sites of supporting shippers, or alternatively imposition of an interchange restriction, are equally undesirable. There is no evidence indicating that protestants would be adversely affected in absence of either restriction, nor is there anything indicating that protestants are currently transporting similar traffic which would be subject to diversion.—International Transport, Inc., Extension, 95 M.C.C. 360 (364)*.

Restrictions suggested by protestant which would limit weight of shipments to 1,000 pounds and require that, in the service, vehicles no larger than 2-ton trucks be used, should not be imposed on authority granted. Evidence fails to show that a maximum-weight service would fully satisfy shipper's needs and thus, in some cases, such restriction might preclude an effective and needed service; likewise, the equipment restriction could, in certain circumstances, deter effective operation and deprive shipper of service. Moreover, both restrictions would be difficult to enforce and, from that standpoint, are administratively undesirable. In addition, record is not convincing that those restrictions are necessary to protect protestant's interests since the shipper is satisfied with, and will continue to use, its service.—Paschall Extension, 96 M.C.C. 652 (655-6).

In the absence of clear public need, the commission will not impose restrictions on grants of authority, especially where ambiguous grants and problems of enforcement would result. In instant proceeding, the amendments allowed by the examiner would restrict proposed service on traffic destined to points in certain States to the partial unloading of volume or truck-load shipment, the balance of which is to be delivered elsewhere. Since the commission is not bound by restrictions agreed to by parties where the result would be inconsistent with the public interest, the proposed restrictions which would be difficult to enforce and administratively undesirable will not be imposed.—Alterman Transport Lines, Inc., Extension, 94 M.C.C. 421 (424).

Restrictions on operating rights create undesirable operating complications, and ordinarily should not be imposed except where the record shows that they are necessary and essential to the well-being of competitors.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (716); suggested restriction of authority for transportation of liquid fertilizer, including placing of storage tanks at farms lacking suitable tanks for delivery of that commodity, to a combination of line-haul and accessorial service is rejected as contrary to well-established precedent.—Delaware Exp. Co. Extension, 92 M.C.C. 718 (721).

The commission is not bound by any restriction in an application, or by a restrictive amendment agreed to by the parties, which achieves results inconsistent with the public interest and effective regulation.—Chem-Haulers, Inc., Extension, 88 M.C.C. 1 (2);

Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (59).

Examiner's interpretation of "peddle service" restriction in applicant's present authority to transport meats and packinghouse products as precluding it from transporting more than half a truckload consigned to any one person and, also, from making fewer than 15 delivery stops to as many consignees on one run, is not supported by any commission precedent. No precise definition as to number of delivery stops, maximum weight shipment allowed to be delivered to one consignee, or other aspects of such service has been formulated. In view of imprecise meaning of "peddle service," and the resultant difficulty of enforcing such a restriction, its imposition is not favored.-Id., p. 61; on the other hand, while such a restriction is imprecise and is not imposed in extension authority granted, applicant is required to attempt to comply with the restriction in its outstanding certificate until it is eliminated. Even though a policy of not including a particular restriction in operating authorities has been adopted, such a restriction in outstanding certificates or permits cannot be flouted with impunity.—Id., p.61.

Restriction of authority granted for transportation of experimental and display machinery and equipment to "sites of plants, sales branches, warehouses, experimental stations and/or farms, shows, exhibits, and field demonstrations owned, operated, or used" by single supporting shipper, as originally proposed by applicant, is sufficiently clear in meaning to justify its use in the circumstances; sites which may be served are locations that may be known with reasonable certainty at any given time. In view of highly specialized nature of the service authorized, imposition of the restriction is warranted.— Donaldson Transfer Co. Extension, 91 M.C.C. 896 (897)*.

See also Refrigerated Transport Co. v United States, n. 24, below.

While the commission is reluctant to impose on Railway Express Agency or any other certificated carrier restrictions which are administratively undesirable or difficult to enforce, interpretation of "general commodities moving in express service" as permitting REA to publish nonpremium container rates on traffic not shown to move more expeditiously than in ordinary l.t.l. freight service, or to require special handling or protection, does not mean that all certificates hereafter issued to it must confer authority for an unrestricted express type service. In considering extension applications by REA, the commission must tailor its grant to the need shown, even though need demonstrated is for less than a complete "express service." However, exclusion from express authority of liquid commodities in tank vehicles, commodities requiring special equipment, and household goods is designed to reflect the nonspecialized nature of express service, resulting in limitation on the equipment that may properly be used in operations under authority for general commodities moving in express service.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468(481)*.

Automobiles, trucks:[Vols. 18,19].—Restriction in protestant's operating authority limiting its right to transport motor vehicle "bodies" only to subsequent or secondary movements, in truckaway service, should be disregarded because, unlike automobiles or trucks, bodies are not vehicles but merely constitute a part of the vehicle to which they will be attached. Consequently, disregarding the "secondary movement" restriction, protestant has authority to transport newly manufactured vehicle "bodies" in the same manner as any other commodity.— Matson, Inc., Extension, 96 M.C.C. 648(649-50)*.

Commodities [Vols. 18,19].—In proceedings on application seeking authority to transport acids and chemicals, in bulk, the commission was not compelled to restrict the certificates granted to the nine chemical commodities specified by supporting shipper as currently being manufactured and shipped. On the contrary, both in the evidence concerning the shipper's research and development program and in the expertise for divination of future needs committed exclusively to it by Congress, the commission had more than enough basis for the general grant. Complaint dismissed.— Younger Bros., Inc. V. United States, 238 F. Supp. 859 (860-1)*.

See also Refrigerated Transport Co. v. United States, 227 F. Supp. 1021, §212(a), n. 1.

That plaintiff is not limited as to the shippers he may serve does not mean that limitations inherent in his commodity authorization can be ignored or that the commodity description "packinghouse products" in his certificate authorizes any different transportation, commoditywise, than the same authority in a permit.— Morehouse v. United States, 194 F. Supp. 940 (945)*.

See also Winter Garden Co. v. United States, §203(b), n.50 *Act of 1958.*

In amending petitioner's commodity authority for aircraft parts to specifically author-

ize transportation of missile parts (not mentioned at hearing on its application because of security restrictions), no restriction against transportation of parts containing explosives should be imposed. Although little evidence of specific need for movement of missile parts containing explosives, including "jet thrust units," was adduced at that hearing, petitioner proposed to provide the aircraft and missile industry with a complete service, embracing all commodities then produced by supporting shippers, including missile parts without restriction. Now to impose the requested restriction would be tantamount to finding that petitioner did not propose to transport missile parts without exception, or that in granting a complete service for supporting shippers the commission intended to exclude a minor part of the transportation service shown to be needed.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (256)*.

The commodity restriction "not including chemicals" sought by applicant for authority to transport slag and slag aggregates, and imposed by the joint board in its recommended grant of authority, implies that some slag and aggregates would be "chemicals" as defined by the commission, and some would not; however, since considered commodities fall within that category of chemically produced commodities excluded from the chemical classification by common usage, imposition of such restriction would not limit proposed operations; recommended exclusionary exeption eliminated from authority granted.—Dreyer Extension, 96 M.C.C. 343 (344-6).

Protestant's requested restriction of authority granted applicant for transportation of financial and business papers to preclude transportation of bills, notes, and checks for shippers other than banks would be impractical and would not meet the fluctuating needs of the involved shippers; not imposed.—Woody, 94 M.C.C. 759 (764).

In compliance with mandate of the court to restrict authority granted for frozen fruit juices and concentrates in mixed shipments with canned citrus products so as to limit applicant's operations to a bona fide mixed service and preclude it from competing directly with existing carriers in hauling truckloads of frozen items, restriction to "mixed loads" of frozen and unfrozen commodities is imposed. That restriction will authorize transportation of frozen commodities only at same time and in same vehicle as unfrozen commodities, and will not allow applicant to handle t.l. amounts of frozen fruit juices or concentrates, or of canned citrus products, in direct competition with presently authorized haulers thereof; nor may it transport l.t.l. quantities of frozen or unfrozen items unless there is also present in the same vehicle at same time a reasonable volume of contrasting freight.—Barsh Truck Lines, Inc., Extension, 92 M.C.C. 254 (255)*.

But it is unnecessary and administratively impracticable to impose a percentage or quantity limitation on amount of frozen commodities that may be loaded in each vehicle. The basic purpose of mixed-lading restrictions generally is protection of existing authorized carriers from unwarranted competition; but the boundary between existing adequate services which must be protected and needed additional services which should be authorized cannot be delineated with mathematical precision; therefore, any mathematical mixing rule would not only be arbitrary in formulation and theoretical in application, but would tend to focus excessive controversy on observance of the artificial demarcation line. However, this does not mean that a restriction to mixed loads or shipments may be defeated by consolidation of a token quantity of one type of commodity with a truckload of another; such a device would be mere subterfuge, for which adequate remedies are available under the act.—Id., p. 256.

Following 92 MCC 254, authority granted for transportation of mixed shipments of frozen and unfrozen citrus products is restricted to "mixed loads."—Wilson Bros. Truck Line Extension, 92 M.C.C. 497 (501-2).

No useful purpose would be served in restricting authority granted for certain frozen cooked vegetables to movement in mixed shipments with frozen fruits and vegetables merely because applicant has been transporting them in that manner.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 187 (191).

Suggested restiction of authority for foods, etc., to mixed shipments of specified non-refrigerated commodities when moving with

commodities requiring refrigeration, under refrigeration, in mechanically refrigerated equipment, is involved and indefinite; to attempt to enforce a restriction to such mixtures would place an intolerable enforcement burden on the commission; "commodities requiring refrigeration" is ambiguous and difficult to apply; any requirement that commodities transported be "refrigerated" is meaningless, as temperature required to place a commodity "under refrigeration" depends on commodity to be cooled, requirements of specific shippers, seasonal temperature changes, and other vague and variable considerations; protestants' interests are sufficiently protected by restriction to transportation in vehicles equipped with mechanical refrigeration.—Refrigerated Transport Co., Inc., Extension, 88 M.C.C. 71 (73-4).

Inasmuch as supporting shipper has received "grandfather" authority to transport frozen fruits, berries, and vegetables from involved origins to many of destinations sought by applicant, and has offered no assurance that it would surrender such authority if corresponding portion of application were granted, no need appears for transportation by applicant of frozen food items made nonexempt by Transportation Act of 1958, and authority granted is therefore restricted to exclude frozen fruits, berries, and vegetables within meaning of §7(c) thereof.—Colonial Refrigerated Transp., Inc., Extension, 86 M.C.C. 796 (798, 799).

See also Home Transfer & Storage Co., §204(b), n. 7 *Frozen foods, juices.*

Applicant is presently transporting for supporting shippers numerous items of farm and construction machinery which have widespread and varied uses, and as there are many occasions when it is impossible to foresee ultimate use, any grant of authority dependent on the intended use test would be impractical and unrealistic; elimination of the intended use test will simplify and clarify applicant's existing authority and permit it to furnish those shippers the complete service to which they are entitled; similarly, the very nature of shippers' products compels a similar conclusion as to restrictions which require use of special equipment.—Gregory Heavy Haulers, Inc., Extension, 88 M.C.C. 45 (48).

Since supporting shipper requires complete coverage for its extensive line of machinery and power equipment, restriction of authority granted against handling of "Mercer" type commodities would generate the same problems now created by an intended use description and will not be imposed.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 356 (359).

Restriction against transportation of commodities which because of size, weight, or inherent nature require use of special equipment is properly imposed ony where valid reason is shown. As refractory products are not shown to be of character requiring special equipment, no reason appears for imposing such restriction on authority therefor.—Freeport Transport, Inc., Extension, 89 M.C.C. 168 (172).

Modification of railroad subsidiary's certificate by authorization of substituted highway service in zones defined around 12 key points should not be restricted against transportation of classes of commodities usually excepted from general-commodity authority, including bulk commodities, since it would diminish petitioner's existing authority without showing of necessity therefor; however, exceptions in its present certificate relating to commodities moving in express or railway baggage service should be retained.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (402, 410-1, 412).

See also Pennsylvania Truck Lines case, n. 35 *Substituted freight service*, below.

Equipment: [Vols. 18, 19].—There is force to applicant's reasoning that, owing to length of haul between Washington, D.C., and Dulles Airport, use of buses as well as limousines may be necessary to make possible an economical service; accordingly, authority granted will not be restricted to prohibit use of bus-type equipment. Limitation of the grant to nonscheduled door-to-door service will ensure a bona fide livery service; and restriction of service authorized between Dulles and National Airports to transportation of a maximum of 14 persons in one vehicle, exclusive of the driver, will be an appropriate limitation.—A.B. & W. Transit Co., Extension, 88 M.C.C. 175 (183).

Although applicant seeks authority to trans-

port sand, in bulk, in hopper-type trailers or mechanical discharge trailers, the equipment restriction requested is undesirable and is not imposed.—J-E-M Transp. Co., Inc., Extension, 94 M.C.C. 573 (577)*.

To serve a shipper who mined and evaporated salt, applicant sought authority to transport "salt, in bags and in blocks, on flat-bed trailers with protective tarpaulins", but in the authority granted the restrictive phrase "on flat-bed trailers with protective tarpaulins" was removed and the words "in cartons" added to the commodity description.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (435).

Distinction has often been drawn between trucks and trailers; recommended restriction of authority for bulk salt against use of dump or hopper type "vehicles" would prevent applicant's use of such trailers as well as trucks, thus precluding it from transporting dry salt in bulk; restriction imposed against transporting dry salt in bulk; restriction imposed against transportation in dump or hopper-type trucks.—Chemical Leaman Tank Lines, Inc., Extension, 91 M.C.C. 683 (686).

Although an equipment limitation is sometimes utilized to resolve ambiguities in commodity descriptions, and applicant applied for authority to transport frozen foods in vehicles equipped with mechanical refrigeration, such limitation is unnecessary: commodity description "frozen foods" itself dictates the type of equipment required. Moreover, should it become feasible to transport frozen foods in vehicles not equipped with mechanical refrigeration applicant would not be required to return to the commission for additonal authority.—Colonial Refrigerated Transp., Inc., Extension, 86 M.C.C. 796 (799).

Removal of restriction "in vehicles equipped with mechanical refrigeration" from citrus-products authority previously granted six applicants is warranted when many of those commodities can be satisfactorily transported in insulated vans or by use of nonmechanical refrigerants, especially during colder months; present restriction has handicapped applicants and the Florida citrus industry by denying use of available saitisfactory equipment that is cheaper to operate, without any corresponding benefit to general-commodity carriers. Applicants require unrestricted authority for citrus juices in bulk, as there is need for additional tank service; supporting shippers also require transportation of other citrus products in insulated vans as well as in mechanically refrigerated vehicles; removal of restriction will promote efficiency and economy in applicants' operations and be responsive to shippers' changing needs, without serious diversion of traffic from protestants.—Clay Hyder Trucking Extension, 89 M.C.C. 757 (761-2).

Protestant dry-freight carriers' interests will be sufficiently protected by restriction of authority for foods, etc., to transportation in vehicles equipped with mechanical refrigeration; such equipment is more expensive to purchase and operate than conventional van equipment and its use to transport general commodities not requiring it would be uneconomical.—Refrigerated Transport Co., Inc., Extension, 88 M.C.C. 71 (74).

Though application seeks authority for transportation of liquid chlorine in 1-ton containers requiring special equipment (a flat-bed trailer mounting a special steel cradle), the commission does not favor imposition of restrictions as to kind of container and mounting or to flat-bed trailers; moreover such a modified vehicle does not consititute specialized equipment; restriction not imposed.—Chem-Haulers, Inc., Extension, 88 M.C.C. 1 (2).

Restriction of authority granted to transport licithin oil, in bulk, to transportation in stainless steel vehicles is not necessary.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 387 (390).

See also Truck Transport, Inc., Extension case, §204(b), n. 7 *Fertilizer, fertilizer materials.*

No need appears for restriction of authority granted for transportation of composition roofing to exclude commodities in bulk, in tank vehicles; applicant does not operate tank equipment and it is not shown that there is a type of composition roofing that can be so transported.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (735).

Restriction of authority granted for agricultural limestone to transportation in dump spreader equipment would be an unwarranted

imposition, since it would place on applicant the duty of performing a separate and distinct service from that of transportation.—Star Carriers, Inc., Extension, 88 M.C.C. 282 (283).

Explosives, 5 year limitation: [Vols. 18, 19].—As no 5-year limitation on transportation of explosives was imposed on authority granted petitioners in another proceeding to transport specified missile parts (as distinguished from jet thrust units), none is imposed on modification of its existing aircraft-parts authority to specifically authorize transportation of missile parts, including those containing explosives or jet thrust units.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (256-7)*.

Applicant's general commodity authority in its southwestern area (between Birmingham and Houston) is restricted against carriage of class A and B explosives so that, while it moves considerable amounts of general commodities, it cannot transport explosives in that area; on the other hand, its southeastern authority is not so restricted and it transports explosives in its southeastern area. On showing of a need for a carrier of expolsives in the southwestern area, which existing carriers were not meeting, applicant is granted authority for proposed tranportation of explosives which, in effect, amount to removal of the restriction against explosives from its general commodity authority. However, explosives authority granted is limited to expire 5 years from date of issuance of certificate.—Ryder Truck Lines, Inc., Extension, 96 M.C.C. 771 (774, 778, 780).

Extension authority granted Railway Exp. Agency, insofar as it authorizes transportation of dangerous explosives, is limited to the usual 5-year term.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 102 (109); Id., 91 M.C.C. 836 (839); similarly, to extent that general commodity authority granted authorizes the transportation of explosives, it is limited to a period of 5 years from date of certificate.—Whitfield Transp., Inc., Extension, 95 M.C.C. 576 (583-4)*.

Since liquid hydrogen, liquid nitrogen, and liquid oxygen are all classified as dangerous commodities in the commission's dangerous explosives regulations, a 5-year term limitation is imposed in the certificates granted each of three applicants.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (19)*.

Less-than-truckload: [Vols. 18, 19].—Requested l.c.l. and l.t.l. restrictions on railroad subsidiary's modified authority are ambiguous, would impose no really definite or effective limitation on its operations, and are administratively undesirable; not imposed.—New York Central Transport Co.—Modification, 89 M.C.C.389 (410).

Limited-term operating authorities: [Vols. 18, 19].—See also *Explosives*, above.

Authority granted is limited to a period of 5 years when the only need for service is to supply a roadbuilding contractor with necessary petroleum products during construction of an interstate highway; applicant may file petition for extension of the authority if further need for service develops.—Blue Ridge Transportation Co., Inc., Extension, 89 M.C.C. 616 (619-20).

Oilfield, oilwell, pipeline stringing: [Vol. 18].—Since scope of authority for pipestringing services, originally restricted to the oil and gas industries, has been expanded as actual and potential use of pipelines has been extended to other commodities, no reason appears for imposition of that outmoded restriction on carriers authorized to serve Alaska.—J.O. (Red) Willett Pipe Line Stringing Corp. Extension, 92 M.C.C. 41 (44)*; and limitation of authority granted to service in connection with main or trunk pipelines is likewise not warranted, since it would inconvenience both applicants and industries they serve; although lateral and gathering lines are normally of smaller diameter than trunklines and employ pipe that is easier to handle, gathering lines often extend from producing fields as well as within refinery areas, and lateral lines usually connect an oil-field to a trunkline system; thus both fall reasonably within scope of applicants' specialized service. However, following 89 MCC 427, service in connection with water and sewer lines is specifically excluded.—Id., pp. 44-5.

Nor should applicants' services be restricted to movements to and from pipeline rights-of-way; such restriction might impose a heavy burden on applicants and their patrons, since it would preclude transportation of pipe in-

tended for use in pipeline construction but placed in storage temporarily until needed, unless the storage site was actually at the pipeline. Such restriction is unnecessary in view of fact that an "intended use" test is inherent in authority for transportation of commodities in connection with the construction, operation, repair, servicing, maintenance, and dismantling of pipelines.—Id., p. 45.

Authority for transportation in connection with stringing and servicing of pipelines for other than oil and gas industries should be limited to avoid duplication of existing services, yet provide for expansion of specialized operations where needs of the shipping public require it; limitation of service to pipelines as defined by examiner would afford no protection to protestants' transportation of pipe for water or sewer systems, which is not shown to require a different or more specialized service; grant to applicant pipestringers should therefore be limited in terms of commodities for which a pipeline is used or proposed to be used. Granted for service in connection with pipelines other than those used for transmission of natural gas, petroleum, their products and byproducts, water, or sewage, restricted also to shipments moving to or from pipeline rights-of-way.—J. O. (Red) Willett Pipeline Stringing Extension, 89 M.C.C. 427 (436-7).

Passenger operations: [Vols. 18, 19].—Authority to engage in special operations (providing of chauffeur service) in transportation of privately owned passenger automobiles, in secondary movements, in driveaway service, is restricted to movements in which the automobile is accompanied by the owner thereof, employees, dependents, or relatives of the owner, or other persons designated by and traveling with the owner, and the baggage of such passengers.—Adams, 94 M.C.C. 290 (295).

Authority granted two applicants to provide limousine service between Connecticut points and La Guardia and Idlewild airports is restricted to transportation of not more than 8 persons, in case of one applicant, and 11 in case of the other, in same vehicle, exclusive of the driver.—Hatom Corp., 91 M.C.C. 725 (734-5)*.

Authority granted Greyhound Corp. To serve Dulles International Airport near Chantilly, Va., is restricted to traffic moving between the airport and points west of Chantilly.—A.B. & W. Transit Co. Extension, 88 M.C.C. 175 (185).

Since proposed transportation of stockmen between Ames, Iowa, and stockyards at Chicago is a special service analogous to assembly and distribution of mill workers or plant employees, authority therefor is restricted to passengers picked up or discharged at the stockyards.—Myers, 89 M.C.C. 125 (129)*.

Plant site: [Vols. 18, 19].—Claim of plaintiff (protestant in commission proceeding) that the commission should have restricted authority granted to two applicants to the plant site of supporting shipper, instead of permitting service from named city and points within 5 miles thereof, rejected. There was ample proof of substantial present and future need and of inadequacy of existing service; and that the evidence was related solely to the one shipper did not compel a plant site restriction. Both for conceptual and practical reasons, the commission imposes such restrictions in carrier certificates only in cases where clear and convincing evidence shows that such a limitation is required in the public interest. Since nothing in the record suggests that existing carriers would be adversely affected as to traffic from other plants in the area, the commission is entitled to the view that the mere fear that traffic might be diverted is not a sufficient basis for a plant site restriction. Complaint dismissed.—Younger Bros., Inc. v. United States, 238 F. Supp. 859 (860, 861)*.

Plant-site restrictions, for the most part, are included in a grant of authority where the exact location of a particular plant is not known or in order to protect the interests of existing carriers against unwarranted competition; however, neither of those conditions is present.—Slay Transp. Co., Inc., Extension, 96 M.C.C. 47 (50); similarly, no good reason appears for restricting the authority granted to plant sites of supporting shipper.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (437).

In petition for reconsideration, applicant urges that his contract-carrier application be considered as one for common carrier authority, and suggests that any authority granted

should be restricted to supporting shipper's plant site; however that limitation was not requested in the application and, generally, common carriers should not be granted authority confined to plants of particular shippers, except where it is the only manner in which a needed common carrier service may be provided, or where interests of existing authorized carriers must be protected. Accordingly, authority granted will not contain any plant site restrictions.—Major Extension, 94 M.C.C. 652 (653, 656)*.

Except in rare instances, common carrier authority should not be confined to a plant site of a particular shipper, since a common carrier's duty to serve the general public without discrimination obligates it to serve, to the extent of its ability, all shippers who request its services.—Chemical Express Extension, 89 M.C.C. 452 (455).

Normally common-carrier authority is not restricted to service from plant-site locations unless competitive conditions are such as clearly to warrant that action to protect operations of carriers with whom an applicant would compete; evidence does not warrant such restriction on applicant's service.—Blue Ridge Transp. Co., Inc. Extension, 89 M.C.C. 616 (619); imposition of destination plant-site restriction is not warranted where rail protestant failed to show that it will be harmed in any manner by grant of authority to applicant to serve all of Baltimore, Md., as a destination point.—Shipley Transfer, Inc., Extension, 89 M.C.C. 524 (526).

As the probative evidence is limited to the need for service of one supporting shipper only, grant of authority to transport candy and confectionery, etc., is limited to movements from that shipper's plant site.—Alterman Transport Lines, Inc., Extension, 96 M.C.C. 478 (481)*; similarly, authority to transport meats, etc., is limited to traffic moving from supporting shipper's plant site.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (64); however, since authority granted is restricted, as sought, to transportation of meats and dairy products from plant site of supporting packing house, there is no need for further restriction against transportation of bulk liquids in tank vehicles.—Nebraska Eastern Exp., Inc., Extension, 94 M.C.C. 799 (804).

As a general proposition, the commission does not favor restricting common carrier authority to a plant site; but in instant case such limitation provides the only suitable means of identifying the location where service is needed, without granting countywide authority.—Dahlen Transport, Inc., Extension, 91 M.C.C. 609 (615); Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (398); in addition, and more important, restriction of authority granted to traffic originating at site of plants whose traffic is controlled by supporting shipper would preclude applicants from tacking it with their present authority from other nearby steel-producing points. No need is shown for such service and it would adversely affect protestants and other carriers operating in that highly industrialized area.—Id., p. 398.

Though applicant seeks authority from Sheffield, Ala., and points within a radius of 15 miles thereof, supporting shipper's plant is at Muscle Shoals, about 2 miles from Sheffield. As there are several other chemical shippers in the Sheffield area, and the commission disfavors territorial descriptions framed in terms of mileage radii, origin authority is limited to plant site of the sole supporting shipper.—Redwing Carriers, Inc., Extension, 92 M.C.C. 379 (382).

Since 27 independent motor carriers have been granted authority to serve the site of supporting shipper's new plant at Oakbrook, Ill., and the evidence shows need for service at that point only, authority granted rail-subsidiary applicant should be similarly restricted.—New York Central Transport Co. Extension, 92 M.C.C. 173 (178)*.

While the commission generally does not favor restricting a grant of common-carrier authority to a plant site, authority granted is restricted to supporting shipper's plant site at Niagara Falls, as requested, since such limitation is the only suitable method of protecting other carriers in a large commercial area, where service is needed only at a particular production point.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (141)*.

Although plant-site limitations are not normally imposed in grants of authority to common carriers, public interest requires such

restriction where applications are supported by only one shipper (receiver) who would use proposed services for approximately one truckload weekly of flourspar and two of feldspar; without such restriction resulting authority would afford applicant opportunity to serve a public far exceeding the limited proof of need for service shown by the single supporting shipper. Destination authority restricted to site of shipper's plant at Baltimore. —M. I. O'Boyle & Sons, Inc., Extension, 88 M.C.C. 559 (561). [But see dissent.]

Points, origin, intermediate, off-route, destination.—[Vols. 18, 19].—Reviewing court, in settting aside, in part, and remanding application proceeding for further proceedings consistent with its finding that record did not support grant of authority for a new service between Beaumont-Orange and Houston, Tex., and intermediate points, specifically indicated what part of the service should be authorized in the further proceedings; since the commission is bound by the court's opinion, a broader grant of authority contrary thereto, though unintended, would not meet either the court mandate or statutory requirements. Restriction in amended certificate issued after the remand is not framed to preclude a "through" service by tacking at Houston, which grant the court found to be erroneous; thus, the commission has no alternative but to issue a second amended certificate correctly reflecting the court mandate. Therefore, certificate is further amended so as to restrict service at points in Orange, Beaumont, and Houston commercial zones to traffic moving to or from points on specifically described route in Louisiana.—Central Freight Lines, Inc. v. Strickland Transp., Inc. 102 M.C.C. 291 (294-8)*.

See also Transamerican Freight Lines, Inc. —Interpretation, case, §208(a), n. 31.

Since the commission can authorize operations only in interstate or foreign commerce, the examiner's recommended restriction of passenger authority "to traffic destined to, or originating at, points outside of or beyond New York" is redundant and will be omitted. —Arrow Trailways, Inc., Extension, 94 M.C.C. 514 (519).

Although busline's application seeks authority to operate over two routes between Philadelphia and New Jersey Turnpike, serving Camden, N. J., and other intermediate points only on traffic to or from points beyond Philadelphia or New York City, to avoid ambiguity and future questions of interpretation that restriction is changed to prohibit transportation of traffic originating at or destined to Philadelphia or New York City.—Greyhound Corp. Extension, 95 M.C.C. 762 (764, 770)*.

While restrictions against a busline's serving intermediate points should not be imposed without strong reasons, the almost complete lack of passenger support for service between Rahway, N. J., and New York City in addition to existing service of protestant railroad and a rival busline, together with probable adverse effect on the railroad's service, warrant a closed-door restriction on authority granted applicant for routes from other New Jersey points against service at Rahway as an intermediate point.—Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (111-2)*.

In order to achieve applicants' intended limitation of proposed transportation of liquid oxygen, liquid hydrogen, and liquid nitrogen to military and Government traffic, authority granted is restricted against transportation of shipments moving to destinations which are not missile storage or missile launching sites, missile test facilities, or manufacturing plants producing those commodities.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (19)*.

While record indicates that there are shippers of chemicals, other than supporting shipper, at or in Lake Charles, La., area, and that protestants serve at least some of them, there is no evidence of their need for applicants' proposed service; therefore, to afford some protection to protestants and confine the grants more to conformance with proof submitted, authority granted to each applicant, as to origin, is limited to Lake Charles and points within 5 miles thereof.—Robertson Tank Lines, Inc., Extension, 95 M.C.C. 234 (245, 250-1)*.

As the preponderance of new-automobile traffic transported by applicant in secondary movements from Spokane to Washington and Idaho destinations will continue to originate in California and will be merely supplemented by the limited volume moving from other origins, requested elimination of present restric-

tion to shipments originating in California depends on whether public convenience and necessity require its removal to permit applicant to provide a complete service for General Motors Corp., which controls the routing. Although GMC did not appear in support of proposed operations, and protestant is authorized and willing to serve supporting dealers in the movements involved, there is no evidence that it, a substantial carrier, needs protection of that restriction. Effective and efficient operation requires that applicant be able to provide a complete service on considered traffic; and that removal of the restriction is supported only by dealers in its authorized area does not warrant a different conclusion. —Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (569, 571).

Authority to serve Harrisburg, Pa., in connection with applicant's regular-route operations between Lewistown and Philadelphia is limited to interchange of shipments, since no need is shown for additional service at Harrisburg for any other purpose.—Noerr Motor Freight, Inc., Extension, 89 M.C.C. 589 (592).

Authority for transportation of meats to certain points and territory in northeastern New York is restricted against service at Syracuse or points within 10 miles thereof, at points in Albany commercial zone, or at points within 10 miles of New York Highway 5 between Albany and Utica.—Refrigerated Food Exp., Extension, 89 M.C.C. 795 (800)*.

Although applicant's primary aim in seeking proposed route in Mississippi appears to be its desire to handle traffic between Memphis and proposed off-route point of Helena, Ark., and a restriction precluding such transportation should not be imposed without strong reasons, since it is in some sense contrary to accepted concept of common-carrier service, imposition is warranted when protestant's service between those points appears reasonably satisfactory and would be adversely affected by a new competitive operation.—F. & W. Exp., Inc., Extension, 88 M.C.C. 262 (263)*.

See also Schroder's Exp. case, and Al Renk & Sons, Inc.—Alaska "Grandfather" Application case, §208 (a), n. 30.

As it does not appear that applicant has ever provided or participated in providing service to or from points in West Virginia portions of commercial zones of Ohio points it is authorized to serve under single-State proviso, or that any need exists therefor, certificate granted for continuance of its Ohio operations is restricted against service at such points.—Pedler—Control—All States Freight, Inc., 90 M.C.C. 491 (498).

At opening of hearing on purchase application vendee's counsel made clear that in seeking certificate covering its operations under former single-State exemption proviso it sought only authority corresponding to its present intrastate authority, in which its regular-route rights are divided into three contiguous territorial groups, with restriction against tacking for purpose of performing service between a point in one group and a point in another, and which also contains restrictions against service between specified points; similar restrictions are therefore imposed on authority granted under §207.—Dodds Truck Line, Inc.—Purchase—Strain, 93 M.C.C. 229 (230-1, 237).

Authority granted for alternate operating-convenience routes over US Highway 36 between St. Joseph, Mo., and Pittsfield, Ill., and between Decatur, Ill., and Indianapolis is restricted to movement of traffic between St. Joseph and Indianapolis; otherwise, applicant could operate directly between St. Joseph and points on its service route between Pittsfield and Decatur to perform a service different from that presently conducted and beyond that contemplated.—Transamerican Freight Lines, Inc., St. Joseph Alt. Routes, 92 M.C.C. 747 (752)*.

Policing of applicant's proposed restriction of alternate-route authority between Birmingham, Ala., and Meridian, Miss., to traffic moving from or to Birmingham and to or from New Orleans and Gulfport does not present any administrative difficulty.—West Bros., Inc., Extension, 91 M.C.C. 523 (532, 533)*.

Authority granted to railroad subsidiary for service between supporting shipper's plant at Oakbrook, Ill, and Chicago is restricted against handling of traffic originating at or destined to points in Lake and Porter Counties, Ind., and points in Illinois other than in St. Clair and Madison Counties.—New York

Central Transport Co. Extension, 92 M.C.C. 173 (178-9)*.

Restriction in railroad subsidiary's certificate prohibiting service "at any point not a point on the rail lines of the railroad" allows it to serve all terminal, intermediate, and off-route points described in its certificate which are stations on its parent's rail lines; "points" refers to all communities, incorporated or unincorporated, or unincorporated areas in which such stations are located.—New York Central Transport Co.—Modifications, 89 M.C.C. 389 (397-8).

A key-point named in connection with one route, but which acutally lies on a connecting route, does not limit operations over the latter route; naming of Erie, Pa., as an off-route key point in connection with certain routes granted in petitioner's extension proceeding does not limit service over routes acquired in earlier purchase proceeding between Erie and either Buffalo, N. Y., or Cleveland or Sandusky, Ohio.—Id., pp. 393-4.

Petitioner's modified authority for substituted highway service over authorized routes in 12 defined key-point zones should not be restricted to movements through the zone hub; the railroad's management should have option of either utilizing petitioner's service in that manner or operating directly between way stations, whichever provides the more efficient and economical service at the time; management should enjoy the same freedom of action in that respect as it now does under the key-point principle.—Id., p. 411; similarly, restriction of petitioner's service at break points common to two or more zones to points within only one zone would require either circuitous back hauls or continuance of uneconomical merchandise car service to and from break points; service should not be confined to one side of a break point so as to preclude handling of traffic flowing in a different direction in the other zone.—Id., p. 411.

Prior or subsequent movement by air: [Vols. 18, 19].—Although applications for authority to transport passengers between Connecticut points and La Guardia and Idlewild Airports limit authority sought to passengers having an immediate prior or subsequent movement by air, it is common practice for persons other than airline passengers to utilize airport limousine service. Also, since applicants will be authorized to transport passengers only when traveling to or from an airport, such restriction is neither necessary nor in the public interest.—Hatom Corp., 91 M.C.C. 725 (734)*.

Authority granted REA for motor carrier operations between Mobile, Ala., and Pensacola, Fla., should not be restricted against transportation of express shipments having a prior or subsequent movement by air. While not extensive, some service of that nature has been performed by REA in the past, and it does not appear that protestant would be seriously injured by failure to impose such a restriction.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 180 (184-5).

Grant of authority for transportation of general commodities, including those of unusual value, between Somerset and Middlesex Counties, N. J., and Newark, Idlewild, and La Guardia Airports, is restricted to traffic having an immediately prior or subsequent movement by air.—Con-Ov-Air Air Freight Service, Inc., 92 M.C.C. 526 (529).

Prior or subsequent movement by rail: [Vols. 18, 19].—See also NTP, n. 10 *Restrictions, auxiliary, supplemental service.*

Although the commission's interpretation of §5(2)(b) as applicable to certificate applications under §207 by rail-affiliated carriers, and its implementation thereof by imposition of a rail-haul restriction on authority granted such carriers, was expressly approved by the Supreme Court in 340 US 419, there was no error in its grant of extension authority to Railway Exp. Agency without including a rail-haul restriction. In approving the commission's use of the policy of §5(2)(b) as a guide rather than a rigid limitation in interpreting §207, the Court in 355 US 141 held that the commission has discretion to grant totally unrestricted authority to rail-affiliated companies where special circumstances prevail and unrestricted operation by the rail-owned carrier is found on specific facts and circumstances to be in public interest.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (334-5)*.

In instant case the commission has in fact found the special circumstances justifying non-imposition of the rail-haul restriction; its report finds specifically, on substantial evid-

ence, that existing motor carriers are unable or unwilling to perform the type of service rendered by REA. Such a restriction would have resulted in denial of express service to shippers in the involved localities, since the very reason for the applications was the discontinuance of passenger trains carrying express freight to those communities. The commission acted well within its statutory authority; sustained.—Id., p. 335.

Authority granted for secondary truckaway movement of new automobiles from Spokane, Wash., to additional destinations in Washington and Idaho is restricted to traffic having prior rail movement from plant sites of General Motors Corp.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (572).

Imposition of a prior or subsequent rail-haul condition on a systemwide basis on petitioner's modified authority for substituted service in 12 defined key-point zones would deprive the zone plan of much of its flexibility by compelling use of rail service when all highway operation would be more logical and practical. However, to protect certain independent motor carriers whose traffic would be subject to diversion, rail-haul restrictions are imposed as to traffic between specified points in designated zones; such restrictions will permit operation through the restricted points to and from other origins and destinations, and with one exception will apply to the named points only and not to points in their commercial zones.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (409-10, 411).

Although application seeks authority for transportation of contractors' equipment from North Dakota railheads to missile launching sites, restricted to service supplemental of that of Soo Line, such movement is on applicant's billing, and restriction to service for one railroad is unnecessary. Instead, restriction to traffic having prior rail movement is imposed.—Maas Transport, Inc., Extension, 92 M.C.C. 581 (583, 585)*; on reconsideration, however, authority restricted only to traffic having a prior rail movement represents a broadening of scope of the application as filed, and authorizes service at points on lines of the opposing railroad without it having an opportunity to show the adequacy of existing service at those points. Accordingly, authority granted is limited to traffic originating at stations on the Soo Line. —Id., 95 M.C.C. 375 (377)*.

Restriction requiring a "prior" movement by rail precludes transportation of shipments which would be proscribed by an "immediately prior" restriction; both terms have been used interchangeably by the commission and appear to have been understood by the regulated transportation industry as identical in meaning; in either form, such a rail-haul restriction refers to uninterrupted movements from origin to destination and does not permit performance of a distribution service on cement which after an initial rail movement has come to rest in silo storage at a rail point.—New England Transp. Co. Extension, 88 M.C.C. 703 (706-7).

Since all interstate express traffic originated or terminated at Great Falls, S. C., under authority granted Railway Exp. Agency to enable it to continue serving that point, will have a prior or subsequent rail movement through either Charlotte, N. C., or Greenwood, S. C., or will move by motor vehicle over a connecting route of REA which is subject to a rail-haul restriction, a like restriction is imposed on the extension route granted.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 102 (109); likewise, authority granted REA over a route between Clinton, Iowa, and Crystal Lake, Ill., is limited to express shipments having an immediately prior or subsequent movement by rail or air, except that purely local service may be rendered on express traffic moving solely between points authorized on that route.—Id., 92 M.C.C. 487 (490).

In view of imposition of a key-point restriction on extension authority granted Railway Exp. Agency, a rail-haul condition would not be appropriate. Key-point and rail-haul restrictions are not intended to be applied concurrently, but are imposed as alternatives, depending on which one would most suitably accomplish the basic objectives.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (481); removal of rail-haul restriction on REA's present authority between Elgin Air Force Base and Pensacola, Fla., to permit tacking with motor-carrier authority granted

between Pensacola and Mobile, Ala., is not warranted when no need is shown for the proposed all-motor service. Authority granted is therefore restricted to observance of Pensacola and Mobile as key points.—Id., 94 M.C.C. 180 (182, 183-4).

As there is no other express at points along proposed route between Sioux City, Iowa, and Mitchell, S. Dak., a rail-haul restriction on authority granted Railway Exp. Agency would preclude it from rendering service required on traffic not having a prior or subsequent rail haul which moves over its existing Sioux City-Omaha motor route. Even in absence of rail service, REA's Sioux City-Omaha operations cannot be considered substituted motor-for-rail movements, but are motor express movements; rail-haul restriction should therefore not be imposed, and it follows that a restriction against handling of traffic moving in TOFC service as part of a rail-haul restriction would likewise be inappropriate.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 836 (839).

Authority granted railroad subsidiary to transport ore and ore concentrates is limited to shipments moving under a through bill of lading and having an immediately subsequent movement by rail.—Rio Grande Motor Way, Inc., Extension, 89 M.C.C. 199 (202-3).

Since proposed transportation of building materials from Jersey City, N. J., and Queens, N. Y., to three New York counties is exactly the same type of service as that now provided by applicant on ex-rail shipments from its Brooklyn terminal, authority granted is restricted to shipments having a prior movement by rail.—Paul Marckesano & Sons Co., Inc. Extension, 86 M.C.C. 727 (729, 733).

Prior or subsequent movement by water: [Vol. 18].—Respondent's permit to transport general commodities "received from, or delivered to, port facilities, or places of storage before or after a movement by water" does not authorize it to transport traffic to or from a port area regardless of whether it has had a prior or subsequent water movement; restriction "before or after a movement by water" is clear and unambiguous and obviously requires that shipments transported have, at some time, a water movement. Restriction of authority granted in conversion proceeding to "general commodities having a prior or subsequent movement by water" ensures substantial parity between past and future operation.—P. Saldutti & Son, Inc., Conversion, 89 M.C.C. 338 (341-2)*.

Authority granted to transport chemicals between named Texas points and water terminals in Texas is restricted to shipments having a prior or subsequent movement by water through a Texas port.—Ryder Tank Line, Inc., Extension, 91 M.C.C. 497 (500, 501); and authority for distribution of salt from border port stockpiles on the Great Lakes and other designated waterways is restricted to shipments having prior water movement from Detroit or Cleveland.—Paul W. Wills, Inc., Extension, 88 M.C.C. 692 (696).

Private and for-hire transportation: [Vols. 18, 19].—See also Winter Garden Co. v. United States, §203(b), n. 50 *Act of 1958.*

"Grandfather" authority granted is subject to conditions that such operations be conducted separately from applicant's other business activities, that separate accounts and records therefor be maintained, and that applicant not transport property both as a for-hire and a private carrier at the same time in the same vehicle.—Lowrance, 91 M.C.C. 440 (443-4)*.

Although applicant's proposed operation as a common carrier of toilet preparations while continuing private carriage of contractors' supplies is found unobjectionable, departure from the commission's long-established policy against commingling of private and for-hire traffic in same vehicle is not warranted; to hold otherwise would place applicant in a particularly advantageous competitive position because of assurance of regular traffic as a private carrier, and would enable it to compete on more than even terms with other common carriers. Usual requirements that applicant conduct its private and for-hire carrier operations separately and not transport traffic of both types in same vehicle at same time, imposed.—Wycoff Co. Inc. Extension, 92 M.C.C. 549 (551-2).

Tacking: [Vols. 18, 19].—Imposition of tacking restriction in conversion proceedings, see Tar Asphalt Trucking Co. v. United States, §212(c), n. 2.

While complainant alleged that the imposi-

tion of restriction against tacking on authority granted it in §5 and related §207 proceedings was unlawful because the commission's conclusion was conjectural and speculative and not based on concrete evidence, and record lacked evidence of adverse effect of its unrestricted operations under temporary authority on other carriers, there had not been prior to the commission hearing any adverse effect on other carriers from such competition, simply because complainant had been competing only on a negligible scale. Evidence supports inferences that protesting carriers were operating equipment at less than capacity and were operating at a very narrow margin of profit; and that complainant's area of operation would duplicate theirs, and he would divert traffic from all of them, if allowed to tack; that protestants had not already been adversely affected was not controlling, since complainant was in complete control of the evidence in that respect; sustained.—Cope v. United States, 222 F. Supp. 596 (602-4)*.

See also Tallant Transfer case, §5(2), n. 110 *Restrictions on operating rights*.

It is not the commission's policy to impose no-tacking restrictions on grants of common-carrier authority in absence of compelling reasons.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 187 (191); Bridge Extension, 88 M.C.C. 108 (113)*; imposition of a restriction against tacking is not warranted when there is no showing that protestant is hauling any traffic which would be subject to diversion as result of such tacking.—Refiners Trans. & Term. Corp. Extension, 88 M.C.C. 611 (614); likewise, as it does not appear that nonimposition of tacking restriction requested by protestants will have any material effect on existing carriers, it is not imposed.—Colonial Refrigerated Transp., Inc., Extension, 86 M.C.C. 796 (799).

There is no justifiable basis for imposing a tacking restriction on extension authority granted from Florida to the Carolinas; it would not be practical or feasible to tack that authority with applicant's Texas authority in a manner which would be competitive with protestant's service, since routes involved would be too circuitous; nor would applicant gain competitive advantage by tacking that authority with its authority from High Point, N. C., since it may already render direct service from Florida to points in substantially the same territory it is authorized to serve from High Point.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (50).

In absence of any showing that tacking of applicant's existing authority for dry bulk chemicals with authority granted for transportation of three specified synthetic resins from Ector County, Tex., to points in 25 States is necessary to prevent injury to existing carriers, recommended tacking restriction is not imposed.—Younger Bros., Inc., Extension, 92 M.C.C. 624 (631); also, restriction against tacking is unnecessary to protect competing carriers when authority granted is restricted to three types of liquid or dry-bulk chemicals. —Eldon Miller, Inc., Extension, 88 M.C.C. 309 (314)*.

It is the commission's well established policy not to encumber grants of authority with restrictions against tacking unless protestants show that they would be materially adversely affected by the failure to do so; and even more compelling reasons exist for that policy with respect to restrictions against interchange. In order that common carriers may fulfill their public obligation to provide adequate service and facilities for interstate transportation of property, the act itself encourages interchange by providing, in §216 (c), a correlative privilege of establishing through routes with other common carriers; therefore, restrictions against that privilege are not readily imposed.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (481).

Accordingly, since evidence is convincing that protestants would be materially and adversely affected by grant of the authority denied, and that failure to impose a restriction to prevent tacking authority granted with other authority presently held by applicant would have exactly the same effect, restriction against tacking is imposed on grant of authority for which a need is shown. However, applicant's privilege of interchange will not be limited although, without that restriction, it would be able to make a direct connection which would reduce present three-line haul from midwestern to southeastern points to a two-line haul. Such considerations, involving merely the risk of somewhat less indirect

competition from applicant and other unnamed carriers, provide a woefully weak argument for a restriction against interchange, while the policy against imposing such restrictions is very strong.—Id., pp. 481-2.

Evidence does not indicate that protestants will be adversely affected by failure to impose a restriction against interlining (requested as an alternative to a plant-site restriction) on grant of irregular-route authority to transport certain farm machinery from Ogden, Utah, and from Boise, Burley and Parma, Idaho, to points in several States. Authority granted is subject to a restriction against tacking or combining, directly or indirectly, with any other authority held by applicant for the purpose of providing through service.—International Transport, Inc., Extension, 95 M.C.C. 360 (364)*.

Inasmuch as the broader commodity description in authority granted, if unrestricted, would enable applicant—through tacking—to serve the same origins and destinations as protestants serve, grant of irregular-route authority to transport prepared foods, and poultry when moving in mixed loads with prepared foods, is restricted against joinder with other authorities held by applicant for performance of through transportation.—Blythe Extension, 96 M.C.C. 546 (549).

Authority granted to each of two applicants to transport acids and chemicals is restricted against tacking or joinder by applicant with any other of its authority for purpose of performing a through service other than that authorized.—Robertson Tank Lines, Inc., Extension, 95 M.C.C. 234 (236, 251)*.

Grant of extension authority for a route between Nashville and Lancaster, Tenn., is restricted against tacking with applicant's existing authority to provide through service between Nashville and Lebanon, Tenn., which would place applicant's operations in direct competition with those of protestant without a showing of public need therefor. As applicant does not seek to serve Lebanon or points between Lebanon and Nashville, protestant need not submit specific evidence of adverse effects it would experience in absence of a no-tacking restriction.—White Motor Exp., Inc., Extension, 94 M.C.C. 12 (13-14).

It is the commission's policy not to encumber grants of authority with restrictions against tacking unless protestants show that they would be materially and adversely affected by failure to do so; and there are even more compelling reasons for adhering to that general policy with respect to restrictions against interchange. No justification appears for imposing a restriction against tacking or interchange on authority granted applicant between Williamson, W. Va., and one western Virginia and six eastern Kentucky counties; the region is in need of regular and dependable common carrier service for shipments originating beyond Williamson as well as for those moving from or to Williamson itself; and for competitive reasons several line-haul carriers do not desire to interchange with protestant, but seek to interline with applicant whom they do not consider a competitor. Restriction to traffic originating at or destined to Williamson, not imposed.—Hogan Storage & Transfer Co. Extension, 92 M.C.C. 63 (66-7).

No compelling reason therefor being shown, recommended restriction against tacking of extension authority granted for hydrolized vegetable protein or interlining of shipments thereof is not imposed. However, grant of unrestricted rights to transport liquid sugar would give applicant substantial additional authority through incidental tacking rights; as only limited need for proposed transportation of liquid sugar and blends thereof is shown, and applicant agreed to, and protestants withdrew their opposition in reliance on, proposed tacking restriction on such authority, it is imposed accordingly.—Robert H. Carr & Sons, Inc., Extension, 92 M.C.C. 262 (264, 265).

While restrictions generally are undesirable and tend to present problems of enforcement, evidence of opposing carriers establishes that unrestricted competition by vendee at points east and south of Asheville, N. C., would have materially adverse effect on their operations, and the commission would be derelict in its duty if it approved purchase without restriction of authority granted vendee in related §207 proceeding for two routes between Knoxville, Tenn., and southwestern North Carolina area against tacking with its irregu-

lar-route authority between a 50-mile radial area based on Asheville and a large North Carolina territory outside thereof. Such restriction will afford some protection to protestant operating in area directly south of Asheville, which vendee will be limited to serving only on an interline basis to and from Knoxville.—Cope—Purchase—Hill and Burdick, 90 M.C.C. 71 (78)*.

Regular route granted vendee in lieu of vendor's irregular routes between Salt Lake City, Utah, and Page, Ariz., is restricted against tacking with vendee's existing routes between California and Texas for performance of single-line service between California points and Salt Lake City when such service would be a new competitive operation for which no need is shown. Such restriction would be in consonance with the commission's view that existing carriers are entitled to reasonable opportunity to provide the service before a new competing service is authorized.—Colsolidated Copperstate Lines—Purchase—Nielsen, 90 M.C.C. 483 (489, 490).

Applicant is essentially authorized to transport automobiles in eastern half of United States, and in absence of a tacking restriction extension authority granted from Springfield, Mass., to Maine would enable it to provide service to Maine from points where no need for such service has been shown; supporting shipper's interest is in movement from Springfield of ex-rail shipments from Buffalo and Michigan; authority granted from Springfield is therefore restricted against tacking with applicant's other authority, to protect carriers now serving Maine from other points. —Howard Sober, Inc., Extension, 88 M.C.C. 755 (760).

Truckloads: [Vols. 18, 19].—See Bowman Transp., Inc., case, §212(a), n. 1.

Weight: [Vols. 18, 19].—The commission has consistently held that, so far as practicable, a common carrier should be expected to offer a complete service and that operating authorities should not, without special justification, be so framed as to permit a carrier to do less. Suggested 2,000-pound maximum weight limitation on shipments handled by railroad subsidiary under approved key-point zone plan would imply approval of a holding out of less than a complete service, and is objectionable because it would detract from flexibility of petitioner's service; not imposed.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (410).

Elimination, in certificate granted vendee for continuance of vendor's operations under "grandfather" clause of §206(a)(7), of size and weight limitations on vendor's underlying State authority is supported by the evidence and is desirable in public interest so that vendee may provide a complete service within Kansas to conform with satisfactory service it is providing express shippers and receivers in Oklahoma and Texas.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797 (804).

7. Competition.—[Vols. 10-19].—Protestant has been transporting supporting shipper's traffic from St. Louis, Mo., to points in North and South Carolina by combining its own authority between Cincinnati, Ohio, and the Carolinas with temporary authority to operate between St. Louis and Cincinnati under another carrier's certificates pending final determination of its application to purchase that carrier's operating rights. Therefore, since protestant is providing service between St. Louis and the Carolinas even though its continuation is contingent upon approval of the proposed purchase, and that service would be seriously and adversely affected should the application be granted, considered application will be denied without prejudice to applicant's filing a petition for reconsideration should protestant's purchase application, or any part thereof, be denied.—Parkhill Truck Co. Extension, 96 M.C.C. 541 (543-4).

Though grant of extension authority sought will divert some traffic from other carriers and would not be justified if applicant were seeking to institute a new service, denial is not warranted where it is already serving supporting shippers and is merely seeking to broaden its commodity authority to afford them the complete service they require.—Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (271)*.

Public convenience and necessity cannot be established for either a new service route or an alternate route merely upon an applicant's assertion of fear that a grant of authority to

another carrier over the same route or a portion thereof would impair its competitive position by diverting traffic other than that between the involved termini.—Greyhound Corp. Extension, 88 M.C.C. 20 (23).

Grant to Greyhound of a segment giving it a more direct passenger route between Raleigh and Charlotte, N. C., does not warrant granting a corresponding more-direct route, even on a "closed door" basis, to Carolina, a Trailways member; that Greyhound may not now be competing effectively with Carolina for local Charlotte-Raleigh traffic is no reason why it should not be permitted to do so. The main traffic subject to diversion is overhead traffic from and to points beyond those termini, and there is no evidence as to effect, if any, of such diversion on Carolina; in the circumstances, an arbitrary balancing of applicants' competitive positions is not a sound basis for a grant of authority.—Id., p. 23.

Also, fact that applicants in connection with their respective system members are in active competition, especially on long-haul traffic, and that the Raleigh-Charlotte operations are an important link in both systems' north-south trunklines, does not mean that both applications should be granted. It is not necessary, or desirable, that each system serve all points in common, or that each should have the most direct route between two points. Carolina's application therefore should be denied.—Id., pp. 23-4.

The fundamental purpose underlying economic regulation of motor carriers was to protect the public from the damaging effects of ruinous competition among carriers; this regulatory concept derives its validity from the public utility characteristics of the transportation industry, and particularly the fact that common carriers of passengers must make a heavy investment in equipment, terminals, and other transportation facilities in order to provide safe, economical, and reliable service.—Auch Inter-Borough Transit Co. Extension, 88 M.C.C. 455 (459).

Ordinarily, certification of motorbus operations and licensing of brokers produces no conflict between them; however, practical and inevitable effect of finding in 54 MCC 291 that a broker of all-expense tours may use services of carriers holding charter authority, in addition to regular-route passenger carriers and those with special-operations authority, was to make tour services rendered jointly by brokers and authorized charter carriers directly competitive with those offered by carriers under special-operations authority. On the other hand, while such brokers perform a beneficial economic function the transportation field, and it is important that services of legitimate brokers be maintained, the act was not intended to protect brokers who might be adversely affected by such direct competition. Record does not support protesting brokers' fears that applicants will use their best equipment in their own tour operations and, by restricting availability of equipment for broker-assembled groups, will drive brokers in the area out of business. Section 216 provides a remedy for such discriminatory practices.—Id., pp. 458-9.

But where a broker is joined by a carrier protestant engaged in charter operations, their combined economic interest is entitled to full consideration; however, if special operations authority were denied because of adequacy of existing service provided by a broker and an authorized charter carrier, the protection against unwarranted competition would not be extended to the broker as such, but to the charter bus operator who in cooperation with the broker is willing and able to satisfy the alleged need for service.—Id., p. 460-1.

Existing motor carriers: [Vols. 12, 19].—See also n. 25 *Existing carriers*, below.

Fact that granting the considered certificate to intervenor would not only divert traffic from plaintiffs (protestants in commission proceeding) but would also increase their preexisting unbalanced traffic flow, is a factor to be considered and the commission did consider it; however, it is not the only factor to be weighed when the public benefit is to be determined. The commission held that need for proposed service outweighed the effect of the loss of traffic and revenues to plaintiffs and other carriers; and its conclusion that the certificate should issue, being adequately supported by the evidence and within its statutory functions, the court cannot say it was wrong; sustained.—Mercury Motor Express, Inc. v. United States, 261 F. Supp. 621 (622)*.

Even assuming *arguendo* that plaintiffs are presently able to provide the unique express service required by shippers, this factor alone would not bar the commission from certifying additional service by Railway Exp. Agency. Plaintiffs have no vested right to be immunized against competition.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (333)*.

While issuance of a certificate requires determination by the commission of any prejudice that will result to existing properly authorized carriers, proceedings before the commission are not contests between competing motor carriers; and since evidence of adverse effect on them is generally within control of protesting carriers, they should present information of that nature to persuade the commission to deny the certificate.—Robbins v. United States, 204 F. Supp. 78 (81, 82)*.

Though protestants contend that grant of interstate authority to applicant busline for its existing intrastate route, with incidental charter rights appurtenant thereto, would adversely affect their charter operations, adequacy of existing interstate charter service is not in issue, and the matter of incidental charter rights, which are automatically bestowed on a successful applicant, is immaterial to the issue of public convenience and necessity for the requested regular-route authority.—Sheridan-Indianapolis Bus Line, Inc., Extension, 92 M.C.C. 285 (287)*.

None of three applicants for extension authority which would permit through bus service between certain New Jersey areas and New York City has established that grant to a competitor would cause substantial diversion from existing routes; no traffic studies were made to show extent of possible diversion, or even that available combination service is being used. Selected applicant's operation tion, it is only reasonable that the criterion on of tremely limited, and any passengers it draws therefrom are probably residents of the northwest portion only; opposing applicant's claim of diversion is premised on alleged affiliation of the selected applicant with another busline which is not shown to be in fact an affiliate, or to be the primary local carrier in that area; thus, competitive considerations are not a determining factor.—Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (114)*.

One of criteria that a railroad subsidiary must satisfy before substitution of its motor service for that of its parent railroad may be approved is that the proposed service will not seriously endanger operations of existing independent motor carriers. And though systemwide operations of a large independent motor carrier might not be threatened by a competitive setback in one geographical location, it is only reasonable that the criterion on of serious impairment be interpreted to apply to a limited area of service.—Pacific Motor Trucking Co. Extension, 92 M.C.C. 573 (578, 579); authority for substituted motor service between El Paso, Tex., and Tucumcari, N. Mex., is denied when ability of existing carriers to continue effectively serving the small towns along that route depends on retention of their present tonnage, and applicant's proposed daily service to all points in lieu of parent railroad's sporadic and noncompetitive service would probably seriously impair their operations.—Id., p. 579.

Analysis of traffic exhibits of 44 protestants shows that all but 10 would be virtually unaffected by modification of railroad subsidiary's certificate to authorize substituted freight service in 12 defined key-point zones, and that only 714 of 104,992 shipments listed could be handled by petitioner in all-highway service from origin to destination; fact that petitioner's routes in each zone are mainly between intrastate points, and such operations must be preceded or followed by a rail movement beyond the State, militates against appreciable alteration of the competitive situation. However, as a rather high percentage of shipments hauled by certain protestants to and from some individual points would be subject to diversion, to protect those carriers from unwarranted and excessive competition railhaul conditions are imposed as to traffic between specified points in designated zones.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (401, 409).

As to protestants' fear that the railroad might enhance its competitive position by concentrating its Flexi-Van operations at break points between adjacent zones instead

of at the key-point hubs, the 12 zone hubs are the more advantageously located to achieve maximum operating economies, and petitioner and the railroad have committed themselves to removal of all LCL-freight handling facilities at the 33 eliminated key points, many of which are break points, also to use of the zone hubs as the principal collection, delivery, and transfer points. If the more flexible zone operations authorized are misused or otherwise serve to restrain competition, the commission will reopen to proceeding for imposition of such further restrictions or conditions as may be necessary.—Id., p. 412.

Existing carriers are entitled to have their services tested before the commission authorizes institution of any additional competitive service.—B & C. Transp., Inc., Extension, 94 M.C.C. 326 (329); and existing tank-truck carriers should be given an opportunity to engage in transportation in premounted collapsible containers before a competitive carrier is permitted to enter the field. Thus, protestants should be afforded an opportunity to expand their facilities to include collapsible containers for handling commodities they are now authorized to transport; to the extent, the application is denied.—Los Angeles-Seattle Motor Exp., Inc., Extension, 89 M.C.C. 621 (624-5)*.

Although carriers initially in the field are not immune to addition of competitive carriers where evidence warrants such additional service, existing carrier is entitled to at least a fair opportunity to demonstrate suitability of its service before another carrier is permitted to enter the field in competition with it.—McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 250 (252).

Grant of authority to transport meats and packinghouse products from Louisville, Ky., to points in three of the destination States sought is not warranted when no traffic is shown to be moving to one of them and no inadequacy is shown in facilities available to points in the others. Fact that supporting shipper may occassionally require multiple-delivery service to destinations both within and beyond the scope of protestants' operating rights does not constitute a basis for placing applicant in a position to compete for traffic now being transported by protestants for other shippers from Louisville to points in the States denied.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (480-1).

Though grant of common-carrier authority to applicant armored-car operators for transportation of commercial papers, film, and related articles may cause some diversion from protesting bus companies, considering amount of such traffic generally handled by the buslines relative to their total operations, and the need shown by supporting shippers, such undetermined diversion cannot be considered a substantial deterrent to grant of authority sought.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (363).

Only a very small portion of overall traffic of protestant which operates a parcel delivery service in addition to household goods moving and general hauling is exposed to diversion by applicant, and such exposure involves a type of traffic on which protestant has demonstrated ability to withstand applicant's competition; traffic of other independent motor carriers which would be exposed to diversion is likewise an insignificant portion of their overall operations; each of those carriers serves only a limited number of points which would be served by applicant, and their opposition does not warrant denial of any portion of application.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (741)*.

Though protestant general-freight carriers' concern regarding increased competition by Railway Exp. Agency through extensions of its authority to provide all-motor express service in lieu of discontinued passenger-train service is not wholly unfounded, and a finding in instant proceeding that grant of authority to REA for all-motor service is justified where existing carriers are not regularly rendering an express service could greatly facilitate expansion of REA's motor operations, it would not be to detriment of common carriers of general freight. Though such carriers have always been authorized to transport express traffic, absence of any real showing thay they do so more than occasionally indicates that, by and large, they have never effectively exercised their ability to compete with REA, no matter what mode of underlying transportation it utilized.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (323, 340)*.

Notwithstanding recent grant of authority to one protestant for substantially the same commodities, including separate loads of parts, from supporting shippers' plants in Illinois to North Carolina, grant of like authority to applicant will not adversely affect that protestant in any material degree when applicant is now providing service to that State through interline and is handling substantial tonnage for those shippers in such service.—Gregory Heavy Haulers, Inc., Extension, 88 M.C.C. 45 (49).

Express: [Vols. 11-13, 19].—See also Freight, All Kinds, L.C.L. Container Charges, §204(b), n. 7 *Express*.

Railway Exp. Agency's proposed motor operation between Charlottesville and Newport News, Va., does not amount to a completely new service but merely substitution of a different mode for one part of its underlying line-haul transportation. Competitive effect of its existing express service has long been felt by other motor carriers and it is not shown to have been providing general freight service between those points under temporary authority or to be contemplating a change in character of express service it now renders; grant of application, restricted to transportation auxiliary to its express service and on through express billing, should not alter REA's existing competitive relations with protestants. Moreover, the commission will continue to scrutinize REA's operations with a view to forestalling any developments which threaten to change the character of its service to serious detriment of other motor carriers; and if its operations under the authority granted should serve to restrain competition the proceeding can be reopened for imposition of any necessary corrective restrictions or conditions.—Railway Exp. Agecy, Inc., Extension, 94 M.C.C. 62 (74, 77, 78).

Railway Express Agency's estimates of diversion to applicant's proposed parcel delivery service are not sustained by evidence; about 40 percent of supporting shippers seldom use REA's service, and others use it for shipments applicant would not handle; much of traffic of shippers supporting REA's opposition moves beyond proposed territory, and others consider its service more suitable to their needs. Applicant's sacrifice of some features attractive to REA's customers, in order to provide a fast, low-cost service, precludes diversion of any appreciable volume within overlapping size and weight brackets. Moreover, division of traffic between a low-cost service and REA's more varied service has already been effected by parcel post, and it is significant that all 193 supporting shippers are parcel post users who desire applicant's service in lieu thereof; advantages of proposed service outweigh any adverse effects of a limited diversion from REA.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (737, 740-1)*.

Railroads: [Vols. 11, 12, 19].—Although authority granted applicant for transportation of cement will divert some traffic from rail protestants, motor service will provide transportation benefits and will not be unduly prejudicial to existing railroads; on balance, public interest will best be served by an additional competitive service of the type proposed.—Best Transport, Inc., 91 M.C.C. 82 (84-5)*.

Passenger traffic between the heavily populated area around Rahway, N.J., and New York City is an important source of revenue to protestant railroad, and additional bus service would be likely to result in substantial diversion from it; no question of allowing passengers their choice between rail and bus service is involved, since one applicant already operates routes extending through Rahway; in view of almost complete lack of passenger support for additional service to or from Rahway, authority granted a different applicant from other New Jersey points is restricted against serving Rahway as intermediate point.—Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (111)*.

9. Jurisdiction of the commission.—[Vols. 10-12, 14, 15, 17-19].—District Court erred in concluding that it is the commission's "unvariable rule" to give existing carriers in an area an opportunity to remedy deficiencies in their service, and in holding that carriers have a property right to such opportunity before a new certificate may be issued upon a finding of public convenience and necessity pursuant to the statute. The commission's power is not so circumscribed; and no such limitation has been established by commission decisions or by judicial determinations. While the public

interest in maintaining the health and stability of existing carriers should be considered, the commission may, upon appropriate findings, authorize the certificate sought even though existing carriers might arrange to furnish successfully the proposed service. Lower court's decision vacating the commission's action, and permanently enjoining it from issuing the certificate until after appellees are afforded such opportunity, reversed and remanded for further proceedings consistent with the court's opinion.—United States v. Dixie Highway Exp., Inc., 389 U.S. 409 (411-12)*.

The commission must exercise its discretion under §207(a) within the bounds expressed by the standard of "public convenience and necessity"; and for the courts to determine whether the agency has done so, it must disclose the basis of its order and give clear indication that it has exercised the discretion with which Congress has empowered it; it must make findings that support its decision and are in turn supported by substantial evidence. While expert discretion is the lifeblood of the administrative process, Congress did not purport to transfer its legislative power to the unbounded discretion of the regulatory body; unless the requirements for administrative action are made strict and demanding, expertise can become a monster which rules with no practical limits on its discretion. —Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (167-8)*.

Though common factors may emerge in adjudication by the commission of questions arising under Interstate Commerce Act and by National Labor Relations Board of matters under Labor Management Relations Act, independent consideration and resolution are possible, with the Labor Board confining itself to consideration of whether employees have violated their duties under LMRA and the commission to whether the carrier may have failed in its obligations under ICA (357 US 93). But if either agency is not careful, it may trench on the other's jurisdiction and because of expert competence contravene the national policy as to transportation or labor relations; fact that §8(e) of LMRA now exposes the employer as well as the union to Labor Board injunctive processes underlines necessity for careful analysis by the commission in fashioning a remedy to terminate unlawful action by delinquent carriers; the policies of ICA and LMRA must be accommodated, one to the other.—Id., pp. 172, 173-4.

An order ofthe commission is not to be disturbed by the court if such order is within scope of the statute which the commission is authorized to administer and enforce and is based on adequate findings which are supported by substantial evidence, even though the court might disagree with the commission's conclusions. The duty of the court is to determine whether order being considered comes within prescribed legal limits, and to ascertain whether there is warrant in the law and the facts for the commission's action.—Willey v. United States, 245 F. Supp. 669 (674)*.

However, the commission's power to grant certificates is not unlimited; one of the requirements is that notice of proposed issuance of a certificate be given to competitors, and another is that the commission first determine that there is a public need for issuance thereof. Therefore, since record of proceedings which resulted in grant of contested authority to transport dump-truck commodities does not show that notice was given to plaintiff's predecessor, or to any competitor other than those listed, and only evidence presented regarding such movements concerned limited northern Illinois-Indiana area, it is not reasonable to assume that the commission intended to grant such authority for entire areas between those States; in the circumstances, the contested unrestricted certificate was issued as a result of inadvertance or mistake. The commission has power to revoke or modify a certificate issued as result of inadvertance or mistake; but whether certificate in issue should be revoked or modified is for the commission to decide.——Id., p. 677.

Careful review of the record shows (1) that commission findings and conclusions in application proceeding are supported by substantial evidence, (2) that the commission followed prescribed statutory standards, and (3) that it did not act arbitrarily and capriciously in making its findings and reaching its conclusions. Therefore, the decision and order granting considered operating authority is

sustained.—Mason & Dixon Lines, Inc., v. United States, 271 F. Supp. 54 (55)*.

The commission did not commit any error of law by supposing that it was without statutory power to sanction any part of the operations covered by plaintiff's substitution-of-gateways application (as recommended by the examiner) unless it concluded that the whole thereof should be authorized. On the contrary, its specific findings that plaintiff failed to show that it was an effective and efficient competitor, while operating through its gateways, of existing carriers and that proposed operations would not materially improve its competitive position to the detriment of existing carriers, provide a rational basis for the order under review. The commission's conclusions resulting in denial of plaintiff's application in its entirety are based on adequate findings supported by substantial evidence; complaint dismissed.—Bowman Transp., Inc. v. United States, 267 F. Supp. 57 (60-1)*.

The provisions of §5(2) do not limit the commission's jurisdiction to grant a certificate under §207; see 355 US 141.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (573)*.

As the Supreme Court pointed out in 355 US 141, §207 (the commission's statutory authority to issue certificates of public convenience and necessity) does not contain the restrictive language of §5(2)(b), concerning limitation of authority granted motor carriers controlled by or affiliated with a railroad to rail-auxiliary service, nor is there anything in §207(a) "even suggesting a mandatory limitation to service which is auxiliary or supplementary." Thus, regardless of §5(2)(b), the commission could grant rail-subsidiary applicant unrestricted authority to serve shipper's new Oakbrook, Ill. plant as an off-route point in connection with its regular-route operations to and from Chicago, already authorized, when it correctly found that "special circumstances," negating any possible disadvantage to the public from the grant to railroad-owned motor carrier, existed which justified granting the application; sustained.—American Trucking Associations v. United States, 260 F. Supp. 386 (389-90)*.

The commission not only has the duty and authority to establish standards and tests to facilitate its determination of the existence, or lack, of public convenience and necessity, but it is free to alter its policies and standards when the necessity, in its judgment, arises.—Youngblood Truck Lines, Inc. v. United States, 221 F. Supp. 809 (818)*.

Since the commission's finding of public need is adequately supported by the record in application proceeding, its grant of certificate authorizing extension of passenger service to Air Force Base was a proper exercise of the discretion given it by statute.—Carolina Scenic Stages v. United States. 202 F. Supp. 919 (924)*.

Congress delegated to the commission broad and exclusive discretion in determining public convenience and necessity in application proceedings. In enacting the Motor Carrier Act, Congress chose the same words to state the condition for authorization of new motor lines which had been employed for similar purposes for railroads; and "public convenience and necessity" is not defined by the statute. Thus Congress, in leaving to the commission authoritatively to decide whether additional motor service would serve public convenience and necessity, gave it administrative discretion to draw its conclusion from infinite variety of circumstances which may occur in specific instances. The commission acted within bounds of such discretion in denying plaintiff's application.—W. T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (626-7)*.

Inasmuch as the commission did not exceed its authority in construing tall oil as a "vegetable oil" within meaning of protestant's certificated authority therefor, it follows that its order in that regard (denying plaintiff extension authority sought for tall oil) did not violate §207.—McKenzie Tank Lines, Inc. v. United States, 211 F. Supp. 876 (877)*.

It is within the commission's statutory authority to grant only a part of the operating authority sought; and it is well established that the commission has a wide latitude in determining extent of service to be rendered. Grant of authority for only part of the operations covered by the application, and denial of the rest, was a proper exercise of the commission's discretion. The commission reached a permissible conclusion based on substantial

evidence; its action was not arbitrary or capricious; sustained.—Great Northern Ry. Co. v. United States, 209 F. Supp. 238 (240, 242)*.

The commission is the guardian of public interest in determining whether certificates of convenience and necessity should be granted, and for performance of that function it has been entrusted with a wide range of statutory authority; forecasts as to the future are necessary to determination of whether a proposed service is or will be required by present or future public convenience and necessity.—Aero-Mayflower Transit Co. v. United States, 208 F. Supp. 303 (305)*.

Although complaint seeking to set aside commission's denial of extension authority sought under §207 (a) requests grant of application, the court has not power to grant plaintiff's application or to order the commission to award him a certificate.—Robbins v. United States, 204 F. Supp. 78 (83)*.

Although statutes cited by examiner, in support of his conclusion that transportation of shipments by Canadian carriers from customs stations at Buffalo and Niagara Falls, N. Y., to customs plazas for interchange with United States carriers requires no authority from the commission, were not discussed in 83 MCC 673, the issue of jurisdiction of the international bridge authorities was briefed in that proceeding and the commission considered the question. The acts of Congress cited were not intended to deprive the commission of any jurisdiction it would otherwise have over the transportation involved: whenever Congress has intended to divest the commission of jurisdiction, it has specifically amended the Interstate Commerce Act; there is no language in the acts cited which either expressly exempts such transportation from economic regulation or confers any corresponding powers on the bridge authorities. Modification of finding in case cited that such transportation, though for extremely short distances, requires authority from the commission is not warranted.—Overland Exp. Extension, 92 M.C.C. 757 (763-5).

See also Central Freight Lines, Inc. v. Strickland Transp., Inc., n. 6 *Points*.

It is within the commission's power to grant authority broader than that requested. [322 US 1.].—Donaldson Transfer Co. Extension, 89 M.C.C. 651 (653)*; broadening of grant of authority sought for transportation of jet thrust units for missiles to include accessories used in installation thereof, and thus enable applicant to provide the complete service needed, is clearly within the commission's power.—Baggett Transp. Co. Extension, 88 M.C.C. 3(10)*.

10. Violation of act.—[Vols. 10-16, 18, 19].—See also n. 25 *Fitness, Past operations*,below.

If carrier operations in question, which the commission found "were inadvertently begun," continued to be inadvertent and performed in good faith, such operations, albeit unauthorized, would be no bar to a grant of authority; and even considering the operations to be inadvertently begun but knowingly continued, no decision is cited which declares that willful performance of unauthrized operations is, as a matter of law, a bar to such grant. Absent pertinent authority, and since the commission is the expert in the transportation field, its view—that past knowing willful conduct in violation of the act and rules and regulations, is an item to be considered in determining present and future fitness—is entitled to special consideration. Accordingly, the court finds that past willful misconduct is not, as a matter of law, sufficient to bar a grant of authority; rather, the commission is to consider such willful misconduct as an element in assessing applicant's present and prospective "fitness" within the act.—Armored Carrier Corp. v. United States, 260 F. Supp. 612 (614-5)*.

Although there is substantial, even compelling evidence that plaintiff's transferor purchased considered rights with understanding that they restricted shipments of general commodities to truckloads only, the record is equally clear that, as early as 1950 when his authority to transport less than truckloads was questioned, he consulted an experienced attorney who advised him that the certificate on its face did not limit general-commodity shipments to truckload lots. The commission's first interpretation of that certificate in its 1957 report should not be retrospectively applied to condemn as "obviously illegal" the l.t.l. shipments transported by plaintiff and its predecessor in the years preceding that

report; such conclusion is at war with the construction of the certificate by its own able and experienced examiner.—Bowman Transp., Inc. v. United States, 211 F. Supp. 354 (358)*.

The restriction "in truckload lots" is vague and indefinite, and the record does not show that plaintiff's past operations, though in excess of actual authority, were willfully and knowingly unlawful. There is pointed disagreement among carrier witnesses as to the understanding within the industry of the "in truckload lots" restriction, and though the commission has the right to crystallize that phrase in process of interpretation, there is no substantial evidence to support its subsidiary conclusion that plaintiff's transportation of l.t.l. shipments was not performed in good faith; that plaintiff, in defining the limits of its authority, has previously relied on factors that the commission now finds impermissible is not evidence of bad faith.—Id., pp. 358-9.

That the findings of obvious illegality and bad faith respecting past operations were gravely prejudicial to plaintiff's application for removal of the restriction is underlined by the commission's conclusion that that type of transportation may not be relied on to establish public need for service or to show an established and continuing operation justifying modification of the certificate. Remanded for further hearing on the issue of public convenience and necessity, unprejudiced by findings of illegality or bad faith in plaintiff's past operations.—Id., p. 359.

Although in investigation proceeding, which embraced applicant's conversion proceeding as well as a "grandfather" proceeding and an extension proceeding involving the identical operations under investigation, applicant was found to be unlawfully transporting certain commodities and serving certain points not authorized by its permits, such violation of terms of its outstanding authorities should not be carried over for consideration in instant proceeding involving altogether different operations; as no finding of applicant's unfitness was made in the embraced extension proceeding, and its fitness is otherwise unquestioned, a finding of unfitness on present record is not warranted.—Zuzich Truck Line, Inc., Extension, 89 M.C.C. 69 (73-4).

Conduct of operations of commonly controlled contract carriers's operations by applicant's president has not changed since decision about 2 years earlier wherein it was found that such common control existed, and wherein the contract carrier was specifically admonished to bring its operations into compliance with the statute and the commission's regulations; applicant's vehicles and drivers perform all transportation conducted under the permit, they have the same business address, and permit holder takes no interest in and exercises no control over the operations. Moreover, permit holder is willing to surrender his permit if common carrier authority sought is granted. Described conduct of the contract carrier operations presents a continuing picture of violations of the act and the commission's regulations by applicant's president and his personal friend, the holder of the permit. Application denied, and full investigation into operations of both carriers directed. —Johnstown Motor Freight, Inc., Extension, 94 M.C.C. 167 (169, 170-1).

That a multiple-State carrier must hold a certificate before it may transport interstate traffic over a route within a State is basic to motor carrier regulation; though applicant claims that its unlawful transportation to and from Michigan points on unauthorized routes was undertaken inadvertently, in erroneous belief that it possessed the necessary authority, and without any intention of deliberate wrongdoing, it is an experienced carrier of many years standing, yet failed to discontinue such operations after being advised of their unlawfulness and after being twice advised to obtain authority before continuing them. Moreover, applicant has performed other unlawful operations and has violated the commission's safety regulations; while it claims that such violations were either insignificant or due to omissions of employees, its conduct has not been such as to absolve it from blame. An applicant's promiscuous disregard for requirements of regulation should not be allowed to redound to its substantial benefit; authority to continue considered operations denied.—Consolidated Freight Co. Extension, 89 M.C.C. 457 (460, 461-2).

Applicant, as set forth in Appendix B, has purposefully flouted the certificate provisions

of the act despite repeated unambiguous admonitions, and certain of its violations are so flagrant that no admonition would appear necessary. Applicant's past conviction of unlawful transportation, and reports in two subsequent proceedings dealing with scope of its commodity authority, made findings of unlawfulness of the transportation for which authority is now sought and put it on notice thereof; nevertheless, it has since made no apparent effort to confine its operations within limits of its authority, and in view of its long-continued contumacy there is no alternative but to deny its application on ground of unfitness.—I. L. & C. Corp. Modification of "Grandfather" Authority, 89 M.C.C. 161 (165).

Applicant's conduct conclusively establishes his unfitness for proposed operation; previous determination that device employed to evade regulation of service performed for one shipper and admonition to discontinue the unlawful carriage resulted only in his adoption of another device by which he hoped the same operation would be sanctioned; furthermore, in face of that determination, he instituted a bald unauthorized service for another shipper; much later, another slightly more sophisticated device was adopted to conceal the illegality, but evidenced instead an unmistakable intent to evade regulation. Such conduct cannot be countenanced if regulation of motor carriage and issuance of operating authorities is not to produce unfair results detrimental to public interest. Denied.—Huffman—Investigation of Operations, 88 M.C.C. 437 (442).

11. Status of applicant.—[Vols. 10-13, 15, 16, 18, 19].—Although applicant is under joint control with a corporation which leases equipment to a shipper that applicant serves as a for-hire carrier, such arrangement is not per se unlawful in absence of some specific abuse or concession.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (755).

That applicant may have disassociated itself from Trailways system since the hearing is of little significance. As a Trailways member, it competed with another Trailways carrier offering express bus service between New York City and Hartford, Conn., and fact that it offered connecting service with that carrier could have little significance for persons traveling between New York City and points beyond Hartford because of latter's faster, more direct service. Apparently no Trailways affiliate is serving the smaller communities along applicant's present or proposed routes, and passengers at such points are compelled to use applicant's service to Hartford and some other carrier's beyond; applicant's affiliation or nonaffiliation with Trailways is therefore irrelevant to need for proposed service.—Arrow Trailways, Inc., Extension, 94 M.C.C. 514 (517).

Despite fact that applicant is a separately incorporated entity its sole supporting shipper is also its president and sole stockholder and would therefore be in position to demand preferential treatment over other shippers in involved territory. An intimate relationship between a carrier and a shipper creates an opportunity for favoritism, discrimination, and unfair competitive practices, which is incompatible with status of a common carrier, which owes a duty of indiscriminate service to all shippers. In the circumstances, applicant has failed to establish that it is qualified to conduct proposed operations. Denied.—Burton Trucking, Inc., Extension, 94 M.C.C. 790 (791-2).

Applicant, in addition to its motor carrier operations, conducts a storage and warehousing business and controls and apparently is managed in common interest with a forwarder which routes a substantial volume of traffic to its terminal and warehouse; by reason of the dual capacities and identity of controlling interests involved, it appears that proposed extension operations would be conducted to advantage of applicant's storage business and its control of certain shippers' routing to advantage of its carrier operations, to probable detriment of competing motor carriers and the shipping public dependent on them; resulting situation offers opportunities for unjust discrimination and unfair competitive practices; denied.—M.G.M. Transport Corp. Extension, 89 M.C.C. 699 (701); and in view of fact that similar operations are being conducted by several corporations controlled by same interests, Bureau of Inquiry and Compliance is directed to investigate and determine whether such operations are in public interest and in

accord with the act and commission's regulations.—Id., p. 702.

Although applicant's status was found in conversion proceeding to be that of a common carrier, it has not yet been issued certificate in lieu of its permits; as it would be inappropriate to issue certificate granted in instant proceeding while its permits are still outstanding, issuance will be withheld until certificate authorized in the conversion proceeding is issued.—Zuzich Truck Line, Extension, 89 M.C.C. 69(73).

Since in another proceeding applicant has been granted certificate in lieu of its outstanding permit to transport cement between other points, to be issued upon its compliance with certain conditions, grant of additional common carrier authority is conditioned on prior or concurrent issuance of that certificate, to eliminate possibility of unlawful dual operation.—Best Transport, Inc., 91 M.C.C. 82 (86)*.

Provisions of §5(2) are quite specific as to how a person or carrier may obtain control of two or more carriers, and such acquisition of control is made unlawful by §5(4) unless approved and authorized by the commission. Record amply demonstrates that corporate applicant is controlled by persons also controlling two other carriers and that the commission's prior approval of such common control was not obtained. Issuance of certificate is therefore withheld pending filing of appropriate §5 application and approval thereof by the commission.—Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 521 (523, 524); similarly, in view of applicant's control of another common carrier, grant of authority is conditioned on commission approval of such control under §5(2).—Reaveley, 91 M.C.C. 604 (607-8).

See also Sloan's Moving & Storage Co. case, n. 5 above.

Record in consolidated application proceedings does not permit determination of whether any unlawful common-control relationships exist as between two Canadian applicants and carriers subject to the act; however, upon grant of authority to one, it would be commonly controlled with a certificated United States carrier within meaning of §5. Issuance of certificates to both is therefore conditioned on prior approval under §5(2) of any common control of the respective applicants and the specified carriers or entities, or other affiliated carriers, where such approval is in fact necessary.—Overland Exp. Extension, 92 M.C.C. 757 (766-7).

24. Proceedings remanded.—[Vols. 11, 13-19].—Subsequent to the commission's decision granting certificate to appellee to remedy deficiencies in service due to trunkline motor carriers' refusal under union pressure to interchange traffic with appellee's carrier stockholders, and over a year before the district court sustained the commission, Labor Management Relations Act was amended by §8(e), which raised serious doubts as to legality of "hot cargo" clauses in union-employer agreements. The delinquent interlining carriers, as well as the union, would be subject to injunctive and other processes of National Labor Relations Board if their conduct violated §8(e), and pressures which generated the refusals to serve might be effectively removed. These intervening facts so changed complexion of the case that the reviewing court should have vacated the order and remanded it to the commission for further consideration in light of the changed conditions.—Burlington Truck Lines, Inc. v. United States, 371 U. S. 156 (171-2)*.

Moreover, at time the case was before the commission there was every indication that a cease-and-desist order would have been effective; there was no reason to have assumed that ordinary processes of law were incapable of remedying the situation. The commission made no findings specifically directed to its choice between two vastly different remedies with vastly different consequences; nor did it express any rational connection between the facts found and choice made; in the circumstances, its choice of the sweeping relief of certification rather than the more precise and narrow cease-and-desist remedy was improvident, absent compelling justification. Judgment of the district court reversed, and case remanded with instructions to remand to the commission for further proceedings consistent with opinion.—Id., pp. 168-70, 173-4.

The reviewing court is not concerned with the propriety of a commission determination but only with the questions of whether such

determination is based on adequate findings and is arrived at by proper application of legal standards. The court is unable to ascertain, on careful review of the record in "grandfather" application proceeding under §7(c) of Transportation Act of 1958, whether the commission applied the proper standards in its assessment of applicant's (plaintiff's) holding out and solicitation in determining the scope of its bona fide operations; and the commission report reflects, to the court's satisfaction, that the only standard applied was that of actual point-to-point service. The commission's order is set aside and the case is remanded for further proceedings—Frozen Food Express v. United States, 280 F. Supp. 661 (663)*.

See also Willis Shaw Frozen Exp., Inc. v. United States, case, §203(b), n. 50 *Act of 1958*.

In summarily denying plaintiff's application for authority for service now conducted under claim of "grandfather" rights, because "no inadequacy was shown in protestants' services," the commission apparently announced an erroneous standard of law to effect that a showing of present inadequacy of protestants' services is indispensable to issuance of a certificate. Moreover, existing service includes plaintiff's disputed service, and the commission does not show how protestants' services would be adequate in absence of that service, or reconcile its finding with the joint board's characterization of plaintiff's service for several shippers as "advantageous," "satisfactory," "very satisfactory," "needed," and "superior to that of other carriers." Remanded for further proceedings in conformity with the court's opinion.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (652, 653)*.

The commission's report in consolidated proceedings does not provide the reviewing court with sufficient findings and reasonings for determination of whether its conclusions are based on a fair and reasonable analysis of pertinent facts and circumstances. Thus, its conclusions in the investigation, that "regular and irregular route" portion of plaintiff's "grandfather" certificate did not permit service from a point in the irregular-route area to an intermiediate point on its regular route and that, therefore, plaintiff willfully violated terms of its certificate by transporting considered shipments, are not supported by the record. "Regular and irregular route" portion of the certificate is clearly ambiguous; the "grandfather" decision does not clearly show that plaintiff may not serve all intermediate points on its regular routes; and the finding of willfulness, predicated only on a reading of the certificate and the decision, is clearly erroneous. Matter remanded for further consideration and findings.—Dixie Ohio Express, Inc. v. United States, 263 F. Supp. 993 (999-1002)*.

There is also a lack of sufficient findings or reasoning for the commission's findings with regard to the modification and application proceedings. While three separate and distinct grants were applied for, the commission's findings and conclusions are drafted in such a manner that it is difficult in many respects, and impossible in others to determine the particular aspect to which they are directed; aside from failure to distinguish those three aspects, applicant's claims were disposed of with general statements and inadequate findings as to subsidiary facts. Moreover, after a most careful reading of the report, it is impossible to determine which of the commission's conclusions apply to the commodity description problem rather than to the route description problem; also, there were no findings relative to the application for removal of "in truckloads" restriction in the certificate. Therefore, issues in the application proceedings must be remanded for further consideration and findings.—Id., pp. 995, 1002-1005.

Order granting interstate authority to intervening defendant for transportation of passengers between Northhampton and Williamsburg, Mass., is vacated and the case is remanded to the commission for further action, when the only substantial evidence of need for proposed service concerned convenience of passengers traveling between Veterans Administration Hospital in one section of Northhampton and bus terminals of interstate carriers in other sections of that city. While it may not be feasible to require testimony from prospective passengers, the other evidence of record, which pertains to requests for information about interstate bus service beyond

Northhampton, is totally lacking in specificity as to number tf requests, how recently or how frequently they were made, or to what extent they reflected a desire to purchase through interstate tickets.—Interstate Buses Corp. v. United States, 259 F. Supp. 577 (578-80)*.

Furthermore, while plaintiff's agrument that transportation of passengers within corporate limits of Northhampton is a service for which a certificate is neither necessary nor proper because it is exempt by §202(c) has plausibility, it was not presented to nor considered by the commission. In action to set aside the commission's order, the court ought not to make a decision as to whether a certificate is permissible when all proposed interstate transportation as to which there is supporting evidence will be within terminal area of certified carriers and under arrangements with them, even if it be a question of law, until that point is raised before and considered by the commission.—Id., pp. 580-1.

While the commission's expert judgment, especially as to public convenience and necessity, is entitled to a wide range of discretion and, in application cases, it must of necessity balance desirability of new and different types of service with the competitive effect thereof on existing services, it is not sufficient for it to cloak its decision in "administrative discretion"; it has a continuing obligation to avoid arbitrary exercise of its powers and the duty to stay within confines of the statutory scheme. If the reviewing court is to rule, with any certainty, that the commission compiled with those minimal requirements and did not act arbitrarily in denying plaintiff's limousine-service application, its opinion must be clear and it must make sufficient explanation to enable the parties and the court to comprehend its actions. Opinion under review is so drafted as to require speculation on the court's part to pin down the theory on which plaintiff's application was denied; reversed and remanded for further proceedings not inconsistent with the court's opinion. —Arrow Line, Inc. v. United States, 256 F. Supp. 608 (611-12)*.

Although evidence presented in application proceeding related solely to need for service at White Sands Missile Range, and the commission found that no need was shown for service to other points and that authority granted should be so limited, the ultimate findings granted one applicant authority to serve points on the highways involved other than White Sands. Therefore, insofar as the orders in question allow or support allowance of service by that carrier at any point other than White Sands, they exceed scope of the application, are not supported by the evidence, and are unsupported by and contrary to the commission's evidentiary findings. Orders set aside, in part, and the cause is remanded to the commission for such action as it deems appropriate, but in accord and consistent with the court's findings and conclusions.—Whitfield Transp., Inc. v. United States, 254 F. Supp. 852 (854, 855)*.

The commission was in error when it denied plaintiff's application as to points in two States merely because two opposing motor carriers had authority to serve those points and there was no clear showing of inadequacy of their services; mere absence of a clear showing of inadequacy of existing services does not justify such limitation. The conclusion to be drawn from the commission's report, i.e., that in no case will an application be granted if it will result in competition with existing carriers, is not the law. Introduction of a competing service may be in the public interest. That portion of the commission's order which denied plaintiff authority to serve points in the two States is set aside; cause remanded to the commission for action in accordance with the court's opinion.—Vincent Montone Transp., Inc. v. United States, 231 F. Supp. 484 (487-9)*.

Although entire application was premised on need for transportation of mixed truckloads of frozen and nonfrozen commodities, authority to transport "mixed shipments" thereof was granted; in view of the commission's definition of "shipment," authority granted could be construed to allow much more than mixed-truckload service. There being no rational basis of record for grant of authority beyond that sought, the commission erred in not restricting authority granted to mixed truckloads; case remanded for imposition of a proper restriction, formulation of which is left to the commission's expertise. Order appealed from suspended pending im-

position of such restriction; otherwise, set aside.—Refrigerated Transport Co. v. United States, 214 F. Supp. 536 (539-40)*.

Since record of commission proceedings which resulted in grant of contested authority to transport dump-truck commodities does not show any notice to plaintiff's predecessor, or to any competitor other than those listed, and the only evidence presented regarding dump truck movements concerned a very limited northern Illinois-Indiana area, it is not reasonable to assume that the commission intended to grant dump-truck authority for entire areas between those States; however, the contested authority issued was not restricted to the area defined and discussed at the hearings. Case remanded to the commission for further consideration in light of the court's determination that, since the unrestricted certificate was issued as result of inadvertance or mistake, the commission has the power to revoke or modify it on the facts of the case.—Willey v. United States, 245 F. Supp. 669 (676-7)*.

The commission's summary rejection, without a hearing, of plaintiff's application for waiver of rule 101(e) and its denial of the petition for reopening did violence to an established principle of law. As plaintiff, at the instance of the court, produced witnesses to demonstrate that it was in position to prove the allegations of its petition concerning the circumstances giving rise to the mistake which it claims occurred, the commission's order denying the petition is set aside and the cause remanded with directions to the commission to grant the hearing and make a factual determination on the matters alleged in the petition.—Id., p. 539.

The district court's power to order a remand to an administrative body to enable that body to take into consideration oversights which may have crept into its decision by reason of mistake or inadvertence stems from the equitable principles governing judicial action, as reflected in rule 60(b) of Federal Rules of Civil Procedure, which provides for relief from a final judgment or order on ground of "mistake, inadvertence, surprise, or excusable neglect." Plaintiff (protestant in application proceeding), in its application for waiver of rule 101(e) of the commission's Rules of Practice and its petition for reopening of the proceeding to change a portion of the certificate alleged to have been granted as result of misrepresentation or by mistake, set forth facts which, if found to be true, would render its withdrawal of protest and failure to appear at the hearing a matter of excusable neglect and inadvertence, and would require the commission to reopen the proceeding to allow plaintiff to adduce evidence in support of its position and be heard in opposition to the challenged grant of authority.—James J. Williams, Inc. v. United States, 241 F. Supp. 535 (537-9)*.

Plaintiffs' late-filed petition for (1) leave to intervene, (2) waiver of rule 101(e) of the Rules of Practice, and (3) reopening and reconsideration in application proceeding (in which none of them participated) showed good cause and was based on averments reasonably pertinent to issues therein and did not broaden them; plaintiffs were diligent in acting after they acquired knowledge of order in that proceeding. The commission abused its discretion in denying the petition to intervene; directed to vacate its order in the application proceeding, and further to permit plaintiffs' intervention, to waive rule 101(e) of the Rules of Practice, and to reopen and reconsider report and order in that proceeding.—National Bus Traffic Ass'n v. United States, 212 F. Supp. 659 (661-2)*.

Although the court sustains the commission's interpretation of plaintiff's certificate as restricting its authority to transport general commodities to truckloads only, it does not follow that such interpretation may be retrospectively applied to condemn plaintiff's past transportation of l.t.l. shipments as "obviously illegal"; and there is no evidence to support its subsidiary conclusion that such transportation was not performed in good faith. Those findings were gravely prejudicial to plaintiff's application for removal of the truckload-lots restriction from its present authority; application proceeding remanded for further hearing to determine, on present record or in such other proceedings as the commission in its discretion may elect, whether plaintiff has established that public convenience and necessity require the operation proposed, unprejudiced by findings that

its past operations were illegal and not performed in good faith.—Bowman Transp., Inc. v. United States, 211 F. Supp. 354 (358,359)*.

Operation; Extension

25. Necessity, demand, for service, in general.—[Vols. 10-19].—In action to set aside the commission's orders granting authority to transport household goods in several western states to intervening defendants, the court may not criticize the criteria by which the commission chose to determine public convenience and necessity, unless they are found to be capricious or irrational; scope given the commission is broad, and within that scope it may choose criteria and weigh evidence of public need as it sees fit. Thus, there is no need for the commission to specifically find inadequacy of existing or decreased service before granting additional operating authority in a given area, and absence of such a finding is not a basis on which the court may invalidate its order. Findings and conclusions in each of considered cases adequately support the grant of authority therein; those findings and conclusions are not arbitrary, but are adequate, supported by substantial evidence of record, and in accordance with the law; the commission's orders sustained.—United Van Lines, Inc. v. United States, 266 F. Supp. 586 (589-90)*.

Congress intended to leave to the commission discretion to decide whether additional motor service would serve public convenience and necessity and, on the record as made, its denial of plaintiff's application for additional authority (because it failed to show that existing carriers could not provide services required) was a sound exercise of its administrative discretion.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (886)*.

The commission's denial of a certificate to plaintiff for transportation of airfreight between Salt Lake City Airport and points beyond the airlines' terminal areas at that point, despite the examiner's recommendation of a grant, was pursuant to statutory authority, and its decision is supported by adequate findings based on substantial evidence. The commission, not the examiner, exercises the determinative judgment and discretion, and its conclusions are not vulnerable merely because they overruled those of the examiner. The rational basis of the order is sufficient to require its approval; sustained.—Wycoff Co., Inc. v. United States, 240 F. Supp. 304 (312)*.

It has been held repeatedly that in issuing a certificate of public convenience and necessity the commission need not specifically find existing service to be inadequate; conversely, mere absence of a finding of inadequacy is not enough to bar issuance of a certificate if other factors justify a finding of public convenience and necessity. Other important elements appear to be desirability of competition, desirability of different kinds of service, and desirability of improved service. The element of inadequacy is thus not controlling, but is to be considered along with those other factors. In denying plaintiff's application solely because no inadequacy was shown in protestants' services, the commission apparently applied an erroneous standard of law; order vacated and the cause remanded.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (652-3)*.

While the commission has wide discretion in deciding whether additional motor service would serve the public convenience and necessity, its discretion is not boundless; that discretion must be exercised within the bounds expressed by the standard of "public convenience and necessity." [Citing 371 US 156.] Mere absence of a clear showing of inadequacy of existing services does not justify denial of an application; the holder of a certificate is not entitled to immunity from competition under any and all circumstances; and the introduction of a competitive service may be in the public interest where it will secure benefits of an improved service without undue prejudice to existing service.—Vincent Montone Transp., Inc. v. United States, 231 F. Supp. 484 (487-8)*.

In concluding that plaintiff (applicant) had failed to show need for its proposed passenger service, the commission was not bound by the Joint Board's recommended grant of the application when, though it adopted the Board's statement of facts, it disagreed as to conclusions to be drawn from those facts and the commission's contrary conclusions had

substantial evidentiary support in the record. The commission is the body charged with the responsibility of decision and it is not only at liberty, but is required, to reach its own conclusions on the evidence. Conclusions of the commission find support in the record as a whole; there is nothing to suggest that it abused its discretion or that it did not weigh amply the claims supporting the application; complaint dismissed.—Continental Southern Lines, Inc. v. United States, 265 F. Supp. 218 (220-2)*.

Contrary to claim of plaintiff (protestant before the commission), record is clear that the commission considered plaintiff's intrastate bus operations and evidence of its pending application for intrastate authority generally paralleling interstate passenger authority sought by applicant, in determining that public convenience and necessity required applicant's proposed service; examination of the record shows that plaintiff's activities were carefully considered at every stage of the commission proceeding. On reconsideration, the appellate division considered the possibility that plaintiff's pending intrastate application might be granted; nevertheless, it concluded that, even if it was, public convenience and necessity required grant of the authority sought by applicant. There is substantial evidence of record to support that conclusion; suit to set aside the commission's orders is, therefore, dismissed.—Resort Bus Lines, Inc. v. I.C.C., 264 F. Supp. 742 (746-7)*.

Determination of the need for a proposed service is for the commission rather than for the courts. Since the commission found a need for the unique door-to-door passenger service which the applicant proposed to offer, the court cannot say that the public interest is accommodated by existing bus service of protestants which, though reasonably adequate for those who may use it, is of an entirely different type. The commission's judgment that need has been shown for proposed service is entitled to the same respect it commands for other matters within its purview, and the court finds no basis for disturbing it; sustained.—Trailways of New England, Inc. v. United States, 235 F. Supp. 509 (514)*.

Since fact that passenger carrier's service had been, and was being, used proves demand for the service to extent of such utilization, general testimony by witnesses to prove what the traffic figures as to number of passengers established definitively could add but little; was unessential to sufficiency of foundation of the commission's finding of public need therefor.—Carolina Scenic Stages v. United States, 202 F. Supp. 919 (923, 924)*.

The standard "public convenience and necessity" is not defined in the statute, but was left by Congress to the commission to be determined, in exercise of sound discretion, upon consideration of infinite variety of circumstances which may occur in specific instances; and the lodestar for the commission's guidance in the exercise of its discretionary power is the national transportation policy. On reconsideration, following remand by a three-judge court, the commission properly gave due weight to intervening defendant's past operations; and its ultimate conclusion that public convenience and necessity required continuation of those operations without an "in truckload lots" restriction is rational, based on adequate findings, supported by substantial evidence, and in harmony with the national transportation policy; sustained.—R-C Motor Lines, Inc. v. United States, 241 F. Supp. 124 (126, 127)*.

The commission is the final arbiter of the "public convenience and necessity." Absence of any finding as to inadequacy of existing service does not invalidate the commission's order granting extension of operating authority. While the commission does not enjoy unbounded discretion in the exercise of its regulatory powers, it nevertheless is the expert in the field of transportation, its judgment is entitled to great deference because of its familiarity with conditions in the industry which it regulates. Complaint dismissed.—Clay Hyder Trucking Lines, Inc. v. United States, 234 F. Supp. 673 (675-6)*; each case entails not only a weighing of evidence by the commission but also the exercise by it of an expert judgment on the intricacies of the transportation problem involved.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (332)*.

Congress has delegated to the commission broad discretion to determine whether a public convenience and necessity exists, and it is

not the court's function to determine factual issues which have been entrusted to the commission; if there is support for the commission's findings in law and fact, the reviewing court cannot substitute its own views. The record supports the commission's denial of plaintiff's application; sustained.—Keystone Motor Exp., Inc. v. United States, 228 F. Supp. 793 (799)*.

The Interstate Commerce Act in general, and §207 in particular, gives the commission broad authority to pass on present and future public convenience and necessity; orders of the commission based on adequate findings and supported by substantial evidence cannot be upset; and a court on review is not concerned with the consistency or inconsistency of the commission's decisions.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (569, 571)*; the commission's finding that plaintiff failed to show need for its proposed service is rational, based upon proper standards, and supported by the record. Sustained.—W. T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (626-7)*.

The statute gives the commission wide discretionary authority to determine whether present and future public convenience and necessity require grant of motor carrier operating authority in issue. Testimony of some 15 witnesses in support of the application, along with other evidence of record, sufficiently supports the commission's finding as to need for proposed service; sustained.—Great Northern Ry. Co. v. United States, 209 F. Supp. 238 (240-1)*.

Though plaintiff railroad, in its proceeding before the commission, presented 37 shipper witnesses in support of application for modification of its motor-carrier certificates to permit unrestricted service in Montana-North Dakota area, most of them are located at smaller Montana communities and are not large or frequent users of freight transportation services; protestant motor carriers, on the other hand, showed that at least three of them serve every principal point in Montana and that each, except one, of the smaller points is served by at least one protestant. The commission's conclusion that there had been no showi g of material defects in existing service, expected increase in available freight, or other substantial grounds for introduction of another carrier into the existing competitive situation, is warranted by the evidence; order denying plaintiff's application sustained.—Id., 209 F. Supp. 230 (233, 234)*.

The standard "public convenience and necessity" is not defined in the act, and the commission is given a broad discretionary authority to determine, under that standard, whether the showing of a particular applicant is adequate. But a showing of convenience alone is not enough.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (900)*.

The commission may base a finding of need for proposed service on future public convenience and necessity, but the finding for the future must have some evidentiary basis of the anticipated need. Although the commission's grant of statewide authority to transport cement from shipper's plant at St. Louis to Missouri points did not in whole depend on questionable interstate character of the major method of stocking the St. Louis facility by barge from Hannbal, Mo., the only evidence of need for that statewide authority was the possibility of certain emergency situations. Since the emergencies would have to coincide with continuation of a predestined interstate movement, and there is no showing that this is more than a remote possibility, it is only remotely possible that such an emergency would create interstate traffic in Missouri. Portion of the commission's order granting statewide authority in Missouri, set aside.—L. A. Tucker Truck Lines, Inc. v. United States, 215 F. Supp. 261 (264-6)*.

Producer of fresh, cooked, and canned meats and meat products shows need for proposed single-line, irregular-route service, with multiple dropoffs en route, from its three plants at Louisville, Ky., to points in 6 of the 9 destination States sought; applicant holds packinghouse products authority from Nashville, Tenn., to five States and has participated in considered traffic through equipment-leasing and interchange arrangements with other motor carriers, acting as delivering carrier on shipments to its authorized points and as intermediate carrier on shipments to points beyond its lines. Moreover, shipper expects

need for multiple-delivery service to increase because it is servicing smaller accounts, and because recent government ruling requires that less-truckload shipments of perishable canned meat be moved in mechanically refrigerated equipment. Respondents operate the required equipment but, except as to States where no need for proposed service is shown, their authorities are not sufficiently comprehensive, commoditywise or territorially, for performance of required service. Granted in part.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (474-6, 480).

Recommendations for grants of authority in protestants' pending application proceedings do not form a sufficient basis in themselves for denying in whole or in part, considered applications. While the commission is cognizant of those proceedings, and will not ignore developments therein, finality of such recommended grants of authority cannot be sufficient to preclude grants of authority sought if the evidence so warrants. Record justifies grants of additional authority, but not to the extent sought by both applicants; granted in part.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 364 (368, 369-73).

Although a tremendous volume of Air Force and Defense Department shipments of cryogenic liquids is involved, record shows that a large percentage will move intrastate and another large percentage will continue to move by rail or in shipper-owned equipment. Considering, also, that bulk of the traffic moves to, from, or between points west of the Mississippi River, that up to time of initial hearing motor transportation requirements were being satisfactorily met by two applicant-carriers operating under temporary authority, as well as the estimated future volume available for for-hire truck movement, there is need for services of two carriers in considered 30-State area and for service of a third carrier between points in 11 of those States west of the Mississippi. Authority granted to the three applicants shown to be best qualified to provide needed service.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (17-8)*.

The Bureau of the Mint requires silver bullion to be shipped to it in quantities that can be accommodated by its limited storage capacity, but sufficient to maintain production schedules necessary to meet the supply and demand of silver coins in the various Federal Reserve districts. Service must be available on 24-hour notice, Monday through Friday, for as many as three truckloads weekly; and, equipment must be clean, fully enclosed, and secured van trailers are necessary, although armed guards are not required. Protestants have not handled the traffic, and equipment allegedly purchased to handle the mint's transportation needs has been used for other purposes; also, there is some question as to whether they are able to provide equipment of adequate capacity and on short notice. In any event, if proposed service is denied, the mint will not utilize protestants' services, but will continue to use REA Express; granted.—Navajo Freight Lines, Inc., Extension, 95 M.C.C. 551 (558).

Part of applicant's proposed service is aimed at effecting expeditious clearance of checks and other financial papers for banking and financial establishments whose essential need is for maximum speed in forwarding such papers. Existing carriers are primarily passenger carriers, which requires shippers to coordinate their operations with existing bus schedules; moreover, protestants stop only at designated places and shipper would be compelled to pick up or deliver packages at such points. Clearly, proposed operation will be superior to existing services. However, nonradial operation between all points in four-State area is not shown to be needed or economically feasible; thus, authority granted is limited to points and areas where need for the service is shown.—Woody, 94 M.C.C. 759 (763-4).

But shipper supporting that part of the application seeking authority to transport film, etc., anticipates using applicant's service only in lieu of air transportation between certain points in event of airline strikes or adverse weather; thus, the need for all motor movements between those points would be sporadic and of an emergency nature, and is insufficient to warrant a grant of authority. Moreover, the shipper has not investigated existing services in the area; denied as to such service.—Id., pp. 764-5.

Complete parcel delivery service proposed

for manufacturers, wholesalers, and distributors between all points in considered territory, with daily pickup service, is definitely superior to existing service of Railway Exp. Agency; a large number of small cities and communities and a significant percentage of the total population in that territory do not have REA service available, and at many of REA's local offices no pickup or delivery is provided. Moreover, all 193 supporting shippers are parcel post users who desire applicant's service in lieu thereof because of its superior features (discussed at pp. 718-9, 720-1); REA, because of its minimum charges and high rate level, is unlikely to obtain much of traffic now handled by parcel post; applicant proposes a territorially more complete, expeditious, and lower cost service on such traffic than REA, and public need for such improved service is apparent; granted.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (738-9).

In addition to those operations found exempt from economic regulation under §203(b10), one supporting shipper needs a nontowing wrecker service for wrecked or disabled passenger automobiles within considered territory; such service, for which authority is required, is necessary to complement applicant's wrecker operations and to provide that shipper with a complete wrecker service; therefore, to that extent, proposed service will be authorized. On the other hand, since record is devoid of any shipper support for proposed transportation by towing of stolen or repossessed vehicles, that portion of the application is denied.—Flora Service, Inc., 95 M.C.C. 673 (675).

Need is shown for proposed transportation of wrecked, disabled, and repossessed motor vehicles; applicant provides wrecker service between points in West Virginia under intrastate authority, operates a repair garage, and owns two wrecker vehicles suitable for proposed interstate operation; and supporting shipper is engaged in buying and selling used motor vehicles and frequently has need for wrecker service. Insofar as proposed service relates to shipper's transportation needs, it is not the type of emergency transportation contemplated by §203(b10); thus, to that extent, a grant of authority is required.—Reilley's, Inc., 95 M.C.C. 608 (610); and proposed wrecker service is needed by automobile salvage broker who arranges for movement of wrecked, repossessed, or burned automobiles from points in five States to West Memphis, Ark., for sale at that central point rather than arranging such sales over widely dispersed territory. Since the shipments do not originate at scenes of accidents or breakdowns and do not require emergency movement, transportation thereof is subject to economic regulation. Granted to extent of need shown.—Heckinger, 95 M.C.C. 668 (670-1).

Evidence of record shows need for busline's proposed service between Scottsville and Leitchfield, Ky.; several passenger witnesses testified as to the inconvenience of present bus service and the need for an improved service in the area; some witnesses also receive emergency express shipments, and need a local express service. Record is convincing that there is a need for bus service at the points involved; persons residing in the area suffer material inconvenience due to inadequacy of protestant Greyhound's available service; granted.—Continental Tennessee Lines, Inc., Extension, 95 M.C.C. 728 (730)*.

Record established that proposed passenger service between Armonk, N. Y., and Sandy Hook, Conn., is required by public convenience and necessity. A number of public witnesses testified as to their need for bus service between the relatively small communities in Westchester County, N. Y., and points on applicant's present route in Connecticut and, also, between the small communities and points beyond New York City; existing motor and rail service is not adequate to meet needs of those traveling to or from Connecticut points; and proposed service, originating and terminating at New York City Port Authority Bus Terminal, would be more attractive than that of protestants. Applicant is successfully providing similar service at small communities on its present route, and that proposed will be in the public interest. Granted.—Arrow Trailways, Inc., Extension, 94 M.C.C. 514 (519).

Public need for proposed passenger service between Boston and Berlin, N.H., is clearly demonstrated and should be authorized to extent it cannot be provided under rights ac-

quired in recently approved purchase or by compliance with commission's deviation rules.—Trailways of New England, Inc., Extension, 92 M.C.C. 434 (437).

Grant to Greyhound of proposed route between Asheboro and Charlotte, N. C., which will give it a more direct route between Charlotte and Raleigh, is warranted when a substantial number of public witnesses expressed need for the service and dissatisfaction with protestant's service requiring layover time for connecting service; but grant of a more direct Raleigh-Charlotte route to Carolina, a member of competing Trailways system, is not justified merely to enable it to provide faster service when no public need therefor is shown.—Greyhound Corp. Extension, 88 M.C.C. 20 (23).

Need for two essentially different and noncompetitive types of for-hire passenger service between Washington, D. C., and Dulles International Airport near Chantilly, Va., one a scheduled, high-density, regular-route bus service and the other a nonscheduled, door-to-door specialized service of "air-limousine" type, is uncontroverted. However, no need is shown for an express scheduled service by a second busline, or for service to Dulles by same bus carrier now serving Washington National Airport; a single carrier should provide the scheduled service, whether local or express; carrier whose existing operations are in same area as proposed Dulles Airport-Washington routes is the logical selection.—A. B. & W. Transit Co. Extension, 88 M.C.C. 175 (181-2, 183).

And no need is shown for scheduled interstate regular-route bus service between National and Dulles Airports; as one applicant already holds Virginia intrastate authority between those airports, authorization of limousine-type service between them by applicant now providing such service between Washington and National Airport and concurrently granted similar authority between Washington and Dulles Airport should satisfy all reasonable needs.—Id., p. 182.

No effective service is shown to exist on dairy products from Missouri to destinations in Colorado, and grant of authority to serve Colorado will increase the dropoff service which applicant is authorized to provide by enabling it to serve destinations in eight States including the entire Pacific Northwest, thus giving it ample opportunity to offer combinations of points for a highly flexible dropoff service. However, no need is shown for the broad midwestern origin territory sought; granted from Springfield, Clinton, and Carthage, Mo.—Raye & Co. Transports, Inc., Extension, 94 M.C.C. 554 (561)*.

Upon consideration of entire record in light of general principles and policies relating to transportation needs of the Florida citrus industry, as discussed in instant and prior decisions, grant of authority sought for transportation of canned citrus products from Florida to 12 eastern States is warranted to make available to that industry and particularly the 9 supporting shippers a complete service not now available, including service to Canadian points through ports of entry on international boundary.—Blythe Extension, 94 M.C.C. 23 (46-7, 49-50).

Need is shown for proposed transportation by three applicants of frozen fruit juices and concentrates in mixed loads with canned citrus fruits and juices from Florida to five midwestern States, which cannot be met by existing services. Though supporting shippers have adequate service available for straight t.l shipments of either frozen or unfrozen commodities, they lack flexible service for combined shipments of those products, and their customers require prompt service on small shipments because they maintain limited inventories and experience fast turnovers of stock. As shippers will continue to use protestants' services for straight shipments, authority granted applicants for mixed loads will not materially affect them adversely.—Wilson Bros. Truck Line Extension, 92 M.C.C. 497 (501).

Although nationwide authority to transport fruit and citrus juices and concentrates from Florida is not warranted as backhaul for applicant's southbound movement of other products, considering applicant's present pattern of operations and need of sufficient carriers to meet the citrus industry's heavy demand for service, authority is granted from specified origins to Lyons, Ill., and points in Minnesota and Wisconsin.—Clay Hyder Trucking Extension, 89 M.C.C. 757 (762).

Authority granted to transport frozen foods, except frozen citrus products, from Fort Lauderdale and Orlando, Fla., and same commodities, except frozen meats, from Miami, to points in the Carolinas; statewide orgin authority not granted, since supporting shippers at Orlando and Miami do not have need for service from other Florida points and any such future need for Fort Lauderdale shipper is too indefinite. Further, applicant already holds authority to transport frozen meats from a number of Florida points, so it can substantially meet future needs of Fort Lauderdale shipper.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (49).

Proposed transportation of mixed shipments of frozen and unfrozen commodities from Florida to 6 States will provide additional flexibility in meeting shippers' requirements which existing carriers cannot offer because they lack authority for both types of commodities, as well as equipment suitable for such mixtures; in permitting more rapid consolidation of truckloads, proposed service would make possible more timely deliveries to customers who need particular products immediately, and to smaller receivers who are some distance from a distribution point; while amount to be carried by applicant will be small compared with that now moving in separate shipments, the service should be made available. Granted for frozen fruit juices and concentrates in mixed shipments with canned citrus products.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (584, 585)*.

Collectively, supporting shippers are presently shipping frozen foods from Philadelphia or nearby secondary plants and warehouses to points in 22 States and District of Columbia; number of points at which they do business in those States is increasing, and indications are that their businesses will continue to develop and expand; though only one or two points have been served in some of States named, weighing the evidence as a whole, including rate of growth of some shippers during period between initial and further hearings, grant of authority for that entire radial territory is warranted.—Hughes, 89 M.C.C. 471 (481)*.

But evidence of need for transportation of frozen foods in mixed shipments with exempt commodities is confined to shipments of fruits and vegetables in fresh, partially frozen, and frozen conditions; authority based on that shipper's needs is therefore limited accordingly.—Id., p. 483.

Since applicant is already serving supporting shipper in transportation of meats from Denver to Boston, New York, and Washington, it should be authorized to serve shipper to those points from Greeley, Colo., also; none of protestants can serve those cities directly from Denver, thus could not provide a two-line service with carriers operating between Denver and Greeley. And since shipper has sought vainly to obtain satisfactory motor carrier service to New Haven, Conn., Savannah, Ga., Lexington, Ky., and Knoxville, Tenn., applicant should be authorized to serve it from Greeley to those points also. Granted in part.—Curtis, Inc., Extension, 92 M.C.C. 25 (31)*.

Movement of whiskey in tank vehicles by virtue of new Federal tax regulations is in effect new traffic; evidence warrants grants of statewide authority to 7 States not served by protestants under their alcoholic beverages authority, but shows only one point in Tennessee from and to which traffic will move; no specific need is shown for service to or from New York points; volume of available traffic appears sufficient to support operations of two carriers; both applications granted in part.—Southern Tank Lines. Inc., Extension, 88 M.C.C. 635 (641).

Overall evidence establishes need for proposed tank-truck transportation of prune juice concentrate from San Jose, Calif., to eastern points; supporting shippers ship some 10,000 tons annually and require direct, multiple-delivery service on relatively small shipments to consignees with limited storage facilities and located at off-rail points; applicant, with its compartmented, stainless-steel equipment, can supply the needed service, resulting in considerable savings in transportation costs to shippers; granted.—Ringsby Truck Lines, Inc., Extension, 92 M.C.C. 225 (226)*.

Although applicant may transport canned water under its authority for canned goods, it may not do so to points where its authority is limited to canned vegetables, and latter authority must be supplemented to meet sup-

porting shipper's transportation requirements, as no service is presently available on canned water and there is a reasonably certain future need for such service. Stockpiling and use of canned water in State, local, and private civil defense programs requires that it be distributed widely and in relatively small quantities, and it will normally move in mixed loads with canned vegetables. Granted.—Lester C. Newton Trucking Co. Extension, 91 M.C.C. 919 (922).

Authority granted for transportation of meats and packinghouse products from Waterloo, Iowa, to 11 States and District of Columbia when rail service is inadequate for supporting shipper's needs, the only motor protestant does not serve Waterloo, and an increasing number of large-volume buyers demand delivery on a given day; present interline service is unsatisfactory because of delays in Chicago and insufficient amount of, or refusal of carriers to interchange, refrigerated equipment. Although shipper has only recently begun to use motor service extensively, it has sales offices throughout the destination territory, and aggressive solicitation of new business is impossible without the type of service proposed.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 255 (263-4)*.

Another shipper desires transportation of mixed loads of frozen and canned goods in refrigerated equipment, the better to serve customers desiring to purchase small quantities of its products, and the only opposing carrier lacks authority to provide the complete service required; applicant already transports canned goods for same shipper to other destinations; granted, restricted to mixed truckloads.—Id., p. 264.

In view of lack of interest of other motor carriers in proposed transportation of bananas from gulf ports to the Northwest, and bearing in mind that certain of supporting shippers are presently using the respective applicants, both have demonstrated a need for service that cannot be met adequately by existing carriers; both applications granted.—Lowrance Extension, 86 M.C.C. 787 (793).

When all supporting shipper's traffic moves from three origins, authority granted is limited accordingly. Though it is considering moving one plant to a new location, it has not entered into a contract for construction of a new plant at that point; such evidence is too conjectural to support grant of additional authority.—Huston, 92 M.C.C. 374 (375, 377).

Grants of authority may be made on basis of foreseeable future need which in normal course of events is reasonably certain to arise. Such reasonable certainty of need for future transportation of liquid sugar is shown only from Cleveland to Pittsburgh, and while sole supporting shipper's desire that applicant obtain authority to transport such traffic to all points in three large and populous States is understandable, such desires do not constitute a real public need. Authority granted from Cleveland to Pittsburgh only, subject to tacking restrictions.—Robert H. Carr & Sons, Inc., Extension, 92 M.C.C. 262 (264-5); although supporting shipper's need for tank-truck transportation of orange juice from Fort Pierce, Fla., to High Point, N. C., is for the future, it is reasonable to anticipate bulk shipments thereto when its customer thereat is presently installing bulk equipment under shipper's guidance.—Kramer Extension, 91 M.C.C. 16 (19).

Authority to transport bulk commodities may be granted on basis of foreseeable future necessity where evidence indicates a prospective need that in the normal course of events is reasonably certain to materialize.—Maxwell Co. Extension, 91 M.C.C. 736 (737); Commericial Oil Transport, Inc., Extension, 91 M.C.C. 961 (963).

No present or reasonably certain potential need is established for bulk transportation of lacquers, paints, etc., from Cincinnati to five New England States when, except for five shipments of varnish to Waldoboro, Maine, prior to hearing, both supporting shippers deliver their products exclusively in drums and could not forecast when, if ever, any of their consignees would convert to bulk facilities. However, the Waldoboro receiver is ready and willing to accept bulk delivery of varnish and no existing carriers are authorized to provide that service; grant limited accordingly.—Maxwell Co. case, p. 737.

Although applicant seeks authority for transportation of numerous bulk liquids from California points to various destinations, with

exception of esters of coconut oil moving from Hawthorne to Kansas City supporting shipper does not deliver any of its products in bulk to customers in the destination area; in fact, it has not established sales offices in that area, and at best could only speculate as to its future needs for bulk transport. Shipper's expectations and hope, as opposed to reasonable definiteness concerning amount of traffic moving to specific destinations, cannot support a grant of authority; granted only for described movement of coconut esters.—Commercial Oil Transport case, p. 963.

Though supporting shippers have a potential need for proposed tank-truck transportation of bulk flour from Pittsburgh area, such need is contingent on applicant's proposed establishment of a bulk storage facility at Pittsburgh; furnishing of storage or similar facilities, however, is not a part of the actual transportation but accessorial or ancillary thereto, and such type of service is not pertinent to the issue of public convenience and necessity; applicant has therefore failed to establish that present or future public convenience and necessity require the proposed service, and that part of application is denied. —E. Brooke Matlack, Inc., Extension, 89 M.C.C. 76 (79).

But since a bulk storage facility already exists at Norristown, Pa., applicant is providing similar service under its existing authority, and no other bulk motor service is shown to be available to the destination territory sought, authorization of proposed service from Norristown is warranted. The milling industry is experiencing increasing customer demand for delivery of flour in bulk, and shippers have salesmen actively soliciting bulk accounts in territory involved; though evidence concerning particular destinations or volumes that would move to specific points is necessarily general, as proposed service is designed to meet a potential rather than a present need, flour can be transported more economically in bulk than in bags, and shippers have reasonable expectation that a substantial volume will move in the near future. —Id., p. 79.

Supporting shippers have demonstrated a valid potential need for motor tank service on petroleum shipments from Harris County, Tex., refineries to California; no authorized motor service is shown to be available and rail transportation lacks flexibility required for off-rail or small-volume shipments. Shippers' traffic in reverse direction has consisted or will consist of petroleum coke and dry and liquid bulk chemicals; however, one protestant holds requisite authority for liquid chemicals and its service should be protected. Granted in part.—York Interstate Trucking, Inc., Extension, 88 M.C.C. 680 (683).

Additional motor service is needed for transportation of lumber from Telfair County, Ga., to points throughout 11-State destination territory; lumber producers are shipping a substantial volume to that territory, and their requirement of expedited transportation on very short notice cannot be met by the limited rail service available. Although protestant motor carrier professes willingness to spot equipment for supporting shipper when needed, its ability to do so is questionable; on the other hand, applicant has rendered eminently satisfactory service of exact nature required. Authority granted from Telfair County.—Dennis, 92 M.C.C. 135 (139).

However, no need is shown for applicant's transportation of lumber from La Grange, Ga., area when its headquarters are almost 150 miles from that area, and supporting shipper has regularly used protestant's services and found them generally satisfactory. Fact that a substantial volume of that shipper's traffic moves in private carriage does not indicate a need for additional certificated service, especially in view of shipper's failure to tender such shipments to existing carriers; nor does shipper's mere desire for an additional service support a finding of convenience and necessity. Authority denied from LaGrange area.—Id., p. 139.

Need is also shown for transportation of wooden pallets from Leesburg, Fla., to points in Georgia and South Carolina, when lack of adequate transportation has discouraged development of additional business in those States; but there is no evidence of need for such service to other States, and grant of authority is limited accordingly.—Id., p. 140.

Need is shown for transportation of lumber from Flathead and Ravalli Counties, Mont., to four midwestern States. Because the lum-

ber business is highly competitive, supporting shippers require dependable, economical, and rapid delivery service; use of rail service entails extra shipping costs, and authorized motor carrier service is inadequate due to inability to furnish suitable equipment; while one shipper has made substantial use of unauthorized truckers, their service has been unreliable. However, record does not support finding that transportation requirements of those shippers are typical of Montana shippers generally; other producers are not shown to have tried and failed to obtain satisfactory service from authorized carriers, and movement of some traffic in unauthorized operations does not justify grant of statewide origin authority; there is no evidence of identities of such producers, their precise locations, volume of their traffic, or reasons for use of such service. Granted in part. Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 408 (410, 411).

Authorization of service between Williamson, W. Va., and Wise County, Va., and six eastern Kentucky counties is justified when the destination area is part of a mountainous coal mining region dependent on highway transportation for general freight movement, supporting receivers are union hospitals scattered throughout those counties, and available for-hire motor service is slow, unreliable, and often involves participation of several carriers.—Hogan Storage & Transfer Co. Extension, 92 M.C.C. 63 (64-5).

Quantum of available service is inadequate for transportation of present and prospective volume of iron-and-steel traffic from two new plants in Kankakee County, Ill., to 12 States. Several regular-route protestants serve only portions of those States and various interchanges would be required, thus making service difficult to off-route jobsites or other points therein; many irregular-route protestants must use circuitous routes, making service to some areas impracticable, or their authority is further limited commoditywise or territorially. Therefore, even assuming extensive interline arrangements with other carriers, protestants could provide, with some circuity, only a portion of the service needed, and clearly could not offer the flexible statewide service shown to be required. And since applicants holding some authority from origin involved are confronted with like problems, they and protestants collectively cannot now meet shipper's demonstrated needs.—Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (397).

Furthermore, supporting shipper must frequently make firm commitments as to time of arrival of shipments at consignees' jobsites, often requiring overnight service, so that shipments can be coordinated with consignees' construction schedule and skilled labor requirements. Service of all 17 applicants is shown to be needed, but record does not justify grant to each of all destination areas each seeks; authority granted each applicant is therefore fashioned according to applicants' and protestants' existing pattern of operations, their terminal locations, quantity and type of their equipment, shipper's present and prospective production schedules, respective tonnage to be shipped to the various destination States, nature of expeditious service required, and requisite coordination at consignees' jobsites.—Id., pp. 397-8.

Shipper needs applicant's service for movement of its agricultural implements to warehouses and distributors throughout destination territory sought, and knows of no available motor service which can meet its requirements. Protestants obviously agree with shipper as to articles weighing less than 500 pounds, since they do not object to a grant subject to that weight limitation, and their anxiety to settle for a favorable restriction weighs strongly against any willingness on their part to meet shipper's needs. Granted without restriction.—Kindsvater Extension, 92 M.C.C. 131 (133-4).

Although shipper of salt from Williston, N. Dak., area supports applications of five carriers, its support of some is predicated less on need for services of those carriers than on its desire to provide them with backhaul traffic. Need is shown only for services of three carriers, and those which could provide the optimum in service are the three whose operations are centered in the Williston area. While the other two would benefit from return loads not otherwise available to them, authorization of more service than is actually required would so dilute the traffic as to make such re-

turn loads of doubtful value; applications of those carriers denied.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (540)*.

Supporting shipper requires transportation of bulk salt from border ports of entry on Great Lakes and other designated waterways to 12 States and District of Columbia, in connection with prior water movement from Detroit or Cleveland; in the past it has distributed large volumes of salt from latter points to those States, which comprise its normal marketing area, using services of applicant and protestant, but use of numerous stockpiles throughout the origin area, with combined water-motor service, is becoming a vital part of its basic distribution program; shipper's salt is used largely for ice control on highways, and peculiar transportation requirements imposed by adverse weather demand an exceptionally flexible motor service. granted.—Paul W. Wills, Inc., Extension, 88 M.C.C. 692 (694, 695).

For a number of years applicant, under color of right, has been providing a highly satisfactory service on l.t.l. as well as t.l. shipments between 5 Georgia points and a 6-State destination territory, which has attracted a substantial volume of traffic from a significant number of shippers who have come to rely on the felt superiority of its service. Existing regular-route carriers cannot offer the complete service required by several supporting shippers, and their joint-line operations would not afford an adequate substitute for applicant's direct service. As applicant's l.t.l. service has existed, albeit unlawfully, for a considerable time, its continuance would not create a new or aggravated competitive situation; authority granted without restriction to truckload lots.—Bowman Transp., Extension, 92 M.C.C. 651 (655)*.

Supporting shippers desire services of a carrier which can handle mixed shipments of their basic machinery and equipment in same vehicle with parts, attachments, and accessories destined to different consignees in same general area; heavy haulers cannot handle shipments of most parts independently or to other than consignees of basic machinery when transported therewith; general freight carriers now handle independent shipments of such articles but have been unable to provide requisitie flat-bed equipment, and their services have proved less reliable than applicant's; moreover, some shipments must be delivered direct to jobsites. Grant of authority is warranted.—Home Transp., Co., Inc., Extension, 88 M.C.C. 265 (270-1)*.

However, the only real evidence of shipper need is for movement of parts and attachments independently of the primary commodities applicant is now authorized to transport, and amount of that traffic is small compared to the volume of prime commodity traffic. Shippers require expeditious carriage of their parts shipments, and applicant's service, which is essentially truckload, is superior to l.t.l. service now available to them to points in considered destination States; they would benefit by its faster service and by savings incidental to more efficient loading of vehicles. General commodity carriers should be able to retain a good portion of such parts traffic as they can lawfully and expeditiously handle. Authority granted for transportation of parts, accessories, and attachments of road construction machinery and equipment in same vehicle with presently authorized commodities, from and to points and areas specified in appendix.—Id., 92 M.C.C. 677 (684-5)*.

Grant of authority for transportation of mine or pit cars from Huntington, W. Va., to three States is warranted when it is not embraced in protestants' heavy-hauling authority, and one protestant's authority for such cars is too limited to provide shipper with complete service required; but while need is shown for transportation of other iron and steel articles to Kentucky, reinforcing steel is excluded from authority granted therefor, since it may be handled by protestants, who can meet shipper's reasonable requirements. —Case Driveaway. Inc., Extension, 89 M.C.C. 633 (634, 635)*.

Need for proposed irregular-route transportation of roofing and siding from Little Rock, Ark., to specified eastern Oklahoma area is established when regular-route carriers either do not serve points therein or can do so only in circuitous manner; some customers cannot handle van-type trailers because of peculiarities of their unloading and warehousing facilities, and Little Rock Shipper has had difficul-

ty in obtaining flat-bed equipment. However, although other supporting shippers desire to curtail their private-carrier operations provided they have available an irregular-route carrier with sufficient flat-bed equipment, in view of lack of specificity of evidence as to volume of potential shipments or location of their customers, grant of broader authority sought is not warranted.—Boswell Extension, 88 M.C.C. 219 (220, 221)*.

Authority granted for transportation of dry cement and motor from supporting shipper's plant at Ravena, N. Y., to 8 States and from its plant and storage site at Boston to 7 of those States. Shipper has shown need for services of a motor carrier that can handle its shipments throughout that area and deliver those reconsigned en route; its Boston plant lacks facilities for loading rail cars, and motor carrier holding authority from Boston cannot serve all points in marketing area of shipper's plant. Moreover, shipper is naturally unwilling to depend exclusively on latter carrier in view of its close business relationship with one of shipper's major competitors.—Bonded Freightways, Inc., Extension, 92 M.C.C. 68 (71).

Although Salt Lake City shipper is not marketing its cement outside of Utah and its future needs are too speculative to justify a grant of authority, shipper at Devils Slide, Utah, has a large productive capacity and its sales volume requires service to named destination territory, which is its normal interstate marketing area. Protestants hold "building materials" authority to a substantial portion of the destination territory, but cement may be transported thereunder only if it is to be used in construction of a building; thus, since a high proportion of highway construction is involved, protestants' authorities are too limited to ensure the complete service required. Granted in part.—Reaveley, 91 M.C.C. 604 (607).

Even though shipper's cement has moved from Douro, Tex., only to points in southeastern New Mexico, applicant should be authorized to provide service in remainder of that State in view of the substantial volume of production at shipper's Douro plant, the projected expansion of its sales activities, and the fact that its potential customers are located throughout that State; furthermore, it appears that existing carriers cannot provide the service required by the shipper to compete adequately in the New Mexico cement market. Need is shown for service to all points in New Mexico.—Chemical Exp. Extension, 89 M.C.C. 452 (454).

Due to competitive and other factors, each of supporting shippers requires services of a motor carrier authorized to transport cement throughout its marketing area; although rail service—the only transportation service now available—has been generally satisfactory in the past, shippers require motor service additionally to enable them to comply with customer requests for direct delivery to plant and job sites not located near rail sidings and to remain competitive with other cement producers who already have available motor service in involved destination areas. Authority granted substitute applicant (parent company of original applicants) as specified in appendix.—Ruan Tansport Corp. of Kansas, 88 M.C.C. 65 (66)*; Ruan Transport Corp. Extension, 88 M.C.C. 123 (124-5).

Evidence indicates that rail and general-commodity carriers have been unable satisfactorily to meet supporting shippers' needs for transportation of small boats from Dickson, Tenn., to Minnesota, Louisiana, and points in States east of Mississippi River, and that one shipper's unsuccessful attempts to obtain protestant's service caused it to resort to private carriage; it is doubtful if protestant can provide the quantity or quality of service Dickson shipper needs and which can reasonably be expected from applicant with headquarters onl a few miles from its plant; granted in part.—Rolling Boats, Inc., 89 M.C.C. 789 (793)*.

While motor carrier protestants each have certain authority in considered area, as pertinent, each is confined to petroleum products and/or liquefied petroleum gases; supporting shipper does not produce, or ship from its chemical plant, liquefied petroleum gases, and it asserts that all commodities moving to or from the plant are chemicals and that they are, and will be, shipped outbound as such mostly under their chemical names. In any event, protestants' possible service would be limited geographically since one has authority

to serve only 1 of the 8 destination States sought, and service of the other to points in 2 of its 4 authorized States would involve substantial circuity of operations. Rail service is also inadequate to meet shipper's transportation needs. Also, record indicates that failure by protestants to obtain any of shipper's new traffic, as result of authority granted, would be only to extent that proposed service is more responsive to the need shown.—Robertson Tank Lines, Inc., Extension, 95 M.C.C. 234 (244-7, 249)*.

Need is shown for transportation of chemicals between specified Texas points and Texas water terminals, since no other motor or rail carrier is in a position to provide the service required, but supporting shipper's needs are otherwise too speculative to justify grant of authority on a countywide basis. There is also need for transportation of certain chemicals from Fort Worth and Houston, following rail movement from out-of-State orgins, to consignees at Texas points. Granted in part. —Ryder Tank Line, Inc., Extension, 91 M.C.C. 497 (500, 501); needed transportation of petrolatum and white oil from Karns City, Pa., to points in Illinois and Wisconsin cannot be provided by existing carriers. Since considered commodities may not properly be classified as chemicals, protestant does hold requisite authority for their transportation; granted.—Milk Transport, Inc., Extension, 91 M.C.C. 280 (283).

Supporting shippers demonstrate need for proposed new and flexible service afforded by the use of collapsible containers. Protestant tank-truck carriers are not authorized to transport considered dry commodities, or those liquid commodities involved which are end products intended for packaging and sale to the general public; need exists for the proposed transportation service that cannot be provided by existing carriers. Granted in part. —Los Angeles-Seattle Motor Exp., Inc., Extension, 89 M.C.C. 621 (624-5)*.

The primary questions in determining public convenience and necessity are whether the proposed operation will serve a public demand, and whether such demand cannot be as well met by existing carriers. Issuance of a certificate must be predicated on a showing of material defects in existing service, expected increases in available freight, or some other substantial grounds for introduction of another carrier into the existing competitive situation.—East-West Transport, 88 M.C.C. 352 (355); although at time of hearing supporting shipper had not completed construction of adequate storage facilities at its plant for bulk shipments of lecithin oil, a real need is shown for transportation thereof, which none of protestants has authority to supply. Granted. —Southern Tank Lines, Inc., Extension, 88 M.C.C. 387 (390).

Unrefuted evidence that shipper's pertinent traffic moves in substantial volume to the destination points and areas sought, together with convincing evidence that protestant has been unable to meet shipper's reasonable transportation requirements, warrants grant of authority sought; fact that 80 percent of the total volume is destined to points in Colorado and Wyoming indicates need for statewide authority to those states.—Consolidated Freightways of Del. Extension, 88 M.C.C. 603 (605).

Supporting shipper has established need for a complete motor service in transportation of cement from its Hannibal, Mo., plant to points in Illinois, Iowa, and Missouri; though volume of interstate shipments to Missouri points is apparently small, such traffic is important to shipper and authority for its movement should be granted.—Orscheln Bros. Truck Lines, Inc., Extension, 88 M.C.C. 569 (573).

Grant of authority for described fungicides from Memphis to Missouri, Iowa, and Kansas is warranted when no motor service is currently available and supporting shipper is at disadvantage in competing for business in that area; however, though that shipper expects to use service to those States about once a week, it is less specific as to prospective volume which might move to other States, and testimony of other shippers is too vague and general to support a grant, since they have not shown that sufficient volume would be available to support proposed operations or that they have sales programs which might develop more traffic; granted in part to one applicant and denied as to rival applicant.—Eldon Miller, Inc., Extension, 88 M.C.C. 309 (313)*.

Although shipper support of application is

not substantial, evidence demonstrates some need for service at points on proposed route between Clarksdale and Dundee, Miss., including off-route points within 5 miles thereof; however, only one shipper supported proposed service between Memphis and the off-route point of Helena, Ark., and only advantage the shipping public would gain therefrom would be availability of another motor service not shown to be required; granted, with restriction against transportation of traffic between Memphis and Helena.—F. & W. Exp., Inc., Extension, 88 M.C.C. 262 (263)*.

Neither applicant nor protestants are now authorized, territorially or commoditywise, to provide the complete service required by supporting shippers and their dealers on tractors, engines, and other heavy articles, including independent shipments of parts; while general-commodity carriers are satisfactorily transporting separate loads of small parts, they may not handle those requiring special equipment. Since applicant already holds broad authority and is now serving shippers from and to the involved points, grant of authority sought, including separate authority for parts, attachments, and accessories, and without restrictions as to intended use of the commodity or need for special equipment, will enable it to meet shippers' reasonable transportation needs without material adverse effect on opposing carriers.—Gregory Heavy Haulers, Inc., Extension, 88 M.C.C. 45 (48-9).

Inasmuch as protestant's authority for aircraft parts is now held not to embrace transportation of jet thrust units for interceptor missiles, the producer, and the Government as consignee, require additional service to move such units and accessories from Redstone Arsenal in Alabama to specified destinations in Utah and Washington, and services of both applicants are needed to ensure prompt delivery of items essential to the missile program; granted accordingly.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (9)*.

In absence of unusual circumstances, territorial grants should not be atomized by excepting therefrom points within the territory. Protestant does not dispute need for an overall motor service between Willow Run and Detroit Metropolitan airports and between those airports and adjacent Michigan area and Toledo, Ohio, but seeks to have excepted therefrom authority to serve Toledo and three Michigan points; however, preponderance of evidence establishes need for applicant's service at those four points.—Nickerson, 88 M.C.C. 186 (187).

Evidence amply supports grant of extension authority to transport new furniture from Hazelwood, N. C., to Illinois and lower peninsula of Michigan; authority is also warranted for transportation of new furniture and pianos to 5 southwestern States and California, where supporting shippers have customers; those shippers are entitled to inherent advantages of motor service enabling them to ship furniture uncrated, more readily serve customers at off-rail points, and make faster deliveries. However, grant of 11-county origin territory sought would enable applicant to serve certain highly populated and industrialized counties where no shipper support is presented; authority granted from 7 North Carolina counties and 2 specific points which contain all plants of shippers who appeared in support of application.—B & P Motor Lines, Inc., Extension, 86 M.C.C. 719 (720-1)*.

Bi-State agency authorized to purchase operating rights of 14 inter-and intrastate buslines serving St. Louis area seeks authority to serve certain additional points and to continue all the acquired operations, with elimination of certain restrictions on the interstate routes as to intermediate-point service and pickup of passengers. Rights sought are essentially the same as vendors' present operations, revised or rearranged slightly for more effective service, and may properly be granted.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (593-4); and denial under §5 of authority for purchase of one vendor's rights between St. Louis and Collinsville, Ill., because of objectionable route split resulting from vendor's proposal to continue operating between Vandalia, Ill., and St. Louis via Collinsville, reflects different considerations than question of convenience and necessity under §207 for the agency to operate partly over same highways between St. Louis and Edwardsville, Ill., via Collinsville, its access to Collinsville being only one aspect of a mass transportation plan of merit where present and future public convenience and

necessity amply justify the service; granted. —Id., pp. 595-6.

See also Best Way Motor Freight, Inc. v. United States, §5(2), n. 115.

That numerous shippers of diversified commodities from 13 points in Kansas and 4 in Colorado offered evidence as to need for continuance of unified service vendee is providing under temporary authority adequately meets the test as to whether public convenience and necessity require such operations in future; certificate granted for continuance of operations formerly conducted by vendor under "grandfather" clause of §206(a)(7).—Denver-Limon-Burlington Transfer—Purchase—Kansas Interm., 93 M.C.C. 210 (214)*.

Such shipper need as was claimed, but not proved, for continuance by vendee of service under vendor's §206 (a)(7) "grandfather" rights between Louisville and Brandenburg, Ky., area related to traffic originating at Louisville and destined to points in other States; no shipper evidence was offered to show need for service between Louisville and the Brandenburg area. Vendee's proposed operation between whose termini would present many tacking possibilities for which no public need has been shown, and protestants would be adversely affected thereby. At most, record shows only a possible need for service in connection with overhead traffic moving from one shipper's Louisville plant to Oklahoma and Texas; and since evidence is inconclusive as to whether existing service is able to meet that shipper's needs, and vendee has the burden of proof, it must be concluded that no public convenience and necessity has been shown for a grant of authority. Denied. —Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (429-30).

Storage-in-transit is a recognized and long established commercial practice that has been adapted to motor transportation of various types of commodities; and storage-in-transit privileges are currently used to a considerable extent in the frozen food industry, where shippers find it necessary to maintain storage facilities at centralized locations for effective distribution of their products. As a commercial practice, storage-in-transit is a feature that may be considered in determining reasonable transportation requirements of the shipping public; however, storage itself is not regarded as a transportation service, and offers to provide transit arrangement are not viewed as controlling but merely as an element to consider in concluding whether there is a need for a proposed new service. Accordingly, even considering desire of two shippers for transiting (and such desire of shippers has been considered in a number of cases), applicant failed to show need for proposed service; denied.—Willis Shaw Frozen Food Exp., Inc., Extension, 100 M.C.C. 18 (20-21)*.

Though shipper is satisfied with applicant's past service from its other plants and prefers such service from its new plant, shipper preference alone is not proof of convenience and necessity. Also, while it is generally difficult to define a future need with precision and exactness, shipper's evidence concerning future need for service from an unopened plant is too general and indefinite to establish future need for applicant's supplemental service. Moreover, record does not show that protestant's untried service from considered origin will be inadequate to meet shipper's requirements for supplemental common carrier service; denied.—Dealers Transit, Inc., Extension, 98 M.C.C. 297 (302-3).

A finding of public convenience and necessity cannot be based on a shipper's mere desire for an additional or "standby" carrier.—Letarte, 91 M.C.C. 158 (160); especially in absence of any evidence demonstrating a genuine need for more than one service.—C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (296)*; similarly, though there is need for motor transportation of calcium carbide where supporting consignee lacks facilities for handling rail shipments, authority is granted for only one of three origins when consignee's mere desire to have the other sources of supply available for possible future use must be considered too speculative.—Shipley Transfer, Inc., Extension, 89 M.C.C. 524 (525); likewise, authority for towage of replacements for wrecked or disabled motor-carrier vehicles is denied when need for such service appears to be largely speculative.—Young, 91 M.C.C. 445 (453).

Extension authority sought for northbound transportation of ex-air freight from Florida

denied when, in view of abundance of authorized motor-carrier service available to perform the single-line operation proposed, supporting evidence at best establishes a mere preference for applicant's service; applicant's desire to obtain a profitable backhaul and thus round out its operations affords no basis for a grant.—Armellini Exp. Lines Extension, 88 M.C.C. 539 (541); similarly, no present or foreseeable future need is shown for proposed transportation of airfreight between Salt Lake City Airport and points on applicant's authorized routes beyond supporting air carriers' terminal areas. Although increase in airfreight is anticipated, evidence is not convincing that it will occur outside the terminal area from and to which the bulk of such traffic moves; nor is there any evidence that abundant existing service is inadequate to meet supporting witnesses' needs; denied.—Wycoff Co., Inc., Extension, 89 M.C.C. 369 (374)*.

Applicant seeking to serve only southern half of New Jersey from cement plants in five Pennsylvania counties would be unable to provide complete service needed. Carriers serving each plant should be limited to a reasonable number in order to promote efficient and economical shipper operations, and applicant concedes that the evidence will not support grant of duplicating authority to each of numerous applicants seeking to provide a new service not previously available. Conclusion in 86 MCC 447 that, generally, only two motor carriers should be authorized to serve each cement mill is sound. Prior denial affirmed.—Pennsylvania Truck Lines, Inc., Extension, 91 M.C.C. 167 (174-5)*.

No public need is shown which warrants a grant of authority that would permit continuation of applicant's past unlawful for-hire transportation of automobiles of miliary personnel between Wrightstown, N. J., adjacent to McGuire Air Force Base, and ports of entry at Philadelphia and New York City. Protestant is authorized to provide a similar service between McGuire and the ports, and appears to be fully
capable of meeting any reasonable requirements for such transportation; also, even considering the diffuculty of obtaining witnesses to demonstrate public support for the application, applicant has failed to show that existing authorized service is materially deficient. Moreover, applicant desires to use the proposed service as a means of obtaining prospective customers for his automobile sales business, but that would be inconsistent with the duties owed the public by common carrier. Application denied.—Cherkos Investigation of Operations. 91 M.C.C. 535 (541)*.

The commission may take into account changes in important facts, which have occurred since hearing and are made part of official record, in determining whether authority sought may properly be granted; authority to transport air cars from South Bend, Ind., would not be responsive to any actual need when, since prior report, supporting shipper has discontinued their manufacture at its South Bend plant and is disposing of its activities there; denied.—George F. Burnett Co., Inc., Extension, 88 M.C.C. 452 (453)*.

No need has been shown for proposed transportation of sections of prefabricated houses from Wellsville, N. Y., to all points in United States, and while a present need has been established for service to Pennsylvania points and there is a possible future need for service in northeastern States and Virginia, applicants have not shown any inability on part of protestants to perform needed service; denied.—National Trailer Convoy, Inc., Extension, 91 M.C.C. 259 (263).

Supporting shipper has failed to establish need for proposed transportation of dry bulk fertilizer compounds since it is not yet in production and its future needs are vague and indefinite; its indication in broad terms of desire for service to all destinations in 5 States is not sufficient. Moreover, in most instances its cooperative owners designate the mode of transportation and the carrier.—Dahlen Transport, Inc., Extension, 91 M.C.C. 609 (612, 615).

Although supporting shipper desires to supply vinegar to Utah points from its Oakland, Calif., plant, production facilities thereat have concededly reached their peak, and future movements to Utah would be largely dependent on completion of proposed enlargement of production facilities at that plant at an unspecified future date. Shipper has failed to establish a need for applicant's pro-

posed service with sufficient specificity to warrant grant of authority sought; denied.—Arizona Pacific Tank Lines Extension, 91 M.C.C. 906 (910).

Inquiries regarding bulk truck service will not alone support a finding of public convenience and necessity; before an inquiry may be translated into need, it must be coupled with reasonable assurance both that the service will be utilized and the volume of traffic will be substantial enough to require the service. Applicant's evidence is too speculative to warrant a grant of authority.—O'Boyle Tank Lines Extension, 89 M.C.C. 499 (501); similarly, supporting shippers' evidence is not convincing of any need for proposed bulk truck service. Neither shipper mentioned a specific point in destination State to which any of involved commodities move or could be expected to move; and while both expressed need for prompt and expedited service, such need is not shown to apply to the only two commodities shipped by them in bulk to that State. Denied.—Maxwell Co. Extension, 88 M.C.C. 648 (651).

Support of one shipper is apparently directed toward transportation of emulsifiying compounds used in manufacture of cheese and cheese products, which are not shown to be within scope of application for authority for commodities dealt in by grocery stores; petitioner's past transportation of soap and related articles for another supporting shipper was performed under an unwarranted misinterpretation of its authority for "groceries"; as a plethora of untried motor service is available which appears completely capable of meeting that shipper's needs, no additional service should be authorized. Denied.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (395-6).

Alaska: [Vols. 18, 19].—See J. O. (Red) Willett Pipe Line Stringing Corp. case, under *Petroleum*,below.

Commercial competition: [Vol. 18].—Supporting shipper's present and future need for tank truck service, to enable it to compete effectively with other shippers of plastic materials and to meet the changing requirements in its industry, justifies a grant of authority. All of shipper's traffic now moves in bags and containers and amounted to about 5 million pounds in 1962; approximately double that amount is expected in 1964, and that will require 300 truckloads or a maximum of five tank trailers in any one day. Shipper's need cannot be met by protestants which do not hold appropriate commodity authority; rail service is not adequate because of lack of rail bulk loading facilities at shipper's plant and absence of rail sidings at some customers' plants. Granted as to one applicant.—Chemical Leaman Tank Lines, Inc., Extension, 95 M.C.C. 394 (400).

Since Coralville, Iowa, and La Grange, Mo., are competing distribution points for petroleum and petroleum products, availability of at least four competing carrier services at the former point places the latter point, with only one carrier service, at a competitive disadvantage. Also, the availability of proposed service from La Grange in addition to that of protestant would instill an element of flexibility in supporting shipper's distribution pattern at potentially reduced costs; thus the existence of two carrier services from La Grange would be in the public interest. Granted.—Ruan Transport Corp. Extension, 95 M.C.C. 134 (136)*.

As supporting lumber shippers serve consignees throughout a State who cannot accommodate truckload shipments, a carrier with broad territorial authority is required. Protestant, authorized to serve only part of one destination State, cannot provide split load deliveries shippers require; granted as to that State.—Hicklin Extension, 94 M.C.C. 434 (438).

On further hearing, and considering the application in light of the critieria established in 355 US 83, a valid need has been shown for proposed transportation of sand, in bulk, from Newport, N. J., to Orangeburg, N. Y.; to that extent, the application is granted. Consignee, a manufacturer of glass containers, must have a constant supply of sand at its plant to maintain operations; expeditious truck deliveries from Newport are needed to supplement rail shipments from a major source in Virginia; furthermore, supporting shipper's sales of sand to consignee began only after applicant was granted temporary authority, and it appears probable that the shipper will lose a valuable customer if instant

application is denied. Protestant, on the other hand, having never handled the subject traffic, will not be adversely affected by a grant of authority to extent of the need shown.—J-E-M Transp. Co., Inc., Extension, 94 M.C.C. 573 (576-7)*.

Commodity description: [Vols. 17-19].—Term "general commodities" as used in describing authority granted is generic and, unless limited or restricted in some manner, it includes and encompasses explosives; therefore, it is unnecessary to authorize transportation of explosives in more specific terms.—Whitfield Transp., Inc., Extension, 95 M.C.C. 576 (583)*; the commodity description "general commodities moving in express service" is sufficient to limit applicant's operation to its normal range without the imposition of weight limitations in the grant of authority.—Railway Exp. Agency, Inc., Extension, 98 M.C.C. 92 (99).

Vendor's intrastate regular-route certificate authorizes transportation of "property," which appears to correspond to the commission's general-commodity authority. But since certificates for transportation of general commodities usually exclude certain classes of commodities requiring special equipment or rendition of special services, and abstract of interstate shipments transported by vendor under former single-State proviso or "grandfather" provisions of §206(a)(7) does not indicate that it handled any shipments within those classes, certificate issued multi-State vendee for continuance of the regular-route service will contain the usual exceptions.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (102-3)*.

While witnesses who appeared in behalf of the Air Force and certain shippers supporting petitioner's application for authority to transport aircraft parts, etc., misdescribed the missile parts they were shipping as airplane or aircraft parts, they did so in compliance with strict security regulations and under the impression, based on an informal opinion of the Bureau of Motor Carriers, that the commission sanctioned describing missiles as aircraft for transportation purposes. That the public may have known that guided missiles were being developed has no bearing on the security regulations in effect at time of the hearing on that application. Those witnesses were under specific instructions that missiles were not to be mentioned, and that reference to airplane or aircraft parts was adequate to support a grant of authority for missile parts; they deliberately used what they thought were proper terms to describe the commodities involved, and their reasons for doing so are beyond reproach.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (252)*.

And although the Air Force's exceptions, filed some 6 months after close of hearing in which those witnesses testified, stated that it could now be generally admitted that the program was concerned with development of long-range guided missiles, it is clear that before those exceptions were filed no mention could have been made of the fact that guided missiles were involved. The Bureau's informal opinion that airplane parts included missile parts, together with reference in the commission's report in that proceeding to the fact that guided missiles were involved, were sufficient to lead petitioner to believe that the authority granted authorized it to transport missile parts.—Id., pp. 252-3.

And while there was no intent, in granting that authority, to use "airplane parts" or "aircraft parts" as generic terms to embrace missile parts, this does not mean that there was no intent at that time to authorize applicant to provide a complete service for both its airplane parts and missile parts shippers. The situation is unique, and there is no question that, had requirements of the national security allowed the shipper witnesses to be more specific when they described the commodities they were shipping, applicant would have received authority for both airplane parts and missile parts as a result of that hearing. Petitioner should be authorized to continue to transport missile parts and related commodities used in the supply, service, repair, operation, or maintenance thereof, without restriction.—Id., pp. 253, 254.

Though jet thrust (JATO) unit for interceptor missiles consists largely of a solid propellant designated a class B explosive, grant of explosives authority would be inappropriate when purpose of the explosive is, not to dissipate energy in an explosion, but to furnish

controlled propulsion, and purpose of the complete unit is to propel the missile from its launching site; as it is an integral part of the missile, it falls more appropriately within category "missile parts"; but since evidence relates solely to transportation of jet thrust units and accessories used in their installation, rather than missile parts as a class, authority granted is limited accordingly.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (9-10)*.

Commodity description of authority recommended is rephrased to eliminate internal duplication, the description "acids and chemicals" being sufficiently broad in scope to embrace paints, varnishes, and laquers. However, since it is possible that certain types of resins may be excluded from that description (although the majority of resins are chemicals), authority is granted to transport acids, chemicals, and resins, in bulk, in tank vehicles.—Slay Transp. Co., Inc., Extension, 96 M.C.C. 47 (50-1).

Shipper of soybean oil and resin plasticizers requires motor carrier service from two plant sites in Illinois to points in some 20 States throughout which it is soliciting or plans to solicit business in those commodities; and while protestant has authority to transport vegetable oils (which would include soybean oil, but not the resin plasticizers) from both plant sites to all the destination States, it can transport the resin plastercizers from only on plant site to a limited number of States under its liquid chemicals authority. Consequently, as protestant cannot provide multiple pickups of both commodities required, and cannot haul them in mixed loads to all of the territory sought, the application is granted but restricted against transportation from one plant site to the few destinations that protestant is authorized to serve.—Ruan Transport Corp. Extension, 96 M.C.C. 719 (722).

Both applicants seek authority to transport liquid chemicals, in bulk; however, in view of shipper evidence concerning particular chemical they produce and ship, specified, rather than generic, commodity descriptions should be used, except insofar as operations being authorized embrace traffic originating at named points where chemical producers have or will soon have a variety of commodities for shipment to the various proposed destination States.—Pacific Truck Service, Inc., Extension, 94 M.C.C. 262 (265, 266).

Since no present or foreseeable future need is shown for transportation from Ector County, Tex., of dry bulk chemicals other than polyethylene, polypropylene, and polystyrene, authority granted is limited accordingly. —Younger Bros., Inc., Extension, 92 M.C.C. 624 (631); likewise, though authority is sought to transport dry plastic materials, authority granted is limited to transportation of polypropylene polymer since that is the only product manufactured by supporting shipper, and shipper does not indicate that any other type of dry plastic will be produced at its plant.—Chemical Leaman Tank Lines, Inc., Extension, 95 M.C.C. 394 (401).

While shipper is presently producing only one prepared food product, turkey rolls, it has definite plans to expand its facilities and is experimenting with other products involving different types of meats as well as certain additives, such as cranberries and dressing. Based on the rationale of the Alterman case, 84 MCC 416, applicant was granted authority to transport "prepared foods", which is a broad grant of commodity authority that will allow applicant to ship its full line of products that it develops without the necessity of supporting future applications for authority as its transportation needs change.—Blythe Extension, 96 M.C.C. 546 (548).

Since authority sought for "food products" would convey the right to transport only those fit for human consumption, and supporting shippers also need transportation of canned pet foods, separate authority is granted for canned animal foods.—Trans.-Cold Exp., Inc., Extension, 92 M.C.C. 739 (741).

In view of shippers' demonstrated need for a transportation service which can handle numerous commodities which fall only within the broadest generic terms of food and foodstuffs, authority is granted for food, food preparations, and foodstuffs, to enable applicant to transport all the freight for which need is shown.—Refrigerated Transport Co., Inc., Extension, 88 M.C.C. 71 (74,75).

Mere assertion that supporting shipper may have future need to ship frozen fruits along with its present products, or that at some fu-

ture date it might develop new products requiring transportation, is insufficient basis for grant of broad authority for "frozen foods." As need is shown only for transportation of frozen waffles, pancakes, muffins, and onions from and to specific points, authority granted is limited accordingly.—Watkins Motor Lines, Inc., Extension, 92 M.C.C. 259 (261).

Though need is shown for proposed transportation of mixed shipments of frozen and unfrozen commodities, supporting shippers are primarily interested in transportation of frozen fruit juices and concentrates in mixed loads with canned citrus products; evidence as to need for transportation of other commodities is too vague and speculative to support a broader grant.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (585).

Recommended description "frozen cooked, or partially cooked (except blanched) foods" is ambiguous; all supporting shipper's frozen food products are cooked or partially cooked, and probably all are "blanched." As shipper has a program of processing new food products, commodity description should be broad enough to provide for its future as well as present needs; the clearest language that will exclude commodities within shipper's recently granted "grandfather" authority is "frozen foods (except frozen fruits, frozen berries, and frozen vegetables within meaning of §7(c) of the Transportation Act of 1958)." —Colonial Refrigerated Transp., Inc., Extension, 86 M.C.C. 796 (798-9).

Since proposed commodity description "chilled citrus juices" is ambiguous, "not canned and not frozen" is substituted for "chilled."—Kramer Extension, 94 M.C.C. 690 (694)*.

Proposed service is clearly required. However, authority to transport "other dairy products as described in subdivision B, appendix I" of the Descriptions case would not suffice, since applicant proposed to transport various products not embraced therein; moreover, use of "other" in that all-inclusive phrase implies that the additional commodities are also wihin the term "dairy products." Authority granted for transportation of dairy products as described in sectin B of appendix I, with specific exceptions and additions.—McGiffen, 91 M.C.C. 555 (557).

While authority to transport lumber includes transportation of veneer, since no evidence was adduced concerning need for transportation of veneer to the destination territory, it is excluded from authority granted.—Hicklin Extension, 94 M.C.C. 434 (438).

The few commodities produced by the sole shipper supporting application for authority to transport agricultural machinery, etc., as listed in section 1(B) and 1(C) of appendix XII to the Descriptions case, do not warrant so broad a grant, and there is no evidence that it is continually developing new products. Moreover, certain items produced by that shipper are not included in those lists, and authority drawn in terms of the Descriptions Case would not permit their transportation. Commodity description in authority granted is therefore limited to shipper's actual transportation requirements as established of record. —International Transport, Inc., Extension, 95 M.C.C. 360 (363)*.

Although two new plants whose traffic is controlled by supporting shipper are presently producing only steel reinforcing rods and dowel assemblies, it has definite plans to manufacture numerous other items; authority is therefore granted for transportation of iron and steel articles listed in appendix V of the Descriptions case (61 MCC 209), as requested.—Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (394, 398).

Grant of authority to transport self-propelled road rollers and streetsweepers is warranted when neither applicant's authority to transport tractors nor its heavy hauling authority enable it to meet shippers' needs. Supporting shippers require service of an authorized carrier for transportation of considered commodities which are specifically identifiable self-propelled single purpose vehicles distinct from tractors, a workhorse type of vehicle used for pulling or propelling others, and distinct from heavy-hauler commodities which, by their inherent nature, require the special handling implicit in crane loading or unloading.—Daily Exp., Inc.-Investigation of Operations, 98 M.C.C. 661(672,674).

Because recent technological advances in the refractory industry have resulted in new products and basic changes in the physiochemical properties of other items, thus rais-

ing some doubt as to whether such commodities are encompassed within authority to transport "clay products," applicants seek to broaden their commodity authorities in order to transport refractory materials and products to the same extent territorially as their present "clay products" authority. Bulk of the new products still possess same physical characteristics as refractories made primarily of clay; the change in their composition was and continues to be evolutional, and unknown to the carriers, so that applicants have unwittingly transported substantial quantities thereof under their "clay products" authorities for a considerable time; and under the circumstances, failure to grant the broader authority can only result in withholding needed service from supporting shippers. Therefore, applicants' present authorities should be appropriately broadened; authority to transport "refractories" granted.—Pennsylvania-Ohio Exp., Inc., Extension, 96 M.C.C. 449 (453-6).

Petitioner's authority for "wrapping paper" was granted on specific showing of need for transportation of a commodity then called "wrapping paper" by all concerned; subsequently, the same commodity (used by consignee as a filler in laminated plastic board) was reclassified by supporting shipper's successor as "wood pulpboard" and marketed as "Kraft saturating." Original shipper's use of description "wrapping paper" was reasonable, since the commodity has all visible as well as transportation characteristics thereof, and it is not apparent that anyone could have been deceived or prejudiced thereby. However, such a broad description authorized a greater service than need was shown for; manufacturer's arbitrary classification of the commodity as "pulpboard" is a misnomer for transportation purposes; the most apt description is "Kraft paper, saturating"; certificate modified accordingly.—Herndon Extension, 89 M.C.C. 278 (279-80).

Furniture shipped in cartons is considered "crated", as the term is used in the commission's commodity descriptions.—Johnson Bros. Truckers, Inc., Extension, 96 M.C.C. 500 (502, note)*.

The term "new furniture", alone, without modification embraces both crated and uncrated furniture.—Id., p. 505.

Traditionally, carriers of liquid products have used tank vehicles to serve liquid bulk shippers, while those handling dry bulk commodities have used a variety of vehicles, including the closed "hopper-type"; thus, under its authority to transport "fertilizer, in bulk, in hopper-type vehicles," applicant has carried only dry fertilizer shipments. However, its certificate is unrestricted as to the form, whether liquid or dry, in which shipments may be transported; and in light of recent development of new tank-like vehicles specially adapted to hauling bulk commodities in either liquid or dry form, and that are so functionally similar to "hopper-type" vehicles that they could be so classified, applicant's authority allows it to transport bulk liquid fertilizer, provided such new vehicles are utilized. But since need is shown only for proposed transportation of dry fertilizer, removal of the equipment in applicant's certificate is not justified. Extension authority to transport dry bulk fertilizer, unrestricted as to type of vehicles, granted.—Truck Transport, Inc., Extension, 95 M.C.C. 597 (599-600).

There is no reason to describe authority granted for transportation of ammonium nitrate fertilizer in terms of shipment "in bulk, in bags, and in packages," since the commission's explosives regulations prescribe the containers and loadings permitted, and new containers of other types may be developed and used in future.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (758).

Though application seeks authority for liquid chemicals as defined in the Maxwell case, shipper fears that such a grant might preclude transportation of chemicals intended for use as end products; since commodities involved embrace a wide range of liquid chemicals, authority is granted for "liquid chemicals, in bulk, in tank vehicles," in accordance with revised definition promulgated in 88 MCC 127, which eliminated the intended use test.—Consolidated Freightways Corp. of Del. Extension, 88 M.C.C. 603 (605).

Determination of whether or not liquid yeast is a liquid chemical within applicant's existing authority is not necessary when it has been established that supporting shipper has a definite need for transportation of liquid yeast from St. Louis to Galesburg, Ill., and there is

no evidence on record of the ability or willingness of any protestant to render such service. Shipper should not be denied availability of a carrier with unquestionable authority to provide the service merely because an unresolved issue is raised as to scope of applicant's present commodity authority; and no burden of proof as to nature of liquid yeast has been imposed on protestants. Therefore, a finding that the public convenience and necessity require the proposed operation to Galesburg, without further consideration of protestants' operating authority can be made. Granted accordingly.—Slay Transp. Co., Inc., Extension, 95 M.C.C. 659 (661).

Proposed description "mineral mixtures" is ambiguous and does not accurately describe supporting shipper's products, which are mixtures of minerals generally known in the feed industry as "mineral feeds" and used as feeds for livestock and poultry. As applicant is already authorized to transport manufactured animal and poultry feeds, authority for animal and poultry mineral feed mixtures would permit it to carry all of shipper's products involved. However, issuance of certificate is conditioned on favorable resolution of issue of applicant's fitness in another proceeding.—Monkem Co., Inc., Extension, 92 M.C.C. 235 (236).

Grant of authority for the broad commodity description recommended, i.e., fish meal and ingredients used in manufacture of animal and poultry feeds, is not warranted when it would permit transportation of commodities (such as chemicals) for which no need is shown; definite need is shown only for movement of fish, peanut, cottonseed, and hydrolyzed feather meals, meat and bone scraps, tankage, and dried blood. Since all supporting shippers ship fish meal, authority granted therefor is based on their collective needs; more limited territorial authority granted for the other commodities is restricted against tank transportation in liquid form; and cottonseed cake is excepted from authority to transport cottonseed meals as a precautionary measure in case, on a more comprehensive record, the latter should be held to include the former. Issuance of certificate withheld pending determination of applicant's fitness in another proceeding.—Monkem Co., Inc., Extension, 92 M.C.C. 160 (165).

Although supporting shipper desires complete service for its extensive line of machinery and power equipment, as the record contains no specific mention of road rollers and compactors authority for those articles is denied. However, while generators are not separately referred to, they frequently move in combination with engines with which they are used to produce electricity, and their separate inclusion in authority granted will ensure shipper adequate coverage where these components are to be assembled at point of delivery.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 356 (360).

"Intended use" commodity descriptions have not been abandoned, and will continue to be used where appropriate; despite difficulties posed by such descriptions, they provide flexibility to meet the needs of the consignee, and are in fact consignee-oriented, which in certain instances offers more advantages from point of view of public interest than attempted broad generic descriptions or enumerations of a large number of individual items.—I. L. & C. Corp. Modification of "Grandfather" Authority, 89 M.C.C. 161 (164).

While under some circumstances an application under §207 may be a proper vehicle for seeking modification of a carrier's operating authority, applicants seek in effect to change their commodity descriptions from intended-use and generic descriptions to descriptions which are in part mere naming of specific commodities, on basis of past operations claimed to have been conducted under color of right; however, abstracts of some 17,000 shipments showing merely the name of the commodity, the consignor and consignee, and the date of shipment do not meet their burden of establishing by clear, concise, and unequivocal evidence that the relief sought is warranted.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (95).

Moreover, applicants seek not only to have their commodity descriptions reworded to embrace additional commodities not now authorized, but ask that this be done without reference to territorial scope of each specific commodity authority sought to be so modified; in absence of substantial evidence that existing authorized services are in any wise

inadequate, applicants' past participation in the available traffic affords no basis for continuance of any presently unauthorized service. Denied.—Id., p. 96.

Conversion to common-carrier operation: [Vols. 17-19].—Application under §207 for conversion of a carrier's contract-carrier permit to common-carrier authority may be approved only upon a showing that public convenience and necessity require proposed operations. However, applicant cannot rely solely on past operations as proof of convenience and neccessity, as would be the case had it filed a timely application under §212(c), but must also present shipper testimony showing need for proposed common-carrier operations. In support of the application, applicant should submit a statement of its past lawful operations so its claim of use of the authority to be converted can be verified, and it should offer to surrender for cancellation authority on which past operations are not based; but evidence of past operations alone normally will not be sufficient because, since the 1957 amendment to the act, such past operations necessarily will have been restricted to service for a limited number of persons.—Connell Transport Co., Inc., 95 M.C.C. 312 (317, 319).

To convert contract carrier authority obtained for service to a few shippers without a clear showing of public need for applicant's service as a common carrier would grant applicant an undeserved benefit, to the detriment of existing carriers. It also would mean that a carrier which had obtained shipper support for its permit application by promises of specialized services, or assignment of vehicles to shipper's exclusive use, would be rewarded for having abandoned the elements of specialization that orginally made its service attractive and probably contributed significantly to authorization thereof. Accordingly, shipper testimony which demonstrates a need for applicant's services as a common carrier rather than a contract carrier should be produced; and since applicant has failed to present such evidence, relying solely on past operations (much of which were unauthorized), its conversion application must be denied.—Id., p. 319.

Although applicant seeks common-carrier authority only slightly broader territorially than its existing contract-carrier authority, it is already meeting transportation needs of supporting shipper as a contract carrier, except for an infrequent shipment from its shook mill or red cedar plants, and reasonably adequate common carrier service is available from numerous protestants; applicant's two remaining contract shippers also have ample service available; denied.—Goodman Motor Transport Co., Extension, 91 M.C.C. 206 (210).

Applicants have made the requisite showing of convenience and necessity to justify issuance of certificates for operations identical in scope with those now performed under their permits as contract carriers of cement or cement and mortar; each has performed considerable service for its supporting shippers, each is willing to provide common-carrier service, and shippers are willing to use it; there is no showing of any other service able to meet those shippers' needs. However, issuance of certificates is withheld pending (1) receipt of written requests for cancellation of certain duplicative authority in applicants' permits, and (2) issuance of certificates in conversion proceedings of two affiliates who serve certain of same shippers as applicants. —Schwerman Trucking Co. of N.Y., Inc., Extension, 88 M.C.C. 661 (664, 665).

In deciding conversion applications, the criteria that must be considered include the nature and extent of past operations, whether the proposed operations would be those of a common carrier, and whether the public support is sufficient to sustain applicant's burden of proof; however, where the proposed conversion is directly related to a §5 transaction, the commission favors a more liberal approach, and conversion has been permitted without the full measure of proof ordinarily required. Although vendee seeking to purchase common-carrier rights has served three shippers as a contract carrier, only one voiced vague support of its conversion application, and in describing its service needs stated that its operations are highly seasonal and that it requires timed deliveries and short-notice pickups; thus its requirements related more to service characteristic of contract carriers. Moreover, the need expressed does not relate to traffic which vendee has handled under its

contract-carrier rights. Evidence adduced falls far short of justifying proposed conversion even under a relaxed measure of proof; denied.—Bowser and Campbell—Purchase—Motorway Corp., 97 M.C.C. 192 (202).

Issuance of certificate to vendee for dormant contract carrier rights it seeks to purchase is not warranted when no inadequacy of existing services is shown and the only supporting shipper, which vendor formerly served as contract carrier, has transacted its business satisfactorily without once using vendor's service during the 13 months preceding hearing. Denied.—H. C. Gabler, Inc.—Purchase—Logan, 90 M.C.C. 436 (440).

Criteria to be considered in deciding conversion application, which is directly related to proposed §5 transaction, are the nature and extent of past operations to be converted, whether proposed operations would be common carriage, and whether the public support is sufficient to sustain applicant's burden of proof. Since vendee's proposed transportation of petroleum products from shipper's terminal under the contract-carrier rights it seeks to purchase is not unique, and it has been providing a similar service as a common carrier in the same area, proposed operations would be common carriage. Therefore, as vendor's operations under the permit have been continuous, and evidence of public support is sufficient to sustain applicant's burden of proof, conversion of the acquired rights from contract- to common-carrier, upon consummation of the purchase, is approved.—Ruan Transport Corp.—Purchase—Hillside Transit Co., Inc., 90 M.C.C. 523 (525, 526).

Delay: [Vols. 11, 17-19].—In determining whether existing joint-line interchange services are inadequate, delays caused by originating carrier and those concomitant with interchange must be considered. Protestants' joint-line service has frequently resulted in undue delays causing consignees to lose sales or to borrow or purchase supplies and appliances elsewhere; authority granted, except as to one intermediate point.—Brown Transport Corp. Extension, 89 M.C.C. 354 (356).

Denied: [Vols. 11, 18].—Although in seeking a new route between Broken Bow, Okla., and Little Rock, Ark., applicant proposes to improve its present service between those points and Dallas, Tex., on one hand, and southeastern Oklahoma, including Eagletown, on the other, an inextricable part of its plan is institution of a new overnight service between Hot Springs, Ark., and Dallas. But though Hot Springs shippers profess desire for it, they have demonstrated no need for consistent overnight service when their rush shipments are infrequent and most do not have daily traffic movements; it appears unlikely that applicant could generate sufficient traffic at Hot Springs to justify an overnight service, and any it obtained would be at expense of carriers now attempting to serve that point; those carriers depend in part on Texas traffic to support their entire operations at Hot Springs, and loss of any of it would jeopardize continuance of their service, particularly on traffic that applicant does not seek to handle. As no material inadequacy of existing service is shown, no new competitive operation should be authorized.—Gordons Transports, Inc., Extension, 92 M.C.C. 426 (431-2).

A grant permitting intermediate-point service only at Eagletown, or limiting applicant to movement of traffic between southeastern Oklahoma, including Eagletown, and Dallas, Little Rock, and Memphis, restricted against transportation of through traffic between Little Rock or points beyond and Dallas or points beyond, would not enable applicant to improve its present operations or to provide superior service at the southeastern Oklahoma points; such operation would be economically unsound. Therefore, as the evidence does not otherwise justify a grant permitting through operations between Little Rock and Dallas, application must be denied in entirety.—Id., p. 432.

In view of absence of evidence that public convenience and necessity require proposed transportation of express shipments, since applicant sought consolidation with, and intended to rely for public support entirely on evidence in, another proceeding in which similar authority in the same large area is sought, application is denied.—Railway Exp. Agency, Inc., Extension, 89 M.C.C. 537 (539-40).

Since the only part of proposed service which requires authority from commission is supported only by air freight forwarders who may not use it because they lack permits as

surface forwarders under Part IV, application is denied.Special Delivery, Inc., Extension, 88 M.C.C. 275 (277).

Desire for connecting link: [Vols. 12, 19].—The close-the-gap principle recognized by the commission in granting authority to applicant which would supply a missing link in Trailways System's service between western New York and Baltimore-Washington was given approval of the Supreme Court in 327 US 515 (p. 532, Footnote 20), and the commission was not estopped, in the present proceeding on an entirely new record based on additional facts and changed conditions, by its refusal to invoke that principal in an earlier proceeding wherein the same applicant sought similar authority.—Edwards Motor Transit Co. v. United States, 201 F. Supp. 918 (923, 925)*.

Desire for particular carrier: [Vols. 11, 12, 16-19].—That some shippers supporting plaintiff's application might be more conveniently served by having a locally based carrier, and that they have a degree of confidence in plaintiff's operator, does not overcome the substantial evidence that existing service is adequate. A showing of convenience alone is not enough.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (900)*.

That a particular shipper desires applicant's proposed service is not as weighty a factor in a §207(a) proceeding as it would be in a §209(b) proceeding for a contract-carrier permit.—Robbins v. United States, 204 F. Supp. 78 (82)*.

Supporting shippers, some of whom applicant has been serving satisfactorily for years, consider single-line service essential because of perishable nature of their products, and have had difficulty in obtaining service from authorized carriers owing to low-volume character of the traffic; one shipper was unable to continue doing business beyond immediate vicinity of Philadelphia after applicant discontinued service on advice of counsel. Shippers unanimously agree that applicant manifests intention to provide the type of service required, regardless of volume or length of haul; their confidence in his service is demonstrated by their assertions that its continuance is vital to successful distribution of their products; considering protestants' general lack of interest in the traffic, grant of authority to extent indicated is justified.—Hughes, 89 M.C.C. 471 (480-4)*.

While supporting shipper asks that applicant be granted broad territorial authority for a variety of commodities, to provide it with flexible service it desires for distribution of its products and cannot obtain from existing carriers, and desires of supporting shippers are an important consideration in application proceedings, determination of whether public convenience and necessity require an additional service cannot be dictated solely by one shipper's desire to follow a particular plan of product distribution; such determination requires consideration of whether shipper's distribution plan is a reasonable or necessary one, which in turn must be determined, at least in part, in light of existing transportation services.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 255 (262-3)*; similarly, shipper preference for service of applicant because of a natural desire to expand its markets is not sufficient to show a need for entire proposed service, particularly since some protestants hold pertinent authority never tried by the shipper.—Dahlen Transport, Inc., Extension, 89 M.C.C. 131 (136).

See also Salem Nav. Co. case, under *Following the traffic*, below.

Shipper supports the application primarily because of a preference for applicant's service, rather than because of real need for additional motor carrier service. While shipper desires to use its own trailers for considered traffic, adequate carrier service is available, serving entire area involved; and protestants authorized to handle the traffic indicate a willingness to use shipper owned trailers; denied.—B. & C. Transp., Inc., Extension, 94 M.C.C. 326 (327-9).

Although 5 shippers selectively support different ones of 3 applicants seeking substantially the same authority, in judging the separate proposals against the standard of public convenience and necessity the commission is not limited to consideration of such preferences by shippers.—Colorado-Arizona-California Exp., Inc., 92 M.C.C. 89 (97)*.

While shipper emphasizes element of service, evidence indicates that it is primarily interested in applicant's lower rates; shipper's preference for applicant's service in this regard cannot form basis for grant of authority, especially since it has not been shown that

protestants' rates are so high as to constitute an embargo. Adequate service is available from existing carriers; denied.—Webb's Transfer, Inc., Extension, 91 M.C.C. 297 (300).

Mere desire to have service of a particular carrier available, without a showing that it would meet a need for service not presently available from existing carriers, is insufficient to support the statutory finding that public convenience and necessity require the proposed operation.—H. C. Gabler, Inc.—Purchase—Logan, 90 M.C.C. 436 (440).

Shipper's desire for applicant's proposed service in order to have available a motor carrier which operates directly from all Louisiana origin points to its plant at Springdale, Ark., is insufficient basis for a grant, particularly where available rail and motor service has not been shown to be inadequate.—Colonial Refrigerated Transp., Inc., 91 M.C.C. 369 (371); nor does shipper's preference for applicant, to which it already tenders intrastate or exempt traffic, justify a grant of operating authority in absence of a showing that the services of existing carriers somehow are inadequate to meet shipper's transportation requirements.—W. J. Dillner Transfer Co. Extension, 91 M.C.C. 667 (669).

Desire of a supporting shipper to engage services of a particular operator, or of an applicant to engage in a particular transportation service, is insufficient, alone, to warrant granting the authority sought.—McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 250 (252); and shippers' desire for services of locally domiciled carriers does not warrant grant of authority sought when they have not used service of existing carriers and therefore cannot determine that it is inadequate for their transportation needs.—Hearin Tank Lines, Inc., Extension, 88 M.C.C. 189 (197)*.

Distance to available carriers: [Vols. 16, 18, 19].—Until protestants' services have been utilized, they cannot be found inadequate simply because carriers' terminals are too remote from shippers' location; while protestants' ability to perform satisfactorily might be questioned because of location, that uncertainty should not be translated into a current need for additional service. The record is not convincing that protestants' facilities are inordinately distant, or that shippers necessarily require a locally-domiciled carrier. While applicant's proposed service might be more prompt than that of protestants, one protestant can place equipment at considered origin within 2 hours after notice; and others, while less proximate, have equipment daily in that area. Denied.—Sullivan Const. & Riggin Co. Extension, 94 M.C.C. 296 (298-9).

Protestants cannot provide the locally domiciled charter service needed by supporting travel groups; their closest equipment availability points are 45 miles or more from the economically depressed mining area involved, and more than nominal deadhead mileage charges discourage charter travel by its inhabitants. Moreover, one protestant has had little success with its charter service from that area, and the other is not at present engaged in operations, whereas applicants are experienced intrastate charter operators and maintain adequate equipment and facilities within a few miles of involved origins. Granted in part.—Lanich Bus Lines—Charter Service, 92 M.C.C. 156 (158).

Although protestant motor carrier indicates willingness to spot equipment for supporting lumber shippers located in Telfair County, Ga., its ability to do so is questionable; its terminal is 300 miles from considered origin points and, in view of its extensive operations, there is no assurance it will have equipment in the area when needed. Applicant, on the other hand, has a terminal in the immediate vicinity and has rendered eminently satisfactory service of exact nature required; granted from Telfair County.—Dennis, 92 M.C.C. 135 (139); but no need is shown for transportation of lumber by applicant from La Grange, Ga., area when its headquarters (though 150 miles closer than protestant's) are almost 150 miles from the base area, thereby reducing materially the significance of the comparative proximity factor, and supporting shipper has regularly used protestant's service and found them generally satisfactory. Authority denied from La Grange area.—Id., p. 139.

Economy and efficiency: [Vols. 12, 18, 19]. —Applicant having failed to establish public need for proposed operation over two shorter

alternate routes, applications must be denied unless it can show a shipper need for the improved service. Applicant has been providing direct, expeditious service by use of a deviation route substantially the same as one route sought, but the deviation route has been disapproved; thus denial of the applications would force carrier to use other routes to serve its shippers which are slower, more costly to operate, and less efficient generally; and inevitably the price of such inefficiency will be paid by the shippers in poorer service. Consideration of competing carriers does not justify decline in the transportation which probably would result from denying the applications; rather, shipper benefits from continuance of applicant's past service clearly outweigh competitive disadvantages to existing carriers. However, to accomplish the desired result, a grant of only one of the routes sought is shown to be needed.—Strickland Motor Freight Lines Extension, 96 M.C.C. 732 (739-41).

Although public convenience and necessity may be found in operating economies or efficiency both in a proceeding involving elimination of a gateway and in one involving relocation of an interchange point, the two types of proceeding are not the same: the former arises out of an applicant's desire to do directly what it may presently do only indirectly by tacking separate grants of authority, while the latter involves serving one point in lieu of one or more others, not in collection or delivery of traffic at the relocated point, but only as a point where traffic that will be handled anyway may be interlined more conveniently and expeditiously. Consequently, the proof required in addition to a showing of economy and efficiency is less in the latter case than in the former.—Blue Ridge Transfer Co., Inc., Extension, 92 M.C.C. 463 (465).

Primary purpose of Railway Exp. Agency's extension application is to make substantial operating economies, especially in service to intermediate points, while continuing the distinguishing characteristics of express service. Maintenance of express expedition in considered area has become increasingly expensive under current methods of operation, and institution of proposed motor service can reduce those costs by over a quarter of a million dollars annually, without significant change in character or quality of express service now rendered; any change resulting from proposed operation can only be in direction of increased efficiency. Granted, subject to key-point and express-auxiliary restrictions.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (479-80).

Existing carriers: [Vols. 12, 18, 19].—In its consideration of an application for a certificate, the commission should consider the public interest in maintaining the health and stability of existing carriers; however, upon the basis of appropriate findings of public convenience and necessity, it may authorize issuance of the authority sought even though existing carriers might arrange to furnish successfully the proposed service. See 368 U.S. 370, 326, U.S. 60, and 355 U.S. 83. Accordingly, lower court's decision which vacated the commission's action in application proceeding and which permanently enjoined it from issuing a certificate to applicant, unless and until appellees (protestants in commission proceeding) are first afforded reasonable opportunity to furnish the considered service, is reversed and remanded for further proceedings consistent with the court's opinion.—United States v. Dixie Highway Exp., Inc., 389 U.S. 409 (411-12)*.

Where deviations from an otherwise completely adequate service (which has economic need for the traffic) consist solely of illegal and discriminatory refusal to accept or deliver traffic from or to particular carriers or shippers, the powers of the commission under §§204(c), 212(a), and 222 bear heavily on the propriety of §207 relief. In such cases choice of the certification remedy may not be automatic: it must be rational and based upon conscious choice that in the circumstances the public interest in "adequate, economical, and efficient service" outbalances whatever public interest there is in protecting existing carriers' revenues in order to "foster sound economic conditions in transportation and among the several carriers."—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (166-7)*.

It is by no means firmly established that the commission must make positive findings that service provided by existing carriers is inade-

quate before new authority may be granted. [See 75 F. Supp. 915 and 209 F. Supp. 10.] Though 204 F. Supp. 78 appears to hold that inadequacy is a prerequisite to a finding of public convenience and necessity, such a requirement does not mean that the holder of a certificate is entitled to immunity from competition in any and all circumstances; introduction of a competitive service may be in public interest where it will secure benefits of an improved service without being unduly prejudicial to the existing service. In the case under review, the commission's findings were more than sufficient to support its conclusions that the requested authorizations would greatly improve service without undue harm to plaintiffs; coupled with findings that plaintiffs were inadequately equipped to meet the public need, this would preclude the relief sought; the commission's orders sustained.—Campus Travel, Inc. v. United States, 224 F. Supp. 146 (149)*.

In challenging the commission's finding that plaintiffs' service fails to meet the need shown for express service, plaintiffs concede that their certificates do not permit them to transport commodities of unusual value, and do not challenge the finding that they have to date shown no willingness to perform express service of any kind. Their argument that they should be given reasonable opportunity to meet the existing need is answered by statement in 326 US 236 that the commission's doubt that the public need will be adequately served by existing carriers is entitled to the same respect as its expert judgment on other complicated transportation problems. The commission's order granting authority sought by Railway Exp. Agency, sustained.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (333)*.

Service offered the public by a protesting motor carrier should be considered as that service is provided at time of filing of the new application; not having moved for years, protestant Greyhound should not be permitted to wait until filing of an application by a competing carrier to increase or improve its service. Testimony of public witnesses indicated need for a through, daylight, and round-trip bus operation between involved termini, but Greyhound made no effort to provide that type of scheduled service until after applicant had completed its case in chief; commission's order granting extension authority sought, sustained.—Edwards Motor Transit Co. v. United States, 201 F. Supp. 918 (922)*.

In application proceedings the commission must determine whether public convenience and necessity require the proposed service; and an important factor for consideration is whether the authority sought is already covered by certificates of protesting carriers. The commission's position, that existing carriers should be afforded opportunity to serve a shipper before a new carrier is authorized to enter the territory, of necessity requires it to review scope of authority of each carrier who protests the application. Thus, necessarily the scope of a protestant's authority is subject to interpretation in such circumstances.—Worster Motor Lines, Inc. v. United States, 226 F. Supp. 603 (607-8)*.

The commission's finding of prospective need on part of the shipping public for utilization of C & S containers for transportation of bulk commodities is not inconsistent with its finding that tank truck carriers do not presently utilize equipment required for transportation of such containers—if tank truck carriers can and will meet that prospective need. On the record available, it cannot be found that existing tank carriers are either unwilling or unable to meet that need; the commission's statement that those carriers have expressed a readiness, and have the right, to do so is sufficient. The commission's denial of plaintiffs' extension applications, sustained.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (876-7)*.

Adequacy of services and abilities of existing carriers is only one phase of the commission's problem in determining a §207 application; subject to restrictions of §210 as to dual operation, §207 declares that a certificate shall be issued to any qualified applicant if it is found that the proposed service "is or will be required by the present or future public convenience and necessity"; such a finding entails a prophecy so far as future requirements are concerned, and to require the commission to deny an application unless it found actual inability on part of existing carriers to acquire facilities necessary for future transportation

needs would impose a limitation on its power which is not found in the act.—Aero-Mayflower Transit Co. v. United States, 208 F. Supp. 303 (304-5)*.

The commission's findings that supporting shippers' needs can all be met by protesting carriers and that they have not adequately utilized such existing services are borne out by substantial evidence; and there is nothing in the record to cast doubt on its finding that all protestants are willing and able to provide service for those shippers. Failure of some protestants to file replies to plaintiff's exceptions to examiner's report or to plaintiff's petitions for rehearing did not indicate lack of interest in serving supporting shippers; burden is on plaintiff to show lack of adequate service, and just as that burden cannot be overcome simply by showing that all possible carriers have not testified, it cannot be overcome by inferences drawn from a fact susceptible of other inferences.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (897, 899)*.

The commission's policy that existing carriers should be afforded opportunity to transport all traffic they can handle adequately, efficiently, and economically is consistent with the national transportation policy. The record amply demonstrates that protestants collctively serving most of the destinations specified by supporting shipper are able to obtain any additional equipment necessary to supplement the large fleets they have on hand, and each expressed willingness and desire to participate in the contemplated traffic. Both intrastate protestants which would haul the traffic from Greeley, Colo., to Denver and their interstate connections believe they could perform satisfactorily, and since that service has not been tried there is no substantial basis for finding it inadequate or unsatisfactory. Interline service by two or even three carriers cannot be deemed inadequate per se, particularly where transportation is sought to very distant points.—Curtis, Inc. v. United States, 225 F. Supp. 894 (899, 900, 901)*.

And failure on part of one protestant to except to the examiner's report and recommended order cannot be taken to indicate a change of heart or lack of interest inproviding service to the supporting shipper. This cannot be a standard of judgment, for it would not only be an inference drawn from a fact susceptible of other inferences, but would place a burden of practically interminable litigation on every existing carrier which decided to protest an application.—Id., p. 899.

When numerous protestants have the requisite authority and equipment to provide a reasonably adequate transportation service for supporting shippers, they are entitled to transport the traffic involved without the added competition of applicant's proposed service. Denied.—Samack, Inc., 94 M.C.C. 161 (165); since protestant recently obtained authority to transport petroleum products from Knoxville, Tenn., to western North Carolina, at request of shipper supporting instant application for similar authority, authorization of another service from that point is unwarranted in absence of a showing of inadequacy of existing facilities.—Petroleum Transp., Inc., Extension, 94 M.C.C. 777 (780-1).

Supporting shipper although aware of the protestants' services has used interline service of applicant and another carrier with satisfaction and apparently felt no need to try other available services; its primary interest is applicant's lower rates, but it has made no attempt to negotiate a lower rate nor has it sought relief by complaint to the commission. Protestants are moving substantial quantities of similar commodities for other shippers. Under such circumstances a shipper cannot successfully base its support of an additional carrier on the proposition that the existing rates are too high to move the traffic. Absent a showing that the existing rates constitute an embargo, failure to establish new rates does not reflect adversely against existing carriers, Denied.—Trans-Cold Exp., Inc., Extension, 98 M.C.C. 10 (12-13).

Supporting shipper has never tendered protestants any shipments of meats or dairy products which involved direct deliveries from its Lincoln, Nebraska plants to its retail outlets, or apprised any carrier other than applicant of its desire for such service; and, though shipper describes an anticipated need for transportation of a large volume of traffic involving multiple deliveries on single loads in order to put its new distribution system into effect, there is no showing that available serv-

ices have been tested; three protestants hold authority to originate traffic at Lincoln and, collectively or individually, can participate with fourth protestant in joint-line service to substantially all points, and these services have not been shown to be inadequate. Denied, except to two States.—Nebraska Eastern Exp., Inc., Extension, 94 M.C.C. 799 (801,803).

Applicant failed to show that protestants' services have been found unsatisfactory by supporting shippers. Record is vague as to points and areas of service required by shippers; each shipper, moreover, utilizes existing services. Protestants, on the other hand, clearly offer a broad range of services, both for truckload and less-than truckload traffic, and could satisfy shippers' needs for consolidating less-than-truckload shipments into truckloads by providing multiple pickups and deliveries. Denied.—Fogleman Extension, 94 M.C.C. 671 (675).

Supporting shippers and receivers have not demonstrated any interest in obtaining proposed coordinated rail-motor service in conjunction with existing motor carriers, and supporting railroads have no objection to participating in coordinated service with such carriers. Inability of each protestant to handle every conceivable item within the generic commodity description applied for, or to serve every point in territory sought, is offset by total absence of evidence of any difficulty of supporting witnesses in obtaining service within scope of the applications. Denied.—Osborne Truck Line, Inc., Extension, 94 M.C.C. 414 (419-20).

There is no adequate showing that existing carrier service could not satisfactorily handle considered traffic. Protestants' can provide direct service to the six-State destination area and, although shipper requires multiple deliveries, two of protestants serve broad areas which will enable them to provide this service with substantial facility. Further, shipper's complaints with respect to protestants' services are general and vague, falling short of showing any substantial deficiencies therein. Abrupt decline in shipper's business in the destination area cannot, on this record, be held attributable to any demonstrated material inadequacies in available for-hire motor service; applicants have failed to establish need for proposed operations.—Alterman Transport Lines, In., Extension, 94 M.C.C. 187 (193-4).

There is a potential flow of traffic to each destination State sought, and furtherance of supporting shipper's business greatly depends on availability of a flexible carrier service; however, while services available at time of hearing may not have been responsive to shipper's reasonable transportation requirements, protestant (by tacking authority granted since that time with that previously held) currently holds requisite authority to transport considered traffic to points throughout each destination State. In view thereof, and since such service has not been tested, the few complaints against protestant at the hearing are not serious enough to warrant grant of authority sought; there is no allegation of injury to shipper, and its interest apparently stems from a desire to have single-line service available.—Watkins Motor Lines, Inc., Extension, 94 M.C.C. 232 (233, 236).

The commission has a continuing duty to protect the public against institution of a new service which will operate to detriment of the public in general and authorized carriers in particular. Protestant short-line railroad, under its motor-carrier authority, has been providing adequate express service for Railway Exp. Agency between Fonda and Gloversville, N.Y., and revenues therefrom have been a substantial percentage of its net income and are important and vital to its ability to continue serving communities which have no other rail service. Grant of authority to REA to serve Gloversville as a motor carrier of express would jeopardize protestant's existence in an area largely dependent on its service and would not be in public interest; denied as to Gloversville.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 227 (231).

Protestant heavy hauler operates a wide array of equipment suitable for movement of considered silos and can serve all destinations involved except Canadian border ports of entry in Minnesota, as to which it is not shown that any service will actually be required. While protestant may also be unable to handle certain hypothetical movements involving

delivery in two or more States, there is no showing of specific need for such movements. No need appears for proposed service in absence of more specific showing respecting volume and particular points to or from which service is required, or why present carriers cannot provide such service; denied.—International Transport, Inc., Extension, 91 M.C.C. 717 (719, 720).

Although two protestants of instant application did not oppose application of another carrier, granted only 13 days before denial of instant application, there is no indication that they abstained from that proceeding for improper motives; instant record is persuasive that these and other opposing carriers can adequately meet supporting shippers' requirements; denial affirmed.—Convoy Co. Extension, 91 M.C.C. 461 (465)*.

Authority denied applicant for towage of wrecked or disabled motor-carrier vehicles when protestants authorized to serve the territory are well able to supply the services proposed, need more business to keep their wrecker fleets busy, and can obtain additional equipment if needed. As no deficiencies in their services are alleged, protestants should be given ooportunity to serve supporting shippers or carriers.—Young, 91 M.C.C. 445 (453).

Although need is shown for transportation of repossessed automobiles, particularly to western States, existing carriers' services are not shown to be inadequate; at least two conduct extensive operations in movement of type of vehicles involved, and many are conducted in States where the bulk of applicant's unauthorized operations has centered; applicant's favorable rates and assumption of responsibility for delivery before "conversion" dates have enabled him to obtain traffic from a substantial number of shippers, preventing some of them from testing existing services and probably impeding development of as highly specialized a service by opposing carriers. Protestants have adequate equipment and facilities, and with benefit of the traffic involved, which all desire and of which they have been deprived by applicant's unlawful competition, should be able to furnish the type of service shown to be needed; existing carriers, particularly those already engaged in similar operations, are entitled to opportunity to transport the traffic without applicant's competition. Denied.—Nash—Investigation of Operations, 89 M.C.C. 493 (469-70).

Authority sought for transportation of repossessed automobiles between points in Florida and some 28 States, denied when protestant holding authority for secondary-movement driveaway service between all points involved has 150 drivers stationed at various terminals around the country, which in turn are linked by a teletype network; with such wide dispersion of facilities and personnel, it is not unlikely that protestant could better serve shipper's need for fast delivery than applicant who must normally start from Jacksonville; protestant should be afforded reasonable opportunity to meet shipper's requirements before a new competing service is authorized.—Morris, 89 M.C.C. 386 (388).

Where opposing motor carriers are authorized, and have amply demonstrated their willingness, to handle the involved traffic, they should be afforded opportunity to satisfy shipper's reasonable transportation needs before a new competitive service is authorized.—Hagen Extension, 92 M.C.C. 479 (486); evidence fails to establish that protestant's service is inadequate. Denied.—Blythe Extension, 89 M.C.C. 195 (198); supporting shippers have only a small volume of traffic moving between a limited number of points involved, and protestant should be afforded opportunity to demonstrate the quality and adequacy of its service. Denied.—Air Cargo Terminals, Inc., Extension, 88 M.C.C. 468 (470); record is not only devoid of shipper support for proposed service, but shows that protestants operate suitable equipment in the territory and have provided service without complaint from shipping public. Denied.—Curtis Keal Transport Co., Inc., Extension, 89 M.C.C. 670 (672).

Existing carriers are able to meet reasonable needs of the public transportation of small shipments, and would be harmed by loss of traffic if the broad territorial authority sought by applicant were granted. Proposed guaranteed overnight delivery service is not so different from existing services as to justify grant of authority; such new service should not be authorized in absence of a very definite

and convincing showing that protestants' services are inadequate, which applicant has failed to make; denied.—Transway, Inc., Extension, 89 M.C.C. 513 (522).

No need is shown for proposed transportation of liquified petroleum gas from southwestern origins to Nebraska when protestant is authorized to provide service thereon from and to all points involved, and no serious deficiencies in its service are shown; moreover, a substantial volume of the traffic is moving in private carriage or by rail, and it is not shown that that situation would be changed if authority sought were granted.—Bridge Extension, 88 M.C.C. 108 (114)*.

Since there is no expert testimony or other evidence of value to show whether cleaning compounds manufactured to military specifications are within protestant's authority for "liquid chemicals," it cannot be found that protestant is not authorized to transport them, as many liquid cleaning compounds are properly so classified. In view of protestant's ability to provide reasonably direct service from shipper's plant to all points in proposed destination territory, it must be concluded that applicant has failed to show that protestant's service is inadequate to meet shipper's reasonable transportation requirements. Denied. —Commercial Oil Transport, Inc., Extension, 92 M.C.C. 186 (187-8).

Since applicant has failed to advance any reasons why vermouth should not be considered as embraced in protestant's authority to transport "wine," and it therefore appears that supporting shipper has available motor carrier service capable of meeting its needs, which has not been used, application is denied, without prejudice to applicant's filing of petition for further hearing to introduce evidence tending to establish nature of vermouth for transportation purposes.—Southern Tank Lines, Inc., Extension, 92 M.C.C. 423 (425).

Movement of whiskey in tank vehicles by virtue of new Federal tax regulations is in effect new traffic, and as neither of two protestants holding alcoholic beverages authority between points in portions of considered area has yet been tendered any of such traffic, their services cannot be considered inadequate, and to that extent applications must be denied.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 635 (641).

No need is shown for applicant's proposed transportation of frozen foods when supporting shipper has used protestant's service satisfactorily and service of another recently authorized carrier is available, both of which can meet all of shipper's indicated needs; denied.—Nationwide Carriers, Inc., Extension, 89 M.C.C. 675 (680); nor is need shown when shipper's present transportation needs are well satisfied by an existing common carrier, and whether or not that carrier is a protestant is irrelevant in view of shipper's testimony that its service is adequate. Shipper's fears that it might be deprived of that carrier's service through possible purchase by another company is sheer speculation; even assuming occurence of such acquisition, any effect on shipper cannot be forecast.—LeTarte, 91 M.C.C. 158 (160).

Authority sought by three applicants is denied when protestants are authorized to transport considered commodities within the territory, are willing to provide service for supporting shippers to and from points sought, have sufficient and suitable equipment and are willing to station vehicles in origin areas to meet shippers' requirements; shippers have not used their services and therefore cannot determine that they are inadequate; and small volume of traffic involved does not require service of more than one carrier from each origin.—Hearin Tank Lines, Inc., Extension, 88 M.C.C. 189 (197)*.

Volume of involved traffic expected to move between considered points is not large and one carrier should suffice for all transportation shown to be required; protestants offer joint-line service, and mere possibility of interruption therein is insufficient basis for placing an additional carrier in the field; in event of emergency which may disrupt their service, temporary authority may be issued to some other carrier to meet any transportation needs of supporting shipper. Denied.—P. B. Mutrie Motor Transp., Inc., Extension, 88 M.C.C. 597 (601).

Although shipper complains of delays in transit in rail piggy-back service, it has not tried service of existing motor carriers nor advanced evidence that joint-line service is unsatisfactory. Further, while protestants

lack authority to serve all Louisiana points, shipper has shown definite transportation requirements only from one point; denied.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 369 (371-2).

See also Pennsylvania Truck Lines case, n. 35 *Substituted freight service*, below.

No need is shown for applicant's proposed service when existing joint-line services are not shown to be inadequate to meet all of supporting shipper's reasonable requirements, protestants' routes are not unduly circuitous, and shipper has not yet tried their service on movements to considered destination territory; in absence of proof that a test of protestants' services would be useless, applicant has established only a strong shipper preference for the proposed service; denied.—T. I. McCormack Trucking Co., Inc. —Investigation, 89 M.C.C. 5 (17)*.

Upon consideration of authorities, facilities, and large fleets of equipment operated by existing tank truckers in considered territory, authority sought by two applicants is denied. Three protestants collectively can transport supporting shippers' traffic to 15 of 19 destination States sought, and while no direct service appears to be available to Georgia, one tankload a month does not support authorization. Though one protestant has been unable to furnish clean equipment in some instances, it is establishing cleaning facilities and like the others should be afforded opportunity to meet shipper's requirements before competing service is authorized.—Commericial Oil Transport Extension, 91 M.C.C. 129 (136).

Protestant's authority for "vegetable oil" includes proposed transportation of tall oils (88 MCC 189); it is an experienced operator, with terminals not inordinately far from origins of supporting shipper's traffic, has empty vehicles in the origin territory daily, and is willing if enough traffic is tendered to establish a new terminal for shipper's greater convenience; until its service has been tried and found inadequate in some substantial respect, there is no basis for finding that it will not meet shipper's disclosed needs; denied.—McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 250 (252).

Though supporting shipper proposes to use applicant's service only for transportation of t.l. shipments of meats which it is now transporting in private carriage, it has never given protestant opportunity to provide the service desired, and there is no reason to believe that protestant's t.l. service would not be satisfactory. Denied.—Shaw Extension, 92 M.C.C. 118 (120-1).

Only two of supporting shippers have tried protestant's service on fresh meats, and one of them is now using it even though applicant's service is available between same points; although the other shipper alleges that protestant's service to a different destination was unsatisfactory on one occasion, it did not so notify protestant or file damage claim; conclusion is not warranted that protestant could not provide reasonably satisfactory service to destinations it is authorized to serve; denied in part.—Refrigerated Food Exp., Inc., Extension, 89 M.C.C. 795 (799)*.

Where majority of supporting shippers have made no attempt to avail themselves of protestant's services in transportation of small boats, and others have complaints relating only to isolated instances several years ago, it does not appear that applicant will be in better position than protestant to provide satisfactory service throughout broad territory sought. Moreover, even protestant has been unable to obtain much northbound traffic from Florida in spite of its extensive nationwide operations and widespread terminals, including one in Florida; granted in part.—Rolling Boats, Inc., 89 M.C.C. 789 (793)*.

Supporting shipper's examples of protestant's alleged failure to furnish adequate service for movement of small foreign cars and transporters from Boston to Maine are not so serious as to justify grant of authority to applicant; while protestant operates only one trailer capable of carrying 3 cars and 3 transporters from Boston, applicant also operates only one such trailer from its Boston terminal; it is not established how many movements require distribution of 3 cars and 3 transporters on same trailer, and protestant operates numerous other trailers which can handle other 6-unit combinations; in addition, a second protestant can handle foreign cars from Boston to Maine; thus no need is shown for applicant's service on that traffic.—Howard Sober, Inc., Extension, 88 M.C.C. 755 (759-

60).

At least two protestants have authority to perform proposed service and are ready, willing, and able to do so; evidence as to shipper dissatisfaction with service of carriers other than applicant is general and vague and no specific instances of inadequacy are cited; applicant's unauthorized operations have for several years deprived authorized carriers of traffic they are qualified to handle, and they should be given reasonable opportunity to demonstrate that they can render the service adequately, efficiently, and economically before a new service is authorized. Denied.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (585-6)*.

Although protestants collectively hold authority to serve all points involved, provide daily service at many of them, and are willing to meet supporting shippers' reasonable transportation requirements, applicant, by combining its unauthorized operations to and from the Michigan points involved with its lawful intrastate operations, has obtained the dominant position in the traffic, and thus for many years has deprived existing authorized carriers of traffic to which they were entitled. Its unauthorized operations have prevented a fair test of existing authorized services and can be accorded no weight in determining whether need exists for the service proposed; denied.—Consolidated Freight Co. Extension, 89 M.C.C. 457 (460, 462).

Existing carriers are entitled not only to continue to transport traffic which they handle satisfactorily, but also, when their services have not been used, to opportunity to show that they can render adequate service. All but 2 of 40 supporting shippers are receiving satisfactory service from existing carriers, and those 2 have not recently tried available through-trailer services; evidence as a whole fails to show public need for applicant's proposed more direct service; denied.—Eazor Exp., Inc., Extension, 89 M.C.C. 345 (350)*.

Both protestants have stainless steel, compartmented tank trailers suitable for transportation of liquid caustic, and their equipment is not being used to full capacity; though shipper requires empty vehicles in absolutely clean condition, and desires that inspection thereof be made by its employee at Sidney, Ohio, before loading at Wyandotte, Mich., for movement to Ohio, it is not shown that protestants would have refused so to accommodate shipper, had it requested their service; both have transported liquid caustic in the past without complaint, and one is in better position than applicant to serve shipper, including inspection at Sidney; thus no need for new service appears; denied.—Stillpass Transit Co., Inc., Extension, 89 M.C.C. 38 (39, 40).

Since transportation of liquid adhesive paste, in bulk, in tank vehicles, is now found to be within protestant's authority for liquid chemicals, and no inadequacy of protestant's service is shown, application is denied.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (140)*.

In embraced case, however, there is need for that applicant's proposed transportation of liquid chemicals in tank vehicles from supporting shipper's Niagara Falls plant to a 9-State area when shipper's assertion that service of one opposing carrier has been unsatisfactory is not rebutted; the other protestant's authority is too limited in scope to meet shipper's distribution requirements, and its only existing terminal is over 350 miles from Niagara Falls. Shipper is entitled to proposed service even though authority granted will be duplicative, in whole or in part, of protestant's authority.—Id., p. 140.

Authority denied to three of destination States sought, which can be served by protestant, when one supporting shipper has used its service and found it satisfactory, and the other expressed willingness to use it, conditioned on protestant's conversion from contract to common carier, which has now been effected.—Service Trucking Co., Inc., Extension, 88 M.C.C. 697 (701)*.

Since three protestants hold authority for liquid chemicals, in bulk, between the points involved, and applicant has not shown that their services would be inadequate to meet supporting shipper's requirements for transportation of considered molding resins, no need for additional authorization can justifiably be found until their services have been tested. Denied.—Ruan Transport Corp. Extension, 88 M.C.C. 643 (646).

Extension application must be denied when there is an abundance of existing motor service offering direct, overnight delivery in transportation of considered commodities, and, to the relatively scant extent utilized, no specific complaints of deficiencies therein were cited by any supporting consignor or consignee.—Momsen—Investigation and Revocation of Certificates, 88 M.C.C. 343 (346).

Abnormal demands for service which cannot be met by existing carriers are not a proper basis for a grant of operating authority. It is not shown that supporting shipper's request for transportation of styrene 3 weeks after protestant filed its notice of protest of application is representative of shipper's requirements for bulk transportation to the destination State, or that protestant's performance on that occasion was so inadequate as to indicate unwillingness or inability to meet shipper's reasonable demands. Denied.—Maxwell Co. Extension, 88 M.C.C. 648 (650, 652).

While the commission has often held that protestants generally are entitled to opportunity to transport all the traffic they can adequately handle before a new competitive service may be authorized, a finding of inadequacy of existing services is not indispensable to issuance of a certificate. Supporting shippers have used applicant's services, including its unauthorized regular-route service between considered points, in transportation of a variety of commodities between Boston and New Hampshire and, while they do not contend that protestants' services are inadequate, they characterize applicant's service as excellent, very satisfactory, or the best afforded them, and strongly express their need for its continuance. Protestants do not rely on that traffic, and should not be seriously injured by grant of authority sought. On balance, shippers' demonstrated need for applicant's superior service outweighs any adverse effect on protestants; granted.—Nashua Motor Exp., Inc.—Petition for Modification, 96 M.C.C. 583 (585, 586)*.

While existing carriers should normally be accorded opportunity to transport all available traffic that they can handle adequately, efficiently, and economically in territory they serve before a new competitive service is authorized, it is ordinarily incumbent on such carriers to show, not only applicable authority, but also their willingness and ability to provide the service in question; where they fail to do so, their existence is insufficient basis for denying an application when applicant has established a prima facie case.—Blythe Extension, 94 M.C.C. 23 (45); application granted where existing carrier cannot render service required by shipper.—Commerical Oil Transport, Inc., 94 M.C.C. 244 (246); where rail and motor carrier protestants cannot render the highly coordinated service for which need is shown.—Daniel Hamm Drayage Co. Extension, 89 M.C.C. 563 (566)*; and where protestants are not shown to be able to provide all the service shown to be required by supporting shippers.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (410); Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 657 (659)*; Babcock & Lee Petroleum Transporters Extension, 91 M.C.C. 517 (522).

No need is shown for additional transportation service with respect to fertilizer from Houston since one of several protestants was shown capable of providing a complete service including farm site delivery needed in the transportation of this commodity. Until this protestant's service is tried and found wanting, authorizing a competing operation is not justified.—Shaw, 95 M.C.C. 663 (666); however, there appears need for service for transportation of fertilizer in bags and wire from and to other points, since the service of the only protestant objecting to this portion of the application is confined to regular routes, and therefore unsuitable since farm site deliveries cannot be made. Granted in part.—Id., p. 666.

Grant of motor carrier authority to Railway Exp. Agency to enable it to continue providing expeditious express service to Great Falls, S. C., after discontinuance of substituted motor-for-rail service of railroad subsidiary which it is now using, is warranted when protestants cannot provide a complete express service. Opposing general-commodity carriers do not handle the full range of commodities involved, especially those of unusual value; other protestants render essentially a passenger-carrier service which under their certificates cannot be changed into a pure express service, and in many instances shippers using their service would have to coordinate

their operations with existing inflexible bus schedules.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 102 (107-8).

Despite the fact that the Bureau of the Mint supported contract-carrier protestants for the authority they now hold, it has been unable to negotiate contracts with those carriers; further, it is the commission's long established principle that a shipper is entitled to motor carrier service which is not dependent on negotiating a contract with carrier or the burden of assuming obligations of such a relationship. In light of the doubt as to whether protestants are actually capable of meeting the mint's reasonable transportation requirements, shipper is entitled to common carrier service; also since protestants have not rendered service for shipper, they do not stand to lose presently handled traffic.—Navajo Freight Lines, Inc., Extension, 95 M.C.C. 551 (559).

Availability of contract carrier service will not defeat an application for common carrier authority, since the commission is indisposed to force such an arrangement.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 645 (649); that protestant was recently granted substantially coextensive contract-carrier authority to serve same shipper in transportation of bulk salt does not militate against a grant to applicant, but rather tends to confirm shipper's peculiar need for complete service over a wide distribution area. Moreover, applicant is almost totally dependent on shipper's salt business for its economic livelihood; shipper's widespread salt operations warrant service of two motor carriers. Granted.—Paul W. Wills, Inc., Extension, 88 M.C.C. 692 (695).

While grant of authority to transport commercial papers, sales audit media, and exposed or processed film and prints between certain points in Texas and Oklahoma may result in some diversion of traffic from protestant motor carriers, such diversion should not be substantial when measured by the amount of that traffic handled by protestants relative to their total operations and the need shown by supporting shippers. All protestants but one—a regular-route express carrier—render essentially a passenger carrier service which under their certificates cannot be changed to the type of service shown to be required, and applicant's proposed operation will be superior to existing services in speed of delivery and efficiency of handling. Granted between points specified.—Southern Couriers, Inc., Extension, 94 M.C.C. 111 (116).

The only protestant of record indicating any willingness to provide desired service had leased applicant's equipment, drivers, and managerial talent and utilized them in performing much of the service involved; however, protestant's sale of its pertinent authority to another carrier has recently been approved. Although other carriers might possibly provide proposed service, they have shown no interest in the proceeding and are not parties of record. Authority to provide service shown to be needed by supporting shippers, granted.—Storm, 96 M.C.C. 761 (762-3)*.

Although there were several carriers specializing in banana transportation already authorized to serve Galveston, it is significant that such carriers failed to protest the application which indicates their lack of interest in the prospect of an additional carrier to move considered banana traffic. As to the protestants, the grant of authority sought would have no material adverse affect on their operations because shippers do not use their services and they are, for the most part, unable to provide the type of transportation required. Moreover, on cross-examination, protestants' witness admitted they do not oppose the application insofar as authority is sought to serve Galveston. Granted.—Hirschbach Extension, 96 M.C.C. 339 (341)*.

Grant of authority sought to originate banana traffic at Gulfport, Miss., is not warranted when supporting shipper has been satisfied with transportation provided by protestant serving Gulfport, which is able and willing to furnish the additional service desired and is dependent on that shipper as its principal source of such traffic. However, grant of authority from Mobile and New Orleans to Tulsa, Okla., is warranted when protestant authorized to perform the service is also a distributor of bananas at Tulsa; shipper should not have to rely on a competitor for needed transportation service.—A and A Produce Co., Inc., Extension, 92 M.C.C. 77 (80).

Supporting shippers' future needs of transporting chilled citrus juices from Florida, in bulk, cannot be met adequately by protestant, although he is authorized to perform proposed operations. Bulk shipment of citrus juices is a relatively new but rapidly increasing development in the the industry, while shipments in packages are correspondingly decreasing. Shippers' estimate of maximum needs amounts to approximately 46 loads weekly to destinations involved. Record indicates that protestant, who already serves satisfactorily some of the supporting shippers, does not have enough equipment to meet all of shippers' demands, particularly during normal crop seasons, and would have to buy or lease additional equipment to fulfill their requirements. Although existing carriers are entitled to transport all the traffic they can adequately handle without added competition, shippers should not be compelled to rely solely on one protestant whose equipment is already committed to the juice industry. Granted.—Kramer Extension, 94 M.C.C. 690 (692-3)*.

As supporting shipper has recently been granted "grandfather" authority under Transportation Act of 1958 to transport frozen fruits, berries, and vegetables from involved origin territory to many of destinations sought, no need appears for such transportation by applicant. However, protestants' authority for frozen cooked vegetables other than those made nonexempt by that act, and for other frozen prepared foods, is too limited commoditywise and territorially to meet shipper's reasonable transportation requirements. Granted for frozen foods other than those within supporting shipper's carrier authority. —Colonial Refrigerated Transp., Inc., Extension, 86 M.C.C. 796 (798, 799).

In addition to lacking authority, both as to commodities and territory, protestants cannot provide the flexible and expeditious service required by shippers of dry and liquid chemicals and resins. Existing service in considered origin area is uncertain and inadequate, being dependent on protestants" having equipment in the area at a given time or the deadheading of equipment from a terminal many miles away. At times, shippers must "ship within the hour" after a sale is made and this, coupled with rigid requirements for clean equipment, makes it mandatory that adequate terminal and cleaning facilities be maintained in the area. Furthermore, protestants' interest in considered traffic is based primarily on their need for backhaul traffic; and it would generate uncertainty among shippers to require them to depend on carriers whose equipment much of the time would be available only when their primary purpose had been fulfilled. Granted.—Slay Transp. Co., Inc., Extension, 96 M.C.C. 47 (49-51).

Shipper of salt requires irregular-route motor service in order to better compete with producers with motor service available, and to recapture former business; while it knows of two carriers with appropriate authority, only one has suitable equipment and, as they do not oppose the applications, patently they are not interested in the traffic. Railroad protestant now serves shipper from one of considered origins by interlining with other rail carriers, and shipper will continue use thereof, but that mode is inadequate for all of its demonstrated transportation needs. Authority granted to one applicant.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (436-7).

One protestant carrier of explosives appears primarily interested in truckload movements and has imposed a 10,000-pound minimum charge on l.t.l. shipments; and its rate structure is such that shippers are discouraged from using its services for expedited movement of small, l.t.l. shipments; another motor protestant has limited frequency of its service to the extent of being unresponsive to shippers' demands upon it; and rail protestants are primarily interested in moving traffic to and from government installations and cannot adequately handle considered traffic. While some traffic may be diverted from protesting carriers, such diversion is not enough to deprive the public of improved service. Applicant, an experienced explosives carrier, is already operating in the area as a carrier of general commodities, except explosives; granted.—Ryder Truck Lines, Inc., Extension, 96 M.C.C. 771 (778-9).

Supporting shippers concede that regular-route common carriers have provided reasonably adequate service on petroleum treating compounds in containers from named Okla-

homa origins to destination territory sought, and that their services will continue to be used, especially for l.t.l. shipments. "Mercer description" carriers collectively serve all destination States and at least three serve each (except one) of States not now served by applicants under their petroleum products authority, which is held to include involved compounds. However, as the Mercer-type carriers generally do not operate appropriate tank vehicles in or near Oklahoma to provide the needed bulk service, their bulk operations should not be protected. Authority granted all three applicants for bulk transportation of compounds to 7 States.—Hugh Breeding, Inc. Extension, 95 M.C.C. 720 (726).

Supporting shipper is not shown to require services of more than one carrier for proposed transportation of liquid chemicals; under authority for chemicals as defined in the Maxwell case, protestant may transport all shipper's products except liquid chemicals derived from petroleum; authority granted only for transportation of liquid petrochemicals between points sought.—Refiners Trans. & Term. Corp. Extension, 88 M.C.C. 611 (613).

Need is shown for applicant's proposed service when record, as a whole, establishes that existing services are unable to meet supporting shippers' transportation requirements. Rail service is clearly not adequate because many of shippers' customers are not served by railroads; and none of the motor carrier protestants is authorized to provide the needed service. However, since record discloses a need for transportation only of shortening and vegetable oils, authority granted is limited accordingly.—Colonial Refrigerated Transp., Inc., Extension, 95 M.C.C. 379 (380-1); broadening of applicant's "grandfather" authority for transportation of frozen vegetables to include three additional commodities produced by supporting shipper will not adversely affect protestants, since they are not authorized to provide the service required. Moreover, shipper requires additional carriers' services and does not intend to divert any traffic from those it now uses; granted.—Id., 91 M.C.C. 187 (190-1).

Shipper needs the comprehensive service of a motor carrier which can transport its shipments from points throughout the origin territory to its new plant at Paulsboro, N. J.; protestant would be able apparently to transport drums only in quantities, and would have to rely on interline connections with carriers to handle shipments originating at points it is not authorized to serve. Furthermore, it is problematical whether connecting carriers would be willing to handle the involved commodities. Applicant, on the other hand, has demonstrated its ability and willingness to perform required service, and handled traffic previously for the shipper at another plant; granted.—Herr's Motor Exp., Extension, 95 M.C.C. 696 (698-9).

The joint-line service offered by two protestants is not sufficiently comprehensive as to enable them to respond to shipper's transportation needs to points in Georgia and Tennessee when, though one of them holds authority to transport traffic that does not require special equipment from considered origins, the other's presently held authority to transport "iron and steel products" does not embrace transportation of the commodities involved, i.e., "lift trucks" and "cranes." Thus, there being no service shown able to provide the shipper with the complete service required to points in Georgia, a need exists for proposed operation thereto.—Home Transp. Co., Inc., Extension, 95 M.C.C. 128 (131-2).

Third protestant's existing territorial authority is too limited to provide the flexible coverage required, and although it desires to handle combined loads destined to points in Tennessee in conjunction with another carrier, not a party to this proceeding, the latter has not adduced evidence of its pertinent authority and operations or quality of the service which would be offered. Proposed service is particularly suitable for shipper's needs and the latter's desire to have available a complete and flexible motor carrier service to move the involved traffic and further its business is justified. A need exists, therefore, for proposed operation to points in Tennessee.—Id., p. 132.

Since protestant's service between Memphis and Helena, Ark., an off-route point appurtenant to proposed route in Mississippi, has been at least reasonably satisfactory, and

authorization of an additional motor service would have substantial adverse effect on its operation, authority granted applicant is restricted to exclude traffic moving between Memphis and Helena.—F. & W. Exp., Inc., Extension, 88 M.C.C. 262 (263)*.

Interchange service offered by protestants to shipper of frozen foods has not provided the greatest protection which could reasonably be expected in the handling of perishable commodities; and fact that shipper discussed the possibility of obtaining through trailer service with one protestant, but did not object formally to their policy of physically interchanging its frozen lading, is not of major significance. In view of the highly perishable nature of considered commodities, carriers should make every conceivable effort to avoid physical transfer of the lading during interchange; and protestants' failure to do so constitutes a clear reflection on quality of the service they have rendered to shipper. Authority granted for proposed single-line service.—Trans-Cold Exp., Inc., Extension, 95 M.C.C. 300 (303-4)*.

On reconsideration, grant of authority limited to "heavy hauling" commodities is not fully responsive to supporting shippers' needs; a complete motor service is required to accommodate mixed loads of commodities which require special equipment and those which do not. Opposing motor carrier cannot meet shippers' full requirements, since it is not authorized to provide service as to commodities requiring heavy-hauling service. Aplicant is presently providing proposed service under temporary authority; and protestant will not be adversely affected to a significant degree by grant of the application, particularly since bulk of the traffic movement will be of limited duration. Prior findings modified accordingly.—Maas Transport, Inc., Extension, 95 M.C.C. 375 (377)*.

Supporting cement shipper's transportation needs cannot be met adequately by either existing motor carrier or rail service. It has constructed four distribution plants at considered origins for the express purpose of convenient, short-haul motor distribution of bulk cement to its customers' locations, but existing motor service, therefrom, is not adequate. Further, shipper's new plants will not have facilities for bulk loading of rail cars, and many of its customers have off-rail locations; and, any diversion of traffic from rail protestant will be compensated by shipper's use of rail on inbound shipments from its manufacturing facilities. Granted.—Mitchell Transport, Inc., Extension, 94 M.C.C. 450 (452-3).

Although protestants are collectively authorized to transport shipper's products from Jersey City to destination points, at the time of the hearing they had no equipment suitable for movement of bulk cement; and, while they were in the process of obtaining such equipment, it was committed to the use of another shipper, and there is no real assurance that it will be readily available to shipper for its bulk shipments. However, they operate equipment suitable for transporting packaged cement, and should be afforded opportunity to demonstrate caliber of their service before a competing operation is authorized. Granted in part.—Schwerman Trucking Co. of N.Y., Inc., Extension, 94 M.C.C. 683 (688).

Shipper's needs for transportation of clay and refractory products cannot be met adequately by either existing motor carriers or rail service; location of its customers and nature of the commodities sold prompt the use of single-line carriers that can serve a large area with flat-bed equipment. About 15 of the 25 destination States sought are not served by any protestant; and scope of operations of the general-commodity carriers is limited but, while their service is not satisfactory for volume shipments because they do not have enough flat-bed equipment available, they will continue to be used for small shipments. However, one protestant can meet the shipper's needs to the extent utilized, and there is no indication that it could not do so in the future, at least as to points in three destination States. Granted in part.—Grant Trucking, Inc., Extension, 96 M.C.C. 145 (147, 148-9)*.

Supporting shippers are turning increasingly to use of flat-bed trailers for transportation of composition roofing, due to advantages of fork-lift loading and preference of many consignees; protestants have few or no flat-beds and are mostly limited territorially to service at points on or adjacent to their regular routes, so that routings by those carriers are sometimes circuitous, resulting in delays, and

present difficulty in effecting split deliveries; moreover, as roofing is a low-rated commodity, protestants have not sought enthusiastically to provide service adequate to meet shippers' requirements for their very substantial volumes of traffic; applicant would render a comprehensive service, providing an ample number of flat-bed trailers, with split deliveries at points throughout considered territories; granted.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (735).

While many of the 21 applicant-protestants hold competitive authority to transport cryogenic liquids involved, under various commodity descriptions, authority or authorities held by each are too territorially fragmented to permit complete and flexible service required by the Air Force and Defense Department. Shippers' probable future need for bulk motor transportation requires services of three carriers; granted accordingly.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (17-18)*.

Although a Trailways member operates frequent schedules between New York City and Philadelphia, serving Camden, N.J., and passengers and shippers of express using that service between the Camden area and New York City consider it satisfactory and will continue to use it, many others, particularly those requiring service between the Camden area and points beyond Philadelphia and New York, consider it necessary to continue using Greyhound's service because latter provides through bus service to their desired destinations, with frequent and convenient departures, whereas Trailways' service involves frequent changes from one bus to another, longer transit time, and more inconvenient departures, and Trailways does not serve all destinations in which supporting parties are interested. In view of the need shown by the supporting parties, Trailways' inability fully to meet that need, and fact that it would lose little if any traffic by grant of authority to Greyhound to serve the Camden area from and to points beyond New York City and Philadelphia, application should be granted.—Greyhound Corp. Extension, 95 M.C.C. 762 (768-9)*.

Although need for tank transportation of orange juice is shown only to two points which cannot be served by one protestant, and another protestant is authorized to serve one of them, latter has in the past been unable to provide equipment when called on, and as its assertion that it can lease all necessary equipment is not based on experience, its success in doing so is problematical. Authority granted for both these destinations.—Kramer Extension, 91 M.C.C. 16 (19).

Though two opposing motor carriers have been granted authority (against which petitions have been filed) to transport bulk cement from considered plant to 2 of 3 States sought by applicant, even if such grants are ultimately affirmed protestants could not provide service shown to be needed for shipments in packages and to destinations in Iowa; moreover, protestants hold out to serve other cement plants and shippers, and, even if supporting shipper's volume estimate is high, and assuming one truck could make 2 or 3 trips a day to nearby points, it is evident that shipper's need for motor equipment could well tax capacity of applicant and both protestants. Granted.—Orscheln Bros. Truck Lines, Inc., Extension, 88 M.C.C. 569 (573).

Although protestants under new furniture authority can transport some types of laboratory furniture, they are without authority to transport all or any significant portion of commodities for which shipper requires proposed service and would be unable to render complete service; need shown for applicant's proposed flexible interstate operation from Statesville, N.C., to points in the United States except Alaska, Hawaii, and North Carolina.—S & S Trucking Co. Extension, 91 M.C.C. 239 (243-4).

Although general-commodity carriers may transport supporting shipper's silo sections to industrial users who unload them with their own equipment, they may not transport such traffic to farm sites where carrier must supply special unloading equipment required; therefore, as some movements include both types of shipment and there is often uncertainty as to ultimate destination of a movement at its inception, existing general-commodity service would meet shipper's needs only when it could be definitely ascertained in advance that shipment would move to an industrial plant.—C & H Transp. Co., Inc., Extension, 88

M.C.C. 285 (292)*.

While the record is abundantly clear that supporting shipper needs single-line transportation of silos, silo unloading devices, parts, and materials and equipment for erection and completion of silos, from Kankakee, Ill., to the numerous destination States collectively sought by four heavy-hauler applicants, much of the territory is already adequately served by other applicants or by protestants; grants of authority are therefore limited to States where no adequate direct-line service is now available, except that, since carriers collectively authorized to serve Minnesota, Iowa, and the Dakotas cannot provide the complete service required, authority for galvanized silos is granted applicant already serving that territory in transportation of glass- or enamel-lined silos. Each application granted in part. —Id., pp. 294-5.

On reconsideration, though three protestants may transport silos under their "prefabricated buildings" authorities, supporting shipper has found the service of one inadequate, and the other two do not have available the drop-nose trailers and winch-equipped tractors required for careful handling of fragile silo sections; also, neither of the protestants' drivers are experienced in the specialized type of delivery. Thus, service offered by the prefabricated buildings carriers is not of a type suitable for shipper's reasonable transportation requirements. Findings in prior report, granting each application in part, affirmed.—Id., 91 M.C.C. 1 (2-4)*.

In determining whether need exists for a proposed service, the whole picture must be considered. It is not enough that motor-carrier protestants, singly to some extent, and to a greater extent collectively, hold authority to provide all or the great majority of the services required; the real question is whether they will provide service when called on to do so, and there must be something more than an expression of willingness and ability to handle the traffic. Whenever services of authorized carriers fail to meet shippers' needs substantially, the commission will not hesitate to grant new authority.—Hughes, 89 M.C.C. 471 (484)*.

Authorized carriers have not demonstrated willingness to handle supporting shippers' food products, which move predominantly in modest lots and must be accorded expeditious service because of their perishable nature and consignees' limited storage facilities; generally, existing carriers have either shown lack of interest in l.t.l. volumes or have been unable to provide the single-line service considered essential. Significantly, several carriers which appeared as protestants at prior hearing some years earlier have not solicited supporting shippers in the interim; applicant, on the contrary, has rendered satisfactory service regardless of size of shipments; grants of authority to extent indicated is justified.—Id., pp. 480-3.

Although applicant's prior application for like authority was denied largely because of protestant's professed willingness to meet supporting shipper's needs, during ensuing 5 years protestant has made no effort to solicit or transport considered traffic or to discuss rates with shippers, who consider its existing rates prohibitive; if it were actually willing to serve the shippers, it would have negotiated with them long before filing of instant application, and its failure to do so indicates lack of interest in the traffic at rates on which it can move. Protestant has been afforded more than a reasonable time to demonstrate its willingness and ability to handle the traffic and has failed to do so. Granted.—Edwards Extension, 88 M.C.C. 318 (320-1)*; Id., 88 M.C.C. 566 (567)*.

See also Fleet Transport Co. of Ky. case, under *Rates*, below.

Protestant's deficiencies in service are serious enough to warrant conclusion that it is unable to meet shipper's reasonable transportation requirements; shipper has afforded it ample opportunity to improve its service, but without success, and protestant gave no satisfactory explanation for its failure to remedy the various deficiencies complained of. Application granted.—Consolidated Freightways of Del. Extension, 88 M.C.C. 603 (605).

Though ordinarily authority for a new operation will not be granted unless it is shown that existing carriers are unable or unwilling to handle the available traffic, applicant is not a new entrant in the field, having conducted proposed operations under color of right for many years; its operations are substantially

the same as those of existing authorized carriers, and it is clear that service offered by each developed in response to a specific and continuing public need; under the circumstances it would not be in public interest to force applicant to discontinue those operations; granted.—Border Exp., Inc., Extension, 88 M.C.C. 491 (494).

Since protestant can transport nitro carbo nitrate to all States sought except Kansas (which apparently involves intrastate movement), has proper equipment, and solicitated supporting shipper upon learning oc completion of its new plant, there is no basis for a grant of competitive authority for that commodity in absence of experience by shipper disclosing material inadequacy in protestant's service. However, protestant is only authorized to transport ammonium nitrate when intended for use as a constituent of a blasting agent or explosive; therefore, since shipper's principal reason for storing that commodity at considered origin is to meet peak demands for it as a fertilizer, and no other authorized service meeting that projected need is shown, applicant is granted authority to transport dry ammonium nitrate.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (751, 758)*.

Aside from movement of caustic soda to Georgia points, protestants are authorized to provide any service from Muscle Shoals, Ala., shown to be needed by supporting shipper. Though one protestant's terminals are some distance from shipper's plant, it is willing to station equipment there regularly if given opportunity to provide service; and though shipper complains generally of service of the other protestant, its complaints are trivial and do not justify a finding of inadequacy. However, as shipper needs service to all Georgia points, but one protestants lacks authority for that State and the other can serve only three points therein, applicant is granted authority to transport liquid caustic soda to all Georgia but those three points.—Redwing Carriers, Inc., Extension, 92 M.C.C. 379 (381-2).

Protestant or its predecessor has transported frozen potato products for supporting shipper from Caribou, Maine, to described New York Area continuously since 1949 under color of right, and in iew of concurrent modification of its frozen vegetables authority to include potato products its single-line service is sufficiently comprehensive to satisfy that shipper's requirements; although shipper intends to add other products to its line, its plans are still in the formative stage and it is not established with reasonable certainty that there is a potential flow of traffic which cannot materialize unless the proposed service becomes available. However, authority should be granted applicant to transport frozen potatoes and products from Greencastle, Pa., to Wauseca, Minn., in view of extreme circuity of protestant's route; also to transport frozen prepared foods from Milton, Pa., to New England when protestants have not shown that they can provide the service needed by shipper.—Midwest Coast Transport, Inc., Extension, 91 M.C.C. 812 (816-7)*.

One protestant clearly may transport refined tall oil from Nitro, Va., to Missouri, as its authority for acids and chemicals is not limited to those listed in Appendix XV of the Descriptions case (61 MCC 209); in view of prior finding that application must be denied to extent it seeks authority coextensive with that of protestants, authority to serve Missouri is denied.—Stillpass Transit Co., Inc., Extension, 89 M.C.C. 692 (693-4)*; but another protestant's authority for acids and chemicals as listed in that case (which does not include tall oil) does not permit it to transport that commodity to Wisconsin, notwithstanding the broadened definition of "liquid chemicals" in 88 MCC 127; the commission is concerned with availability of existing motor service, and latter case merely outlined procedures whereby existing certificates might be revised. Grant of authority to applicant for Wisconsin, affirmed.—Id., pp. 693, 694.

As applicant and two protestants are authorized to provide a substantial service for supporting shipper from Erie County, Pa., to North Carolina, and shipper failed to indicate specifically what volume of considered food products would move from that county, it cannot be found that existing services of the three available carriers are inadequate to meet shipper's reasonable transportation requirements therefrom. While shipper professes dissatisfaction with protestants' services, that of one is not shown to fall so far below reasonable performance standards as to warrant

authorization of an additional competitive service; shipper's damage claims against the other are mostly for less than $10 each, and amounts involved cannot be considered exorbitant or indicative of careless or irresponsible service, considering fragile nature of some of the commodities and the substantial volume of shipper's traffic handled by the protestant. Grant of additional authority to applicant from Erie County is not justified.—Blythe Extension, 92 M.C.C. 242 (245, 246).

While applicant has served supporting shipper from only one origin in Chautauqua County, N.Y., to North Carolina, it appears reasonably certain that in the near future shipper will originate traffic for North Carolina at other points in that county. Although applicant and one protestant are now authorized to provide substantial service from Chautauqua County origins, neither's authority is sufficiently broad to provide the service required by shipper from its numerous facilities in that county. Authority granted for transportation from Chautauqua County to North Carolina of specified fruit products, except canned goods, which protestant is authorized to transport from virtually all origins in that county to the destination area.—Id., pp. 245-6.

Although opposing household-goods carriers may, individually or collectively, transport uncrated photographic and X-ray machines and equipment to all points sought beyond territorial scope of applicant's household-goods authority, it does not follow that there is no need for applicant's proposed service; consideration should be given to fact that applicant pioneered and gained considerable experience in transporting those and similar complicated machines and pioneered in refining its equipment and methods of handling uncrated shipments to meet its shippers' needs; as protestants have provided such service only to a limited extent, they would not be materially injured by grant of specific authority for the articles involved.—Neptune Storage, Inc., Extension, 88 M.C.C. 25 (32-3).

Existing service adequate: [Vols. 11, 18, 19]. —It is unmistakably clear from the record that trunkline motor carriers' refusals to handle interchange traffic and to accept freight from certain shippers, which caused substantial disruption in motor service and serious inadequacies in available service, arose from union pressure applied to obtain union objectives and that in normal circumstances existing carrier facilities and services were adequate. In such circumstances certification of an additional carrier is not an automatic remedy in view of others available under the act; choice thereof must be rational and based on conclusion that public interest in adequate service outbalances that in protecting existing carriers. There are no findings or analyses to justify the commission's choice of granting appellee a certificate; the commission's order set aside, a proceeding remanded.—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (165-7)*.

A basic ingredient in the determination of public convenience and necessity is whether existing facilities are adequate to meet present or future transportation requirements. Denial of plaintiff's extension application because it failed to show inadequacy of existing services was sound exercise of the commission's discretion, when record amply supported its finding that direct service and interline arrangements existed throughout areas involved; and evidence before the commission fully justified its conclusion that existing service was adequate and satisfactory.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (885)*.

The commission's finding that services offered by plaintiff (applicant in commission proceeding) were offered and available from other existing carriers (through either single-line service or interline arrangements), although supporting shippers had not taken advantage of such existing services, is supported by the evidence; there is also substantial evidence in support of commission finding that plaintiff's proposed service was not so special or that demands of supporting carriers were not so unusual as to justify granting the authority sought. Since that is a matter which calls for commission expertise, the reviewing court would not be justified in conducting a pinpoint, faultfinding analysis thereof; moreover, it is not for the court to say that the commission was wrong in concluding that plaintiff's proposed services would duplicate

W.J. Digby, Inc. v. United States, 254 F. Supp. 515(517)*.

Adequacy of existing transportation service is one of the basic ingredients in determination of public convenience and necessity. The commission's findings that all destinations in question had single-line service of one or more protestants with exception of one point which had two-line service, and that shippers were not using authorized motor carriers willing to meet their transportation needs, are amply supported by the evidence. There is no merit to plaintiff's argument that, in finding existing service adequate and satisfactory, the commission erred in considering joint line service and in considering interline arrangements with carriers who did not appear at the hearing to show they were willing and able to interline with existing carriers. The dispute was not directed at interline arrangements particularly, rather testimony was offered to show no available service at needed points or that existing carriers could not take shipments at time requested. Moreover, the commission simply found that supporting shippers were not using available facilities, in some instances because they were not aware of carrier's availability. Sustained.—Watkins Motor Lines, Inc. v. United States, 243F. Supp. 436 (439, 441-2,443)*.

The record supports the commission's findings and conclusions that plaintiff failed to establish a present or foreseeable future need for its performance of nonexempt transportation of airfreight between Salt Lake City Airport and points outside the air carriers' terminal areas on presently authorized routes. One of the basic ingredients in determination of public convenience and necessity, is the adequacy of existing service; the applicant has the burden of producing evidence to show that the proposed service is or will be required by present or future public convenience and necessity, and adequacy of existing services is a proper subject of consideration in this field. The commission's denial of the authority sought, sustained.—Wycoff Co., Inc. v. United States, 240 F. Supp. 4(312)*.

It is not fatal that the commission's finding that supporting shipper had adequate motor service available to all but a few of the 151 destination it desires to serve from its new plant at Greeley, Colo., entails a prophecy as to future requirements; the court cannot require the commission to find actual present ability of existing carriers to render the service that may be needed in the future. The commission's prediction of adequacy of existing service to the points in controversy could rationally be made on the evidence before it; thus its finding is supported by substantial evidence. Order denying plaintiff's application as to those destinations, sustained.—Curtis, Inc. v. United States, 225 F. Supp. 894 (900-1)*.

One of the basic ingredients in the determination of public convenience and necessity is the adequacy of existing service; and protesting carriers should come forward with information concerning adverse effect on them, which is generally within their control, to persuade the commission to deny the authority sought.—Worster Motor Lines, Inc. v. United States, 226 F. Supp. 603 (607)*; since the commission's finding that public convenience and necessity does not require complainant carrier's proposed operations is supported by substantial evidence, and that evidence clearly establishes adequacy of existing service, the court must sustain the commission's decision.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (468)*.

The commission's finding that plaintiff failed to establish need for motor service in addition to that available at time of the order because existing service, consisting in part of two-carrier interline arrangements, was adequate, is borne out by substantial evidence. Contention that the commission should not be allowed to consider interline arrangements, in considering adequacy of existing service, is untenable: that would mean that any carrier able to show lack of direct single-line service to any given point in United States could apply for and would necessarily be granted a certificate without further showing of inadequacy of the inter-

line service available. Congress intended that decision to be one for administrative determination, not to be over-turned by the courts except in absence of substantial evidence supporting the commission's findings. And the commission may similarly consider adequacy of existing rail service.— Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (896-7, 898-9)*.

And contention that the commission erred in giving controlling weight to adequacy of the existing service must be rejected, since it is based on a Supreme Court decision under the contract carrier provisions of the act, as amended in 1957, involving considerations not present in the case at bar. Since the commission may and does consider adequacy of existing service in testing merits of an application, and since the evidence is ample to show that all destination points of supporting shippers are served with adequate speed and volume by existing carriers, either directly or by interline, it follows that plaintiff has not sustained its burden. That some shippers might be more conveniently served by having a locally based carrier, and that they have a degree of confidence in plaintiff's operator, do not detract from the substantial evidence that the existing service is adequate. Order denying plaintiff's application sustained.—Id., p.900

In order to establish that public convenience and necessity require its proposed service, plaintiff (applicant) was required to show that existing facilities are inadequate in that authorized carriers are not ready, willing, and able to perform the service. Record supports the commission's finding, after giving due consideration to supporting shippers, that there is an ample supply of authorized carriers in the area who are ready, willing, and able to provide the type of transportation service proposed; sustained.—W.T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (627)*.

One of the basic ingredients in determination of public convenience and necessity is adequacy of existing service; though not all possible existing carriers appeared as protestants to heavy hauler's extension application, the commission's conclusion that adequate single-line service is available to several of involved destination States, and joint-line service to the balance, was not based solely on a presumption; evidence concerning the Red Book Plan under which participating heavy haulers provide through service was introduced at hearing; the commission is not unfamiliar with that plan and members there-of, and, in absence of complaints to the contrary, may rely on that organization to supply the services it offers to shippers.— Robbins v. United States, 204 F. Supp. 78 (81,82)*.

In action to set aside grant of authority to intervenor for transportation of aluminum products from one Florida county to certain eastern States, the commission's findings that, based on the facts of record, existing service was inadequate and public need had been shown for the type of service proposed by applicant, are adequately supported by the evidence and justify the conclusion that the certificate should issue. The commission acted within the scope of the functions commited to it by Congress; the record discloses no departure by the commission from requirements of the law nor any abuse of the discretion which is vested in it; order of the commission sustained.— Mercury Motor Express,Inc. v. United States, 261 F. Supp. 621 (622)*.

A showing of need for more than one carrier can satisfy the legal standards of public convenience and necessity even though no specific inadequacy of existing service is found. Furthermore, grant of authority to one applicant merely increased scope of its authority from a point it was already serving; and it is clear that, in granting certificates to three applicants, the commission gave consideration to the effect of increased competition on existing carriers.— Petroleum Carriers Corp. v. United States, 258 F. present services substantially; sustained.—

Supp. 611 (615-17)*; while inadequacy of present service is certainly an element to be considered in determining public convenience and necessity, a specific finding of inadequate service is not necessary. Contention of plaintiff (protestant in commission proceedings) that the commission's failure to make an affirmative finding that its service is inadequate precluded its grant of authority in question, is not in accord with the law. Complaints dismissed.— Id., 258 F. Supp. 617 (620)*.

Though adequacy of existing service is a factor which the commission should consider in determining whether any authority should be granted, §207 expressly provides that issuance of a certificate confers no proprietary interest in use of the highways on the certificate holder, and plaintiff concedes that absence of an express finding of inadequacy of existing service does not invalidate an order of the commission. The record indicates that the examiner, and the commission in adopting his recommendation, gave full consideration to the available existing service; the commission's order granting certificate for service competitive with that of plaintiff, sustained.— Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (570)*.

Evidence shows that at least two motor carriers are willing and able to provide the service required by supporting shippers of frozen foods, that complaints of service inadequacy are not substantial, and that an abundance of suitable equipment and facilities is available. Moreover, there has been no reasonable effort to work out transiting arrangements with protesting carriers, who show willingness to institute storage-in-transit arrangements with respect to traffic moving to all points involved. Denied.—Willis Shaw Frozen Exp., Inc., Extension, 100 M.C.C. 18 (21).

Untried single-line and, in some cases, joint-line services available cannot be found inadequate on the record; protestant's through-trailer service cannot be presumed to be inadequate merely because a joint line service would be provided on perishable products.—Wilson Bros. Truck Line, Inc., Extension, 94 M.C.C. 426 (430); collectively protestants can provide service to a vast territory, affording shippers of dairy products ample opportunity to obtain a variety of combinations for stops in transit for partial unloading. Shippers are not entitled as a matter of right to service to every point or combination of points to which they might conceivably make a shipment when reasonably adequate existing services are available which they have failed to try. Granted in part.— Raye & Co. Transports, Inc., Extension, 94 M.C.C. 554 (561)*.

Record does not show that protestants or other existing carriers are unable or unwilling or are not, in fact, presently providing the public with adequate service in the handling of considered traffic. On the contrary, it was shown on cross-examination that supporting shippers are reasonably satisfied with present services of existing carriers and, in some instances, with that being rendered by applicant on an interline basis; extension application denied.—Dixie Ohio Exp., Inc., Investigation and Revocation, 94 M.C.C. 625 (636)*; similarly, supporting shipper describes service of one protestant as adequate and reliable, has no complaint about service rendered by the other, but is interested in having the service of at least two carriers to each of two destination States involved. Applicant has failed to show that existing service is inadequate; denied.—E.B. Law & Son, Inc., Extension, 94 M.C.C. 532 (534-5, 539-40)*.

Supporting shipper's only complaint regarding existing carriers' service is that they could not transport small quantities of smokeless powder in mixed shipments with their other products, but this deficiency has been remedied by the Commission's reclassification of smokeless powder in quantities not exceeding 100 pounds as a flammable solid for transportation purposes, thus bringing it within authority of general commodity carriers unless restricted against transportation of flammable solids. Existing carriers are willing and able to render service reasonably adequate to meet shipper needs; denied.—West Motor Freight, Inc., Extension, 94 M.C.C. 793 (797).

Supporting shipper's described loss of sales in destination States sought is not shown to be due to any particular factor whatever, much less inadequate transportation; in fact, a portion of the loss of sales which shipper claims at one New England city occurred subsequent to grant of temporary authority to applicant to serve that point; it seems clear, therefore, that the asserted loss of business cannot properly be attributed to lack of motor carrier service, and evidence is not persuasive that protestants failed to render reasonably prompt service in furnishing vehicles upon request.—Curtis, Inc., Extension, 94 M.C.C. 728 (730).

Though applicants seek authority between Alabama railheads and other Alabama points for purpose of establishing coordinated rail-motor service on traffic assertedly not susceptible of all-motor or all-rail movement, claimed advantages of such service cannot be related to any demonstrated need when no complaints about, or material deficiencies in, the abundance of existing and available motor services are shown. No present or potential shipments are shown to be beyond protestants' authority or ability to handle, and failure of supporting shippers and receivers to investigate services of existing motor carriers, or to request them to reach workable through-route and joint-rate agreements with supporting rail carriers, is of controlling significance. Applications denied.—Osborne Truck Line, Inc., Extension, 94 M.C.C. 414 (418-9).

Though 3 applicants seek statewide destination authority for transportation of meats, packinghouse products, and frozen foods from Denver, the 5 supporting shippers presently sell their products at only one or a few points in each State sought, and their evidence is not shown to be representative of a more extensive distribution pattern. All those destinations are served single-line by one or more protestants, and the record demonstrates that supporting shippers have not adequately utilized existing services of carriers authorized and willing to meet their requirements. All three applications denied.—Colorado-Arizona-California Exp., Ind., 92 M.C.C. 89 (97-8)*.

Supporting shipper has been able to move its products satisfactorily from Denver to 147 of 151 points to which it now ships or has sought to ship from Denver; on the whole, existing motor carrier service from that point is not shown to be inadequate, and protestants now serving shipper from Denver are willing to interchange with carriers operating between Denver and Greeley. Since latter service has not been tried and there is no substantial basis for finding such interline service inadequate or unsatisfactory, it is necessarily concluded that shipper has adequate service available from Greeley to all points, with certain exceptions, to which it now ships from Denver; application denied as to such points.—Curtis, Inc., Extension, 92 M.C.C. 25 (31)*.

Need for proposed transportation of chemicals by 2 applicants from 2 West Virginia points to 10 States and District of Columbia is not shown; protestants' services when used have concededly been entirely adequate, and 23 instances in which they did not furnish equipment on request are insignificant compared to overall volume which they have transported without complaint, and do not justify duplication of their authority and dilution of their present traffic. Applicants' transportation of certain traffic, which is some cases protestants apparently could not handle on short notice, does not establish a presumption of public need; denied.—Mason & Dixon Tank Lines Extension, 91 M.C.C. 7 (12-13).

Application denied as to points protestant may serve when its service for supporting shipper has been at very least reasonably adequate; protestant has made every effort to insure its continued participation in involved traffic even when afforded very short notice of need for equipment. Although protestant must lease some equipment to fulfill shipper's peak needs, it has done so in the past, and there is no reason to believe it will be unable to do so in the future, even with increased production anticipated by shipper.—Kramer Extension, 91 M.C.C. 16 (19).

Protestants operate over feasible, though slightly more circuitous, routes than applicants, and have suitable equipment which they are willing to make available to satisfy shippers' needs. Shipper's only real interest is proposed lower rate; however, protestants have not sought to embargo the traffic, but

rather have done all they could to obtain it. Before additional authority is granted, existing authorized service should be tried; denied. —Hulme Extension, 91 M.C.C. 575 (581).

From Sioux City-Omaha area three carriers provide single-line service to a considerable portion of 13-State destination area sought, and numerous others perform joint-line service, so that entire destination area generally is served; criticism of their service lacks specificity and is not convincing that present service is inadequate; denied as to those origins.—Indiana Refrigerator Lines, Inc., Extension, 91 M.C.C. 71 (80).

Evidence of supporting shippers is vague and generally fails to show any need for service to specific destination points; plethora of motor and rail service is available and shippers have not shown any substantial inadequacy which would warrant new competitive service. An existing carrier should be given reasonable opportunity to transport all the traffic it can satisfactorily transport before new competitive service is authorized. Although applicant is providing supporting shippers with service to points in the Lower Peninsula, he should not be permitted to extend his operations to the rest of Michigan where no inadequacy in existing service is shown.—Davis Extension, 91 M.C.C. 623 (631, 632).

Supporting shipper makes no claim of material deficiencies in available transportation facilities at Vancouver where its new terminal will be located; four opposing carriers are authorized and equipped to transport petroleum products from Vancouver to all or substantial portion of Oregon; one is eminently qualified to meet all shipper's requirements and its ability to do so is unchallenged. Loss of traffic applicants have handled for shipper at Portland is unlikely to impair their ability to provide adequate service. Denied.—Salem Nav. Co. Extension, 91 M.C.C. 699 (701, 704).

Evidence at further hearing vitiates prior conclusions as to need for through service on meats by Canadian applicant to points in eastern States; protestant has amply demonstrated that it handles the traffic in a satisfactory manner; no load has been rejected because of spoilage and no claims for spoilage have been made, While existing service involves a physical transfer of lading, protestant is willing to participate in through trailer arrangements with applicant. Denied as to such service.—Leamington Transport, 91 M.C.C. 647 (650, 651)*.

Collectively protestants are authorized to serve the entire destination area sought and in most cases a minimum of two of them can provide service to any point. They are all serving supporting shipper satisfactorily or are willing to do so; they operate considerable amount of refrigerated equipment and offer 1.t.l. as well as t.l. service. Supporting shipper's transportation needs are apparently being met by existing carriers who are capable of assimilating more traffic, and the ample service available has not been shown to be wanting in any respect; denied.—Blythe Extension, 91 M.C.C. 827 (834-5).

Where opposing carriers provide service similar to that sought to be established, applicant must show inadequacy of the existing service; a finding of inadequacy of such service is subsidiary, thus relevant and necessary, to an ultimate need for the new service; and evidence concerning certain activities of protestant which allegedly prevented use of existing common carrier facilities was relevant to a determination of whether existing service is adequate. Need for proposed transportation of passengers, in special and charter operations, not shown.—Kirk, 89 M.C.C. 587 (588-9).

One or more of protesting carriers is authorized, with few exceptions, to provide all service proposed by railroad subsidiary; they operate suitable equipment, have served supporting shippers in both intra- and interstate movements in the past, are willing to enter into joint rail-motor arrangements with applicant's parent railroad, and also, if requested, to provide shippers with all-motor service. Shipper testimony as to present or future need is vague and speculative; much of expressed future need is contingent on shippers' successful bidding on construction contracts; no situation is foreseeable whereby existing facilities would be inadequate to handle the traffic; denied.—Milwaukee Motor Transp. Co., Extension, 89 M.C.C. 41 (44-5).

Although supporting shipper represents that existing motor carriers, most of which

operate over regular routes or serve only limited destination territories, cannot provide the flexible service it desires for distribution of its products, a finding of necessity for an additional transportation service cannot be predicated solely on one shipper's desire to follow a particular distribution plan. Considering number and extent of available motor and rail services, it is not shown that existing carriers cannot meet that shipper's reasonable transportation requirements; denied.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 255 (262-3)*.

No real need is shown for transportation by applicant of frozen fruits, berries, and vegetables in relatively broad territory additional to that for which "grandfather" rights were confirmed; general statements by supporting shippers that they ship traffic between storage facilities or from copackers' plants to storage facilities and to their customers, and that they need flexible single-line service between such points, do not demonstrate need for more service than is now available; existing regular-route general-commodity carriers and irregular-route carriers of frozen foods serve practically all points in considered Middle Atlantic States, and with their connections provide interline service to southern and New England States; not only is there no specific showing of inadequacy of such services, but shippers are admittedly satisfied users of several protestants' services; denied.—Lester C. Newton Trucking Co. Extension, 89 M.C.C. 269 (274)*.

Two protestants which can serve supporting shipper's plant operate over substantial systems of routes, and though services provided by each are to a certain extent performed over routes of subsidiary or affiliated companies, both offer the through-trailer type of service shown to be required, not only over their own systems, but through interchange with connecting carriers as well. There is no showing of inadequacy of those services; shipper's only specific complaint concerns a shipment handled by another carrier which could have been handled by one of those protestants; no good reason appears why shipper cannot use their services; application denied.—Roadway Exp., Inc., Extension, 88 M.C.C. 533 (537-8).

Except for transportation of grain fumigants and insecticides from Kansas City area to Illinois points, existing motor carrier service is not shown to be inadequate to meet supporting shippers' reasonable transportation requirements. One shipper has available to points in the destination territory protestants' untried services, which are not shown to be inadequate in any material respect, and but for that shipper's unsupported expectations there is no evidence to indicate the volume of anticipated inbound traffic or points from which it would move; another shipper's isolated examples of delays or dirty equipment are not a proper basis for a grant of authority. Granted in part.—Cyrus Truck Line, Inc., Extension, 88 M.C.C. 447 (451).

While adequacy or inadequacy of existing service is a factor to be accorded weight, a finding of inadequacy is not indispensable to issuance of a certificate; and though, once a need for a proposed service has been established, adequacy of existing service is an important factor in determining whether public convenience and necessity require certification of a new carrier, it is only one of the many factors which must be considered in arriving at the broader determination of public convenience and necessity.—Nashua Motor Exp., Inc.—Petition for Modification, 96 M.C.C. 583 (585)*.

See also Railway Exp. Agency, Inc., Extension, n. 7 *Express*, above.

Shipper of candy (which requires refrigeration) from Texas to retail drugstores at some 105 points throughout Florida is presently using a three-line service provided by regular-route carriers; but that service is unsatisfactory because of transit time, which limits it to once-a-week service to some points, and because it prefers single-line service to avoid exposing its candy to unfavorable temperatures. Transportation of the many small shipments to a large number of points requires an irregular-route carrier that can provide extremely flexible single-line service and that can either make the necessary dropoffs or has a peddle service from terminal refrigerated storage facilities which cover the State. Existing services are inadequate to meet shipper's transportation needs; granted.—Alterman Transport Lines, Inc., Extension, 96 M.C.C.

478 (480-1)*.

Supporting children's camps require a fast, efficient, and reliable service in the transportation of campers' baggage, since failure of a carrier to make prompt pickup and delivery can cause great inconvenience to the child, create ill will between the camp and the child's parents, and result in loss of attendance the next season. Seven camps have used services of protestants but have found them unsatisfactory, and cite numerous examples of delayed and lost shipments and rude and incompetent service. Considered camps desire applicant's proposed interstate service and would utilize if the application is granted; they have used applicant's intrastate service and found it to be very satisfactory. Evidence is convincing that the existing service is inadequate to meet shippers' reasonable transportation needs; granted.—Gibney Distributors, Inc., 95 M.C.C. 733 (735-6).

Motor protestants have never carried fertilizer from and to involved points, have made no serious solicitation of shipper, and their rates are too high to move its traffic; to this extent available service is inadequate; authority granted.—Porter Transp. Co. Extension, 91 M.C.C. 178 (181).

The examiner's finding that existing service for transportation of fresh meats between considered points is inadequate was justifiable solely on the basis of the quality of service protestant has rendered in the past; any consideration of intrastate service by the examiner was merely gratuitous; and an allusion to the "complete service" concept was subsidiary to a finding of inadequate interstate service. Applicant's proposed service is shown to be needed by supporting shipper.—T.M. Zimmerman Co., Extension, 89 M.C.C. 150 (153).

Express: [Vol. 19].—Since applicant is affiliated with rail carriers within meaning of §5(2)(b), special circumstances must be shown to exist in order for it to obtain authority to conduct motor operations wholly disassociated from rail operations. Operation of rail passenger and merchandise trains in considered area has been discontinued, and evidence shows that existing motor carriers do not regularly render express motor service therein; such "special circumstances" justify a finding of public need for proposed motor carrier service, limited to that auxiliary to or supplemental of REA's express service. But issuance of certificate is withheld pending republication of the application, as amended, to give any interested party notice of complete scope of the authority granted.—Railway Express Agency, Inc., Extension, 98 M.C.C. 75 (78-9, 80); similarly, "special circumstances" justify grant of express-auxiliary authority between Chicago and Cincinnati, serving named intermediate points.—Id., 98 M.C.C. 92 (98-9); and over Macon-Atlanta, Ga., route, serving Robins Air Force Base as an off-route point.—Id., 91 M.C.C. 887 (890, 891)*.

When Railway Exp. Agency seeks to institute motor vehicle operations which are not auxiliary or supplemental to those of the express company, such as irregular-route service which is not considered to be in nature of an express service, it must show that special circumstances exist; and since it is affiliated with railroads within meaning of §5(2)(b), it must show special circumstances to justify authority for motor operations wholly disassociated from rail operations. Such special circumstances are in fact present where existing motor carriers are not regularly rendering an express service.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (339-40)*.

And although use of existing transportation modes and carriers is intrinsic to operations of an express company, where existing services are not compatible with transportation of the wide range of commodities that move in express service, or with the expedition and special care provided thereby, there is ample cause for REA to institute motor operations in its own behalf. Argument that such an application should turn on a showing that REA will transport over the route involved a significant number of commodities which by nature require special handling ignores the fundamental function of an express service, which is a premium service utilized by shippers whenever speed or special handling, rather than rates, is important the choice is shipper's, and it is clearly in public interest that if possible that choice be not precluded.—Id., p. 340.

Need is established for REA's transportation of express between Boston and certain

points in New Hampshire, and between Hoosick Falls, N.Y., and Middlebury, Vt., latter restricted to traffic having prior or subsequent movement in REA's express service, when passenger-train service formerly utilized has been discontinued and existing motor carriers are unable to provide the complete service required because their authority excludes commodities of unusual value. More important, absence of proof that protestants have at any time effectively competed for express traffic warrants conclusion that none of them regularly renders an express service such as applicant has been providing. Extension authority granted for service auxiliary and supplemental to REA's express service. —Id., pp. 315-9, 341-2.

When existing modes of transportation are inadequate for many commodities that move in express service, or for expedition or special care provided in express movement, Railway Express Agency has ample cause to seek authority for motor vehicle operation in its own behalf. Dimunition of passenger-train service and of expedited rail operations in which express has historically moved should not be permitted to threaten continued existence of express service in the affected area. Protestants cannot, either singly or collectively, provide the complete express service required in considered area; therefore, extension authority is granted, subject to key-point and express-auxiliary restrictions.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (479, 480); similarly, public need is clearly established for REA's motor express service to points along proposed route between Sioux City, Iowa, and Mitchell, S. Dak., and, since no other express service is available at those points, authority granted is restricted only to express-auxiliary service.—Id., 91 M.C.C. 836 (839).

Railway Exp. Agency's contention that as long as its express service, as distinguished from the operational means whereby the service is rendered, remains essentially unchanged the existing competitive situation will not be affected by a grant of motor-carrier operating authority to it, and that consequently it should be allowed to continue to offer express service regardless of the underlying transportation mode and without consideration of adequacy of other existing services, rejected. While the commission recognizes the distinct character of express service and that it should not be tied inflexibly to any particular underlying transportation mode, an unbroken line of cases establishes that an application by REA for motor authority to transport express is subject to the criteria which stem from Part II, and in such proceedings the commission has consistently considered the adequacy of existing service by all modes in determining the propriety of a grant. —Railway Exp. Agency, Inc., Extension, 94 M.C.C. 102 (106, 107).

But when for a convincing reason the underlying mode in the area is shown to be inadequate for movement of express, as where train discontinuances leave an area without express service or with service available only at inconvenient times, or where use of existing modes results in substantial in-transit delays, a grant of motor operating authority to REA is warranted. Such authority has also been granted where, in addition to inadequacy of existing service, there was a convincing showing that substantial interior operating economies would result. However, applicant's argument that present proposal should be treated like a railroad proposal to substitute motor for rail service and, thus, should be authorized on the sole showing that use of the new motor route would generate operating economies, was rejected in 91 MCC 311; and its contention that the criteria applicable to alternate-route applications should apply is untenable, since its proposal contemplates a service route.—Id., pp. 106, 107.

There is no justification for allowing REA to institute line-haul motor operations between Charlotte, N.C., and Chester, S.C., when as a shipper it has shown no material deficiencies in present underlying rail service; and while specific support from individual users of its service at intermediate points is not prerequisite to establishing public need for that proposed service, there is no convincing evidence that existing rail service materially handicaps them or fails to meet REA's requirements as a shipper. Contemplated earlier deliveries at such intermediate points are not demonstrated to be responsive to any definite need therefor, and claim that they

would increase efficiency of scheduling express traffic through the Charlotte gateway does not rebut the prima facie showing that present rail service is compatible with the expedition required in that area. Additionally, there is no convincing showing that proposed service would result in such substantial operating economies as to justify grant of all authority sought, without any apparent accompanying benefit to the public.—Id., p. 108.

But public need is established for continuance of REA's expeditious express service at Great Falls, S.C., which otherwise would be rendered impossible in view of impending discontinuance of railroad's substituted motor service to that point, which REA is now using, when buslines and motor general-commodity carriers cannot provide a complete or convenient express service of type required. Therefore, authority is granted, subject to rail-haul and through-billing restrictions, between Chester and Lancaster, S.C., serving Great Falls as an intermediate point. —Id., pp. 104, 107-8; for similar reasons, regular-route authority is granted between Hartford and Evergreen, Ala., serving specified intermediate points, and over two alternate operating-convenience routes, subject to certain restrictions.—Id., 94 M.C.C. 731 (735-6) and public need is established for REA's proposed service between Roanoke, Va., and Walnut Cove, N.C., serving named intermediate and off-route points, in lieu of service formerly provided in passenger trains which have been discontinued.—Id., 91 M.C.C. 711 (715).

See also Pennsylvania Truck Lines case, n. 35 *Substituted freight service*, below.

While the peculiar attributes of express service, viz., expediency and special handling of freight at premium rates, have always provided a natural line of demarcation between such service and that rendered by common carriers of ordinary freight, and those distinctions have often been persuasive that a proposed line-haul motor movement of express by REA will not present any substantial threat of undue competition with operations of independent common carriers conducted generally at lower rates, in instant proceeding there is no evidence to indicate that shipper of fresh meats would use REA's proposed service because of any expeditious or special handling or other attributes of express service that might be provided; thus, applicant failed to rebut protestant motor carrier's prima facie case that it can provide that shipper with the complete motor service required.—Railway Express Agency, Inc., Extension, 94 M.C.C. 677 (681-2).

Applicant is now providing express service in considered area with rail transportation and there have been no complaints of material deficiencies therein, by users of applicant's service or by applicant itself. Neither contemplated earlier deliveries to some points on inbound shipments, nor elimination of transfers of express between rail terminals and applicant's recently installed off-rail pickup and delivery facilities at certain points, are shown to be responsive to any definite need and, thus, do not rebut the prima facie showing that existing rail service is entirely compatible with transportation presently required for express traffic in the area.—Id., pp. 680-1; the proposed substantial line-haul motor operations should not be authorized on a sole showing that applicant's use of new motor route would generate some interior operating economies, without a concomitant showing of some appreciable and direct benefit to the public. Any other conclusion would accord REA a privileged status and treatment, in determining its requests for motor authority, that Part II of the act does not contemplate. Denied.—Id., p. 682.

Because of limited space available on underlying railroad's trains operating between Charlottesville, Richmond, and Newport News, Va., discontinuance of stops at some intermediate points, and inadequate time for transfer of express to Richmond train at Charlottesville, Railway Exp. Agency has had to hold eastbound express shipments overnight at Charlottesville or route them circuitously via Washington, and institution of motor service under temporary authority has resulted in earlier deliveries at Richmond and Newport News. Moreover, in view of rapid diminution of passenger train service in recent years, REA cannot be expected to continue in reliance on existing rail service.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 62 (66-7, 72).

More importantly, economies possible without significant change in character or quality of express service previously rendered, as demonstrated by REA's experience under temporary authority, warrant grant of permanent authority for routes sought. REA has maintained the separate character of express service in those operations, and existing motor carriers do not or cannot provide express service of like comprehensive scope. General-commodity carriers do not regularly furnish express service on poultry or live animals at points involved, and protestant buslines do not handle explosives, articles of high value, or certain perishable commodities; moreover, size of shipments handled by buslines is limited to carrying capacity of their passenger vehicles, and their ability to render pickup and delivery service is circumscribed by their more restricted terminal areas. Granted for service auxiliary to REA's express service.—Id., pp. 69, 73, 76.

Evidence presented by REA, which alone supports application of railroad subsidiary for authority to handle REA's traffic over proposed shorter route between Atlanta and Cedartown, Ga., fails to show that existing service available to it in that area is in any way inadequate. Protestant motor carrier's service has not been tried, and that of applicant and another railroad, which it now uses, is not shown to be deficient except in allegedly inconvenient late arrival time of shipments moving to Atlanta—which could easily be remedied by a change in applicant's scheduling of vehicles or by REA's use of protestant's more direct service; thus, grant would merely allow applicant to enhance its competitive position and that of REA at expense of an authorized independent motor carrier which has already suffered diversion of part of its general freight traffic and whose service is not shown to be anywise inadequate. Moreover, REA's expressed preference for rail carriers or their affiliates because of their familiarity with type of billing used has little significance when shipments originating at Cedartown are rehandled at REA's Atlanta facility before reshipment to destinations. Denied.—Central of Georgia Motor Transport Co. Extension, 94 M.C.C. 6 (11).

Evidence establishes a need for applicant's proposed motor express service at Loxley, Robertsdale, and Foley, Ala., which will be superior to that presently provided by freight train express service; receivers of express at those points will be able to handle additional commodities, in some instances, and to improve their customer relationship through use of the more expeditious service to be provided. However, grant of unrestricted motor carrier authority between Mobile, Ala., and Pensacola, Fla., is not warranted; present service between those points is not shown to be inadequate and, so far as time is concerned, there is virtually no difference between present train and proposed truck service. Authority granted, therefore, is subject to express-auxiliary and key-point restrictions.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 180 (183-4).

Record as a whole demonstrates need for continuance of applicant's express service between Clinton, Iowa, and Crystal Lake, Ill., serving designated off-route and intermediate points including Chicago, also for local express service solely between authorized points on described route, but otherwise restricted to reflect accurately the contemplated traffic movements shown of record.—Railway Exp. Agency, Inc., Extension, 92 M.C.C. 487 (489-90).

Use of the various existing transportation modes and carriers is inherent in operations of Railway Exp. Agency, and where existing modes are not adequate for express service REA may seek to institute motor operations in its own behalf. Evidence adduced demonstrates public need for continuance of expeditious express service between Albany and Gloversville, N.Y., serving Amsterdam as intermediate point. Though applicant has been using New York Central's service between Albany and Fonda and that of protestant short-line railroad between Fonda and Gloversville, Central's service has not been entirely satisfactory, and its failure to protest REA's application indicates lack of interest in continued participation in express traffic between the involved points. In such circumstances, and in view of protestant's inability to serve Albany or Amsterdam, applicant should be granted authority between Albany and Fonda, serving Amsterdam as intermediate point.— Railway Exp. Agency, Inc., Extension, 92 M.C.C.227(230-1).

However, REA, should not be authorized to serve Gloversville when protestant is ready, willing, and able to provide adequate motor service between Fonda and Gloversville, as it has done in the past, and its service on express is not shown to be in any way inadequate. Moreover, express revenues derived from its motor operations are important and vital to continuance of protestant's service as the only rail carrier serving communities in the Gloversville area. Authority granted REA between Albany and Fonda will allow it to institute an expeditious and dependable express service, using its own vehicles between those points and those of protestant between Fonda and Gloversville, thus permitting protestant to continue participating in the express traffic which yields a substantial percentage of its new income—Id., pp. 231-2.

Considering that purchase applicants' services involve solely express operations, any adverse effects on protestant general freight carriers of issuance of certificate to vende for continuance of vendor's single-State proviso operations would be inconsequential in view of fundamental differences in, and limited competition between, those types of service; moreover, neither of those protestants is authorized to provide the complete service needed in involved rural area. While protestant busline is authorized and capable of providing the needed service to some extent, it could not provide the flexible service needed, due to weight and size limitations inherent in its transportation of express in some vehicles with passengers, lack of pickup and delivery arrangements, and need to subordinate transportation of express to interest of passengers. Certificate granted.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797(803-4).

No need is shown for proposed operation, in distribution service for an air freight forwarder, between Cleveland airport and that portion of adjacent 5-county area not within terminal areas of airlines serving that airport; supporting forwarder has available, and utilizes, various motor carrier services and has expressed no dissatisfaction with existing service except in very general terms; protestant is authorized and willing to transport freight in that area, but supporting forwarder has never used it, and in absence of proof of any material deficiency in service of protestant and other carriers its desire to use applicant's service does not warrant grant of authority.—Panther Cartage Co. Extension, 88 M.C.C.37(42).

Proposed transportation of express in pup semitrailers, to be towed by applicant's buses, would be merely a new method of performing service it already renders, and is not shown to serve any bona fide public purpose. While the commission subscribes to encourangement of progressive measures which will benefit the general public, it cannot do so in face of appreciable adverse effects on other segments of the transportation industry. Benefits from proposed service, which would accrue primarily to applicant, lose significance when considered within the context of desirability of requiring passenger carriers to remain primarily in the passenger business, and of considerations of safety and feasibility of operation. Furthermore, supporting shippers express complete satisfaction with existing services, and applicant admittedly has no overflow of express traffic which it cannot handle on the next scheduled trip after tender. Denied.—Continental Southern Lines Extension, 88 M.C.C.547(552).

Fitness, in general:[Vols. 10-12, 14-19].—See also n. 10, above.

As management changes and improvements in corporation form of business enterprise may result in radical change in corporate applicant's capability to perform its carrier operations, it would be unrealistic to hold that the commission lacks authority to decide whether a corporation is presently "fit" to perform proposed operations. Past willful misconduct should be considered as an element in assessing applicant's present and prospective fitness; and such assessment is one peculiarly within the commission's expertise and should not be interferred with unless found to be arbitrary or capricious. While the commission made no specific subsidiary findings on the issue of willfulness of corporate applicant's past unlawful operations, record shows that it gave adequate consideration to that issue; other subsidiary findings of record adequately support its conclusion that evidence of past unlawful operations did not require finding applicant unfit to receive grant of authority; sustained.—Armored Carrier Corp. v. United States, 260 F. Supp. 612 (615-7)*.

Despite previous unlawful operations applicant is found fit to provide the proposed service. Although informed by report in an earlier extension proceeding that its authority to transport tractors did not authorize the transportation of commodities similar to considered self-propelled road rollers and street-sweepers, it was not given an adequate guideline as to the full scope of that authority. Its continued unlawful transportation of such commodities appears to have been based on an honest difference of opinion; moreover, no other unauthorized operations on its part are shown.—Daily Exp., Inc.-Investigation of Operations, 98 M.C.C. 661 (676).

Applicant cannot be found unfit to provide proposed service when record does not show that its leasing arrangements may result in owner-operators being inadequately compensated and in improper expense-cutting practices in contravention of the national transportation policy. The record does not provide sufficient facts to make a determination whether as petitioners contend, applicant is merely renting out its authority to owner-operators and that its operations, therefore, do not constitute for-hire carriage as contemplated by the act. Should petitioner desire to further pursue their contentions in this regard, other appropriate proceedings before the commission are available.—International Transport, Inc., Extension, 95 M.C.C. 360 (362-3)*.

The examiners' conclusions as to applicant's fitness are twofold: (1) that it has not shown exclusive possession, control, and use of the equipment it leases and (2) that its financial balance sheets show current liabilities grossly in excess of assets. The leasing arrangements are discussed and approved in concurrrent decision (94 MCC 361) on another extension application by same carrier; balance sheet for a recent 8 month period shows that applicant's current assets substantially exceed its current liabilities; it is found fit to conduct proposed operations.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 364 (366, 373-4).

Applicant may properly be found fit to perform proposed service when protestant's allegations concerning past unauthorized transportation of the commodity involved are not supported by any convincing evidence.—M. I. O'Boyle & Son, Inc., Extension, 88 M.C.C. 559 (561); facts bearing protestant's claim that applicant has made stops in transit for partial unloading without appropriate tariff provisions are not set forth sufficiently to permit determination of that issue. However, applicant has satisfactorily established its fitness to perform the proposed operations.—Raye & Co. Transports, Inc., Extension, 94 M.C.C. 554 (559)*.

Specific evidence of an understanding or arrangement between carriers and/or shippers, whereby carriers agreed not to protest a particular application, would raise a question of the present and future fitness of such participating carriers to conduct operations subject to the commission's regulation.—Convoy Co. Extension, 91 M.C.C. 461 (465, Note)*.

Although fitness issue is not foreclosed, further hearing was authorized to permit certain carriers to contest issue of need for proposed service and, in absence of anything to the contrary, prior evidence establishes applicant's fitness.—Leamington Transport, 91 M.C.C. 647 (649)*.

Even though carriers have transported silver bullion in the past under authority to transport general commodities, except commodities or articles "of unusual value," the record does not necessarily justify a finding of unfitness. The issue of the status of silver bullion has not been entirely clear cut, and applicant has been diligent in testing its restricted general-commodity authority since it was first challenged. Therefore, applicant is found fit to conduct proposed operation.—Navajo Freight Lines, Inc., Extension, 95 M.C.C. 551 (554, 560).

While the violations complained of cannot be condoned, they stem from misunderstanding, and misconstruction of the court's action in refusing judicial review of the commission's opinion that transportation of certain commodities was not authorized by applicant's authority to transport "canned and preserved foodstuffs" because of its advisory character, rather than from a willful disregard of the act and the commission's rules; in the circumstances, therefore, a finding that applicant has not shown itself to be fit to receive authority requested is harsh and not warrant-

ed. Other alleged unlawful safety, operational, leasing, and the interchange activities on the part of applicant consisted primarily of rather infrequent minor infractions of the commission's rules; and those infractions especially appear rather inconsequential when considered in light of applicant's extensive operations, the absence of evidence indicating willfulness, and the inconclusiveness of other evidence. Applicant found fit to perform needed service.—Coldway Food Exp., Inc., Extension, 95 M.C.C. 780 (784-6)*.

Although applicant's past unlawful operations cannot be condoned, a finding of unfitness is not warranted since the transportation was performed under some color of right. Applicant is authorized to transport meats and meat products, but has transported vegetable oils and vegetable oil shortenings on the ground that these commodities were classified as "oils" and included in the list of "meats, meat products, and meat byproducts" contained in section A of appendix I to the report in the Descriptions Case, 61 MCC 209. After the commission found that such operations were not permitted by applicant's outstanding certificate, applicant filed instant application to obtain necessary authority.Therefore, a finding of fitness may properly be made.—Colonial Refrigerated Transp., Inc., Extension, 95 M.C.C. 379 (380, 382).

While applicant's past operations disclose various violations of the commission's safety regulations, and it has also violated the explosives regulations in certain respects and performed unlawful tacking operations, applicant appears to have taken measures which, if diligently pursued, will eliminate the failings it has been guilty of in the past; therefore, in view of apparent absence of willfulness in those violations, a finding of unfitness is not warranted. However, applicant does not have a full-time safety director, and services of its part-time ssfety consultant are more advisory than supervisory; it should employ a full-time safety director if that appears desirable to prevent violations of type considered, since any recurrence thereof could have serious consequences.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (755).

Although applicant has transported considered traffic without appropriate authority, and such unlawful operations are not condoned, a finding of unfitness is not warranted when applicant has demonstrated that it will comply with the commission's rules and that it is fit to perform proposed service.—Gibney Distributors, Inc., 95 M.C.C. 733 (737); when record shows no improper operations of a material nature, and applicant conscientiously ceased unauthorized service when admonished to do so and filed for both temporary and permanent authority covering those operations.—S & S Trucking Co. Extension, 91 M.C.C. 239 (241); when past unlawful transportation was performed in mistaken belief that it was permissible under a combination of applicant's existing authorities.—Edwards Extension, 88 M.C.C. 318 (321, 322)*; when there is nothing to indicate that applicant's past unlawful operations were conducted in willful disregard of requirements of the act.—Kiser, 89 M.C.C. 750 (753).

Unlawfulness of past transportation of shipments by applicant Canadian carriers from customs station at Buffalo and Niagara Falls, N. Y., a few hundred feet to customs plazas for interchange with United States carriers does not preclude a finding of fitness. One applicant instituted such operation only after being advised by the commission's district supervisor, some years before similar operations of another carrier were held unlawful, that no authority was required; and legality of the other's operations, conducted since about 9 years prior to enactment of the Motor Carrier Act, was never questioned by commission personnel. A stronger color of right than that under which applicants have operated in the past would be difficult to imagine.—Overland Exp. Extension, 92 M.C.C. 757 (760, 761, 765).

Question of fitness arising from Canadian applicant's past unauthorized movements across international boundary must be resolved in its favor, considering that the commission's Bureau of Motor Carriers had rendered informal opinion that no authority was required for the operation involved. Similarly, in light of surrounding circumstances, past existence of an improper common-control relationship with a United States carrier did not render it unfit, since it provided service between the United States and Canada under

erroneous assumption that its operations were not subject to the commission's jurisdiction and thus would not be subject to its regulation regarding common control; applicant did not engage in unlawful operations willfully and should not be considered unfit because of its participation therein.—Fess Transport, 91 M.C.C. 924 (927)*.

And though issues pertaining to rate matters are not normally pertinent to application proceedings, applicant's failure to abide by terms of tariff published by tariff bureau while a member thereof was a violation of the act, since a foreign operator, by participation in a joint rate with a United States carrier, becomes subject to terms of the act to extent of the joint rate. However, since that violation was likewise due to applicant's mistaken belief that its activities were not subject to the commission's jurisdiction, a finding of unfitness on that ground is not warranted.—Id., p. 927-8.

Since applicant's past transportation of stockmen between Chicago stockyards and Ames, Iowa, was conducted under color of right and without any attempt at subterfuge, application should not be denied for unfitness, especially as denial would leave the Iowa stockmen without adequate transportation service to and from the stockyards.—Myers, 89 M.C.C. 125 (129)*.

Although applicant's drivers were delinquent in accepting a shipment from a retail store and in accepting 5 shipments exceeding 50 pounds, in violation of restrictions in its certificate, and such violations are not condoned, they fall short of establishing that those restrictions cannot be satisfactorily administered or that applicant is unfit to conduct proposed extension operation.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (742-3)*.

Though applicant has disagreed with the commission's interpretations of various sections of the act, has actively taken issue with its holdings as to exempt or nonexempt status of certain commodities, and continued to perform certain transportation after revocation of his certificate therefore, his theory that all commodities he transported were exempt received encouragement from certain court decisions, and he has operated under a bona fide belief that his theory was correct. He has always accepted responsibility for his actions, has cooperated with commission personnel during surveys of his operations, and his conduct has never approached a willful and flagrant disregard of the law; he may therefore be found fit to conduct the operations authorized.—Hughes, 89 M.C.C. 471 (476, 484)*.

While applicant continued transporting frozen potato products after denial of its "interim" application filed under §7(c) of Transportation Act of 1958, it did so on advice from Bureau of Motor Carriers that such transportation would be considered lawful pending final determination of proceeding on exempt status of frozen cooked vegetables; therefore, although decision therein (81 MCC 649) held commodities such as frozen french fried potatoes to be nonexempt, applicant's transportation thereof does not reflect upon its fitness.—Midwest Coast Transport, Inc., Extension, 88 M.C.C. 587 (588, 591)*.

Although applicant has engaged in some questionable leasing practices and transported some shipments after his temporary authority therefore was revoked, he is found fit to perform proposed service when there is no indication that legality of his leasing operations was questioned prior to hearing on instant application or that he is now engaged in any unauthorized transportation activities, and he ceased the unauthorized operations upon learning that he lacked appropriate authority. Considerable weight is accorded applicant's status as a new operator whose oversights apparently resulted from ignorance of regulatory requirements; fact that he has never been cited for violation of safety regulations, and his highly satisfactory performance for supporting shippers, are also taken into account.—Dennis, 92 M.C.C. 135 (140).

However, grant of authority should not be construed as condoning applicant's past unlawful activities. He is admonished that he has an affirmative duty to conform to requirements of the act and the commission's regulations thereunder, and that mere compliance after notification of a deficiency is not enough; that duty requires his constant and continuing interest to ensure that his operations are in total conformity with the commission's rules, and he is reminded that upon is-

suance of certificate he becomes an authorized carrier subject to regulation and should be governed accordingly.—Id., p. 140.

In determining a carrier's fitness, consideration must be given the nature and extent of its violations, any mitigating circumstances shown to exist or to have existed, whether its conduct represents a flagrant and persistent disregard of provisions of the act, and whether it has made sincere efforts to correct past mistakes.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (734).

Applicant has made substantial progress in bringing its operations into line with requirements of regulation. It has ceased its gateway violations and, although there is room for additional improvement, has inaugurated a safety compliance program which has had a high degree of success; its unauthorized transportation of certain commodities was at least undertaken under some color of right, and extension application was filed as soon as its authority was questioned by a commission representative; in the circumstances a finding of unfitness is not warranted.—Id., p. 734.

Applicant's continued transportation of repossessed automobiles after two investigations does not reflect adversely on his fitness when the first resulted in a letter allowing it as private carriage, and in the second, after his transportation activities had presumably increased, no action was taken. And while his continuance of unauthorized transportation after institution of a third investigation and before he received temporary authority is not condoned, no official action was taken in that proceeding for some months; considering former character of his operations and aura of uncertainty that surrounded them, together with his assertion that he considered the investigation proceeding as appropriate a vehicle for determiing character of his operations as alternative of filing a motion to dismiss his application, there is no fitness bar to his obtaining such authority as may be needed.—Nash—Investigation of Operations, 89 M.C.C. 463 (469).

While certain of applicant's operations from Kentucky origins to Memphis are not authorized under its "grandfather" certificate, applicant had reasonable basis for concluding otherwise, especially since the commission now finds it necessary to clarify that ambiguously drafted certificate; applicant's prior operations, conducted in good faith under a color of right, do not impugn its fitness for proposed operation for which need has been demonstrated.—Southern Forwarding Co. Extension, 91 M.C.C. 221 (227).

While not condoning unauthorized operations, the commission has long recognized that it may not be in public interest, where convenience and necessity are clearly established, to deprive a shipper of a needed service where extenuating circumstances, such as misadvice, attend past unauthorized operations. Applicant has conducted operations for which authority is now sought for over 5 years under color of right and upon advice of cousel, and considering the original wording of its "grandfather" authority and changes therein in course of successive transfers (applicant being the fifth transferee), it cannot be concluded that its unauthorized operations were conducted willfully. Applicant is experienced in the type of transportation involved, has been rendering service satisfactory to supporting shippers, and is financially fit; in the circumstances, concurrent finding that its past performance of such service was unlawful does not require a finding of unfitness. Denied on other grounds.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (580, 585)*.

That one of applicant partners, who was formerly a distributor of liquefied petroleum gas, sold his interest in the distributorship to a brother does not warrant finding that applicants' relation to supporting shipper, a producer of LPG, would be inconsistent with public interest. There is no contention that the partner's sale to his brother was not bona fide; he testified that his brother paid cash for his interest, and there is no evidence that he or any of his brothers ever had any financial interest in supporting shipper; therefore there is no secondary business or personal relation between applicants and the shipper. Substitution of a corporate applicant for the partnership does not affect this conclusion, since it is a change only in form rather than in actual management or control of the carrier. Applicant is fit to perform proposed service; however, should conditions change and any un-

lawful relationship or practice arise, any injured party may file appropriate complaint.—Wooten and Parker Extension, 92 M.C.C. 530 (532)*.

Applicant's refusal to accept collateral determination in four earlier proceedings in which appeared as a protestant, that territorial description in its authority to serve points "in Connecticut, Pennsylvania, New Jersey, and New York within 100 miles of Columbus Circle" restricted its territory in all four States, and its failure to initiate a proceeding for clarification of its certificate, did not amount to defiance of the commission or demonstrate any unfitness. If the prior collateral determinations are correct, applicant might be unable to claim good faith operations as justification for additional authority; however, it is not attempting to do so, but claims to hold unrestricted authority for the three States first named, and it should not be characterized as perfidious for refusing to accept what amounts to a "Humpty Dumpty" interpretation of its certificate. Thus, in view of the novelty of the interpretative problem presented, no finding of unfitness can be predicated on unlawfulness of applicant's operations beyond scope of that authority.—T. I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (10-12, 16)*.

In addition, after being convicted and fined for hours-of-service violations, applicant appears to have discontinued the offending practices, and it would be improper to increase the court-imposed penalty when that action has apparently been effective in securing applicant's compliance; and its violations of the safety regulations consisting of a number of minor infractions over a long period, when balanced against applicant's extensive operations and satisfactory accident record, do not even suggest a finding of unfitness. Therefore, all things considered, an affirmative finding as to applicant's fitness is warranted.—Id., pp. 16-17.

While issue of applicant's fitness is questioned in another proceeding, inasmuch as that proceeding does not involve unsafe operations or safety violations by applicant, applicant can properly found to be fit to perform the proposed interchange service; proposed operation would improve applicant's safety of operations and afford greater safety to the general public. This finding, however, is specifically limited to instant proceeding, and shall not be construed to foreclose a contrary finding in any other pending proceeding.—Daily Exp., Inc., Extension, 95 M.C.C. 106 (108-9).

That legality of applicant's present operations under its modified heavy-hauling authority is under consideration in several other proceedings does not reflect on its fitness to perform proposed transportation of steel reinforcing rods.—Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (392).

Since certain of applicant's operating practices are questioned in pending purchase proceeding, it would be inappropriate in extension proceeding to make any finding respecting its overall fitness. However, as only alternate routes are sought in connection with presently authorized operations and applicant does not propose a new service, it can properly be found fit to receive such authority. But that conclusion is specifically limited to instant proceeding and does not foreclose any possible contrary finding in any other proceeding involving applicant.—Illinois-California Exp., Inc., Extension, 92 M.C.C. 125; Ringsby Truck Lines, Inc., Extension, 88 M.C.C. 544 (545).

While fitness need not be considered in view of lack of need for proposed service, applicants' unlawful leasing arrangement, their unauthorized leasing of vehicles to shipper as a contract carrier, and their repeated unlawful transportation of mixed loads of regulated and unregulated commodities has placed their fitness in very real question. Applicants are admonished that continued violations may subject them to fines and/or proceedings looking toward revocation of their present authority.—Hulme Extension, 91 M.C.C. 575 (581).

Delay in final determination of extension applications, due to further hearings respecting applicant's fitness, has had a salutary effect in that applicant has shown commendable improvement in its attitude toward commission's regulations, terms of its certificates, and safety of the general public, and its drivers have achieve a satisfactory degree of compliance with hours-of-service regulations.

Though the placing out of service of 13.8 percent of its units of equipment road-tested during a 6-months period is unfavorable, and it is admonished to bring all its operations into full compliance, applicant's fitness must not be judged in a vacuum; that percentage compares substantially with the national average; all things considered, applicant has improved its operations to the point that it can be found fit to receive additional authority.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 255 (259)*.

Applicant has now demonstrated that it is fit and able to perform proposed transportation of roadmaking machinery, etc., from South Bend, Ind., for which need has been found; after operating under present ownership for about 5 years, it is thoroughly experienced in such transportation, has a completely equipped terminal at South Bend, and maintains adequate equipment; it enjoyed a modest profit in the 2 months following filing of application, and anticipates profitable operations; proposed extension should afford it opportunity to improve its financial position; authority granted to 36 States.—Taylor Heavy Hauling, Inc., Extension, 88 M.C.C. 208 (210)*.

Examiner's observation that applicant has not proved its fitness, based apparently on his belief that it is not observing the peddle service restrictions in its outstanding certificate, is not supported by the record. That applicant's president was unable to explain clearly the precise effect of that limitation was due primarily to its inherently vague contours; reasons making compliance difficult for applicant are essentially the same as those causing the commission to look with disfavor on peddle service limitations.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (61).

Applicant's experience in operating profitably in transportation of new furniture from Hazelwood, N. C., to Oklahoma and Texas indicates it will probably be able to continue operating profitably over greater distances under extension authority granted from other North Carolina origins to those and three other southwestern States and California.—B & P Motor Lines, Inc., Extension, 86 M.C.C. 719 (721)*.

Applicant's past transportation of butter and fresh or frozen meat under "agricultural products" authority does not warrant finding it unfit; that authority and "agricultural commodities" authority involve a complex and somewhat confused area; however, in view of finding that such authority does not embrace those commodities, applicant is admonished to discontinue such unlawful practices.—Yeary Transfer Co., Inc., Extension, 88 M.C.C. 473 (477-8).

While applicant's leasing arrangements with a shipper appear to be unauthorized and in violation of §207.6 of the leasing regulations, and its records do not comply with condition in its Sub-No. 1 certificate requiring it to maintain separate records and accounts for its private and for-hire operations, hearing on present application followed so closely the grant of that certificate and applicant's incorporation that such violations warrant only an admonition at this time. However, applicant is directed to take appropriate measures to ensure compliance with all applicable regulations and with restrictions in its certificates; fact that it is being the benefit of the doubt and granted a certificate does not license it to conduct any illegal activities in the future; and such admonitions should be followed strictly and with celerity.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (585-6)*.

Though neither applicant's failure to provide in its tariffs for unloading of shipments from rail cars, furnishing of special pallets, and provision of storage prior to delivery, all of which it does without charge in addition to the line-haul rate, nor its operation beyond scope of its authority in transporting shipments from its warehouse at an unauthorized origin, appears to have been in intentional disregard of its obligations as a regulated carrier or to require finding it unfit to receive extension authority sought, such violations are not condoned and it is admonished immediately to take steps to comply fully with the provisions of the act and regulations thereunder.—Paul Marckesano & Sons, Inc., Extension, 86 M.C.C. 727 (731-2).

Although, in prior report, applicant was properly granted authority to perform service shown to be needed, since that decision an investigation was instituted to determine whether it has been transporting commodities

not authorized by its certificate and whether it has been unlawfully extending credit; until that decision, a statutory finding of fitness would not be warranted; therefore, issuance of certificate is withheld pending outcome of the investigation proceeding.—C & H Transp. Co., Inc., Extension, 94 M.C.C. 711 (720)*; likewise, inasmuch as applicant's operations are the subject of a pending investigation, a finding that it is fit to provide the needed service cannot be made at this time. Proceeding held open for further consideration of applicant's fitness after final disposition of the investigation proceeding.—Home Transp. Co., Inc., Extension, 95 M.C.C. 128 (132).

Since applicant's fitness has been placed in issue in a new pending application proceeding, a finding of fitness in instant case would be premature and inappropriate. Therefore, while need is found for proposed service, proceeding is held open for further consideration of applicant's fitness after determination of the pending proceeding.—Ace Lines, Inc., Extension, 91 M.C.C. 559 (568); the question of applicant's fitness being involved in other application proceedings, grant of authority is conditioned upon a favorable finding of fitness in those proceedings.—Clay Hyder Trucking Extension, 89 M.C.C. 757 (762); similarly, as questions concerning common control and applicant's past operations have been raised in other proceedings, finding of applicant's fitness and issuance of certificate are conditioned upon favorable determination in those proceedings.—Milk Transport, Inc., Extension, 91 M.C.C. 280 (283).

Violations of a State's maximum weight laws may be considered in determining a motor carrier's fitness.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (408).

Inasmuch as demand for proposed special or charter-party service, especially at the commencement of operation, will not be so great as to require applicant to augment his equipment to any substantial degree, the fact that he only has two vehicles presently does not necessarily mean that he cannot meet the future increased demands for service; moreover, he is financially able to add more limousines to his fleet either by purchase or through legitimate leasing if necessary. Also, while applicant may have conducted numerous interstate trips unlawfully, he ceased all such trips when informed of impropriety thereof, and he is desirous of conforming with all commission regulations. Applicant found fit, financially and otherwise, to conduct proposed operation.—Canzano, 95 M.C.C. 568 (574)*.

Although special and charter operations conducted by applicant for many years were in numerous instances unauthorized, evidence indicates that similar operations were conducted by its predecessor since before 1935 without question, and there is no record support for conclusion that applicant acted other than in bona fide belief that it was operating under color of right. Moreover, it has filed application for appropriate authority and has made full disclosure of its operations. In the circumstances, a finding of unfitness is not warranted.—Trans-Bridge Lines, Inc., Extension, 96 M.C.C. 506 (512-3)*.

Though applicant, an intrastate carrier, engaged in unauthorized interstate charter operations for a number of years and also for a time participated in such operations under an unlawful leasing arrangement with another carrier, his meager educational background and unfamiliarity with commission regulations are an extenuating factor, and it is significant that on each occasion when he was informed by a commission representative of unlawfulness of a particular operation he discontinued the service; moreover, his refusal on a number of occasions since then to handle interestate charter movements indicates sincerity of his expressed intention to conform to regulation by the commission. In the circumstances his part violations, while not condoned, do not bar grant of authority sought.—Blunt, 92 M.C.C. 306 (307, 309)*.

Since applicant is already operating over other authorized routes between the New York City and Newark, it may properly be found fit to operate over the shorter and safer route granted via George Washington Bridge, notwithstanding findings in investigation proceeding of numerous violations of the commission's orders and regulations. However, such finding of fitness shall not operate to exempt operations conducted over the new route from compliance with safety and other

regulations in the manner and to the extent required generally by order entered in the investigation.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (951)*.

The primary purpose of the statutory requirement that an applicant be found fit before a certificate may be issued is not to punish the applicant for past offenses, but to protect the public from carriers unwilling to operate in accordance with the requirements of regulation. In determining fitness, the nature and extent of applicant's violations must be considered, as well as any mitigating circumstances, also whether its conduct represents a flagrant and persistent disregard of provisions of the act and whether it has made sincere efforts to correct past mistakes; thus it is entirely proper to consider an applicant's past convictions and improper conduct where they reflect on its present fitness. It is incumbent on a carrier to comply with regulations whether or not violations are specifically called to its attention: a fit carrier endeavors to be continually in compliance through its own efforts and not because of direct, coercive supervision.—Interstate Dress Carriers, Inc., Extension, 92 M.C.C. 142 (146, 147).

Applicant was guilty of a number of serious violations during the 1950's, and at or shortly before the hearing it was shown to be committing further serious violations by failing to completely identify shipments on its bills of lading for rate purposes, by failing to collect transportation chages within the allowed time limitation, and by failing to assess minimum charges on certain shipments. It is significant and indicative of the aggravated character of those violations that they place applicant in a position to make concessions to favored shippers, although it is not shown to have actually performed discriminatory acts in committing them.—Id., pp. 146-7.

Moreover, applicant has made no positive effort to ensure that its activities are in full compliance with the requirements of regulation; its compliance efforts are entirely recent and result from investigation of its operations shortly before the hearing and from its desire to avoid a finding of unfitness in instant proceeding. In view of its past violations, and in absence of a demonstrated sincere desire to correct its past mistakes, applicant cannot be found fit to conduct proposed operations; consequently, the commission need not consider whether public convenience and necessity require those operations. Applicant is admonished to take immediate and comprehensive steps to bring its operations into full compliance and to ensure that no additional improper practices arise in the future. Where its violations result from competitive pressures among carriers serving a difficult and demanding industry, applicant should invoke assistance of the commission's field staff or other appropriate agencies in order to avoid violations. Denied.—Id., p. 147.

The record establishes that applicant has engaged in numerous unlawful operations; in fact, applicant was still serving one shipper unlawfully even after his court conviction, and was serving other shippers immediately prior to this conviction. In spite of numerous warnings, and with full knowledge of the requirements of the act, applicant has demonstrated a flagrant disregard for the law, and has not offered any explanation for his contumacious conduct. Any individual who willfully ignores the primary requirement that he obtain operating authority can hardly be trusted to comply with the obligations a regulated carrier is expected to observe in his relations with shippers and the general public. Nor can evidence based on willful unlawful transportation be used as grounds for establishing public convenience and necessity. Denied.—Jones, 96 M.C.C. 100 (103).

Applicant filed no exceptions to examiners' conclusions that words "Merrick, Long Island, Nassau County, N.Y." in its present certificate refer to a single origin point, Merrick N.Y., that it holds no authority to originate considered traffic from any other point and, hence, should cease and desist from serving points, other than Merrick, under such authority; giving applicant the benefit of any doubt, however, examiners also found that its past operations did not render it unfit to conduct proposed operation. Had applicant ceased its unauthorized operations, it might have been found fit to receive extension authority sought; but it failed to do so and its open and flagrant continued unauthorized service from considered origin, as shown by record in a subsequent application proceeding

involving substantially similar authority, leaves the commission no alternative but to find that its actions constitute a willful refusal to abide by the act and the commission's rules and regulations thereunder. Applicant found not shown to be fit properly to perform proposed service; denied.—Kennedy Motor Lines, Inc., Extension, 95 M.C.C. 499 (501-3).

Though all of applicant's interstate towage of wrecked or disabled motor-carrier vehicles was unlawful prior to grant of temporary authority, such activities might be understandable, in view of his reliance on a proposed amendment of the act to exempt wreckers, if he had ceased illegal operations at or shortly before the time he first applied for temporary authority. On the contrary, although he was advised on several occasions that his operations were illegal, he continued openly to flout the provisions of the act; such actions cannot be condoned nor applicant found fit; application denied.—Young, 91 M.C.C. 445 (447, 453).

Applicant's transportation of a number of commodities under its heavy-hauling authority has resulted in continuous disagreement with, and substantial litigation before, the commission. Principles of interpretation established in prior proceedings involving applicant are completely unsusceptible of strained construction which applicant advances as an excuse to transport considered commodities. A condition precedent to operation under commission authority is compliance with the act and the commission's rules and regulations, but applicant has made no attempt to follow guidelines laid down in earlier cases involving its authority; a carrier which takes regulation so lightly should not be granted additional authority. Finding of fitness is not justified; authority sought for additional commodities, denied.—W. J. Dillner Transfer Co. Extension, 91 M.C.C. 667 (669, 672).

Before granting motor-carrier authority, the commission must find, among other things, that applicant is fit and able, financially and otherwise, to conduct such operations. Statements in last recommended report relative to applicant's current accident record and improved safety program, and the letter from its counsel stating matter of its fitness had been disposed of, do not show that applicant is now fit; record shows that applicant's violations of the act and the commission's safety regulations are continuing; denied.—Service Transport Co. Extension, 94 M.C.C. 255 (257-9).

Applicant has failed to establish his fitness to provide proposed service; evidence shows numerous violations of commission's leasing regulations and persistent violations of safety regulations despite numerous warnings. Necessity of observing minimal safety standards may not be minimized because of applicant's zeal to expand. Applicant has instituted a new safety program but its effectiveness is not indicated in sufficient detail, and his history of continued violations in face of repeated warnings and the gravity of certain offenses must be considered in determining whether improved conduct in the future will materialize. Before additional authority is granted, applicant should be required to show his experience during the past 2 years under the new safety program.—Davis Extension, 91 M.C.C. 623 (632-3).

Applicant has failed to show that it is entitled to a certificate where the record shows a continuing picture of violations of the act by its president, who, rather than seek commission approval of contemplated dual operations, transferred his individual permit to a personal friend and then became manager of those operations, assuming complete control over his own former contract carrier operation. Even though the common control did not require commission's approval, the resulting dual operations did. Parties were repeatedly informed that they were in violation of the act, but nothing was done to rectify the situation.—Johnstown Motor Freight, Inc., Extension, 94 M.C.C. 167 (170-1).

Past conduct of applicant's president and sole stockholder renders him personally unfit to receive operating authority, and since applicant is merely his alter ego, his actions preclude finding that applicant has shown itself fit. While his conviction for performing unauthorized transportation was based on violations committed 3 or more years ago, and his recent conviction by State court of receiving stolen property has been appealed, applicant has the burden of proving its fitness as a

basic element of its case; the record falls far short of showing that its management is willing to comply with requirements of the act and the commission's regulations. Application denied.—Gouverneur Trucking, Inc., Extension, 92 M.C.C. 621 (623).

Applicant's past record of continued and apparently willful non-compliance with commission's regulations concerning hours of service, drivers' logs, accident reports, and other safety requirements renders it unfit for grant of requested extension, particularly as its president, while an individual operator, was fined for such serious violations as operation of equipment with defective brakes and other dangerous defects; its very recent corrective efforts and safety program are not persuasive of its fitness when all of the reform procedures had not actually been instituted at time of hearing. Denied.—McCue Transfer, Inc., Extension, 89 M.C.C. 296 (297-8).

Extension authority to serve an additional intermediate point for purpose of interchange is denied when applicant's acquiescence in continuing unlawful control by a connecting carrier over transportation ostensibly performed under applicant's regular-route rights, together with accompanying dormancy of its own operations, precludes finding it fit to conduct the operations proposed.—Stewart—Investigation of Control, 87 M.C.C. 681 (698).

Financial fitness: [Vols. 16, 18, 19].—Inasmuch as applicant's current assets and capital accounts indicate an ability to meet its obligations as they come due, it already owns equipment suitable for considered commodities, and is otherwise fit, the application should not be denied because (1) applicant's practice of not including equipment obligations due within 1 year in its "current liabilities" accounts is contrary to the Uniform System of Accounts regulations, and (2) its balance sheet reflects an operating loss in 1962 and that its current liabilities and equipment obligations due within 1 year exceed its current assets.—Schwerman Trucking Co. of N.Y., Inc., Extension. 94 M.C.C. 683 (684-5, 686).

Applicant who operated at a profit in 1961 and already owns sufficient equipment suitable for proposed operation found financially fit in view of limited grant of authority and fact that his ability to meet current financial obligations is uncontradicted.—Kramer Extension, 91 M.C.C. 16 (19).

Applicant which has operated profitably in each of 10 preceding years and has assets in excess of $11,000,000 is fit financially to perform proposed service.—Schwerman Trucking Co. of Ala., Inc., 89 M.C.C. 628 (629)*.

The record does not warrant conclusion that applicant is not financially fit to conduct proposed operations because it had operated at a loss in recent years and owes its parent company approximately $516,000. Aside from that debt, applicant is in fairly strong financial position; its balance sheet shows current assets of $839,504, and current liabilities, excluding debt owed the parent company, of $503,311. Applicant is fit and able, financially and otherwise, to conduct proposed operations.—Braswell Freight Lines, Inc., Extension, 95 M.C.C. 457 (460-1)*.

Applicant may be found financially fit to conduct proposed operation from Greeley, Colo., to seven eastern cities when it has been conducting similar operations at a profit from Denver. While it relies largely on transportation of exempt commodities or leasing of its equipment to other authorized carriers for returns trips, there is nothing unlawful in such activities, and it has demonstrated that the proposed operation is economically feasible. —Curtis, Inc., Extension, 92 M.C.C. 25 (31)*.

Though applicant's current liabilities greatly exceed its current assets, proposed service will not require any financial outlay for terminals or equipment, will permit it to make more efficient use of equipment it now operates, and should enable it to improve its financial position. Applicant is currently operating at a profit and may be found financially fit.—Freeport Transport, Inc., Extension, 89 M.C.C. 168 (169).

Although applicant sustained a considerable net operating loss in 1960, its net worth is substantial and its financial condition has improved during first quarter of 1961; further, such loss is partly attributable to large expenditures on its safety program which has resulted in steadily declining accident ratio; applicant found fit and able to perform proposed service.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 657 (658)*.

Since financial condition of one applicant, as shown on its yearend balance sheet, raises serious doubt of its ability to continue to provide service, its application is reopened for further hearing on that issue.—Hatom Corp., 91 M.C.C. 725 (734)*.

Financial exhibits of corporate applicant currently engaged in equipment leasing, as modified by testimony of individual who organized it, show current assets considerably less than equipment obligations due within a year. At time of hearing it had issued no stock, and its balance sheet did not reflect as a stock subscription $26,000 advanced by its organizer for stock to be issued later, which he explains was used for payments on equipment. The inconsistent evidence relating to applicant's financial position fails to show ability to undertake the new responsibility of a motor common carrier; and financial fitness of its potential stockholders is not only not a satisfactory substitute for that of a corporate applicant, but those involved do not appear able financially to support the corporate obligations even if willing.—Colorado-Arizona-California Exp., Inc., 92 M.C.C. 89 (98)*.

Following the traffic: [Vols. 11, 12, 14, 16-19].—The commission's holding in 61 MCC 748, sustained 120 F. Supp. 277, that grant of authority cannot be justified solely on the "follow the traffic" theory, does not entirely reject any consideration to a "follow the traffic" basis for authority but teaches that such theory cannot alone be the ground for such grant. If there are, or may be, other factors justifying a grant based on public convenience and necessity, a carrier might be allowed to follow its traffic through grant of new authority. There was sufficient evidence in application proceedings for the commission's findings that (1) there would be substantial increase in petroleum products traffic from considered pipeline-terminal origins to destinations involved because of shippers' changes in distribution and marketing patterns; (2) multiple carrier service was needed; and (3) competitive sharing of the rerouted traffic would be in accord with objectives of the national transportation policy. Those findings being supported by substantial evidence, the court cannot set them aside.—Petroleum Carrier Corp. v. United States, 258 F. Supp. 611 (613-15, 617)*; Id., 258 F. Supp. 617 (618-19)*.

Desire of two railroad subsidiaries to serve supporting shipper from its new distribution facility at Oakbrook, Ill., to Chicago involves aspects of the "follow the traffic" theory, and carriers have been allowed to follow the traffic where existing carriers will not be harmed or where there is need for service of a particular carrier. Shipper anticipates need for expanded service at Oakbrook due to increased production, and dearth of motor carrier opposition to instant applications indicates that any harmful effect of approval on existing carriers (27 of whom have been authorized to serve the new plant) would be minimal. Granted, subject to plant-site restrictions.—New York Central Transport Co. Extension, 92 M.C.C. 173 (177-8)*.

Applicant has been transporting glass products from various plants of supporting shipper for some 40 years and, after shipper transferred its assembly and distribution warehouse to Greencastle, Pa., continued to provide service from latter point but, owing to circuity involved, obtained temporary authority from the Greenville plant to the destination territory embraced in present application for permanent authority. Shipper, because its customers generally maintain small inventories and order its products only as needed, requires stopoffs and multiple delivery within definite time limits and has been using over 100 different stopoff combinations throughout its marketing area. It has generally found interline service unsatisfactory for such movements, and protestants' authorities are not sufficiently comprehensive to provide the complete and direct service needed, whereas applicant under temporary authority has demonstrated ability to provide a reliable service of type desired. Outbound authority granted to all destinations sought except those in Connecticut, but no need is shown for backhauls of commodities used in manufacture and distribution of glassware except from New York-New Jersey area authorized.—H. W. Taynton Co., Inc., Extension, 94 M.C.C. 1 (3-4)*.

Follow-the-traffic theory has little application to question of whether restriction to traffic originating in California on applicant's

secondary authority for transportation of new automobiles from Spokane to Washington and Idaho points should be removed. Most of the traffic will continue to originate in California, and there is no reliable evidence that manufacturer which controls the routing contemplates any substantial change in its method of distribution.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (570).

Under the "follow the traffic" principle as generally applied since 61 MCC 748, grant of authority to continue serving same shipper from a new location is not warranted on a mere showing of loss of traffic, without proof that existing service in the new location is inadequate. The same principle applies where closing of a warehouse requires a change in distribution and shipper wants applicant to serve several destinations in dropoff service rather than the one destination formerly served. Adequate service is available from existing carriers whose services shipper has found satisfactory in transportation of its products in other destination areas; denied.—Webb's Transfer, Inc., Extension, 91 M.C.C. 297 (299, 300).

Applicants presently serving supporting shipper from its Portland, Oreg., petroleum distribution terminal seek authority to continue serving it from its new terminal at Vancouver, Wash., 8 miles distant; however, shipper's support is based wholly on its and its customers' preference for applicants' services, not on any inadequacy of existing service at Vancouver. While each case of "following the traffic" must stand on its own merit, principle of 61 MCC 748 that a grant of authority on a mere showing of loss of traffic without proof of lack of adequate existing service in the new location would be contrary to law and to sound reasoning is clearly applicable. Denied.—Salem Nav. Co. Extension, 91 M.C.C. 699 (701, 703).

Foreign commerce: [Vols. 10, 11, 14, 16, 18, 19].—Review of the record fairly establishes that no material inadequacy exists in services of existing carriers presently handling international traffic between the United States and Mexico. Applicant failed to demonstrate how or in what manner its proposed service via Laredo, Texas, would be any more satisfactory than that offered by such existing carriers, or how it would expedite the movement of traffic across the international boundary. Furthermore, even if it could be instituted, proposed through-trailer service would be of little benefit to supporting shippers. Proposed operations would provide only an additional competitive and unneeded service; denied.—Yellow Transit Freight Lines, Inc., Extension, 94 M.C.C. 153 (159-60)*.

Where applicants seeking operating authority between international boundary points and points in United States hold authority from Canadian origins to appropriate border points, the commission need not consider the need for service at points in Canada or effect of a grant on Canadian carriers, since those issues have already been resolved to satisfaction of the Canadian authorities. What is pertinent is the extent to which each applicant has established a need for service to particular destinations in United States, and its fitness and ability to operate in this country in a manner consistent with the commission's regulations.—Norton, 92 M.C.C. 82(87).

Evidence supports grants of authority enabling two Canadian applicants to conduct charter passenger operations, in foreign commerce only, between described ports of entry and points in the 48 contiguous States; in view of the broad area sought and the numerous specific points to which public witnesses indicated need for service, authority granted should not be atomized by limiting extent of its application; and no reason appears for restricting origin points to specific points within territorial limits of applicants' Canadian rights. However, authority sought by one applicant for operation to Alaska is denied since that State cannot be reached via the ports of entry specified in its application.—Id., p. 87.

Authority granted will allow applicant to move considered traffic, in foreign commerce only, over Canadian highways to port of entry at Noyes, Minn., thence over U.S. highways to port of entry at Detroit, thence over Canadian highways to Buffalo-Niagara Falls ports of entry for interchange; however, issuance of certificate is conditioned on applicant's submission of a sworn statement that it has obtained appropriate authority from the Canadian authorities. Also, applicant is admonished that authority from the commission is necessary to move traffic within U.S. boundaries at Niagara Falls or Buffalo ports of entry for interchange or otherwise.—Leamington

Transport, 91 M.C.C. 647 (651)*.

See also Overland Exp. Extension under *Interchange*, below.

Authority granted to transport refractory products from Pennsylvania and New Jersey points to Canadian ports of entry in New York and Michigan, restricted to shipments moving to Ontario destinations, and conditioned on issuance of appropriate authority from the border points by Canadian regulatory authorities. Supporting shippers producing a large quantity of such products require single-line motor service because the traffic is susceptible to damage by excessive handling, direct service is more expeditious, and rail service involves excessive transit time.—Freeport Transport, Inc., Extension, 89 M.C.C. 168 (171).

Household goods: [Vols. 12, 16, 18, 19].—Both applicants, "independent" household goods carriers, have been meeting a public need in transportation of household goods between sought territories and their authorized points through interline service performed prior to and subsequent to "grandfather" days; however, protesting nationwide van lines do not interline with them. Record clearly shows that applicants' present interline arrangements are unsatisfactory and threatened with termination, whereby the public will be deprived of a needed service; that no adverse effect has resulted from their past interline service; and that termination of such interline service would constitute an interference with the public interest. Such evidence demonstrates a public need for proposed service; both applications granted.—Burnham Van Service, Inc., Household Goods—13 States, 98 M.C.C. 58 (62-5)*.

Present and future public convenience and necessity, require proposed transportation over irregular routes, of household goods as defined in 17 MCC 467, between points in Colorado, Kansas, Oklahoma, and Texas, on one hand, and, on the other, points in Arizona, California, and New Mexico. Evidence establishes the tremendous growth in population and the accompaning economic growth of latter 3 States sought to be served, and survey of existing service to California is persuasive that protestants are unable or unwilling to provide the service required to meet the needs of shippers of household goods. Granted.—King Van Lines, Inc. Extension, 98 M.C.C. 19 (23-4)*.

Although there is merit to applicant's contention that its participation in transportation of household goods to and from points in the Dakotas under interline arrangement has for reasons apparently beyond its control resulted in unsatisfactory service to the shipping public, and service of one protestant has not been altogether adequate on shipments under 5,000 pounds, another protestant can serve directly or through its connecting carrier Greyhound all points in the broad territory sought, including the sparsely populated Dakotas, and no material inadequacy in that service is shown. In the circumstances, applicant's dissatisfaction with its existing interline arrangement and desirability of authority sought from an operating standpoint do not justify establishment of a competing service.—Wheaton Van Lines, Extension, 94 M.C.C. 489 (492)*.

Interchange: [Vols. 17-19].—A carrier seeking relocation of an interchange point need only show, in addition to operating efficiency and economies, that interline service possible through the new point will not be competitively different from that through the present interchange point. Applicant's proposed interchange of traffic at its new terminal at Roanoke, instead of at Rocky Mount or Martinsville, Va., would not be a new service, and grant of authority for interchange of trailers at Roanoke would merely permit more efficient handling of its existing interline traffic. Protestants' fears that applicant's competitive position would be strengthened because of the greater number of connecting carriers available at Roanoke are not justified, since its trailer equipment primarily is especially designed for furniture. Applicant has shown that its proposal will result in economies and efficiency, and even if its competitive position were improved no new or competitively different service would result. Granted.—Blue Ridge Transfer Co., Inc., Extension, 92 M.C.C. 463 (465-6).

Application involves only the transfer of applicant's existing point of interchange with connecting carriers from Lewistown to Carlisle, Pa; routes sought will enable applicant to

operate principally over safer Pennsylvania Turnpike instead of transporting considered heavy commodities over narrow mountainous highways presently used; moreover, no new or different service will result from relocation of the interchange point. In view of the benefit to the public from applicant's safer operations, authority sought is granted.—Daily Exp., Inc., Extension, 95 M.C.C. 106 (108-9).

Purpose of application is to permit applicant to interchange freight and trailers with connecting carriers (primarily its commonly controlled affiliate) at Sacramento in lieu of Oakland, California; Oakland terminal has become congested and its use requires applicant to traverse heavily congested areas. Routes sought will enable applicant to avoid heavily congested San Francisco Bay area and to effect operating economy and efficiency, and relocation of interchange point will not result in any new or different service. In view of the benefit to the public from applicant's safer operation, and the annual savings that will accrue to applicant, authority sought is granted.—Southern California Freight Lines Extension, 94 M.C.C. 467 (468-9).

Though applicant may serve points within corporate limits of Harrisburg, Pa., as a point within commercial zone of an authorized point on its Lewiston-Philadelphia route, it may not interchange shipments at terminals within the Harrisburg commercial zone beyond the corporate limits; as applicant's interchange service at Harrisburg clearly developed in response to public need, and public interest will be served by allowing it to continue to meet that need, authority is granted to serve Harrisburg for interchange of traffic, only, in connection with its regular-route operations.—Noerr Motor Freight, Inc., Extension 89 M.C.C. 589 (590-1).

See also the Hogan Storage & Transfer Co. case, n. 6 *Tacking*, above.

Applicant Canadian carriers have established public need for interchange of freight with United States carriers at points in Buffalo and Niagara Falls, N.Y., other than plazas adjoining customs stations. Congestion at the customs plazas preventing transfer of shipments there has occurred in the past and will doubtless do so on future occasions. To prevent situations where a carrier must choose between interchanging at an unauthorized point or turning back a loaded trailer, applicants should be authorized to serve the two cities adjacent to the international bridges solely for purpose of interchange with connecting carriers; within those limits, the precise location of interchange cannot affect competing carriers. More economical, safer, and more efficient interchange can be performed at motor carrier terminals in those cities than in the customs areas; moreover, the commission is reluctant to hamper the bridge authorities in controlling traffic in vicinity of the bridges by requiring interchange within the limited space of the customs plazas. Both applications granted accordingly, restricted to traffic moving to or from Canada.—Overland Exp. Extension, 92 M.C.C. 757 (765-6, 767).

Based on satisfactory past performance under color of right, together with expressed desire of numerous shippers for continuance of its service, Canadian applicant is granted authority to serve Buffalo and Niagara Falls, N.Y., solely for purpose of interchanging traffic with connecting carriers.—Fess Transport, 91 M.C.C. 924 (927, 928).*

No need is shown for proposed transportation by Canadian applicant of traffic originating in United States and received by it from connecting lines at its Canadian terminals for movement to Canadian destinations over routes partly through United States; supporting motor carriers have not shown with clarity the volume of traffic which can be expected to move to Canadian destinations, proportion thereof which might be tendered applicant for movement over United States highways, or assurance that they will continue to interline with applicant; and applicant's evidence is devoid of any figures as to amount of traffic which its proposed service might or could generate. Denied.—East—West Motor Transport, 88 M.C.C. 352 (355-6).

Intrastate certificate: [Vols. 16-19].—Since, as result of recent grant of authority between points beyond Ohio, applicant will no longer be eligible to claim benefits of the single-State proviso, principle of the Day case (53 MCC 672) is inapplicable to its application for certificate to continue its Ohio proviso operations.—Pedler—Control—All States Freight, Inc., 90 M.C.C. 491 (498).

It is well established that past lawful performance of transportation in interstate or foreign commerce under exemption of former single-State proviso is in and of itself evidence of public need for continuance thereof, and the same principle applies to amended §206. Vendor's past operations under the proviso and under the "grandfather" clause of §206(a)(7)(B), as continued by multiple-State vendee under temporary authority, support issuance of certificate to latter covering former's irregular-route rights as authorized in its State certificate.—Inland Exp., Inc.—Purchase—Frontier Dispatch, Inc., 93 M.C.C. 50 (53).

Evidence of past operations and public testimony demonstrate that vendor, prior to vendee's exercise of temporary authority, and vendee since, have provided substantial service to the shipping public in interstate commerce with respect to number of points served and volume of shipments, under vendor's §206(a)(7)(B) "grandfather" rights within a 50-mile radius of Springfield, Ill., and between that area and other Illinois points, that such service is responsive to supporting shippers' needs and cannot be provided by protestants alone, and that grant of authority therefor to multiple-State vendee is warranted. However, no need is shown for institution by vendee of new unrestricted service between all points in Illinois.—Chicago Kansas City Freight Line, Inc.—Purchase—Capitol, 97 M.C.C. 68 (73, 76).

Labor difficulties: [Vol. 19].—Grant of certificate to appellee on basis of inadequacies of service due to trunkline motor carriers' refusal under union pressure to interchange traffic with carrier stockholders was an improvident exercise of the commission's discretion; argument that attempted compliance with a cease-and-desist order by the unionized carriers might have so aggravated their labor difficulties as to cause a complete cessation of operations ignores the commission's conclusion that carrier aprehensions of teamster reprisals were exaggerated and unwarranted, and further ignores the fact that (as the commission was aware) the National Labor Relations Board had ordered the union to cease boycotting any of the stockholder carriers by appeal to employees of any other carrier. Moreover, 357 US 93 recognized the commission's power to enter cease-and-desist orders against carriers' violating the transportation law and their tariffs; thus there was no reason to assume that the ordinary processes of law were incapable of remedying the situation.—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (169-70)*.

This is not to imply that service deficiencies of the sort considered could never justify issuance of permanent operating authority; a totally different case might be presented if other remedial action by the commission or the Board proved fruitless, hopelessly time-consuming, or otherwise inadequate to terminate the interruptions in service. Nor does the Court pass on the commission's discretion to provide temporary authority under §210a pending determination of a §207 application or one for a cease-and-desist order, or as an alternative to permanent authority to remedy service inadequacies of that type.—Id., p. 171, Note.

The Court does not wish to fetter the commission's expert, discretionary powers by specifically prescribing in the instant case that cease-and-desist order relief (if relief is still needed) be granted rather than additional certification; nevertheless the commission should be particularly careful in its choice of remedy because of the possible effects of its decision on functioning of the national labor relations policy. Whatever it does affirmatively may have important consequences upon the collective bargaining processes between the union and the employer, and it must act with a discriminating awareness of the consequences of its action; the policies of the Interstate Commerce Act and the Labor Management Relations Act must necessarily be accommodated, one to the other.—Id., pp. 172, 174.

Lease arrangement: [Vols. 12, 16, 18, 19].—Shipper-owned terminal facilities, see Southern Bulk Haulers case under *Public interest*, below.

Applicant's operations under its new equipment-lease contract, which specifically provides that lessee-carrier shall have full direction and control of the vehicles, drivers, insurance, and disbursement of operating expenses—though the costs will be reimbursed

to applicant by lessor—conform to the statute and the commission's regulations. Very favorable credit arrangements in the new lease seem to be no more than a liberal extension by the equipment leasing company, which is 50 percent owned by applicant's two major stockholders, to the carrier-lessee. Unquestionably there is need for a portion of proposed service; granted in part.—Florida Refrigerated Service, Inc., Extension, 94 M.C.C. 361 (362-3).

While protestants question the validity of equipment-leasing arrangements between applicant and other carriers under which supporting shipper is afforded through service from considered origin to destination, the record does not provide sufficient facts for the commission to make such a determination. Should protestants desire to pursue that contention further, appropriate commission proceedings are availalbe.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (479).

Noncompliance by carrier: [Vol. 16].—See *Fitness*, above.

One-way service: [Vols. 17-19].—Although evidence in support of proposed service from Minot, N. Dak., to Twin Cities is less persuasive than that supporting applicant's operation in reverse direction, restriction of regular-route authority granted in lieu of irregular-route to a one-direction movement is not desirable, since applicant would be unable to provide the shipping public with the additional services required of a regular-route carrier, and such a limitation on authority granted would be unduly burdensome.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 92 M.C.C. 558 (564)*.

While applications for irregular-route authority between points in seven States are supported by three producers of granular and pulverized limestone and by five contractors who use limestone, only the producers showed definite need for service from points in 4 of the 7 States sought where their plants are located; however, no need is shown for interstate service from either plant to points in the State where it is located. One-way authority to serve location of shippers' production facilities, to extent that need for interstate service is shown, granted.—Liquid Transporters, Inc., Extension, 94 M.C.C. 615 (617, 618).

One-way authority granted for transportation of jet thrust units for interceptor missiles from Redstone Arsenal in Alabama to one destination in Utah and one in Washington; though return shipments of salvaged units may be made to point of manufacture, such shipments are sporadic and of uncertain origin; authority for return movement is therefore not warranted.—Baggett Transp. Co. Extension, 88 M.C.C.3 (8, 10)*.

Operation in connection with other business: [Vols. 10-15, 18, 19].—See also Ralph A. Veon, Inc., case, §209(a)(1), n. 29.

Under principle of 7 MCC 369 condemning authorization of for-hire carriage in connection with private carriage in reverse direction, reaffirmed in 92 MCC 248 which emphasized the deleterious long-term effects of exceptions to that policy, application for authority to transport fertilizers and feeds is denied when applicants' principal interest is livestock farming and proposed for-hire operation is admittedly designed to provide backhauls in connection with their private carriage of livestock to Chicago and Madison, Wis., markets.—Taylor and Lambert Extension, 92 M.C.C. 783 (785-6).

Principle of 7 MCC 369 against grant of for-hire authority to applicants also operating as private carriers in connection with a primary noncarrier business, which was reaffirmed in 92 MCC 248, is not applicable to proposed transportation of toilet preparations by applicant also engaged in sale and distribution of contractors' supplies a private carrier, since applicant's primary business is that of a motor common carrier, and it has been engaged for many years in for-hire transportation of various commodities pursuant to authority granted by the commission. Grant to such an applicant of authority sought will not have effect of fostering the growth of private carriage to detriment of carriers subject to regulation.—Wycoff Co. Inc. Extension, 92 M.C.C. 549 (550-1).

See also Derrico Co. case, §209(a)(1), n. 12.

Past operations:[Vols. 10-19].—See also n. 10, above.

Inasmuch as the route description in "regular and irregular route" portion of plaintiff's

"grandfather" certificate is clearly ambiguous, and the commission's finding of willfulness finds no support in the record, plaintiff's past operations from an origin in its irregular-route territory to an intermediate point on its regular route did not constitute a willful violation of the terms of its certificate; on the contrary, such service was clearly rendered under claim of right. Therefore, the commission erred in failing to consider and weigh such past service in determining whether public convenience and necessity required grant of authority sought.—Dixie Ohio Express, Inc. v. United States, 263 F. Supp. 993(999, 1001, 1003)*.

See also Armored Carrier Corp. v. United States under *Fitness, in general,* above.

In order for evidence of past operations to be entitled to consideration in determining whether there is need for such operations, they must have been lawful or, at least, conducted under some color or right; but prior unauthorized operations should be considered where they were undertaken under color of right or in the good faith belief that they were authorized. Plaintiff had been put on notice, by the commission's prior determination of the services a carrier of "packinghouse products" and "canned goods" could lawfully perform, that the past operations it relied on were unauthorized; the commission therefore properly refused to give any weight to evidence of those operations and properly denied plaintiff's extension application.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (468-9)*.

The commission has consistently held that public need may be shown by prior service, lawfully conducted, without additional testimonial evidence. That rule is a reasonable one; the reviewing court cannot conclude that the commission could not treat the fact, nature, and use of prior service of motor carrier of passengers as sufficient proof of public need for its continuance; grant of authority sustained.—Carolina Scenic Stages v. United States, 202 F. Supp. 919 (923, 925)*.

Plaintiff's contention that the commission is required to consider its past unauthorized operations as evidence of public convenience and necessity is without merit; unauthorized operations are not sufficient to establish public need for a service in absence of compelling reasons to the contrary.—W.T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (627)*.

Applicant seeking interstate authority to transport cement and fly ash from plant sites at Chicago, Ill., to points in described portion of Indiana, has transported those commodities for supporting shippers from and to points embraced in its Illinois and Indiana intrastate authorities and, also, has performed some interstate transportation within the Chicago commercial zone. In addition, applicant's equipment, drivers, and managerial talent have been leased by protestant and used by that carrier to perform much of the service involved; however, protestant's sale of its pertinent authority to another carrier has recently been approved. On reconsideration, therefore, since applicant has shown need for its proposed service which cannot be met by protestant, and denial of the application would deprive shippers of a needed service, authority sought is granted.—Storm, 96 M.C.C. 761 (762-3)*.

Although past operations are not alone conclusive proof of public need for their continuance, they are, where not conducted in willful disregard of the law, entitled to consideration in determining whether, on balance, public convenience and necessity require their authorization. Petitioner's unauthorized operations since 1935 over three regular routes between Manchester and Laconia, N.H., have been conducted, not in willful defiance of the law, but under a misapprehension of the true scope of its "grandfather" certificate. In those operations, conducted openly and without any element of pretense, disguise, or concealment, petitioner has proyided a highly satisfactory service which has attracted a substantial volume of traffic from a number of shippers. Those supporting extension application have come to rely on the superiority of petitioner's service and strongly express their need for its continuance, and that expressed need cannot be disregarded when it does not appear that protestants will be seriously injured. Granted.—Nashua Motor Exp., Inc.—Petition for Modification, 96 M.C.C. 583 (584, 586)*.

Applicant has transported supporting shipper's spreaders used for spreading aggregate on roadbeds and for agricultural and other purposes for almost 4 years under mistaken impression that it was authorized to do so under its authority to haul roadbuilding and construction machinery; however, upon being informed that such authority does not embrace transportation of spreaders used for agricultural purposes, it filed instant application for authority to transport a new spreader for such use. A substantial portion of shipper's traffic is presently handled by applicant; grant of authority sought would enable it to provide shipper with a needed complete and direct service, especially on mixed shipments of both agricultural and roadbuilding spreaders. On the other hand, protestant has not handled any of considered traffic, although authorized to do so, and may provide the service only over circuitous routes. Granted. —Matson, Inc., Extension, 96 M.C.C. 648 (650)*.

Applicant is authorized to transport canned and preserved foodstuffs from origin points to destination States and has sufficient equipment with which to conduct the proposed operation. Since 1956, it has provided an expeditious, multiple pickup and delivery service on both t.l. and l.t.l. shipments under mistaken belief that its existing certificate authorized such service; supporting shippers have come to depend upon applicant's service, and consider it to be highly satisfactory. Furthermore, although protestant has handled some of the traffic involved, it cannot perform the complete service required by supporting shippers; and, inasmuch as proposed service has been conducted for a number of years, it is unlikely that its continuance would have a materially adverse effect upon existing carriers; granted.—Coldway Food Exp., Inc., Extension, 95 M.C.C. 780 (786-7)*.

For over 3 years, shippers had come to rely on the service performed by applicant who efficiently transported their traffic from points in the Southwest to the East Coast using, for the segment between Cleveland and Newark, a 500-mile deviation route along turnpikes instead of over applicant's 647-mile service route between these cities. This use of the deviation route was protested and the commission finally ordered the carrier to cease from using it, resulting in the present application being made for certificated authority to use the deviation route as a service route, serving no intermediate points. Along with showing how the use of such route would provide faster, safer and more economical service, shipper evidence of the applicant's satisfactory service provided through use of the deviation route, in good faith and under color of right, although subsequently disapproved by the commission, was accepted as evidence and relied on as establishing public need.—Strickland Motor Freight Lines Extension, 96 M.C.C. 732 (739).

As applicants' past operations in transportation of certain new refractories (not composed principally of clay) under their certificates which generally authorize transportation of "clay products", were not conducted in intentional derogation of the commission's rules and regulations, such past operations do not make them unfit to receive additional authority to perform services required by supporting shippers. Nor, in the circumstances, should those past operations be overlooked in considering evidence adduced of the needs of supporting shippers. Authority to transport "refractories" granted to all applicants.—Pennsylvania—Ohio Exp., Inc., Extension, 96 M.C.C. 449 (453-4, 456).

Applicant has fairly demonstrated a continuing need for charter and special operations from named New Jersey and Pennsylvania counties to 30 States and District of Columbia; evidence adequately shows that existing carriers are lacking in authority and ability to provide service comparable to that offered by applicant in territory involved. Applicant has been providing a very satisfactory service under color of right for many years, and its patrons have relied on that service. While past performance of unauthorized operations, or their use as a means of establishing public convenience and necessity, is not condoned, the violations were not deliberately committed, and denial of application would deprive the traveling public of an established service on which it has long relied, whereas grant should have no materially adverse effect on protestants whose operations and revenues have flourished despite appli-

cant's competition.—Trans-Bridge Lines, Inc., Extension, 96 M.C.C. 506 (514-5)*.

For over 20 years prior to 1959 applicants conducted charter operations from Long Island in belief that they were within their incidental rights under their regular-route authority between New York City and New Jersey. Though those operations were found to be unauthorized, they were performed in good faith and under substantial color of right and, in absence of any showing that they were knowingly and willfully performed unlawfully, may be considered in determining whether their resumption is required by the public.—Hudson Transit Lines, Inc., Extension, 92 M.C.C. 586 (589-90)*.

Although applicant's past transportation of l.t.l. shipments between 5 Georgia points and 6 southern States under "grandfather" rights restricted to "truckload lots" was unlawful, the court, in remanding extension proceeding seeking like authority without a quantity restriction (211 F. Supp. 354), made clear that the commission may not question applicant's good faith in conducting those operations under color of right. While past conduct of operations is not in itself proof of public need therefor, and the court did not direct a finding that public convenience and necessity require the proposed operation, no other conclusion is possible when due weight is accorded applicant's past service. Authorization will sustain a needed service which should not now be impaired by enforcement of the "truckload lots" restriction; granted, conditioned on surrender of the corresponding "grandfather" authority for cancellation.—Bowman Transp., Extension, 92 M.C.C. 651 (655)*.

Because applicant's past service for supporting shippers, though unauthorized, was performed under some color of right, and issue of fitness has been resolved in its favor, evidence of its past operations is entitled to consideration in determining public need for their continuance.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (735).

That applicant has been serving supporting shipper under color of right for some 20 years clearly establishes need for continuance of its service.—Border Exp., Inc., Extension, 88 M.C.C. 491 (494).

Where a multi-State carrier seeks a certificate for acquired single-State operations already lawfully in existence under §206(a) exemption provisions, the problems presented are not identical with those where entirely new operations are proposed. Past continued performance of operations lawfully conducted in interstate commerce by single-State vendor is itself substantial evidence of public need for their continuance by multi-State vendee, and effect on competing carriers is not substantially different from that in the ordinary §5 acquisition case. But where the only "past continued performance" established by vendor was under its regular-route authority, argument that the chaotic state of its records was responsible for lack of freight bills covering service over its irregular routes is not convincing, especially in view of abundant evidence of service under its regular-route rights. As vendor's irregular-route State authority is found to be dormant, and involved Ohio area is abundantly served by other motor carriers, vendee is granted certificate only for the regular-route operations.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (100-1)*.

On reconsideration, however, in view of vendee's extensive operations under temporary authority and the expressed need of supporting shippers for continuance of its improved service under the unified operations, conclusion is warranted that substantial compensatory benefits have resulted to the shipping public, without adverse effect on protestants' operations and services. Grant to vendee of authority to transport general commodities, with exceptions, over regular and irregular routes between specified points in Ohio will enable it to provide a more adequate and essential service to consignors and consignees which it presently serves without any apparent serious impact on the service of other carriers; accordingly, prior findings are modified in part.—Id., 101 M.C.C. 444 (449-52)*.

Though applicant's single-State proviso operations in Ohio are at present confined to transportation of residual fuel oil between only a few points for a single shipper, and it is not shown whether there are other carriers equipped to perform the service for that shipper, the long-continued operations conducted under the proviso by applicant and its prede-

cessor afford a basis for finding that public convenience and necessity require continuance of its present service after it becomes a multiple-State carrier; granted accordingly.—Pedler—Control—All States Freight, Inc., 90 M.C.C. 491 (498).

Evidence that vendor has been providing a substantial and continuous service under single-State proviso, commensurate with its facilities and limited operating authority, constitutes evidence of public need for continuance thereof by vendee (38 MCC 547 and 58 MCC 507).—Hart Motor Exp., Inc.—Purchase—Lake Superior Motor Frt., 90 M.C.C. 652 (654); vendor prior to exercise of temporary authority under §210a(b), and vendee's predecessor thereafter, provided adequate and satisfactory service to shipping public in interstate commerce under the proviso in vendor's authorized area. Shipments shown to have been transported, and fact that shippers have been using applicants' combined service, establish that they have handled significant volume of traffic in operations fulfilling a real need. Certificate granted vendee for all of vendor's intrastate routes to extent that they are complementary to its own.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (346).

The relatively short period (not over 7 months) of vendor's operations under single-State proviso preceding vendee's exercise of temporary authority provides no valid reason for refusing to apply the principle that past performance of lawful transportation under the provisio is in and of itself evidence of public need for continuance thereof by a multiple-State vendee; joint board properly considered applicants' interline operations during that period. Likewise, evidence of service by vendee under temporary authority, while not conclusive, is properly to be considered in determining whether proposed unified operation would be consistent with public interest; evidence of shippers interested in vendee's express service is convincing that it will fulfill a need in the public interest; certificate granted.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797 (803).

Applicant's argument that past operations of contract carrier commonly controlled with it warrant a fining of need for its proposed common carrier service is patently unsound; at most, one shipment weekly was transported to one destination, while no traffic was handled to the other two destinations involved. More important, the transportation was not performed by applicant seeking to take advantage thereof, and it was performed unlawfully.—Johnstown Motor Freight, Inc., Extension, 94 M.C.C. 167 (170).

The mere fact of past unauthorized operations conducted in honest belief that they were within scope of applicant's authority does not establish per se a public need for their continuance.—Momsen—Investigation and Revocation of Certificates, 88 M.C.C. 343 (346-7); but evidence of past operations under color of right is entitled to consideration as bearing on the issue of public convenience and necessity.—Southern Forwarding Co. Extension, 91 M.C.C. 221 (228).

Although evidence of past operations does not alone suffice to support a finding of public need, it may be an important factor when considered in conjunction with other evidence. As result of its past operations under color of right between Canadian boundary and Buffalo and Niagara Falls, applicant has developed a service which has attracted a substantial volume of international traffic and has satisfied transportation requirements of a significant number of shippers, who expressed strong interest in its continuance. Since applicant is already serving those shippers, grant of authority will not alter the competitive situation to detriment of existing carriers.—Fess Transport, 91 M.C.C. 924 (926-7)*.

Applicants' operations embracing transportation of a substantial volume of pressure cement pipe from Waukegan, Ill., to various States are of long standing, and though their claim to a reasonable color of right to transport that commodity is not entirely convincing, supporting shipper should be permitted to have their continued services available to same extent as before their authority to do so was challenged. They otherwise provide a generally complete service from Waukegan for that shipper on other commodities, and shipper continues to need them for transportation of pressure pipe, since protestants's

services will not as satisfactorily meet its needs in territories involved; both applications granted accordingly.—Ace Lines, Inc., Extension, 91 M.C.C. 559 (568).

Applicant's past transportation of soap and related articles for supporting shipper was performed under a misinterpretation of its authority for "groceries" in disregard of interpretation thereof in 53 MCC 703, 61 MCC 311, and in absence of other factors may not be relied on as indicative of present or future need.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (396); likewise, even if applicant's and its predecessor's past unauthorized service for supporting shipper could properly be considered, it would not take the place of a showing of real public need for continuance thereof and would not justify a grant of authority.—Kroblin Refregerated Xpress, Inc., Extension, 89 M.C.C. 255 (263)*.

Although prior to the Descriptions case (61 MCC 209), decided in 1952, petrochemicals were generally not considered "petroleum products," applicant's transportation thereof since that report, under general-commodity authority excluding petroleum products in tank trucks, was based on self-serving interpretations of operating rights, was clearly unauthorized, and is not a proper evidentiary basis for permanent authority.—Consolidated Freightways Corp. of Del., Extension, 92 M.C.C. 443 (445, 449)*.

Applicant's unauthorized operations, regardless of whether or not performed under an honest belief that they were within scope of its authority, have for many years deprived authorized carriers of traffic they were qualified to handle, thus preventing a fair test of existing authorized services; they can therefore be given little weight in determining whether need exists for applicant's proposed service.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (585)*.

Since applicant's past transportation for supporting shippers was performed under some color of right, evidence thereof is entitled to some consideration; however, even recognizing that such past operations, together with shippers' evidence, demonstrate a continuing need for service, such evidence does not truly bear on adequacy of existing service; right of existing carriers to transport all traffic they can efficiently and economically handle must still be recognized before granting competitive authority to another carrier.—Nash—Investigation of Operations, 89 M.C.C. 463 (469).

Although applicant's past transportation for nonpackinghouses of various commodities classified as packinghouse products was performed in good faith and under bona fide color of right prior to decision in 63 MCC 625, that decision should have put it on notice that such transportation was beyond scope of its authority for packinghouse products; its operations over a 4-year period following that decision were therefore not bona fide in character and may not be considered as bearing on issue of convenience and necessity for such transportation.—Argo-Collier Truck Lines Corp. Extension, 88 M.C.C. 253 (257, 258)*.

Evidence of past operations presented solely through uncorroborated testimony of applicant's son, who assists in management of the business, is insufficient to establish public need for continuance of charter operations conducted for many years from unauthorized points in good-faith belief that they were permissible under §202(c); if applicant's services have been satisfactory to the educational and civic organizations that have used them in the past, and a need for those services still exists, it should not be too onerous a burden to obtain testimony of representatives of several of those organizations in his behalf. Denied.—Rose Extension, 86 M.C.C. 723 (724). [But see dissent.]

There are two ways to prove a public need for continuance of a vendor's single-State proviso operations by vendee, i.e., through evidence of past lawful operations in interstate commerce, or by testimony of supporting shippers or other public witnesses that such need exists. Where applicants do not offer testimony of any public or shipper witnesses, but elect to rest their case on evidence of past operations, the commission has consistently found that proof of such operations must convincingly and comprehensively show that the past operations conformed substantially to the scope of authority sought; application of the "test of substantiality" enunciated in 87 MCC 267 and 90 MCC 899 is limited

to proceedings involving transfer of a certificate previously issued on basis of either established "grandfather" rights or proof of public convenience and necessity.—Joyce Trucking Co.—Purchase—Selig, 97 M.C.C. 1 (7).

Evidence relating to scope of vendor's proviso operations under his State authority for a 10-mile radius of Chicago in Illinois shows that no operations were conducted for some 4 months prior to vendee's temporary lease of his rights, that before May 1962 his service was confined to points in the northwest portion of that area, and that for the period of about 5 months thereafter until his discontinuance of operations he served only a single point in that radius. That evidence falls far short of meeting the requirement of a convincing and comprehensive showing of past operations substantially conforming to the authority sought; and the reason given for the curtailed and finally discontinued operations —vendor's adverse financial condition and ultimate bankruptcy—is entitled to little weight in determining the issue of public convenience and necessity. Both certificate and purchase applications denied.—Id., p. 8.

Vendee cannot rely on vendor's operations beyond scope of its authority as proof of need for a complete heavy hauling service after purchase. Commodity description "machinery, equipment, and supplies used in maintenance and operation of industrial plants" in vendor's certificate is not patently ambiguous or capable of misconstruction by reasonable persons; vendor's transportation of commodities not used in operation of industrial plants was manifestly unauthorized and cannot be relied on to show an established and continuous operation. A person seeking to establish or obtain a benefit or right ordinarily will not be permitted to qualify therefor on basis of his own unlawful acts, and in that respect vendee must stand in vendor's shoes.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (190).

Evidence of past operations by a vendor under the former single-state proviso of §206(a)(1) constitutes evidence of a public need for the continuance of such operations by a multiple-state vendee; and the same principle applies to past operations under §206(a)(6) and (7).—Sanborn's Motor Exp., Inc.—Purchase—Bemis Exp., Inc., 93 M.C.C. 728 (735).

When evidence shows that vendor's purported interline of traffic with vendee prior to latter's temporary authority was not a valid interchange arrangement under the commission's lease and interchange rules, but that vendor's claimed bulk operations were in fact commenced and continued under vendee's direction and control, thus amounting to an unlawful lease of that portion of vendor's operating rights; and when, additionally, the claimed point of interchange was not an authorized common point of service, considered operations, which were the sole bulk-commodity operations performed under vendor's "grandfather" rights under §206(a)(7), may not be relied on to justify issuance of a certificate to vendee for their continuance, in view of their unlawfulness.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428-9).

Past continued performance of lawful transportation in interestate or foreign commerce under single-State proviso is evidence of public need for continuance thereof; public convenience and necessity exists in such operations in same manner as in lawful operations performed under a certificate, where the operations were real, vital, and active prior to existence of influence by an acquiring multistate carrier, and show a continued use thereof by the shipping and receiving public. However, where the proviso carrier has not been operating in interstate commerce or operations so performed have been negligible, no public convenience and necessity exists which would justify issuance of a certificate. —Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (466)*.

Long-continued operations under single-State proviso are in themselves adequate evidence of need for their continuance in interstate commerce by a multiple-State vendee; and evidence of vendee's operations under temporary lease of the rights must be considered along with all other evidence.—Dorn's Transp., Inc.—Purchase—Mayberry Motor Freight, 90 M.C.C. 269 (275).

While vendor's operations under its New York proviso rights have undeniably been

substantial, they have been conducted primarily in east-west service; north-south movement of interstate traffic interlined at Albany has consisted almost wholly of inbound shipments, the few southbound shipments shown being entitled to little weight in determining nature and scope of its past operations; and while vendee expanded the north-south operations under temporary authority, such service also was primarily inbound. As no real shipper need is shown for outbound service from points on certain routes, grant of certificate to vendee is conditioned on cancellation of certain of the proviso rights which were utilized in a limited manner, and on restriction of others against their use in connection with vendee's existing rights to perform operations not previously conducted to a significant degree.—Id., pp. 277-9.

Petroleum, petroleum products; stringing pipelines: [Vols. 18, 19].—Stringing, etc., of pipelines other than for gas and oil industries, see J.O. (Red) Willett Pipeline Stringing Extension case, under *Special services*, below.

While contract carrier authority to transport gasoline and petroleum oils, in tank vehicles, from Belton and Camp Croft, S.C., to points in Georgia cannot be granted because of absence of a continuing carrier-shipper bilateral contract for such service, a need for service is amply demonstrated by the evidence; therefore, the application is considered as one seeking a certificate. Supporting shipper has established a number of accounts throughout Georgia which it seeks to serve from its pipeline terminals at Belton and Camp Croft; and since protestant failed to present any evidence of its authority or operations, its ability to meet the shipper's needs is not of record; nor can any possible adverse effect that a grant of authority would have on protestant be determined. Viewing the substance of the application, proposed service is actually that of a common carrier for which a public need is shown; common carrier authority granted.—Infinger Transp. Co., Inc., Extension, 96 M.C.C. 551 (552-3).

Although a trend toward increased bulk movement of petroleum treating compounds has been demonstrated, the preponderance of supporting shippers' traffic will continue to move in 30-and 55-gallon containers. The three applicants have transported much of those shippers' traffic both in bulk and in containers under their petroleum products authority, which is found to include compounds, and the territorially broad bulk authority applied for is largely duplicative of such authority they collectively hold. Applicants' existing services and those of regular-route common carriers appear adequate to meet shippers' reasonable needs for transportation of compounds in containers; however, adequate bulk service does not appear to be available from named Oklahoma origins to 7 destination States which applicants may not serve, or may serve only to a limited extent. Granted accordingly, for petroleum treating compounds in bulk, in tank vehicles.—Hugh Breeding, Inc., Extension, 95 M.C.C. 720 (725-7).

Though applicant seeks to enlarge its origin areas in vicinity of Chattanooga and Knoxville to encompass pipeline outlets, so as to continue emergency transportation of petroleum products formerly provided from barge terminals, and shipper's only reason for supporting application is its fear that in emergencies the supply of available equipment might be insufficient for its needs, what those needs are is not made clear and no evidence is presented of nature of past emergencies, when and how they have occurred, or from and to what points transportation was needed; the only commodity names for which emergency transportation was needed is kerosene.—Petroleum Transp., Inc., Extension, 94 M.C.C. 777 (778, 780).

There is no evidence regarding the volume of traffic which has moved or may move to North Carolina destination counties, extent to which existing services have been utilized or investigated, locations of present or prospective consignees, or locations of terminals at the origin points; furthermore, supporting shipper's witness is not attached to its division controlling transportation from Knoxville and Chattanooga, and could not testify as to nature of shipping or transportation facilities at those points. There is therefore no factual basis for determining whether or not the pipeline outlets which may be built at Knoxville or Chattanooga will be within scope of applicant's present authority, or that which it

now seeks. Denied.—Id., p. 780.

The commission has recognized that the type of service developed over the years by applicant pipestringers should be made available generally to industries which require laying of pipelines in producing fields and the open country. That service should now be made available to shippers promoting the growth of Alaska mineral production; exploration appears to be active and there is reasonable expectation that substantial resources will be developed. Protestants have not shown that they can provide the type of service required; the only one with any experience in such operations lacks the organization and equipment to handle a major project unaided. Authority granted for transportation within Alaska of commodities embraced in part (2) of the Mercer description (74 MCC 459), restricted only against transportation in connection with water or sewerage pipelines.—J.O. (Red) Willett Pipe Line Stringing Corp. Extension, 92 M.C.C. 41 (44, 45)*.

Shipper needs motor carrier service for transportation of petroleum products from its plant to construction sites along interstate highway; applicant is better equipped than protestant to provide the expeditious call-on-demand service needed because it has a terminal nearby and can provide needed intrastate service and proposed interstate service at same time and in same vehicles.—Blue Ridge Transportation Co., Inc., 89 M.C.C. 616 (619).

Although need is shown for proposed transportation by one applicant of named petroleum products from Newport, Minn., to Chicago and Griffith, Ind., evidence submitted is too indefinite, particularly as to volume of traffic expected to move to or from any specific points or areas, to support grant of remainder of authority sought; also , as one protestant holds authority for fuel oil solvents from Newport to Chicago, those commodities are excluded. Nor is any reasonable basis shown for authorizing the more limited and substantially duplicative service proposed by another applicant; present and probable future volume of traffic from Newport is insufficient to support operation of more than one carrier. One application granted in part.—Dahlen Transport, Inc., Extension—Newport, Minn., 89 M.C.C. 131 (135-6). [But see dissent.]

Prior denial: [Vols. 13, 18, 19].—See also Campus Travel, Inc. v. U.S., 28 USC §2325, n. 56.

Prior denial of application for similar authority by same applicant is not controlling in present proceeding on entirely new record; the doctrine of res judicata can have no application in a proceeding involving determination of present or future public convenience and necessity; administrative agencies have, and must have, power to change their minds. —Edwards Motor Transit Co. v. United States, 201 F. Supp. 918 (924-5)*.

Public interest: [Vols. 11, 17-19].—See also Argo Trucking Co., Inc., case, NTP, n. 5 *Private-common carrier.*

Applicant's proposed lease of terminal facilities from supporting cement shipper will not adversely affect public interest and does not require denial of application; rental charges assertedly will be adequate to amortize shipper's cost of construction and there is no indication that any improper practices would result or that applicant would derive any undue transportation advantage; construction of terminal facilities on shipper's plant site is virtually required by available plant facilities and by practical aspects of its plant expansion program and cement loading and distributing activities. Should such arrangement result in improper discrimination between shippers or in unlawful rebates, appropriate remedies are available under the act.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (306).

That proposed service may be more attractive to certain shippers than to others affords no real basis for denial of application.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (743)*.

Public need: [Vols. 13, 18, 19].—Notwithstanding opposition, of lack of it, of certain parties to some applications, public need is a fact, and not something which can belong to any applicant.—C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (294)*.

Public need for additional motor service to all points within confines of White Sands Missile Range is clearly demonstrated by representative of the Department of Defense who

appeared at hearing in consolidated proceeding on two applications; and, while testimony as recorded in that proceeding was properly rejected at hearing on third carrier's application, public need, once established, is a fact and not something that belongs to any applicant. Moreover, the Department of Defense is primarily interested in service shown to be needed and does not support any specific carrier; accordingly, third carrier's application is entitled to consideration on that basis. Applications of all three carriers granted in part.—Whitfield Transp., Inc., Extension, 95 M.C.C. 576 (582-3, 584-5)*.

Public convenience and necessity are not the property of any particular applicant, and it is the commission's function to determine, in furtherance of aims expressed in the national transportation policy, which of 21 applicants seeking similar authority should be selected to provide the service shown to be needed.—Younger Bros., Inc., Extension, 95 M.C.C. 1 (18)*.

Inasmuch as the only shipper supporting application for irregular-route authority between Albuquerque, N. Mex., and Arizona points is one desiring service from Colorado Springs to points in Arizona, there is a total lack of any evidence of public need for applicant's service between points actually named in application; denied.—Denver-Albuquerque Motor Transport, Inc., Extension, 91 M.C.C. 582 (584).

Technological advances and development of new types of equipment must be recognized when advantages thereof will enure to benefit of shippers, receivers, and the public; however, advent of new and different types of equipment designed to transport commodities in different ways or to move those not previously handled in motor carriage must generally result in economic advantage to the shipper before being generally accepted; therefore, regardless of the novelty of a proposed service and inability of other motor carriers to provide it, it is axiomatic that before a new service of any type will be authorized there must be a reasonable certainty that a public need for it exists that cannot be adequately met by existing transportation facilities.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (584-5)*.

Railroad service considered: [Vols. 18, 19]. —While Texas producer of salt is presently shipping by rail, it finds that mode inadequate for all its transportation needs because the 5-day delivery time does not meet most customer needs; it is not flexible enough in that off-rail customers cannot be served directly and the necessary multiple-delivery service cannot be rendered; and the number of customers willing and able to receive carload quantities is declining. Also, shipper attributes the great decrease in its share of the market, in past 5 years, to inadequate transportation facilities; and, since it intends to continue shipping by rail to extent the competitive situation allows, it anticipates little reduction in its use of rail service. Granted as to one applicant.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (436-7).

Although supporting shipper of acids and chemicals, in bulk, uses and expects to continue using available rail service, rail lines do not provide tank cars; and some shipments from time to time require expedited motor delivery. Also, some of shipper's customers require small-quantity or split-delivery shipments, are located off-rail, and/or request motor delivery which if not available results in the customers purchasing elsewhere from shipper's competitors. Need is shown for the advantages (including flexibility) of motor service, in addition to rail service; granted as to both applicants.—Robertson Tank Lines, Inc., Extension, 95 M.C.C. 234 (242-3, 249)*.

Railroads cannot provide such advantages as flexibility and speed which shippers of liquid chemicals, in bulk, require; also they cannot serve potential customers located at off-rail points. Furthermore, though certain points are served by rail, shipper also is entitled to have the inherent benefits of motor service. Additional motor service authorized. —Pacific Truck Service, Inc., Extension, 94 M.C.C. 262 (265, 267).

Proper marketing of supporting shipper's synthetic resins requires rapid and reliable bulk motor carriage in pneumatic vehicles in addition to rail service, and lack of such service has placed shipper at a competitive disadvantage. Rail carriers cannot meet shipper's requirements for flexibility, economy, and speed, nor can they assure timely provision of

pneumatic equipment; furthermore, a number of present and potential customers are located away from rail sidings, and some request deliveries in l.c.l. quantities. Shipper requires a complete single-line service covering its entire 25-State marketing territory; however, as no need is shown for service of both applicants, authority is granted the one which appears best qualified from a service standpoint. —Younger Bros., Inc., Extension, 92 M.C.C. 624 (630).

As neither supporting lumber shipper's plant nor facilities of many of its customers are located on rail sidings, rail shipments require prior and subsequent truck movements, resulting in extra costs; moreover, an increasing number of its customers request motor transportation in order to obtain expeditious delivery of orders placed on short notice, and many require split shipments. However, as lumber traffic is an important source of revenue to rail protestants, authorization of a new competitive service from other than the two Montana counties named is not warranted by highly speculative testimony as to need therefor. Granted in part.—Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 408 (410, 412).

Shipper requires expeditious service for movement of fertilizer directly to farms and planting areas when conditions are favorable for planting; rail service is generally unsatisfactory as it requires 10 days to reach destination area and service is often needed where no rail siding is available; granted.—Porter Transp. Co. Extension, 91 M.C.C. 178 (180, 181).

Although rail protestants handle a large amount of involved salt traffic, which represents important revenue, they cannot provide the flexible service shown to be required; motor service is also needed as a supplement to rail service, for deliveries to consignees not located on rail sidings, those requiring expedited service, and those that carry small inventories and require frequent fast deliveries of small shipments.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (540)*.

Although rail service will continue to be used to transport major portion of involved meat products, such service is not entirely adequate because many consignees are not located on rail sidings. However, only one additional motor carrier service, from only two origins, is shown to be required.—Indiana Refrigerator Lines, Inc., Extension, 91 M.C.C. 71 (79-80).

While a substantial volume of considered traffic now moves by rail, proposed motor service possesses certain inherent advantages; motor carriers can provide consignees with expedited deliveries in emergencies, enable them more effectively to control inventories, reduce congestion at their yards, and allow for faster unloading. Need demonstrated for services of applicants in transportation of imported salt cake from Jacksonville to three points in Florida to which motor service is not now available.—Petroleum Carrier Corp. Extension. 89 M.C.C. 139 (141)*.

Substantial need is shown for proposed transportation of petroleum products from Oklahoma to North Dakota, even though rail service generally has been satisfactory; shippers additionally require a dependable motor carrier to provide expeditious, split-delivery service to points, many of which are off-rail, in North Dakota and adjacent States, and have used applicant's service substantially to South Dakota and Minnesota; granted.—Kroblin Refrigerated Xpress, Inc., Extension, 89 M.C.C. 657 (659)*.

Rail carriage is unsuitable for transportation of tall oil rosin because of damage by deterioration and contamination when black iron cars are used; there is a shortage of stainless steel cars, and they can be obtained by shipper only by entering into a costly 15-year lease; grant of authority to two applicants between points named will assure supporting shipper of adequate service.—McKenzie Tank Lines, Inc., Extension, 88 M.C.C. 554 (556, 557).

Authorization of motor carriage of photographic and X-ray machines and equipment is warranted when railroads are interested in transporting those commodities only when packaged or crated and are not shown to be willing to provide service thereon in uncrated form as shown to be needed by the shippers. —Neptune Storage, Inc., Extension, 88 M.C.C. 25 (30).

Shippers are dissatisfied with rail service on bananas from gulf ports to the Northwest

because carloading cannot be supervised by their personnel; railroads do not inspect or check shipments in transit to determine their condition and temperature; shippers cannot control rail routing; time in transit is longer because of circuity and layovers; rail movements are difficult to coordinate with sales operations because of poor scheduling and unpredictable times of arrival; and instances of excessive transit time and delays are shown. Thus, rail service cannot meet shippers' demand for flexibility, speed and personalized handling, or provide a closely coordinated delivery service; shippers are entitled to benefits of a complete and flexible motor carrier service.—Lowrance Extension, 86 M.C.C. 787 (791, 792). [But see dissent].

See also Mitchell Transport, Inc., case under *Existing carriers*, above.

Although rail transportation of cement has generally been satisfactory in the past, supporting shippers now also require motor-carrier service to meet customer demands and remain competitive with other cement producers who already have available, and use, motor service to destination areas involved; on balance, benefits to be derived by supporting shippers outweight fact that some traffic may be diverted from rail protestants. —Ruan Transport Corp. of Kansas, 88 M.C.C. 65 (66)*; Ruan Transport Corp. Extension, 88 M.C.C. 123 (125); rail protestants will not be unduly prejudiced by diversion of some traffic.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (305); shipper is entitled to inherent advantages of motor service in addition to rail even though some traffic will be diverted from rail protestants.—Orscheln Bros. Truck Lines, Inc., Extension 88 M.C.C. 569 (573); Daniel Hamm Drayage Co. Extension, 89 M.C.C. 563 (565, 566)*; Best Transport, Inc., 91 M.C.C. 82 (84)*.

Evidence abundantly establishes need for proposed transportation of cement and/or lime from 4 Alabama origins to 8 southern States; though rail service has been generally satisfactory in the past, supporting shippers now require motor service additionally to enable them to comply with customer requests for direct deliveries to plants or construction sites not located near rail sidings, and to remain competitive with other producers who have, or soon will have, available motor service in same destination areas. While some traffic will undoubtedly be diverted from rail protestants, on balance the public interest will best be served by institution of additional competitive service.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (411).

Where supporting shipper prefers rail service for southbound movement of acetic acid in large quantities, and delays caused by necessity of preheating rail shipments in winter months are not a serious objection, its willingness to divert a portion of that traffic to applicant solely to obtain reduced rates proposed by applicant on related northbound movement of fatty acids does not warrant grant of authority sought for southbound movement of acetic acid.—Liquid Commodities between Va. and N.J., N.Y. & Pa., 316 I.C.C. 609 (611, 612).

Supporting shipper's products have moved primarily by rail and a substantial amount would continue so to move when such service would be most economical and convenient; grant of application is not warranted by shipper's desire for supplemental motor service to meet peak demands and, to a lesser extent, for delivery to off-rail customers, when service of an existing motor carrier is available. Denied.—Petroleum Transit Co., Inc., Extension, 88 M.C.C. 399 (401); similarly, major portion of lime and limestone shippers' traffic moves in bulk by rail and there is no showing of inadequacy of rail service. Though the commission is mindful of the inherent transportation advantages motor service offers, inquiries regarding bulk truck service will not support grant of authority sought; denied.—O'Boyle Tank Lines Extension, 89 M.C.C. 499 (500-1).

Rates: [Vols. 10-12, 15-19].—In failing to consider whether Railway Exp. Agency's rates were in fact premium rates, before granting it authority sought, the commission followed a long-settled and judicially approved procedure in holding that the proper place to test the legality of REA's rates was in a complaint proceeding and not in a certificate proceeding; its decision not to depart from that procedure was entirely within its discretion.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (333-4)*.

The commission's findings concerning published tariff minima of protestant tank truckers are not inconsistent with its denial of plaintiffs' applications for authority to transport bulk commodities in premounted C & S containers; shippers have long had statutory remedies to determine if tank truckers' rates are too high. While protestants' current high minima may limit usefulness of C & S containers, they may lower their tariff minima pursuant to specific provisions of the act, and the court is not now prepared to find that the tank truck industry will renege on its unequivocal willingness to satisfy shippers' needs. Should tank truckers do so, new proceedings under §§206(a) and 207(a) might be received with more favor by the commission or a reviewing court.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (877)*.

Rates are generally not an issue for consideration in determining whether public convenience and necessity require a proposed operation. Level of rates is a factor to be considered only where it is shown that existing rates are so unreasonably high as to constitute; in effect, an embargo; however, evidence of record does not support shipper's claim that protesting carriers' rates amounted to an embargo of shipper's traffic. Denied.—Trans-Cold Exp., Inc., Extension, 98 M.C.C. 10 (12-13); likewise, it cannot be found that protestant's rates constitute a virtual embargo on movement of shipper's traffic, such as would warrant a grant of competitive authority, when protestant transports the commodity regularly to destination territory involved.—Monkem Co., Inc., Extension, 94 M.C.C. 749 (758).

Supporting shipper's major interest in proposed service is the low rate offered by applicant; however, that rate is not shown to be economically feasible and appears to be little more than a cost-cutting or profit-shaving device. Protestants not only have not sought to embargo shipper's traffic, but have done and are doing all they reasonable can do, including downward adjustments of rates, to obtain it. Denied.—Hagen Extension, 92 M.C.C. 479 (485, 486).

Supporting shipper's only real interest in applicants' service is their proposed lower rate; however, shipper concedes that it discontinued service of one protestant solely because of reduction in rail rates, and that it could continue to market its shipments at protestant's present rate. Moreover, that protestant has repeatedly attempted to regain the traffic by proposed reductions of its own; protestants thus have not sought to embargo the involved traffic, but have done all they could to obtain it; application denied.—Hulme Extension, 91 M.C.C. 575 (578, 581).

While fact that prospective patrons in low income bracket consider protestant's charter service charges prohibitive does not justify grant of authority to applicant, since cost of service is not an issue properly to be considered in a certificate application unless carrier's charges are so high as to constitute an embargo, which is not established, grant is justified by greater suitability of applicant's service to needs of the public in the largely rural origin area involved. And though protestant questions propriety of applicant's rates, it has an appropriate forum for its contention under other sections of the act.—Blunt, 92 M.C.C. 306 (308-9)*.

If the basis of protestant carrier association's concern regarding enhanced competition from Railway Exp. Agency through proposed extension of its all-motor service to replace discontinued passenger-train service formerly utilized is what it believes to be an inequity in comparative rate structures on small-parcel and volume traffic, such matters must be settled in appropriate proceedings, not in extension application.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (327)*.

That supporting shipper would divert part of its southbound rail movement of acids to applicant to obtain a reduced rate for northbound movement (under proposed rates restricted to apply only when there is a movement in both directions) is not a sufficient or compelling reason for grant of authority for operation over southbound routes shorter than that already authorized.—Liquid Commodities between Va. and N.J., N.Y. & Pa., 316 I.C.C. 609 (611, 612-3).

See also Webb's Transfer case, under *Desire for particular carrier*, above.

To raise in application proceeding the issue of what rates will apply on mutliple delivery

of combined intrastate and interstate shipments is premature, especially in absence of evidence that applicant and shipper are planning to violate any applicable law.—T. M. Zimmerman Co., Extension, 89 M.C.C. 150 (153).

See also Fess Transport case, under *Fitness*, above.

Applicant has not established that t.l. minimum weights in protestant's latest tariffs have so effectually embargoed supporting shippers' traffic as to warrant finding that it is unwilling to serve them, or to justify a grant to applicant within principle of cases cited. While shippers express dissatisfaction that protestant's t.l. rates are based on minima somewhat higher than all shipments they wish to make, this has not prevented protestant from carrying shipments in quantities smaller than those minima. Practice of transporting shipments of less than applicable minimum volume is not uncommon and does not reflect any unwillingness or inability of protestant to render adequate service. If shippers believe protestant's rates to be unjust or unreasonable, they may contest their lawfulness by filing complaint under §216.—Fleet Transport Co. of Ky., Inc., Extension, 88 M.C.C. 762 (765).

Further, the record shows that protestant is rendering satisfactory service to supporting shippers, that it needs and can handle all of the traffic involved, and that it is willing to institute a lower alternate minimum at an equalized rate if shippers want it. Application denied.—Id., p. 765.

While protestant motor carrier professes willingness to serve shipper of bulk sand, it indicates that its charges will not be less than $6 a ton on considered traffic, whereas applicant's rate on such traffic, transported under its temporary authority, is $3.05 a ton. The record is convincing that supporting shipper cannot utilize protestant's service at the level of rates it charges and still remain competitive with other producers shipping bulk sand to consignee's plant from other origins; therefore, by its adherence to rates which will not move the commodity involved, protestant has in effect embargoed shipper's traffic.—J-E-M Transp. Co., Inc., Extension, 94 M.C.C. 573 (575-6)*.

Without departing from the general principle that reasonableness of rates is not an issue in §207 proceedings and that §216 affords an adequate remedy for excessive rates, authority to transport malt beverages should be granted when protestant's rates are nearly double applicant's and, in the 5 years since denial of applicant's previous application, protestant has neither solicitated nor transported any of involved traffic, nor has it made any effort to discuss rates with shippers. While protestant's rates may be entirely reasonable, its failure to negotiate with shippers indicates either a decision to forego the traffic except at its existing rates, or a lack of interest in it at rates which will move it, since it is clear that considered traffic will not move at protestant's existing rates.—Edwards Extension, 88 M.C.C. 318 (320-1)*; likewise, authority is granted when protestants' fertilizer rates, though maybe not intrinsically unreasonable, are too high to move supporting shipper's traffic between the points involved.—Porter Transp. Co. Extension, 91 M.C.C. 178 (181).

Contention that applicant's low charges are predicated on selection of the cream of parcel traffic by use of commodity and weight restrictions like those proposed is not substantiated; evidence shows that in its present operations, by development of more efficient methods of handling and consolidating package shipments, applicant has been able to accord a more expeditious and economical service for type of traffic formerly handled by parcel post than its competitors; fact that applicant and its affiliates have maintained rates comparable to those of parcel post is significant indication of its ability to do so in future, and the many advantages of proposed service over parcel post constitute effective inducement for use of its service even at rates higher than parcel post level.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (739, 745)*.

Though proposed operation in which shipments of frozen and unfrozen commodities would be combined into mixed truckloads of both types might result in a more advantageous rate than that obtainable on t.l.t.l. shipments, latter service is available only for the separate shipments and is not being used by supporting shippers because of their fear of product deterioration or damage, later deliv-

eries, and loss of their relative competitive position; therefore, any collateral rate differential that might be obtained is not the ultimate advantage of the proposed service.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (585)*.

Refused, rejected, returned, damaged shipments: [Vols. 14-19].—Return of rejected or damaged shipments refused at tender of delivery requires no specific authority, and no need is shown for return of rejected or damaged shipments at a later date. Paul Marckesano & Sons Co., Inc., Extension, 86 M.C.C. 727 (731).

Since authority for transportation of cement includes return of rejected shipments and of pallets used in the outbound movement, and no need is shown for return movement of shipments previously accepted by a consignee or of pallets not used in the outbound movement, that part of the application is denied.—Ruan Transp. Corp. of Kansas, 88 M.C.C. 65 (67)*.

Seasonal operation: [Vols. 10, 11, 13-15, 18, 19].—Peak period demand does not justify a grant of motor carrier authority; the demand must be reasonably consistent and determinable and not dependent on any extraordinary peaks which arise in the course of any business.—Petroleum Transit Co., Inc., Extension, 88 M.C.C. 398 (401).

Special equipment: [Vols. 12, 13, 17-19].—Grant of authority is not warranted merely shipper desires "palletized" service similar to that rendered by another carrier from other origins; use of accessories such as rollers and pallets does not constitute a service by "special equipment" which cannot be performed by transporters of commodities generally.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 369 (372).

Supporting shipper has experienced a trend from packaged to bulk shipments of its dry synthetic resins, and provision of pneumatic-type equipment is important, since its loading facilities and receiving facilities of several of its principal customers use pneumatic devices. As volume of its traffic will support only one motor-carrier service, authority is granted applicant which, among other things, has a far more extensive and more readily available fleet of pneumatic vehicles than the other.—Younger Bros., Inc., Extension, 92 M.C.C. 624 (629, 631).

Need for proposed transportation of nitric acid is established when protestant owns no equipment suitable for that traffic, whereas applicant operates stainless steel equipment in which additional freight can be accommodated. Protestant's claimed transportation of two tankloads for supporting shipper in leased equipment savors of an unlawful lease of operating rights; moreover, there is no certainty that it would be willing to purchase the needed stainless steel tank trailer in view of its high cost and limited volume of traffic involved. Granted.—Walker Hauling Co., Inc., Extension, 88 M.C.C. 607 (609).

Proposed transportation of mixed shipments of frozen and unfrozen commodities in refrigerated trailers with movable insulated partitions is a new service which will afford greater flexibility and permit more rapid consolidation of truckloads by combining smaller shipments of both types in same vehicle. Equipment applicant proposes to install in its vehicles is designed for such service, is commercially available, and its principle has been employed successfully by one shipper and an intervening carrier; proposed operation thus appears feasible and is responsive to a public need which cannot be adequately met by existing services.—Barsh Truck Lines, Inc., Extension, 88 M.C.C. 579 (584, 585)*.

Special service: [Vols. 12, 18, 19].—Bananas, because of price fluctuations and widespread consumption, require expeditious transportation and timely delivery and, due to their perishable nature, they also require careful handling by experienced personnel and temperature control during transit. In addition, evidence shows that when shiploads of bananas—in quantities ranging from 20,000 to 100,000 stems—arrive in port, there is a heavy demand for equipment, experienced drivers, and flexible service which results in a need for additional service, and which existing carriers are unable to provide. Granted.—Hirschbach Extension, 96 M.C.C. 339 (341)*.

Supporting shipper, a manufacturer of ranges and stoves at Murray, Ky., cannot maintain large inventories of parts and materials at its plant because of lack of storage space; therefore, in order to maintain produc-

tion, a constant supply of component parts is essential. Regular-route carriers, including protestant, transport a substantial volume of parts for the shipper, and protestant conducts a peddle run between Nashville, Tenn., and Paducah, Ky., for 1.t.1. shipments, which arrives at shipper's plant around noon, 5 days a week. However, applicant proposes to provide service 24 hours a day on a call and demand basis, and the irregular-route authority granted will enable it to supplement existing service in emergency situations, when shipper needs rapid delivery of certain parts, by intercepting a carrier's vehicles en route, reloading the needed parts, and immediately delivering them to shipper's plant.—Paschall Extension, 96 M.C.C. 652 (654).

In addition, dies used in manufacturing ocassionally have to be shipped from Murray for repairs and, since shipper does not keep extra dies at the plant, expedited service is required for such shipments. Shipper also need fast dependable service for transporting steel stock between its plant and Nashville because of the possibility that parts essential to its operation might have to manufactured from its own steel and, in such event, expedited service would be essential because entire plant operation might have to be suspended until necessary parts were available; while the need for such service is somewhat indefinite, possibility exists that it might arise, and the consequences of its not being available are enough to justify authorization of the service. Protestant's regular-route service would hardly suffice in such emergency situations; and the limited scope of territory involved minimizes the possibility that the competitive picture would be changed. Granted accordingly. —Id., pp. 655-6.

Inasmuch as applicant has demonstrated a need on the part of supporting shipper for a specialized transportation service closely coordinated with its production and sales efforts, such service is no more specialized than that provided by common carriers for other shippers who are faced with similar merchandising problems, and protestant regular-route carriers clearly cannot provide the complete service required, common carrier authority (rather than permit applied for) granted.—Major Extension, 94 M.C.C. 652 (655)*.

In view of time in transit, specified delivery times, and increased demand for bulk motor shipments, shipper of vegetable oils and animal fats and blends thereof, in tank vehicles, requires direct motor carrier service from Memphis, Tenn., to destination and, where specific delivery times are involved, immediate availability of suitable equipment. Protestant's service has not been satisfactory, and it has not furnished equipment when needed or promised; but shipper would again try to use that service if protestant would reestablish a terminal at Memphis. Though applicant could provide service from Memphis to all destinations involved, through tacking of existing authorities, certain of the operations would involve considerable circuity; also, shipper's delivery schedules render impracticable its use of a substantial portion of the service applicant now can perform. Evidence is sufficient to establish need for applicant's proposed service; granted.—Commercial Oil Transport, Inc., Extension, 94 M.C.C. 244 (245-6).

Banking institutions and other companies supporting application for interstate authority to transport commercial papers, business records, sales audit media, and exposed or processed film and prints require expeditious service on small shipments at certain times of the day, usually not during normal business hours, and their needs cannot be gaged by tonnage potential or by the number of carriers now authorized to operate in the involved territory. Proposed service is necessary to effect expeditious settlement in clearance of checks and other financial papers, maintenance of credit, and preparation of billing and sales, and maximum speed in forwarding of such papers is most desirable, especially in the banking business. Applicant now transports those commodities intrastate in Texas, serving country banks, correspondent banks in larger cities, and clearinghouse banks in a flexible, coordinated service which protestants cannot provide in the proposed territory under their existing authorities as passenger carriers and a regular-route express carrier.—Southern Couriers, Inc., Extension, 94 M.C.C. 111 (115-6).

But while supporting shippers have evinced

need for the services proposed, which will be superior to existing services in speed of delivery and efficiency of handling, need is shown for transportation of commercial papers only between Dallas, Fort Worth, and Wichita Falls, Tex., and Oklahoma, and of sales audit media only from Oklahoma (other than the Panhandle) to Dallas; and the shipper of film and prints requires only transportation of unprocessed prints and film to its processing laboratories, together with return movements to dealers of processed film and prints, complimentary replacement film, and incidental dealer supplies. Authority granted is therefore limited accordingly.—Id., pp. 116-7.

Applicant armored-car operators have established need for common carriage of commercial papers, records, documents, etc., and of film, prints, and related articles between points named. Supporting shippers require dependable and expeditious door-to-door pickup and delivery service, often outside of normal business hours, which existing carriers apparently cannot provide. In order to use available bus service, shippers would have to coordinate their operations with existing bus schedules, and use of private cartage or messenger service would be necessary unless shipments were made ready during normal business hours when the bus company could provide pickup service; moreover, those protestants render essentially a passenger service, which under their certificates cannot be changed to type required by shippers. Authority granted one applicant, but applications of the other two held open for 90 days to permit them to seek conversion of outstanding permits to bring their operations into conformity with §210.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (363, 365).

Both applicants have clearly demonstrated public need for transportation of passengers in limousine service between specified Connecticut points and La Guardia and Idlewild airports. Substantial numbers of passengers flying to and from those airports live or work in or near those communities, and denial of applications would leave them entirely dependent on private transportation or on multiple-line services of railroads and buslines; only one protestant specializes in type of service normally required and expected by airline passengers, and its service limited to a point near Bridgeport would not meet reasonable needs of Bridgeport passengers. And though each applicant opposes the other's desire to serve Norwalk, their operations branch out therefrom, one extending east and the other north, and as routes of both pass through Norwalk, both should be authorized to serve it. Granted, but issuance of certificates withheld for reasons stated.—Hatom Corp., 91 M.C.C. 725 (733, 734)*.

Authorization of transportation, in special operations, of stockmen between Ames, Iowa, and Chicago stockyards, serving intermediate Iowa points on US Highway 30, is justified when protestant Greyhound's time schedules,even ondays when the market closes early, would not allow the stockmen time to change into travel clothing and would require them to forgo lunch and dinner, endure an additional 3 hours' travel, and alight at less convenient points on Highway 30; and if they failed to catch the 1:15 p.m. bus, they would have to wait until 7 o'clock the next morning. —Myers, 89 M.C.C. 125 (128)*.

Proposed transportation of liquid fertilizer from Susquehanna River barge landings at or near Havre de Grace, Md., to farmsites in Delaware and certain Maryland and Pennsylvania counties, including stationing of storage or nursing tanks at farms which lack suitable tanks, will meet a demonstrated public need. In many instances the only feasible method of delivery is to pump the liquid fertilizer from the line-haul vehicle into applicant's nursing tanks, and protestants are unwilling to provide that service. Supporting shipper, which is pleased with applicant's service on dry fertilizers, has experienced an increasing trend to use of liquid fertilizers, and applicant has or will obtain suitable equipment for the complete service it desires; granted.—Delaware Exp. Co. Extension, 92 M.C.C. 718 (720, 722-3).

Ordinarily a proposal to provide an auxiliary service which an existing carrier is unable or unwilling to provide is not in itself sufficient basis for a grant of new operating authority; otherwise, those seeking to enter the transportation field might be encouraged to propose novel transportation services as a means of thwarting the effort of existing car-

riers to provide economical and efficient service within scope of their authorities.—Star Carriers, Inc., Extension, 88 M.C.C. 282 (283).

However, with present-day methods, the only efficient and useful way for shippers to transport agricultural limestone to farm sites is by use of the type of dump vehicles with spreader equipment for direct application of the limestone to the soil which applicant utilizes; as protestant cannot provide this spreader service to the portion of proposed destination territory which it may serve, application should be granted..—Id., pp. 283-4.

Real need exists for proposed transportation of shipper's experimental and show display tractors and farm and industrial equipment, much of it requiring flat-bed or low-bed trailers not possessed by protestants; applicant is well equipped to render required specialized service and has transported numerous loads of considered commodities under temporary authority. Authority granted for transportation of such experimental and show display articles and incidental paraphernalia, when moving for purposes of display or experiment only, throughout United States except Alaska and Hawaii.—Donaldson Transfer Co. Extension, 89 M.C.C. 651 (652)*.

Applicant, which pioneered in transporting complicated machines, uncrated, has shown that supporting shippers' photographic and X-ray machines and equipment require the specially designed equipment and careful and experienced handling which applicant has, by its lawful transportation thereof under its existing household-goods authority, shown itself best able to provide, and has established public need for transportation of those articles to and between specified points and areas beyond its household-goods territory, to enable it to provide the complete service required by its shippers. Granted.—Neptune Storage, Inc., Extension, 88 M.C.C. 25 (33).

Though pipestringers contend that, in view of their experience in handling materials for pipeline construction in the oil and gas industries, their specialized services should be made available to all industries desiring to transport their products through pipelines, prospective pipeline users named by applicants and supporting contractors are predominantly builders or operators of water or sewage systems for municipalities which can provide complete access to construction sites; occasional location of construction sites far from highways does not justify a plethora of grants to Mercer-type carriers to transport pipe for municipal sewers and water mains when it is not shown that adequate service cannot be rendered by carriers which do not engage in pipestringing but are fully authorized to carry pipe and unload it where needed. —J. O. (Red) Willett Pipeline Stringing Extension, 89 M.C.C. 427 (435).

However, true overland pipelines are now used and are expected to be used increasingly for transmission of commodities other than products of gas or oil, some of which cannot now be identified; such pipelines will require large-scale stringing operations in areas which cannot be served by general-commodity carriers or heavy haulers lacking applicants' special vehicles, and industries contemplating use thereof need service of carriers with oilfield experience and equipment. Each applicant is therefore granted extension authority for service to pipelines other than those used for gas and oil, coextensive with and complementary to that it now holds under part (2) of the Mercer description (74 MCC 459); nothing less will meet the predictable shipping needs expressed. Such grant, however, contemplates service only to pipelines used for transmission of articles of commerce, which excludes municipal water systems, sewer lines, or irrigation ditches.—Id., pp. 435-6.

Speculation; trafficking in certificates: [Vols. 15, 16, 18].—While grant of authority to an applicant which intends, not to utilize it, but to sell it to another should be discouraged, a grant is not necessarily precluded where the operations would be under control of the same person even if transferred to a new corporation. However, where noncarrier applicant, shortly after hearing on its applications, proposed to transfer whatever rights it obtained to an affiliate, which was subsequently granted temporary authority corresponding to that sought by applicant, authority for which a public need is shown should be granted to the successor, but only upon proof of latter's fitness and ability to provide service. Proceeding held open for 90 days, during which

applicant should either inform the commission by affidavit of its intent actually to use the authority granted, or petition to have its affiliate substituted as applicant, in which case the proceedings will be set for further hearing on issue of latter's fitness.—Hatom Corp., 91 M.C.C. 725 (731, 734)*.

Sporadic, irregular service: [Vols. 11, 18, 19].—The joint board erred in classifying the numerous shipments received by several supporting shippers as "emergency" shipments which were fairly infrequent, sometimes rare, especially in those instances where orders for such shipments are daily or weekly occurrences. Applicant proposes to furnish a daily service for which a public need is shown; and its failure to provide such service over another route has no probative value in determining need for daily service over route sought.—Brown Transport Corp. Extension, 89 M.C.C. 354 (355-6).

Temporary authority: [Vols. 12, 15-19].—Evidence of plaintiff's operations under temporary authority or of grants of temporary authority to other carriers has no ligical bearing on issue of whether plaintiff sustained its burden of showing public convenience and necessity at the hearing; the mere fact that plaintiff may have been operating successfully and in accordance with the commission's regulations does not prove that public convenience and necessity was served. The grant of temporary authority in no way eased plaintiff's burden of proof, since it is granted without a thorough investigation into the public need or the operations of the carriers; and to say that the commission thereby restricts its freedom of ultimate determination is not contrary to the statute, but against common sense.—Colorado-Arizona-California Exp., Inc. v. United States, 224 F. Supp. 894 (900, 902)*.

Although the commission, during course of hearings, has admitted evidence of operations by an applicant under temporary authority for purpose of determining issues of convenience and necessity or of applicant's fitness, its refusal to grant petition of plaintiff (unsuccessful applicant) to reopen the record for purpose of hearing evidence as to temporary operations instituted after closing of the record is not shown to have been arbitrary or capricious. It was clearly within the commission's competence to weigh plaintiff's allegations as to changes in conditions and circumstances since hearing closed and during period of its operation under the temporary authority against matters alleged in answer filed by the successful applicant; it must be presumed that the commission gave those factors such consideration and concluded that plaintiff's charges dud not require reopening of the record.—Suburban Transit Corp. v. United States, 215 F. Supp. 717 (725)*.

Plaintiff acted at its peril in undertaking obligations of performance under the temporary authority granted it at its own instance, and character of those operations was not of such extraordinary importance as to deprive the commission of its discretion to deny plaintiff's petition; moreover, in its successful petition for review by the commission of the prior decision of Division 1, at which time it had been operating under that authority for nearly 6 months, plaintiff sought only reconsideration and oral argument, and cannot now complain that the commission's denial of its subsequent petition for reopening was an abuse of discretion.—Id., pp. 725-6.

Although the commission may officially notice temporary authorities issued by it, grant of such authority creates no presumption that corresponding permanent authority is required. Moreover, as temporary authorities cited by applicants, for transportation of same commodities from same origin to some of same destinations for which they seek permanent authority, involve four nonparty carriers as well as applicants and in some instances are supported by different shippers than those supporting instant applications, and all of the temporary operations were performed after the hearing, they may not be considered evidence or a proper factor in determining the §207 applications on the merits.—Colorado-Arizona-California Exp., Inc., 92 M.C.C. 89 (91)*.

Applicant's transportation of new motor vehicles other than automobiles from Spokane to considered Washington and Idaho counties under temporary authority does not establish need for continuance thereof.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (571).

There is no inconsistency in the commission's adoption of examiner's report denying the application notwithstanding a prior grant of temporary authority. Applications were decided in essentially different proceedings, the temporary authority being granted informally without hearing, responsive to shipper representations of urgency and immediacy, while the permanent authority was denied on the record made upon formal hearing. Those differences in evidentiary standards are recognized in §210a which specifically provides that a grant of temporary authority creates no presumption in favor of a grant of corresponding permanent authority. And since the examiner accepted supporting shipper's projected traffic volume, evidence of applicant's temporary operations would not vitiate his conclusions as to need for permanent authority. Furthermore, admission in case cited of evidence of operations under temporary authority prior to hearing did not involve administrative delay entailed in applicant's proposal to reopen instant proceeding to receive such evidence.—Convoy Co. Extension, 91 M.C.C. 461 (463-4)*.

Where other evidence indicates that continuance of service previously performed under single-State exemption would meet a public need, evidence of service by an acquiring multistate carrier under temporary authority may be corroboration; however, such evidence by itself cannot support a finding of public convenience and necessity, particularly when scope of the resulting unified operations is considered and there is no showing of inadequacy of service of existing carriers.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (469)*.

Although there may be occasional need for transportation and pipestringing in connection with water systems for mining operations or in other locations inaccessible to ordinary motor carriers, the rare situation in which a construction site is located far from highways ordinarily traversed presents an appropriate circumstance for seeking of temporary authority by a qualified applicant and would not justify a plethora of grants for such service to Mercer-type carriers.—J. O. (Red) Willett Pipeline Stringing Extension, 89 M.C.C. 427 (435).

Through service: [Vols. 12, 18, 19].—Although shippers almost unanimously expressed preference for straight line rather than joint-line service for transportation of frozen foods, in determining whether need exists for proposed additional service, a mere preference for single-line service is not sufficient to show inadequacy of joint-line service, in absence of demonstrated service deficiencies.—Lester C. Newton Trucking Co. v. United States, 264 F. Supp. 869 (885)*.

While applicant seeks authority to transport frozen foods from Kansas City, Kans., to points in States east thereof and the District of Columbia, it would actually perform through single-line transportation, by use of transit, from points west of Kansas City to the destination territory. Considering the application on the basis of the through service actually involved, therefore, applicant not only failed to afford interested parties adequate notice, but it also failed to establish need for such through service when its whole presentation was directed toward need for service east of Kansas City, and for transit at that point; no need is shown for service from origins west of Kansas City to destinations east thereof; nor does the record show that potentially competitive carriers cannot provide satisfactory single-line or joint-line service via that transit point. Accordingly, absent appropriate notice and proof of need for single-line service, application is denied insofar as through service, via the transit point, is involved.—Willis Shaw Frozen Exp., Inc., Extension, 94 M.C.C. 495 (501-2, 505).

As to asserted need for service on shipments originating at Kansas City, the only evidence of any consequence of need for such service was that submitted for one shipper who ships frozen steaks to Landover, Md., and Chicago, Ill., and who uses applicant's service under temporary authority. However, no additional authority is needed from Kansas City to Chicago because applicant presently holds authority to that point and, in addition, two protestants hold appropriate authorities for such transportation. Also, that shipper's expected need for service to other points in requested destination territory is speculative; and the extensive coverage provided by protestants throughout the area is not shown to be

inadequate or unsatisfactory for the shipper's foreseeable requirements. Therefore, authority to transport frozen meat from Kansas City to Landover, restricted to shipments originating at Kansas City, is granted.—Id., pp. 505-6.

The recognized advantages of single-line motor carrier service do not justify institution of a new operation without a concomitant showing of existing detriment to shippers in form of presently inadequate for-hire motor service.—Lester C. Newton Trucking Co. Extension, 89 M.C.C. 269 (274)*.

National Aeronautics and Space Administration, though preferring single-line service for transportation of irradiated fuel elements in lead casks, agrees that its basic requirements could be met by joint-line, through-trailer service; two protestants, one of which has handled radioactive materials, are able and willing to provide that service; applicant has shown no need for operations which cannot be adequately performed by protestants; denied.—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (379).

Under passenger authority sought by one carrier, a member of Trailways system, if all four separate segments of lines in North Carolina, South Carolina, and Georgia were authorized, applicant could provide service using two major north-south routes; also, if arrangements could be made with other Trailways members, it would participate in through passenger service between numerous northern points and Savannah, Ga., and points in Florida. While numerous supporting witnesses appeared, their needs for service are minimal, at most; nearly all residents in the area have direct interstate bus service available, and the others need travel only relatively short distances to points served by protestants; very limited need described by residents of rural areas not otherwise served does not warrant grant of authority sought. Moreover, other Trailways members are opposed to the grants, and show no intention of engaging in joint operations with applicant even if authority is granted. Routes sought are not needed to provide adequate through Trailways service and, in view of extremely limited need shown, all four applications are denied.—Queen City Coach Co. Extension, 98 M.C.C. 117 (118, 121-2, 124).

Grant of passenger authority between Charleston, S. C., and Savannah, Ga., sought by the other applicant, also a member of Trailways system, would permit establishment of through Trailways operations along the Atlantic seaboard between many northern points, on one hand, and numerous Florida points, on the other; however, supporting witnesses were generally unfamiliar with service offered by protestant Greyhound, and, with one exception, no need for additional service between the termini was even suggested. No inadequacy is demonstrated in the service provided by Greyhound. All supporting witnesses, except one, reside at intermediate points along proposed route and, in view of the argument that a grant of authority limited to overhead traffic is warranted on an alternate-route theory, applicant does not appear to be especially desirous of providing proposed intermediate point service. Considered on the basis of inadequacy of present service, or on alternate-route theory, application must be denied.—Id., pp. 121-2, 124-5.

Need for proposed interstate bus service over applicant's existing intrastate route is established by testimony of 11 witnesses, several of whom reside at points not served by any protestant, that it would be a convenience to them, particularly in purchase of through tickets and checking of baggage at their respective origin points. Granted.—Sheridan-Indianapolis Bus Line, Inc., Extension, 92 M.C.C. 285 (287)*.

In connection with approved purchase of operating rights of 14 inter- and intrastate bus lines operating in St. Louis area and concurrent application for authority to continue the intrastate service, eliminate certain restrictions, and serve additional points, the agency seeks to provide an entirely new through service by tacking the Missouri and Illinois operations. While there is no evidence by present or prospective passengers of need for unrestricted through service on an area-wide basis, in light of surveys conducted to ascertain benefits of a unified transit system, also prior passenger use of the various segments and fact that all local buslines will either cease to exist or discontinue all competitive operations, it is reasonable to conclude that such a

need exists.—Bi-State Development Agency —Purchase—Vandalia Bus Line, 93 M.C.C. 579 (594).

Grant of extension authority to one applicant between specified New Jersey points for provision of through bus service over two routes between those areas and New York City is justified by collective testimony of some 60 public witnesses showing need for both routes; few residents of areas involved can use rail service without incidental use of some other mode of transport, and the situation has been aggravated by one railroad's discontinuance of service at certain stations; because of the considerable distance between considered areas and New York, time in transit is important, and single-line service over the most expeditious routes is desirable. —Somerset Bus Co., Inc., Extension, 89 M.C.C. 107 (112)*.

Though another applicant now provides service to and from one involved point over combinations of its existing routes, there is no overall coordination of its schedules, and only one or two in each direction could afford satisfactory through service; moreover, its operations over certain routes are not of type attractive to local traffic. There is no showing that available combination service is being used; on the record as a whole, the demonstrated need for service is not being met by any existing carrier; however, magnitude of present need does not warrant authorization of more than one carrier over any route; two of three applications denied.—Id., pp. 112-4.

Evidence of supporting shippers convincingly demonstrates a need for proposed service between Ardmore and Tulsa, Okla., and for resulting single-line overnight service between Wichita Falls, Tex., and Tulsa which applicant would provide. Though two carriers apparently are providing overnight service between Wichita Falls and Tulsa, their services have failed to satisfy shippers' overall requirements established of record; moreover, those carriers did not appear as protestants, and there is no evidence as to their willingness or ability to provide desired service; also, their express service, while used extensively for smaller shipments, is considered too costly by shippers for general use. Most shipments move regularly in l.t.l. quantities, and a scheduled service such as that proposed is considered superior to one carrier's irregular-route service. Overnight service is essential to some shippers' maintenance of small inventories and their ability to compete more effectively with other merchants; one protestant provides a second day delivery, but evidenced no interest in providing required overnight service. Granted.—Nix Extension, 96 M.C.C. 374 (375-6)*.

Where applicant was only carrier offering direct, expeditious, single-line service from points in the Southwest to the East, and it applied for certificated authority to transport traffic from Cleveland to Newark (a route it had previously used as a deviation route until the commission had ordered it to cease) and it was demonstrated that if it had authority to use this route as requested it could continue to furnish fast, economical and safe service, application was granted in spite of the presence of other abundant motor carriage between Cleveland and Newark.—Strickland Motor Freight Lines Extension, 96 M.C.C. 732 (740-1).

Evidence establishes a need for proposed direct transportation of new furniture and furniture parts from Taylorsville and North Wilksboro, N.C., to points in New York, New Jersey, Delaware, and described portions of Maryland and Pennsylvania; applicant specializes in transporting new furniture, has served supporting shippers for several years under a costly leasing arrangement with local carriers whereby it leased equipment to carrier making the pickup, and presently is providing direct service under temporary authority. Without proposed service, supporting shippers have no direct service to most of the destination territory sought; they require services of a carrier authorized to carry both crated and uncrated furniture, and some mixed shipments, and capable of providing split deliveries or stops in transit for partial unloading. Protestants cannot provide shippers with the comprehensive service shown to be needed; however, they are entitled to transport all the traffic they are authorized to handle until their services have been tried and found lacking by the shippers. Granted accordingly.—Johnson Bros. Truckers, Inc., Extension, 96 M.C.C. 500 (501, 504-5)*.

Supporting shipper, a manufacturer of highly perishable frozen foods, needs a more direct and expedited refrigerated service than it is presently receiving, and one wherein the lading is not physically transferred from one vehicle to another, since a sudden rise in temperature can seriously limit shelf-life of its products and reduce their salability. Applicant's proposed single-line service will result in significant mileage savings and reduction in transit time, and will obviate the problem of physical transfer of lading; granted.—Trans-Cold Exp., Inc., Extension, 95 M.C.C. 300 (302-3)*.

Existing three-line service from Lincoln, Neb., to points in Virginia and West Virginia is clearly not responsive to supporting shipper's requirements for movement of such perishable products as meats and dairy products; however, available joint-line service to four other eastern States and District of Columbia has not been tried sufficiently or otherwise shown to be inadequate to meet shipper's demonstrated need for service to points therein; granted in part.—Nebraska Eastern Exp., Inc., Extension, 94 M.C.C. 799 (803).

Supporting shipper with packing plants at Macon and Springfield, Mo., needs expedited single-line service on meats and packinghouse products from those points to 17 States and District of Columbia, with second-morning delivery on meats and numerous stops for partial unloadings. Several carriers now serving Springfield have refused to provide the required transportation; one protestant lacks authority for meats, and another cannot perform single-line service because of tacking restrictions; interline service is unsatisfactory due to delays and loss of control of shipments. Although need shown relates principally to shipper's expectation of future sales, any hope of expanded business is now hampered by lack of required service; granted.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (638-9).

Supporting shippers need proposed transportation of meats, meat products, and by-products (as defined in 61 MCC 209) from Denison and Fort Dodge, Iowa, to numerous eastern States and District of Columbia. Though applicants and protestants now participate in the traffic to some extent through various interline arrangements, this joint-line service is circuitous and occasions administrative disputes between carriers, causing delays and interruptions in service; because of perishable nature of the commodities, distance to eastern markets, and volume of available traffic, expeditious single-line service is required. However, although shippers require multiple carrier service to handle their large traffic volume, grant of similar authority to five applicants would in some instances result in all five serving one State; authority granted each, therefore, is limited so that not more than three will serve any one destination State.—Kroblin Refrigerated Xpress, Inc., Extension, 92 M.C.C. 669 (672-3).

Proposed single-line service on meats and packinghouse products from North Platte, Nebr., and Huron, S. Dak., to 17 States and District of Columbia is needed when no motor carrier service is available from North Platte and only joint-line service, which is shown to be generally unsatisfactory to shippers, is available from Huron; moreover, protestants lack authority to serve all destination points. However, volume of such traffic does not justify authorization of more than one service; one applicant granted authority from both origins.—Indiana Refrigerator Lines, Inc., Extension, 91 M.C.C. 71 (80).

While joint-line service is available from a number of opposing carriers on frozen potatoes and products from Presque Isle and Easton, Maine, to 15 States and District of Columbia, none of them is individually authorized to render supporting shippers a complete service, and collectively they cannot serve all destinations to which need is shown. Shipper's products will move to distant points and require careful handling because of their perishable nature, and their desire for the most efficient and expeditious type of motor carrier service to handle their full line of food products is justified; pattern of distribution and nature of commodities involved demonstrate need for single-line service, for which that proposed by applicant is most suitable; granted accordingly.—Midwest Coast Transport, Inc., Extension, 91 M.C.C. 812 (817)*.

Although applicant failed to meet gateway elimination tests, it presented shipper testimony to establish need for its proposed direct

service on frozen vegetables and products from Maine origins to numerous States. Nature of commodities involved and changes in customers' purchase patterns are convincing that furtherance of supporting shipper's activities is substantially dependent on a carrier's ability to provide rapid service, and that availability of a carrier offering single-line service is required. Granted in part.—Refrigerated Food Exp., Inc., Extension, 91 M.C.C. 779 (783).

Though on reconsideration authority sought from 3 Pennsylvania points to 10 midwestern States is found not justified on gateway elimination principle, supporting shippers have demonstrated present need for single-line l.t.l. service on frozen bakery products to 7 of those States and reasonably anticipate need for similar service to the other 3 in near future; authority granted to 7 States to which no motor service is shown to be available, but denied as to 3 which protestant can now serve as a common carrier.—Service Trucking Co., Inc., Extension, 88 M.C.C. 697 (701)*.

In the distribution of its fragile and perishable bakery products, shipper requires fast and flexible direct-line service from Macon, Ga., to each of its five locations, with split-deliveries between any two or more of such destinations, plus a final delivery at its main plant in the Cincinnati commercial zone. No protestant, individually, can provide this service; protestants' collective service involves extensive interline arrangements, which result in circuity, delays, and unnecessary exposure to possible contamination and damage. Shipper should not be obliged to change its normal business operations and distribution method to experiment with joint-line service which fails to meet its reasonable transportation requirements. Granted.—Newman & Pemberton Corp. Extension, 91 M.C.C. 662 (665)*. [But see dissent.]

Supporting shipper requires deliveries of yeast at precise times in order to coordinate movement of the traffic with distribution schedules of its branches, and also requires protective service with no transfers of lading, because of perishable nature of the product. For the past 4 years applicant and a connecting carrier have rendered a service highly satisfactory but for recurring delays at origin on part of the connection, whereas protestant has transported yeast for shipper to involved points during two separate periods and failed to provide reasonably adequate service. Need for applicant's proposed single-line service is thus established; granted.—Frozen Food Exp. Extension, 91 M.C.C. 592 (595-6).

Where four supporting shippers ship large yearly volumes of frozen foods from Florida to the Carolinas and are unable to obtain prompt single-line service needed from existing motor carriers, need is shown for applicant's proposed service; granted in part.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (46-48).

Authorization of southbound service by applicant from Bowling Green, Ky., to Memphis is warranted when supporting shippers have established need for expedited service on a constant basis to meet their competitive situations, which protestants' interline and indirect service cannot consistently meet; granted.—Southern Forwarding Co. Extension, 91 M.C.C. 221 (227-8).

Supporting shipper requires applicant's more expeditious and flexible service in proposed transportation of cheese from three Wisconsin points to Kansas City, St. Joseph, Omaha, and Sioux City; the traffic moves in l.t.l. shipments of individual orders comprising different types of cheese produced at different points, and customers normally require single rather than piecemeal deliveries of their orders; at present such shipments must be interchanged at Chicago for consolidation because no protestant can serve all points involved; applicant will provide a multiple pickup service at the three origins, a direct, temperature-controlled service on consolidated shipments, and multiple deliveries of individual orders to consignees. Proposed service will eliminate time now consumed in circuitous operations through congested Chicago area and in physical interchange and consolidation thereat, will eliminate deterioration of the cheese due to extra handling and inability to maintain required temperature in transit, and will enable shipper more efficiently to serve its customers and meet competition in the destination area; granted.—Zuzich Truck Line, Inc., Extension, 89 M.C.C. 69 (72-3).

Supporting shippers require a carrier which can provide expeditious single-line service on asphalt and road oils from Billings, Mont., to construction sites throughout South Dakota; authority sought will enable applicant to improve joint-line service in which it now participates, by operating economically over the most direct and efficient route; granted.—Babcock & Lee Petroleum Transporters Extension, 91 M.C.C. 517 (521).

Supporting shippers have need for vendee's single-line service between Knoxville, Tenn., and involved southwestern North Carolina area over regular routes in lieu of limited irregular-route authority authorized to be purchased. While all protestants but one are substantial carriers, they cannot provide shippers with the same personalized service as vendee who would continue to operate in a relatively small compact area, and his additional competition in serving Knoxville would not endanger services of the larger protestants in that area. While the somewhat duplicative operations of the smaller protestant would be more severely affected, it does not serve Knoxville and cannot provide the single-line service shippers require; weighing all the evidence, public interest would not be served by denying vendee a certificate solely because he could compete more effectively with that carrier at a relatively few points; tacking restrictions imposed will afford it some protection. Granted for two of three routes sought.—Cope—Purchase—Hill and Burdick, 90 M.C.C. 71 (77)*.

Public witnesses supporting vendee's application for conversion of acquired irregular-route authority to regular route all indicated a need for regular-route service, and their uncontradicted testimony shows that there is no single-line, regular-route service between Salt Lake City, Utah, and certain major Texas points and, also, that existing service to Arizona points has not been entirely satisfactory. Vendee's through service under vendor's rights has met a public need and should be continued; regular-route authority granted.—Consolidated Copperstate Lines—Purchase—Nielsen, 90 M.C.C. 483 (488).

See also Trans-Cold Exp. extension case, n. 26 below.

While shippers are not entitled to single-line service as a matter of right, it will be authorized where existing joint-line service is inadequate. Applicant has established need for single-line service from Maryville, Tenn., to Atlanta when existing service has resulted in undue delays; one shipper's use of private carriage is based on need for better service, and smaller consignees have resorted to bus or railway express service. Granted, except as to one intermediate point from which existing service appears adequate.—Brown Transport Corp. Extension, 89 M.C.C. 354 (355-6).

Need is shown for transportation of meats, meat products and byproducts, dairy products, and articles distributed by packinghouses from Fremont, Nebr., to Arizona, New Mexico, and defined Texas area; originating carrier with which applicant formerly interlined supporting shipper's traffic under its "peddle" authority from Oklahoma City has discontinued its service; shipper desires single-line service because interchange involves risk of spoilage and damage; rail service is inadequate because of length of time in transit. Protestant offering through service cannot handle "distributed" articles or dairy products, which, though a small percentage of the total tonnage shipped, are an integral part of shipper's overall distribution pattern. However, although shipper regards Oklahoma, Colorado, and Utah as potential sales territories, it has no definite plan for obtaining business therein. Granted in part.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (62-3).

Although applicant formerly interchanged equipment with a connecting carrier at Utica for transportation of fresh and frozen meats to New York points north thereof, that service is no longer available and present two-line service is unsatisfactory to shippers because shipments must be physically interchanged and may become defrosted; grant of authority for single-line service to that part of destination territory sought is warranted. However, single-line service desired to points south of Interstate Highway 90 is presently available to all but five; granted as to those five points.—Refrigerated Food Exp., Inc., Extension, 89 M.C.C. 795 (799)*.

As demand for bananas fluctuates greatly according to season, quality of the fruit, and prevailing market prices, fast and timely ar-

rival of shipments in desired condition is of utmost importance; shippers show need for single-line service from gulf ports to specified northwestern points and States which can offer shortest possible transit time, personalized responsibility for rigid temperature control in transit, and accurate scheduling and dependable arrival times, with some split deliveries; such service must be flexible, serving off-rail points, and closely coordinated with shippers' marketing activities. Though shippers will continue to receive most of their banana shipments from west coast ports, present and prospective volume from gulf ports warrants grant of authority to both applicants.—Lowrance Extension, 86 M.C.C. 787 (791, 792).

Truckaway, driveaway, secondary movement: [Vols. 18, 19].—Record establishes a need for proposed driveaway transpoatation of private passenger automobiles from New York City area to points in Florida using casual drivers, obtained from newspaper advertisements; applicant would solicit customers through advertising and charge a fee of $75; nonprofessional drivers, employed for one one-way trip, would be paid expenses. Testimony of nine nonprofessional shippers, i.e., private automobile owners, shows that similar driveaway service offered by protestants between the same points at a one-way rate of $340 is unresponsive to the needs of private automobile shippers; and where proposed transportation normally is provided infrequently for laymen, rather than regularly for businessmen, presence of nine supporting nonprofessional shipper witnesses is not insignificant. Moreover, protestants give no indication of means used to acquaint the public with their services; their published rates clearly would not move considered traffic; and nonprofessional shippers are in no position to attempt rate negotiations with established carriers.—Bell Transp. Co., Inc., Extension, 96 M.C.C. 264 (266, 268-9).

Because proposed driveaway service entails the use of drivers virtually unknown to applicant, and operating free of any effective control, it raises the question of applicant's ability to conform to the commission's safety regulations. While applicant will have obvious problems in compelling driver compliance with the safety regulations, particularly those prohibiting a driver from allowing unauthorized persons to ride in or operate vehicles assigned to him, such problems need not be insurmountable. Applicant is an experienced regulated motor carrier, is now providing service similar to that proposed, and is in substantial compliance with the safety regulations. Moreover, grant of authority sought will make available to those desiring it the service of a carrier subject not only to the safety regulations but, also, the regulations requiring insurance protection and the naming of an agent for service of process in each State through which it operates; and introduction of those protective elements into a segment of the industry which heretofore has been unregulated is in the public interest. Granted.—Id., pp. 270-1.

Applicant proposes a unique driveaway chaffeur, but not for-hire passenger, service to owners of private passenger automobiles when the automobile is accompanied by owner, his dependents, agents, and their baggage. Record indicates that need for this service cannot be met by either protestant bus operators or automobile transporters. Although the commission has generally refrained from authorizing the transportation of a particular class of passengers, it will, nevertheless authorize such a grant in a situation where public need exists, as here, and the protestant carriers do not engage in the more extensive type of operation. Application granted, subject to specified limitations.—Adams, 94 M.C.C. 290 (294).

Evidence justifies grant of extension authority to applicant for truckaway of new automobiles in secondary movements from Spokane, Wash., to 11 Washington counties and Idaho in and north of Latah and Shoshone Counties, restricted to shipments having prior rail movement from plant sites of General Motors Corp.; but no need is shown for proposed service to other Washington and Idaho counties sought, or for driveaway service. Expansion of applicant's commodity authority to include new vehicles other than automobiles, particularly trucks, is not warranted when it would be a new competitive service, which protestant is authorized and willing to provide for supporting dealers; that

transportation of new trucks in mixed shipments with new automobiles might improve applicant's overall operations or be of some convenience to dealers is insufficient to establish future need for that service. Granted in part.—Transport Storage & Distributing Co. Extension, 92 M.C.C. 566 (569, 571).

The primary question in determining whether restriction to traffic originating in California should be removed from applicant's existing authority for secondary movements of new automobiles from Spokane to other destinations in those States is whether public convenience and necessity require such removal to enable applicant to provide a complete secondary-movement service in its authorized area; effective and efficient operation requires that it be able to do so; request for removal of the restriction, granted.—Id., p. 571.

Shippers have shown a need for proposed fast service in transportation of replacement motor vehicles for wrecked and disabled vehicles in driveaway service from Charlotte, N. C., to points in 38 States, and of wrecked or disabled vehicles on return; none of protestants can offer complete service or meet need shown because of restrictions upon their territories or methods of operation; granted.—Kiser, 89 M.C.C. 750 (753).

General statements concerning need for service in emergencies from Chicago and other Great Lakes ports to Minnesota do not justify grant of authority, for tacking with applicant's existing authority, for secondary truckaway of automobiles between Minnesota and surrounding States, when no specific instances of inadequacy of protestants' services are shown; like considerations militate against grant of authority which would round out applicant's operations in the Northeast by adding Maine and Delaware to its already extensive service area, and enable it to serve Maine from Boston; even if weight is given to testimony of supporting automobile manufacturers, who do not control secondary movements, as to need for service between Maine points, such evidence is too general and speculative to support grant of authority.—Howard Sober, Inc., Extension, 88 M.C.C. 755 (756, 759).

But authority for secondary movements from Buffalo and Springfield, Mass., to Maine is justified to provide supporting shipper with a complete service which existing carriers cannot supply; shipper plans to use Springfield as a marshaling point for ex-rail shipments from Buffalo and Michigan for delivery to New England points, and as applicant already serves it from Buffalo and Detroit, additional authority granted will enable it to coordinate its shipments.—Id., p. 760.

Volume of traffic: [Vols. 13, 18, 19].—While there is a lack of specific figures as to the expected tonnage of salt to be carried and the number of consignees not located on rail lines, evidence is sufficient to establish a need for proposed service. Supporting shipper is attempting to recapture a formerly held percentage of the salt market; it is not entering a new field or strange territory; and its efforts have been hindered by a lack of transportation. Also, protestant does not contend that the general statements in applicant's presentation are untrue, but merely asserts that general statements are always insufficient to serve as a basis for granting authority; that is not a valid premise in instant case.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (437).

Substantial amounts of dry fluorspar presently move from Wilmington, Del., to points throughout involved destination territory, and volume to be made available by supporting shippers in the foreseeable future will approximate 50,000 tons annually, provided speedy and flexible transportation service, with suitable facilities and equipment for preventing loss and damage by wind, leakage, and contamination, is available. Rail service cannot meet these requirements, and suitable motor service is available only to a single destination; lack of such service precludes installation by principal consignees of facilities for receiving fluorspar by tank or hopper type vehicle. In the circumstances, grant of authority to both applicants is warranted.—Coastal Tank Lines, Inc., Extension, 92 M.C.C. 149 (154-5).

As to the eastbound aspects of proposed operations, record is convincing that there is need for some additional service, but not to the extent sought by the two applicants. While supporting evidence relates primarily

to potential traffic, volumes, and destinations of which are indefinite, products of liquid chemical producers in the Pacific-coast States are likely to move to considered marketing area in the foreseeable future. Opposing motor carriers either do not hold necessary authority or can provide needed service only through tacking or joinder over unduly circuitous routes; and many prospective consignees are located at off-rail points; granted in part to one applicant.—Pacific Truck Service, Inc., Extension, 94 M.C.C. 262 (264-5. 266).

In view of the relatively vague and indefinite evidence, sole supporting shipper's preference for multicarrier service is insufficient basis for premature authorization of three duplicating services in order to develope and transport anticipated future traffic. Though shipper's assertions and expectations as to estimated volume of future sales do not justify authorizing multiple and identical services, a need exists for one carrier to provide service on bulk shipments to certain of shipper's present and potential customers. Granted as to one applicant.—Coastal Tank Lines, Inc., Extension, 94 M.C.C. 206 (211); similarly, while four applications for similar authority are supported by the same shipper, there is no indication or estimate of the volume of traffic that would move to any specific point or area. Certainly the meager shipper evidence shows no need for services of more than one carrier to any destination; granted accordingly.—Wilson Bros. Truck Line, Inc., Extension, 94 M.C.C. 426 (430, 431).

Although supporting shipper anticipates an increase in volume of salt traffic available for motor carriage and supports all five applications, an estimated 7,300 tons of its current production is annually tendered to motor carriers. Based also on the volume so tendered during the 20-month period beginning August 1960, grant of authority only to the three applicants whose operations are centered in involved area is all that is needed for adequate transportation of shipper's traffic.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (539, 540)*.

Only some 200,000 pounds of supporting shipper's products will move monthly in motor carriage from Ector County, Tex., to points in 25-State destination territory; this relatively limited traffic volume is not enough for both applicants to develop economically feasible operations. Though shipper supported both applications, its mere desire for services of two carriers forms no basis for the requisite finding of public convenience and necessity; only one application granted.—Younger Bros., Inc., Extension, 92 M.C.C. 624 (631).

Volume of steel reinforcing rods and dowel assemblies available for transportation from two new plants controlled by supporting shipper in Kankakee County, Ill., to points in 12 destination States will aggregate some 80,000 tons a year, with larger production facilities both under construction and in the planning stage; expected production will greatly exceed capacity of shipper's private-carrier fleet, which it wishes to discontinue, and when full production is reached it will also channel a portion of the output to customers now receiving shipments from other plants. In the circumstances, a substantial amount of motor carrier service is required to meet shipper's present and prospective needs, and quantum available is inadequate to meet those demonstrated requirements.—Steel Transp. Co., Inc., Extension, 92 M.C.C. 387 (396-7).

However, while volume of traffic to be shipped is considerable, when viewed in relation to the large number of applicants it does not warrant grant to each of authority for all destination areas sought by each; and no need is shown for service to points in New York and Upper Peninsula of Michigan where relevant evidence is speculative or demonstrates such a paucity of traffic moving that available service is adequate to meet shipper's foreseeable requirements. Authority granted 17 applicants to extent shown in appendix B.—Id., p. 397.

Inasmuch as a substantial volume of supporting shipper's traffic moves to Iowa, grant of authority to two applicants is warranted. But additional service is not shown to be needed for the infinitesimal tonnage now moving to Nebraska, Illinois, and the Dakotas, and shipper was unable to state whether the big potential market it anticipates in the Dakotas would materialize in the foreseeable future. Denied as to those States.—Dahlen Transport, Inc., Extension, 91 M.C.C. 609

(613, 614).

Facts that, according to supporting shipper's tonnage abstract, the volume of traffic moving from its Illinois plants to Tennessee is the greatest for any State to which examiner recommended grant, and that both applicant and protestant have participated therin, lend weight to shipper's claim that it requires service of more than one carrier, and is convincing that broadened commodity authority granted applicant will not upset existing competitive balance.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 356 (358, 360).

Large volume of cement which will move from supporting shipper's plant at Harleyville, S. C., to North Carolina and Georgia warrants provision for adequate motor carrier service; though 2 carriers have recently been granted authority from Harleyville, as well as 4 Tennessee origins, to North Carolina, neither may serve Georgia destinations and neither has equipment necessary for all service required; considering shipper's expressed need for a single carrier to transport cement to all receivers in its normal marketing area, grant of authority sought is warranted.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (305).

About half of supporting shipper's annual production of pianos moves as uncrated shipments; as part of its high estimate of three truckloads a week is already being handled by one applicant, volume which will move under authority sought to 25 destination States is not so substantial as to require services of more than one carrier; authority granted applicant which is now serving shipper to extent of its existing authority.—Trans-American Van Service, Inc., Extension, 89 M.C.C. 48 (50).

Volume of supporting shipper's traffic which applicant is now moving at peddle rates under temporary authority from Fremont, Nebr., to Arizona, New Mexico, and defined Texas area is sufficient to justify permanent authority; while specific customer locations in those States are not shown, it is clear the service will be used to make deliveries of contents of a single truck to numerous consignees at the same or widely scattered points.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (62, 63).

See also East-West Motor Transport case, under *Interchange*, above.

Although supporting shipper does not now have voluminous sales orders to all States collectively sought by four applicants, in light of its greatly expanded manufacturing facilities and intensified sales program thoughout the area, transportation of silos, silo unloading devices, and related parts, equipment, and materials is required from Kankakee, Ill., to all States sought. However, in view of availability of adequate service to much of the destination territory, authority granted each applicant is limited to areas to which a complete direct-line service is not authorized to be provided by one of the others or by protestants, except that to New York and Pennsylvania, where shipper's traffic is expected to be considerably heavier than to other States, grant of authority to two applicants is warranted.—C & H Transp. Co., Inc., Extension, 88 M.C.C. 285 (294-5)*.

Though grant of authority to two applicants to transport tall oil from two Arkansas origins to Oakdale, La., is justified, authority for a third origin is denied when no estimate was given of amount of traffic to be generated by unfinished plant at that point.—Hearin Tank Lines, Inc., Extension, 88 M.C.C. 189 (192, 197)*.

See also Convoy Co. Extension case, §206(b), n. 25.

While it may conceivably develop that supporting shipper's very large anticipated future expansion of bulk chemicals traffic to involved destination area will require service of one or both applicants, protestants have been largely able to keep up with past increase in volume, comparable to that envisioned for the future, and it appears likely that they will be able to provide an adequate quantity of equipment to meet shipper's reasonable requirements. Denied.—Mason & Dixon Tank Lines Extension, 91 M.C.C. 7 (13).

26. Operation over irregular routes.—[Vols. 10-19]. —Charter or special passenger service, see §208(c), n. 10.

Authority granted for transportation of household goods, over irregular routes, will enable applicant to continue service over more direct routes between the States involved. For about 10 years, applicant had misconstrued its irregular-route radial author-

ity and had transported an extensive volume of traffic between considered States in an operation which the commission found, in 84 M.C.C.269, to constitute an unauthorized crosshaul, thus eliminating a direct route to certain points in Arizona, New Mexico, and California. Not only will applicant suffer a material revenue loss if not permitted to continue service to those States, but operations of many smaller interstate carriers with limited territorial authority will be drastically curtailed. Moreover, record is not convincing that protestants will be adversely affected by a grant of the limited authority sought.—King Van Lines, Inc., Extension, 98 M.C.C. 19 (22-4)*.

Shipper of candy needs services of an irregular-route carrier who can give extremely flexible, miltiple deliveries on small shipments averaging between 65 and 500 pounds from its Texas plant to retail drugstores at some 105 specified points through Florida; also, shipper needs expedited service for supplying new accounts, store openings and handling holiday orders, and prefers single-line service to eliminate exposing the candy to unfavorable temperatures. As protestants are regular-route carriers who only offer interline service and can not serve more than 60 or 70 percent of the involved points, they cannot provide service for which need is shown; approved.—Alterman Transport Lines, Inc., Extension, 96 M.C.C. 478 (481)*.

Supporting shippers require the direct, single-line service proposed by applicant for transportation of certain farm machinery, involving multiple deliveries en route, which can be provided only by a carrier operating over irregular routes. Protestant's authority does not embrace all points at which service is or may be required, and their respective operations are not flexible enough to permit them singularly or collectively to provide the complete service needed by shippers. Granted, subject to restriction against tacking.—International Transport, Inc., Extension, 95 M.C.C. 360 (363)*.

A clear need is established for applicant's transportation of gilsonite, in bulk, from Bonanza, Utah, to points in southwestern Wyoming. Supporting shipper has many customers in that area, most of whom receive bulk gilsonite in substantial quantities, they are located at out-of-the-way places and often need expedited service in emergency situations. Protestants cannot serve the destination territory, and there is no indication that the service required is now available. While regular-route authority was sought, applicant's proposed operation involves call-on-demand transportation of t.l. shipments to diverse points; such service is clearly irregular-route in nature; therefore, irregular-route authority is granted.—Bonanza Trucking Co. Extension, 94 M.C.C. 620 (624)*.

By rail affiliate, see New England Transp. Co. case, n. 35, below.

Applicant has established need for irregular-route transportation of frozen foods from Pacific Coast States to Arizona and from California to New Mexico. Supporting shippers' traffic consists of l.t.l. lots of perishable commodities produced at widely divergent points in Pacific coast area for sale and distribution in the Southwest, and distances up to several hundred miles separate the numerous points of origin and destination; while existing service appears adequate for some of the traffic handled for large shippers between key points, it is not sufficiently complete or flexible to accommodate the greater proportion. Proposed operation will in large measure replace service of a carrier which has recently ceased operations, and in which traffic protestants have not participated to any appreciable extent. Full scope of proposed service is required, and manner of its performance should be left to applicant's managerial discretion and not burdened with routing restrictions which at the outset would impede development of the service to its full potential; granted accordingly.—Zero Refrigerated Lines Extension, 91 M.C.C. 857 (863).

Where effect of a grant of irregular-route authority will merely be to allow applicant to continue the same operations it has been performing, but under authority more consonant with its actual nonscheduled, call-on-demand service, the conversion should be authorized; most of applicant's authority and its overall methods of operation are those of an irregular-route carrier, and conversion of its sole regular-route operation would be more compatible therewith. Granted, subject to request

for cancellation of its regular-route certificate.—Deaton Truck Line, Inc., Extension, 89 M.C.C. 231 (234, 235).

Irregular-route authority granted for transportation of stockmen between Ames, Iowa, and stockyards at Chicago, to permit flexibility in choosing the least congested highways for entering and leaving Chicago under various traffic conditions.—Myers, 89 M.C.C. 125 (129)*.

Overall character of proposed parcel-delivery service is territorial when it extends between all points in territory sought; necessity for regular use of certain highways between operating centers and/or sorting hubs on a daily basis to provide efficient, expeditious, and economical handling of such traffic does not change basic character of service offered. Purpose of requiring irregular-route carriers with more than usual number of regular-route characteristics to obtain regular-route authority or alter their operations is to protect authorized regular-route carriers, but because of voluntary restrictions in applicant's proposal it is opposed by only two such carriers, neither of which would be appreciably affected by grant of authority sought. The special or unusual features of proposed operation outweigh its regular-route characteristics; considered in entirety, it is essentially an irregular-route service. Irregular-route authority granted.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (714-5, 744)*.

See also Public Service Coordinated Transport Extension, §208(c), n. 1.

Need for proposed irregular-route transportation of roofing and siding from Little Rock, Ark., to specified area in eastern Oklahoma is established when Little Rock shipper has customers at points in that area not generally served by regular-route carriers, and many points in same area can be served by such carriers only in a circuitous manner.—Boswell Extension, 88 M.C.C. 219 (221)*.

While a carrier may join separate grants of irregular-route authority, that is not the proper method of seeking extension of irregular-route operations, and the commission would be warranted in denying an application where additional service contemplated would be of major scope in relation to that specifically proposed. Applicant requests authority for irregular-route transportation of food products from eastern origins to Martinsville, Ind., for joinder with its similar authority from that point to Texas and Oklahoma; all supporting shippers find existing service, where available, too slow for their perishable products, and lack of service has hampered them in expanding into Oklahoma or meeting demands of Texas customers; as they do not ship frozen foods, it is unlikely that other carriers would be affected. Therefore, in lieu of proposed restriction to through traffic destined to Oklahoma and Texas, authority is granted for unfrozen food products from named origins to points in those States, subject to republication in Federal Register.—Trans-Cold Exp., Inc., Extension, 92 M.C.C. 739 (741).

Where existing motor carriers have adequate authority, equipment, and experience in handling type of traffic involved, and their services have been used by shipper satisfactorily in other areas, and applicant can operate between considered points over a combination of its existing routes, no need is shown for grant of irregular-route authority sought to permit use of more direct routes.—Liquid Commodities between Va. and N.J., N.Y. & Pa., 316 I.C.C. 609 (611, 612).

Evidence of need for service from points beyond the origin point specified in an application for irregular-route authority is insufficient to warrant grant of such authority in the absence of a showing of need for proposed service from the origin point itself. Application seeks irregular-route authority from Wendover, Nev., to two Utah points, but record is devoid of any evidence that shipper has facilities at origin point specified or conducts operations therefrom; applicant testified that traffic would move from Ely, Nev., 120 miles south of Wendover. It is clear that proposed authority is sought only for purposes of tacking with applicant's presently held authority. There is no evidence of public need for applicant's service from and to the points actually named in the application denied.—Oxborrow Extension, 95 M.C.C. 96 (97-8)*.

Under principle of 84 MCC 239 and 92 MCC 220, a carrier seeking irregular-route authority for purpose of tacking or interchange must inform the public in its applica-

tion of the true nature of the service proposed; failing this, it must, in absence of special circumstances, show need for service from and to the origin and destination points named in the application. No need is shown for proposed irregular-route transportation of feeds from East St. Louis to Dupo, Ill.; the only evidence relates to service from East St. Louis to unnamed destinations; denied.—Kreider Truck Service, Inc., Extension, 92 M.C.C. 662 (663); Denver-Albuquerque Motor Transport, Inc., Extension, 91 M.C.C. 582 (584).

While regular-route authority has in the past been granted many common carriers of only limited commodities, in recent years, where regular-route authority is sought by a specified-commodity carrier, it has generally been found inappropriate and irregular-route authority granted instead; operations involving special commodities or special service or both, such as distribution of motion picture films, have historically and consistently been considered within the legitimate service area of an irregular-route, specified-commodity carrier.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (430).

Even if an operation involves handling of a large proportion of l.t.l. shipments for a number of shippers, entailing provision of a city pickup service, maintenance of a terminal for consolidation of small shipments, and scheduling of departures for certain days of the week, those factors, while noted in 47 MCC 23 as possible indicia of regular-route service, are necessary adjuncts to performance of a specialized service by a carrier of limited commodities, for which irregular-route authority has frequently been granted.—Id., p. 431.

28. Change in route; alternate route.—[Vols. 10-19].—The proper rule of three concurrent tests which applicant for alternate-route authority must meet was applied in proceeding wherein an alternate route between Nashville, Tenn., and St. Louis, Mo., was granted intervening defendant; however, while the examiner found that applicant (intervenor) failed to meet any of those tests, the commission concluded, from the same facts, that it had met all three. The commission's conclusion that applicant was operating under appropriate authority over a practical and feasible route, the first test, was based on its interpretation of carrier's certificates which it held permitted combination of its north-south route with subsequently acquired east-west route; and, in suit to set aside the commission's order, the court feels bound by the commission's interpretation of its own certificates when that interpretation does no violence to principles of logic and common sense.—Campbell Sixty-Six Exp., Inc. v. United States, 258 F. Supp. 529 (532, 533)*.

As to the second (or "actual competition") test, the commission without modifying the examiner's finding of fact that, while overhead freight must be considered, by the same token so must local traffic, simply concluded that intervenor's annual tonnage was comparable with tonnage handled by protestants (plaintiffs); however, the court finds no basis for that conclusion of the commission. In applying the "transporting a substantial amount of traffic" test, all traffic between "affected points" must be taken into consideration; but the salient point is that gross tonnage which intervenor transports between its St. Louis and Atlanta terminals is no measure of its "actual competition" with plaintiffs in transporting freight between authorized points of plaintiffs in each of those areas.—Id., pp. 533-4.

While the commission devised the test of present "effective competition" and, not being bound by the rule of stare decisis, it can abolish that test as a prerequisite to issuing an alternate-route certificate, the commission's report stated it was following that test; however, no findings were made in the report which can in any way justify its conclusion (diametrically opposed to that of the examiner on uncontradicted facts) that intervenor had met the test. The commission's "ultimate conclusion" on the actual competition test is not based on any "adequate subordinate findings" [230 F. Supp. 646] and is therefore, in a legal sense, "arbitrary and capricious" [239 F. Supp. 591]; therefore, its order is set aside and declared void.—Id., pp. 534-5.

The commission's denial of plaintiff's alternate-route application, on ground that applicant should not be authorized to do indirectly, by an alternate route, that which it is not au-

thorized to do by its existing service route between the same points, sustained. The commission's action is consistent with that it has taken an analogous and similar situations; there is judicial support for this principle, and it appears to be based on good logic. Applicant railroad's motor-carrier authority is restricted to service which is auxiliary to and supplemental of its rail service; grant of alternate-route authority sought would contemplate a new service, for which no need was shown, and would require removal of key-point restrictions in the certificate. Moreover, in view of decision in 209 F. Supp. 230, instant action represents a request for a part of that the whole of which has been denied.—Great Northern Ry. Co. v. United States, 209 F. Supp. 234 (236-7)*.

Before alternate-route authority may be granted on the basis of operating efficiency and economy, over routes substantially the same as two routes applicant operated over—under the deviation rules—for 3 years before the commission disapproved its use of both deviation routes, applicant must show, among other things, that compared with operation over authorized service route, proposed alternate would not result in improvement of service so as to create a new competitive situation detrimental to existing carriers. Thus, since record clearly shows that proposed routes are so much shorter and faster that the proposed operation would create a markedly different competitive situation, applicant has failed to show need for its proposal based solely on economy and efficiency. However, a shipper need for proposed improved service is established; supporting shippers, particularly those who ship between eastern cities and southwestern points, are entitled to retain improved services applicant has provided over the deviation routes; granted as to one route.—Strickland Motor Freight Lines Extension, 96 M.C.C. 732 (735-7, 739, 741).

Although applicant does not now have a service route to which proposed routes (2) and (3) would be alternate, authority is granted to operate over those routes, not on basis of alternate route proof, but for same reasons that authority over proposed service route is granted; however, alternate route authority is granted over those routes, as sought, in order to reflect actual function of proposed operations over such auxiliary routes.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 731 (736).

Where carrier seeks authority to transport explosives over the same regular-route network over which it presently transports substantial amounts of general-commodity traffic and, also, seeks explosives authority over pertinent alternate or nonservice routes, all the traffic handled by each of the parties should be considered in assessing probable competitive effect of applicant's operation over proposed alternate routes, which are essentially local in nature. Grant of pertinent "alternate routes" would merely enable applicant to minimize safety hazards by avoiding metropolitan areas without altering its present pattern of operation to an extent that would materially affect the competitive situation; and operation over such routes should be authorized, not necessarily on the basis of strict alternate-route proof, but for same reasons that authority over proposed service routes is granted; however, to reflect the actual function of proposed operations over such auxiliary routes, alternate-route authority is granted.—Ryder Truck Lines, Inc. Extension, 96 M.C.C. 771 (779).

Applicant is a substantial carrier conducting extensive general-commodity operations in some 25 States over a multiplicity of regular routes; its existing routes between Dallas, Fort Worth, Tulsa, and Oklahoma City, on one hand, and such points as Chicago, Milwaukee, Detroit, Cleveland, Louisville, and points east thereof, on the other, are feasible and practical, and use of proposed alternate routes between St. Louis and Tulsa and Checotah, Okla., for traffic moving between the aforementioned points would result in insignificant mileage savings and would not enable applicant to institute a new or materially different service that would materially improve its competitive position; thus applicant has justified grant of authority sought in connection with that portion of its operations.—Transamerican Freight Lines, Inc., Extension, 91 M.C.C. 841 (847)*.

But use of the alternate routes in connection with traffic moving between points in St. Louis-East St. Louis commercial zone and

Tulsa, Oklahoma City, Dallas and Fort Worth would enable applicant to increase its competitive effectiveness by providing more direct and expeditious service, to the substantial detriment of other authorized carriers. Considering the general scope of applicant's operations, the total volume of its traffic between those points is extremely light, attributable to circuity of its routes and incidental longer transit time, and it cannot be considered a presently effective competitor for such movements. Authority granted is therefore restricted against use of the alternate routes for movement of traffic between the St. Louis area and those southwestern points.—Id., pp. 847-8; in order to clarify the restriction imposed, and consented to by applicant, on reconsideration the authority granted is restricted against use of described routes for movement of traffic between St. Louis-East St. Louis commercial zone, on one hand, and Tulsa, Oklahoma City, Dallas and Fort Worth, and their commercial zones, on the other.—Id., 95 M.C.C. 637 (640)*.

Though applicant railroad has no existing service routes between termini of proposed alternate routes, the same considerations of operating efficiency and economy found to justify grant of regular-route authority for substituted motor service also justify concurrent grant of alternate-route authority, subject to the same rail-auxiliary restrictions as imposed on authority for the service routes.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (32).

See also Illinois Central R. Extension, n. 35 *Substituted service*, below.

Applicant has met the three tests for grant of alternate operating-convenience route sought between Birmingham, Ala., and Meridian, Miss. Though its failure to establish that its past traffic either moved entirely over its service routes, or that it moved via applicant's existing alternate route but could have moved over its service routes, is a formal failure of proof, the 13-mile elimination involved is de minimis and not a controlling factor. The traffic could have moved over the service route with substantial facility, and the shortening of transit time is not crucial.—West Bros., Inc., Extension, 91 M.C.C. 523 (530)*.

Considering the overall volume applicant has been transporting between Birmingham and New Orleans or Gulfport and the volume accorded overnight service, applicant has been substantially competitive in the past and protestants have not had any substantial competitive edge. Moreover, elimination of about 12 percent of mileage between Birmingham and New Orleans is unlikely to enable applicant to offer a new and substantially different service. While operational disabilities suffered from applicant's stub-end operation at Meridian would be alleviated by the grant and institution of described Hattiesburg turnaround, this is primarily an internal operating matter. Granted with restriction against traffic between Birmingham and points short of New Orleans or Gulfport.—Id., p. 531.

See also Ringsby Truck Lines case, n. 25 *Fitness* above.

Since applicant is already operating between New York City and Newark over other authorized routes, new route granted via George Washington Bridge, serving no intermediate points, is in nature of an alternate route although technically a service route, since it will result in a saving of about 30 minutes operating time and will ontribute to safer operation by bypassing heavy traffic congestion in central part of New York, City.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (951).*

Though applicant in seeking elimination of its Hoffman, Ill., gateway, has justified grant of authority allowing it to operate in the most direct manner between Chicago and Centralia, Ill., it has been providing service of marked consistency between certain fixed termini under its irregular-route authority, and apparently intends to continue oerating in the same manner; such operations would be more appropriately classified as regular-route. Therefore, to allow it to operate with some degree of flexibility, authority is granted for two routes, between Chicago and two points adjacent to Centralia; and since it would be inappropriate to grant a regular alternate route where a carrier has only irregular-route authority, both are granted as service routes. Since no intermediate-point service is authorized, competitors should not be affected.—Centralia Cartage Co. Extension, 91 M.C.C. 749 (753-4).

Applicant also seeks authority for a number of 'alternate' routes connecting its various regular (service) routes and authorized off-route points, grant of which would allow it to perform its peddle operations more efficiently. However, certain points it is authorized to serve in connection with its existing routes would become intermediate points on the proposed routes; as service at intermediate points is inconsistent with nature of an alternate route, grant of those routes, also, as service routes would be more appropriate and would not change the character of the proposed operations.—Id., p. 754.

Although vendor and vendee have provided a coordinated service between Boston, Mass., and points in Maine on vendor's routes north of Bangor by combining or tacking their respective authorities at Bangor, vendee seeks authority to operate, after proposed purchase, over a shorter route via Augusta instead of Bangor as a gateway, in order to provide a more expeditious overnight service. Vendee transports, under temporary authority, a substantial amount of traffic over the Bangor route and is competing effectively with existing carriers; its useof the Augusta route would not create any substantial change in its service to the public, except in the substitution of single-for joint-line service; thus, it has satisfied the criteria for a grant of alternate-route authoriy.—Sanborn's Motor Exp., Inc.—Purchase—Bemis Exp., Inc., 93 M.C.C. 728 (735).

Since applicant is willing to accept passenger authority between Charleston, S. C., and Savannah, Ga., sought either on basis of inadequacy of present service or on an alternate-route theory, with any authority granted being limited to overhead traffic, it does not appear that it is especially desirous of providing the proposed intermediate point service. Furthermore, applicant has not met required alternate-route criteria when it failed to show (a) that it is operating between the termini under appropriate authority over a practical and feasible route, (b) is effectively competing for traffic with existing carriers operating between the termini, and (c) that the competitive situation would not be materially altered to thedetriment of existing carriers. In alternate-route cases involving passenger carriers, additional factors are also to be considered, see 46 MCC 55; however, since the basic criteria are not met, the addtional factors need not be discussed. Denied.—Queen City Coach Co. Extension, 98 M. C. C. 117 (125).

See also Greyhound Corp. Extension, n. 7 above.

In determining an alternate-route application, the basis of comparison between actual and proposed operations must be the service actually performed. Fact that applicant is authorized to operate in a different, and superficially more efficient, manner than it did is not a pertinent factor because there is no way to ascertain whether the operation would actually have been a feasible one; also, in considering the effect of a grant of alternate-route authority, the commission is concerned not with the quality of the service applicant proposes, but with service it would be capable of providing. While applicant is transporting a substantial volume of freight over practical and feasible routes between pertinent termini, its use of proposed alternate route would allow institution of a new service which would alter the existing competitive situation; and since no need is established for such new service, the application must be denied.—Burlington Truck Lines, Inc., Extension, 96 M.C.C. 467 (471).

In both alternate-route and substituted-service cases grant of authority would result in a more economical and efficient operation, with ultimate benefits to the shipping public; however in an alternate-route proceeding it must be found that grant would not materially change the existing competitive situation, whereas in a substituted motor-for-rail application it must be shown that the service needed cannot as well be provided by existing carriers, and that grant of authority to a railroad affiliate will not seriously harm operations of independent line-haul motor carriers who compete not only with the highway service proposed, but also with the combined rail-motor service. Therefore, since alternate-route application seeks, in essence, to substitute one piggyback loading facility for another, it falls within purview of substituted service and is not one to be determined under standards applicable to alternate-route applications.—Pacific Motor Trucking Co. Ext., 95

M.C.C. 53 (54,56-7)*.

Although applicant states that it desires only alternate-route authority over route sought between Terre Haute and Vincennes, Ind., the only traffic it seeks to transport over that route moves to or from points east of Ohio-Pennsylvania line, and while it can now operate directly between Vincennes and those eastern points over routes of about same length as that proposed through Terre Haute, there is no showing that it is actually operating over those routes. On the contrary, much of its traffic to Vincennes and nearby points on same east-west route has been handled through its Terre Haute terminal, involving an unlawful haul to Vincennes and it is logical to assume that such freight required the intervening terminal operation and that applicant could not have handled the many small shipments that it did, had it observed its authorized service routes and operated directly from the eastern points to those destinations. Thus, it cannot be found that applicant is now operating over a feasible service route and lawfully transporting a substantial amount of traffic between the points involved. Eastern Exp., Inc., Extension, 92 M.C.C. 696 (700).

Additionally, grant of authority sought could materially affect operations of opposing carriers adversely by subjecting to diversion traffic they now transport between Terre Haute and Vincennee under interline arrangements with applicant. Nor is there any showing that it would permit institution of more economical or efficient operations which would work to benefit of the public generally, which is the basis of a finding of public convenience and necessity on the alternate-route theory; proposed service, involving rehandling of shipments at the Terre Haute terminal, can be and is as efficiently performed in joint-line as in single-line service. Denied.—Id., p. 701.

Where operations reflected in applicant's exhibit show overnight delivery on, at most, 30 percent of its traffic and then only after its insistence that service be "stepped up" applicant's present total service cannot be classified as next-day and, accordingly, is so unlike consistent next-day service provided by protestants that it cannot be considered competitively comparable. Granting of alternate route authority should not result in a new service. While some of the traffic would not move in next-day service because of applicant's operational practices, the alternate route sought would allow applicant to perform consistent next-day service on a majority of its traffic and, thus, would permit institution of a new and significantly different service which would materially improve its competitive position to the detriment of existing carriers. Denied.—Davidson Transfer & Storage Co. Extension, 91 M.C.C. 687 (689, 690)*.

Before alternate-route authority may be granted solely on basis of operating efficiency and economy, applicant must show (1) that it is presently operating between the involved termini over a practical and feasible route, (2) that it is in actual competition with existing carriers between those points transporting a substantial amount of traffic over such route, and (3) that the competitive situation will remain relatively unchanged if authority sought is granted. To satisfy the first two tests applicant usually must show that it has been conducting substantial operations over its service routes.—Capitol Truck Lines, Inc., Extension, 88 M.C.C. 212 (215-6); T.I.M.E. Freight, Inc., Extension, 89 M.C.C. 241 (244).

Although the substantial tonnage transported by applicant over its service route between Atlanta and Memphis warrants finding that the route is feasible and that it is in effective competition with other carriers for traffic between those termini, savings of 29 percent in mileage, and 3.5 hours in transit time from its present 15.5-hour average, over proposed alternate route would enable it to provide consistent next-day service, as well as next-morning service on shipments dispatched the previous evening. Even though applicant now generally renders next-day service, use of the shorter route would allow it to institute a new service significantly different in quality from that presently provided, and would materially improve its competitive position to detriment of other carriers. Denied.—Id., p. 245.

Criteria established in a long line of cases for grant of alternate-route authority to regular-route carriers are well recognized in the motor carrier industry, have been applied for a number of years, and have worked well; their application has permitted such carriers to enjoy operating economies in appropriate

situations without disrupting existing competition or allowing them to provide new services without a showing of public need. Such procedures, together with the Deviation Rules, are adequate to meet the aims of promoting more efficient and economical operations and more expeditious service to the public.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (417, 425-6).

Proposed alternate routes may not be approved solely on basis of operating efficiency and economy when they would reduce applicant's route mileage between Chicago and West Virginia points by 21 and 25 percent, would reduce operating costs by $32 and $38 per trip, resulting in annual savings exceeding $25,000, and, while not affecting second-day delivery of truckloads, would change delivery time for less-truckloads from third or fourth morning to second day; these benefits would enable applicant to provide a new service which would materially alter the competitive situation and adversely affect operations of existing carriers and their service to the public.—Eazor Exp., Inc., Extension, 89 M.C.C. 345 (347)*.

Alternate route to an alternate route:[Vols. 18, 19].— Applicant's past operations over its alternate route between St. Joseph, Mo., and Kansas City commercial zone, which authority is restricted against service between the termini, are considered in determining whether authority sought for operating-convenience route between St. Joseph and Indianapolis via US Highway 36 should be granted. Applicant could have operated over its less efficient but feasible service route between the alternate-route termini; record is convincing that it is an active competitor for traffic between St. Joseph and Indianapolis and, considering total distance between those points, elimination of the 142 miles involved will not permit it to institute a new service or materially affect the competitive situation. However, in view of its existing rights over portions of Highway 36, alternate-route authority is granted only between St. Joseph and Pittsfield, Ill., and between Decatur, Ill., and Indianapolis, restricted to traffic moving between St. Joseph and Indianapolis.—Transamerican Freight Lines, Inc., St. Joseph Alt. Routes, 92 M.C.C. 747 (751-2)*.

Furthermore, on reconsideration, although considered alternate-route authority over US Highway 71 is restricted against service between the termini, it is clear and unambiguous; that route may be joined with applicant's otherwise authorized regular routes for the purpose of transporting traffic originating at one of those termini and destined to points, other than points in Kansas on the service route, beyond the other. Prior report, to extent inconsistent with current finding, modified.—Id., 96 M.C.C. 243*.

In order to obtain alternate-route authority solely on the basis of operating efficiency and economy, applicant usually must show substantial past operations over its authorized service route; but an alternate to an alternate route may be granted where it is shown that, had there been no prior alternate-route grant, the past service could have been performed with equal effectiveness over the service route. Proposed route is an alternate to an alternate route and, also, is alternate to a segment of carrier's regular service route; and since applicant's present operations are conducted over a combination of the service and alternate routes, it is treated as an alternate to an alternate route. Applicant transports a substantial volume of overhead freight between points involved over its present route; reduction in mileage and operating time resulting from use of proposed route will not alter the competitive situation; nor will proposed operation constitute a new and substantially different service by applicant. However, as applicant has not effectively competed for local traffic between the termini, grant of alternate-route authority is restricted against transportation of such local traffic.—Bestway of Indiana, Inc., Extension, 95 M.C.C. 263 (265-7).

Although route sought as alternate to a segment of applicant's existing alternate route will increase distances between termini of the latter by about 17 miles, avoidance of a highway bridge with a low maximum weight limit on the present route will permit applicant to handle heavier loads and thus operate more efficiently and economically without affecting existing competitive situation; granted.—Vi-

king Freight Co. Extension, 88 M.C.C. 720 (721).

In addition to the three tests which must be met before alternate route authority may be granted solely on basis of operating efficiency and economy, where the present operations are conducted over an alternate route it must also be established that, had there been no prior grant of an alternate route, the past service could have been as effectively performed over the underlying service route.—T.I.M.E. Freight, Inc., Extension, 89 M.C.C. 241 (244).

Applicant has shown that it is conducting substantial competitive operations over its present route between Los Angeles and Oklahoma City embracing an authorized alternate segment, and that such operations could have been as readily conducted over its service route; mileage reduction of 14 percent compared with the service route, and reduction in transit time of 6 hours compared with the service route, or 3.4 hours compared with the route actually used, would not allow it materially to improve its present 40- to 50-hour operation or substantially alter its competitive position. Granted.—Id., p. 246.

Authority for an alternate to an alternate route may be granted without proof of existing operations over the service route where it can be established with assurance that, had there been no prior grant of an alternate route, the past service could have been performed with equal effectiveness competitively over the service route.—Capitol Truck Lines, Inc., Extension, 88 M.C.C. 212 (216).

Applicant, operating over a route embracing an alternate operating-convenience segment, could not compete effectively with existing carriers for traffic between considered termini if it operated over its service route and had not obtained authority for the alternate segment because of unsafe highway conditions on its service route; however, it was required by State authorities to transfer operations involving normal over-the-road equipment to that alternate route, and had the service route highway been maintained in safe condition for use of ordinary line-haul equipment it would be able to provide service thereover similar to that now provided over the alternate route. In the circumstances, an exception to the general rule should be made; applicant's operations over its alternate route considered in determining whether it has met the tests for alternate-route authority. Evidence of record meets those tests.—Id., pp. 216-7.

Nor is there any merit to contentions as to applicant's failure to provide service at intermediate points on the service routes. Ordinarily in alternate-route applications evidence of service at intermediate points on the appurtenant service route has no relevance in establishing substantial operations between the termini and beyond; no questions were raised as to any failure to provide service at points on applicant's present route, and it has continued to serve authorized points on the service route even though it cannot conduct normal operations over that route. [Decision in 79 MCC 806 distinguished.]—Id., p. 217.

Change in route, in general: [Vols. 18, 19]. —Applicant believes the service which it renders in Tennessee, under its present irregular-route authority, is becoming regular-route in character since it has five terminals there and, by request, provides daily, scheduled service to many Tennessee shippers; thus, it seeks two east-west regular routes in that State to permit the regular-route service demanded, and one shorter generally north-south route to tie its present regular-route operations in nearby States with the proposed service. Evidence of record reflects public need for proposed service at all points in Tennessee and, since applicant's service will be performed in conjunction with its regular-route operation, the only feasible manner of authorizing it to provide the needed service is to grant applicant authority to serve all Tennessee points not on its regular routes as off-route points. Granted accordingly.—Thurston Motor Lines, Inc., Extension, 94 M.C.C. 131 (132-3).

When vendor and vendee of irregular-route intrastate rights, used as basis for interstate operations for which issuance of certificate to vendee is authorized, have for at least 8 years conducted interline operations between their respective territories, using generally the regular routes sought by vendee, and that method of operation is the type required by the shipping public on both inbound and outbound traffic, conversion of the irregular-route rights to regular-route is warranted.

Competing carriers will not be affected because they have become adjusted to applicants' continuous joint-line operations over the years and most of them are authorized to perform similar single-line service.—Inland Exp., Inc.—Purchase—Frontier Dispatch, Inc., 93 M.C.C. 50 (54).

Where applicant's operation between Twin Cities and Minot, N. Dak., under its regular-route rights between St. Paul and Bismarck, N. Dak., and its radial irregular-route authority beyond has taken on the characteristics of regular-route service and it could not arrest that process without curtailing its legitimate business activities, it has properly sought to convert its authority. Since it is now transporting substantial amounts of general commodities between those points and will not be a new competitor, grant of regular-route authority between Bismarck and Minot should cause no substantial traffic diversion from protestants. Supporting shippers have used applicant's service extensively and it has become an integral part of the available transportation service; but as it is not shown to be serving any intermediate points on the Bismarck-Minot route, authority is granted only between those termini.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 92 M.C.C. 558 (563-4)*.

As recognized in 47 MCC 23, irregular-route operations often tend to achieve such regularity as to gravitate into regular-route operations and, upon application, appropriate authority has generally been granted to carriers whose operations have taken on such a character. However, while applicant's operations have certain indicia of regular-route service such as established terminals, regular overnight service, and predominantly l.t.l. traffic, those elements are not so substantial or significant when considered in the context of its demonstrated operations as to warrant conclusion that its irregular-route authority between Ronoake, Va., and Huntington and Kenova, W. Va., should be converted to the regular routes sought.—Hatcher Trucking Co., Inc., Extension, 91 M.C.C. 853 (855-6).

Routes sought clearly are not applicant's customary and established ones as it depends primarily on the West Virginia Turnpike, which it uses under the commission's deviation rules, for the greater part of its West Virginia movements. Thus, applicant not only uses the turnpike route for a substantial part of its irregular-route operation in West Virginia which it does not wish to convert but, also, uses that route for more than 80 percent of the traffic involved. With only a small portion of considered traffic moving over the routes sought, and absent any convincing showing of the regularity or predictability with which either of those routes is traversed or points thereon served, record is not conclusive that such service as is rendered over either route is marked by such a fixed and definite periodicity as to warrant a grant of regular-route authority sought. Denied.—Id., p. 856.

Deviation rule: [Vols. 18, 19]. —See also Greyhound Corp. v. United States, 221 F. Supp. 440, §208 (b), n. 5. The Deviation Rules provide a means, in addition to procedures for obtaining alternate-route authority, whereby regular-route carriers can increase efficiency of their operations; rule allowing use of any superhighway extending in same general direction as carrier's service route, provided the competitive situation is not materially changed thereby, will be of even greater benefit to such carriers when the planned system of interstate highways is completed. Adoption of rule allowing regular-route carriers to use any route between authorized service points is not warranted.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (426).

When access to or from Interstate Highways 75 and 10, for considered segments of which extension authority is sought, will upon their completion be limited to specified interchanges, those highways are not suitable for use as service routes and are clearly superhighways within §211.1(c)(8)(i) of the commission's Deviation Rules; thus, those segments and four other routes ostensibly sought as service routes are clearly intended to be used as alternate routes, and the four access routes can be used as such under the deviation rules. Also, fact that distances over applicant's existing routes and over the Interstate Highways are similar, and that application is unopposed, indicates that no material change in applicant's competitive position will result. Applications dismissed.—Greyhound Corp.

Extension, 89 M.C.C. 65 (66-7).

Elimination of gateway: [Vols. 18, 19].—Criteria for determining circumstances under which an irregular-route carrier will be authorized to eliminate the necessity of observing a gateway without showing that proposed change of operations is responsive to a public need or that existing carrier services are inadequate (set forth in 61 MCC 421 and amplified in 88 MCC 415) require affirmative showing (a) that applicant is actually transporting a substantial volume of traffic between points involved by good-faith operations through the gateway in effective and efficient competition with existing carriers and (b) that elimination of the gateway requirement would not enable applicant to institute a new or different service that would materially improve its competitive position to the detriment of existing carriers.—Bowman Transp., Inc. v. United States, 267 F. Supp. 57 (59-60)*.

Evidence of record supports the commission's determination that plaintiff (applicant) failed to show that it was effectively and efficiently competing with existing carriers while operating through its five gateways in issue and that elimination of those gateways would not materially improve its competitive position to the detriment of existing carriers; thus, there was a rational basis for its decision (disagreeing with the examiner's recommendation of a partial grant) that the application should be denied in its entirety. The commission's conclusions were based on adequate findings supported by substantial evidence; action to enjoin and set aside its order denying plaintiff's substitution-of-gateways application in its entirety, dismissed.—Id., p. 60.

The commission, in exercise of its administrative authority and discretionary judgment, not only can promulgate standards for determining public convenience and necessity, but also is free to alter its policies and standards when in its judgment the necessity arises. Requirement that an applicant for gateway elimination show effective competition with other motor carriers in "substantially all" its authorized territory is not arbitrary, capricious, or novel to an application of the sort; that criterion is not new, having been inserted into the "substantial competitor" and "new service" tests in 61 MCC 421 and reiterated in 83 MCC 451. The commission found that plaintiff was not an effective competitor throughout its north Georgia territory on evidence that it had served only 8 localities, of which 5 were in Atlanta commercial zone and the other 3 in an almost direct line between Atlanta and the involved gateway; plaintiff's proposal for partial elimination of the gateway was never properly or timely presented to the commission, and failure to consider it was therefore not unreasonable.—Youngblood Truck Lines, Inc. v. United States, 221 F. Supp. 809 (818-9)*.

Even assuming that such a question was before the commission, there is ample evidence to support the commission's denial of plaintiff's application. Were even a partial elimination of the gateway granted, it is not unreasonable to conclude that resulting reductions of 15 to 71 percent in circuity of plaintiff's routes would afford it "new service" capabilities enhancing its competitive position with respect to opposing carriers. That the commission did not reiterate the facts stated by the joint board relative to the "new service" is immaterial when it expressly adopted the board's statement and finding of facts and adequately stated its conclusions on that point and the basis therefor. The commission's order sustained.—Id., p. 819.

Although applicant railroad subsidiary is currently transporting a portion of Railway Exp. Agency's traffic, and grant of authority for general commodities moving in REA's service over route sought would allow it to effect operating economies and reduce transit time by shortening its existing service route by some 38 miles, its proposal cannot be viewed as one for an alternate route, but is rather akin to one for gateway elimination. From that viewpoint, applicant has failed to demonstrate that the commodities it would transport over the proposed route are at all representative of the full range of commodities it is authorized to transport over its service route. Moreover, it would materially distort the concept of substituted motor-for-rail service to allow applicant to use this theory, with its concomitant lesser burden of proof, to institute a motor service which would replace a less direct highway movement rather than an inefficient rail operation.—Central of

Georgia Motor Transport Co. Extension, 94 M.C.C. 6(10).

Considering duplicative applications for extension authority from West Virginia points as seeking elimination of gateways, both applicants propose an essentially new competitive service that would unwarrantably dilute protestants' traffic. Elimination of circuity inherent in one applicant's proposal amounts to reduction of its 850-mile average trip by an average of 267 miles; moreover, fact that it has served only a limited area in Pennsylvania compels inference that it has not been competitive on supporting shipper's traffic to Pennsylvania points west thereof; and its service to western New York is explicable by greater distances and proportionately less circuity to such points.—Mason & Dixon Lines Extension, 91 M.C.C. 7 (13).

Second applicant's present authority does not extend to all the origin and destination territory sought; and in addition, when its claim of actual operation through considered gateway was challenged, it did not supply documentary corroboration thereof. Present operation through an authorized gateway is a specific element of the tripartite test for elimination thereof; in absence of probative evidence, applicant's claim as to volume of traffic transported through the gateway cannot be credited.—Id., pp. 10, 13-14.

Moreover, while both applicants urge that they are being penalized for their smaller size, compared to protestants, and that point would be very pertinent to question of whether they were transporting substantial volume of traffic in competition with existing carriers, the decisive issue is whether they propose what is, in effect, a new service; and required affirmative answer in no sense depends on applicant's size. Both applications denied.—Id., p. 14.

Applicant's use of Pittsburgh as a point for tacking its Cleveland-Pittsburgh routes and its irregular-route authority from Neville Island and Coraopolis, Pa., to West Virginia was based on erroneous interpretation of its authority to serve "Neville Island" as embracing a terminal area including Pittsburgh; consequently, those gateway operations were unlawful and may not be considered in determining whether its Neville Island and Coraopolis gateways should be eliminated. Moreover, applicant's operations do not meet the test of being "an effective competitor" as to substantially all commodities and points within scope of its pertient outstanding authority, nor has any need for proposed service been shown; denied.—Lattavo Bros., Inc., Extension, 91 M.C.C. 643 (644, 646)*.

While finding in 84 MCC 671 that elimination of applicant's Marietta, Ga., gateway was not justified is not binding on determination of same issue on record in instant extension proceeding, applicant has not established need for more expeditious service, but merely for expansion of its existing service; since none of supporting shippers complains about transit time of the existing service, continued observance of that gateway will be required. —Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (272)*.

In failing to demonstrate need for expansion of basic heavy-commodity descriptions in its certificates, applicant has necessarily failed to demonstrate need for eliminating its gateways in independent movement of road-machinery parts. Applicant must observe its gateways in all movements of independent parts traffic in same vehicle with prime commodities which must be transported through a gateway point.—Id., 92 M.C.C. 677 (686)*.

While a carrier authorized to transport a limited number of specified commodities through a gateway might justify elimination of that gateway upon a showing of service to only limited points, applicant authorized to transport general commodities must show that it is an effective competitor as to substantially all points in its pertinent authorized territory; transportation of substantial volume of traffic is insufficient if it has served only a few points in a relatively large area. In addition, applicant seeks authority to provide direct service between two contiguous territories it can now serve only by operating through a gateway located beyond the borders of both, and the reduction in circuity would be so great as to constitute a wholly new service; denied. —Youngblood Truck Lines, Inc., Elimination of Gateway, 89 M.C.C. 541 (544)*.

An applicant desiring to change or eliminate an existing gateway must show affirmatively (1) that it is actually transporting a substantial volume of traffic from and to the points in-

volved by operating in good faith through the present gateway point or points and in so doing is effectively and efficiently competing with existing carriers, and (2) that the gateway elimination sought would not enable it to institute a new service or one so different from that presently provided as to improve its competitive position materially, to detriment of existing carriers; it must show that it is an effective competitor as to substantially all commodities and substantially all points within scope of its pertinent outstanding authority.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (452).

While applicant's operations under general-commodity authority between radial points in Nebraska and Iowa and authorized points on its regular routes and in two Iowa counties via its King City, Mo., base area as gateway have been substantial enough not to warrant a finding of dormancy, its operations have undergone a change in the past 2 years and it has become primarily a carrier of t.l. shipments of meats and packinghouse products, principally to Iowa points; it has thus not been an effective competitor under its irregular-route general-commodity authority for those two States. A change of gateway should not be authorized for a limited number of commodities where the carrier is authorized to transport commodities generally; such a carrier cannot be said to be competing effectively with other general-commodity carriers when its operations are limited substantially to transportation of t.l. shipments of a specific class of commodities for a single industry.—Id., pp. 452-3.

The commission is unwilling to establish a precedent for partial elimination of a gateway by limiting applicant to transportation of meats and packinghouse products to points in Iowa and Nebraska, since it would then be necessary, in determining similar applications, to consider separately each and every commodity transported and point served in order to determine applicant's competitive status—a most difficult administrative task. Moreover, applicant admittedly has not picked up or delivered any freight at Kansas City for over a year because of circuity of its routing via King City, and at present its operations begin or end at St. Joseph, Mo., any traffic beyond being handled on interline basis with other carriers. Apparently it considers its operation through the King City gateway to be impractical; it follows that removal of that gateway would allow it to institute an entirely new service. Denied.—Id., p. 453.

Vendee at present has no authority to use Pittsfield, Maine, but must use Bangor, as a gateway on traffic between points on its regular routes south of Pittsfield and those in its 5-county irregular-route area in Maine; thus, grant of authority to serve Pittsfield, after proposed purchase, as an intermediate on the route between Augusta and Norcross, Maine, would enable it for the first time to operate over regular routes between Pittsfield and points south thereof and, by tacking such authority at Pittsfield, to provide an entirely new service between more southerly points, such as Boston, Mass., and the 5-county area. There is no satisfactory showing as to vendee's service at points in the 5-county area, hence it cannot be determined whether the substitution of Pittsfield for Bangor as a gateway would enable it materially to improve its competitive position; therefore, since criteria for gateway elimination have not been satisfied, authority to serve Pittsfield as an intermediate point is denied.—Sanborn's Motor Exp., Inc.—Purchase—Bemis Exp., Inc., 93 M.C.C. 728 (736-7).

Since applicant's joinder of its regular-and irregular-route authorities at point claimed as a common gateway for performance of through service described is found to be unlawful, consideration of application for elimination of the purported "gateway" under principle of 86 MCC 87 and 88 MCC 697 is unnecessary; denied.—Lattavo Bros. Inc., Extension, 89 M.C.C. 600 (603-4)*.

Elimination of gateways may be accomplished: (a) by showing that for reasons of safety, economy, or improved efficiency of authorized operations, an application should be granted, or (b) by showing that an actual need exists or will exist for the proposed service which either cannot or will not be met as well by existing carriers. To meet requirements of (a), applicant must show that it is transporting a substantial volume of traffic, is effectively competing with existing carriers, and that elimination of the gateway require-

ments would not enable it to institute a new service or one so different as to improve materially its competitive position to the detriment of existing carriers.—Yale Transport Corp. Elimination of Gateways, 89 M.C.C. 527 (533)*.

In view of its relatively light tonnage, and the percentage of circuity of its routes through considered gateways, applicant is not effectively competing for the traffic; elimination of those gateways would enable applicant to decrease its operating time between various points to such an extent that its operations would no longer correspond to those presently conducted, thereby increasing its competitive ability to the detriment of existing carriers whose service has not been shown to be inadequate; proposed service would be tantamount to a new service for which no need is shown. Denied.—Id., p. 534.

Although extension application is designed primarily to eliminate gateways, applicant has originated shipments at only one of three authorized points in Maine and has not established that it has handled substantially all authorized commodities to substantially all destinations within scope of its pertinent authority. However, it presented shipper testimony to establish need for its direct service; granted in part on showing of convenience and necessity.—Refrigerated Food Exp., Inc., Extension, 91 M.C.C. 779 (783).

While grant of extension authority to enable applicant to perform a more complete service for supporting shipper will incidentally eliminate a gateway through which applicant is now obliged to operate, such elimination may rest upon showing of improved efficiency or actual need, and applicant has met the test of need.—Ligon Specialized Hauler, Inc., Extension, 91 M.C.C. 356 (358, 359, 360).

In seeking elimination of Hoffman, Ill., gateway in connection with operations between Chicago and St. Louis, applicant has not shown that it is an effective competitor with protestants operating over the most direct route, who are transporting up to 20 times applicant's volume between those points; and since protestants operating over routes of approximately the same circuity as applicant's (12.5 percent) are apparently unable to compete on a scale comparable with the direct-route carriers, it is clear that even such a modest degree of circuity prevents a carrier from being an effective competitor between those points. Thus, applicant has not justified grant of irregular-route authority between Chicago and St. Louis.—Centralia Cartage Co. Extension, 91 M.C.C. 749 (753).

And while applicant satisfies the first test for gateway elimination in respect of operations between Chicago and Illinois points on U.S. Highway 50, since it serves those points regularly over a practical route and is clearly a major competitor, authorization of direct service to Flora and points east thereof would eliminate circuity of 25 to 38 percent, with time savings of 2 to 4 or 5 hours; thus applicant's present overnight service might well become a new same-day service. However, as virtually all shipments handled by it to points on the western segment of the Illinois portion of Highway 50 will continue to pass through Centralia, applicant should be allowed to operate in the most direct manner between Chicago and Centralia; and since consistency of its operations between those two points is in nature of regular-route service, authority is granted for two specific routes, serving no intermediate points.—Id., pp. 753-4.

Existing gateway-elimination procedures, including criteria considered in 83 MCC 451, 84 MCC 671, and 86 MCC 87, are adequate to meet legitimate needs of irregular-route carriers wishing to operate between authorized service points directly rather than circuitously; adoption of proposal which would allow indiscriminate tacking of irregular-route authorities is not warranted.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (420, 425).

Policy and rule of law laid down in 83 MCC 451, requiring a showing that applicant is transporting substantially all authorized commodities from and to substantially all authorized service points via gateway sought to be eliminated, is sound and controlling of similar issues in instant proceeding. Though applicant has trasported a substantial volume of traffic through its Delmarva Peninsula gateway, it cannot be said to have served substantially all pertinent service points when such traffic originated at only two points in a single

State, though its origin territory extends from Connecticut to Virginia; nor has it been an effective competitor for substantially all authorized commodities when under its frozen foods authority it transported only frozen bakery products during the preceding 2-year period. However, authority sought is granted in part, on showing of convenience and necessity.—Service Trucking Co., Inc., Extension, 88 M.C.C. 697 (701)*.

30. Extension of operations.—[Vols. 10-19].—Part I, §1(18), n. 29, 129.

Scope note: **the following are cited as examples of, or bases for, granting and denying extension applications. Similar points are annotated under note 25, which carries the bulk of decisions on extension applications.**

It is of no legal significance that the commission, in proceeding on application for extension of operating authority, reversed the decision of its employee board and entered an order granting the authority as initially recommended by the examiner. The commission is not only at liberty but is required to reach its own conclusions upon the evidence.—Clay Hyder Trucking Lines, Inc. v. United States, 234 F. Supp. 673 (675)*.

Although, in considering application for authority to extend passenger service to an Air Force Base, the commission referred to applicant's previous service as authorized by an administrative ruling permitting carriers to serve military installations which can be entered within one air mile of an authorized route, those references were solely for purpose of invoking principle that proof of public need may be shown by nature and extent of lawfully rendered past service. Application was treated as one for extension of service; the commission did not base its grant of authority on premise of validity of the administrative ruling, but gave real consideration to evidence it carefully discussed and upon which its findings and conclusions were based; sustained.—Carolina Scenic Stages v. United States, 202 F. Supp. 919 (924-5)*.

As Greyhound's present authority over two routes between Philadelphia and New Jersey Turnpike permits no service at intermediate points, and there are no parking facilities near its Philadelphia terminal, persons using its service between Camden area and points beyond Philadelphia or New York City must arrange to be driven to that terminal by others, or must use local bus service to a point four blocks away and walk or take a taxi for the remaining distance. In either case, northbound passengers must ride back through Camden en route to their destination, and similar inconveniences are encountered in reverse direction; also, as Greyhound can transport baggage from out-of-State points only to Philadelphia, it must be turned over to protestant for delivery at Camden, involving an extra day's delay, which is also incurred in handling express shipments. These inconveniences demonstrate public need for improved service between Camden area and points beyond Philadelphia or New York, which protestant cannot fully meet; extension authority granted between all intermediate points on the Philadelphia-New Jersey Turnpike routes and authorized points other than Philadelphia or New York.—Greyhound Corp. Extension, 95 M.C.C. 762 (764-6, 769)*.

See also Bell Extension, §212(a), n. 30.

Enlargement of applicant's existing authority for transportation of fertilizers to embrace statewide origin and destination areas is warranted to enable it to supply the complete service desired by supporting shippers. While a substantial portion of the traffic consists of bagged fertilizers, there is a growing demand for movement of dry fertilizer in bulk, and shippers need an efficient, economical, and flexible transportations service offering split deliveries to customers throughout the destination area, direct service to off-rail points, and transportation of straight or mixed shipments. There are present and potential customers in the considered territory, and shippers are constantly seeking to increase sales therein, but no motor carrier service is shown to be available. Granted.—Clark Tank Lines Co. Extension, 95 M.C.C. 422 (424)*.

Grant of extension authority for transportation of ex-rail shipments of various construction materials from Jersey City, N.J., and Queens, N.Y., to points in Nassau, Suffolk, and Westchester Counties, N.Y., is warranted by showing that adequate motor transportation from Jersey City will eliminate time

involved in floating rail cars across the harbor for movement to applicant's warehouses in Brooklyn and Queens and will result in more dependable and expeditious routing of traffic; service from Queens is required by consignee in that county for delivery of shipments moving to the destination territory.—Paul Marckesano & Sons Co., Inc., Extension, 86 M.C.C. 727 (731).

See also J. O. (Red) Willett Pipeline Stringing Extension, n. 25 *Special service*, and Denver-Albuquerque Motor Transport, Inc., Extension, n. 26, above.

Commodities:[Vols. 17, 19].— Shipper, a producer and distributor of acids and chemicals, has been producing a few products at considered plant for several years and recently began a research or expansion plan which has resulted in additional items to a total of nine announced to the public; in addition, 12 unannounced but definitely planned items for production and motor distribution from the plant in the foreseeable future would increase outbound commodities to 21 items, all moving in bulk. Shipper has actual and potential customers for its various products in all eight distribution States sought and anticipates an increase thereof; while volume of the traffic cannot be predicted (nor all destinations anticipated), apparently it will be substantial. To assure shipper of availability of appropriate equipment and the complete motor carrier service required at all times to effect distribution of its products, existing and new, grant to both applicants of authority to transport acids and chemicals to points in the eight States sought, except as specified, is warranted.—Robertson Tank Lines, Inc., Extension, 95M.C.C. 234 (242-3, 249-50)*.

Grant of authority to transport frozen french fried onion rings, potato products, and cooked squash, which applicant has been transporting under color of right for same shipper for many years in mixed shipments with frozen fruits and vegetables, is but a minor broadening of its commodity authority and will avert possibility of its losing about 99 percent of traffic it is satisfactorily handling for that shipper.—Colonial Refrigerated Transp., Inc., Extension, 91 M.C.C. 187 (191).

Broadening of applicant's commodity authority for specified foodstuffs to permit a more complete service is warranted; supporting shippers require a service providing multiple deliveries of consolidated truckloads of commodities usually moving under refrigeration, in mixed shipments with other foods not requiring refrigeration, to a large number of customers throughout the destination States; protestants generally cannot provide proper equipment or furnish the complete service needed; authority granted for foods, food preparations, and foodstuffs moving in equipment with mechanical refrigeration.—Refrigerated Transport Co., Inc., Extension, 88 M.C.C. 71 (73).

Shippers supporting extension application for road construction machinery and equipment chiefly desire more economical and expeditious handling of l.t.l. shipments of parts, which applicant cannot provide under its existing heavy-hauler authority; grant under which applicant could efficiently handle such shipments in mixed loads with machinery destined to other consignees in same destination territory would be consistent with commission's goal of promoting sound economic conditions in transportation, as it is unrealistic to require a shipper to use services of several different carriers, with terminals located at different places and using a variety of equipment, for service to a single destination point or to points in same area.—Home Transp. Co., Inc., Extension, 88 M.C.C. 265 (271)*.

However, no need is shown for expansion of basic commodity descriptions in applicant's present heavy-commodities authority; most of supporting shippers already use applicant's service extensively or exclusively, and there is scant evidence that its and protestants' services are not satisfactory for movement of their prime products. Nor does there appear to be need for independent authority for transportation of parts and attachments from all of proposed origins; no substantial evidence was adduced of any need for authority from Michigan, and evidence of movements from only three Indiana points would not support grant of statewide authority. Extension authority granted for parts, accessories, and attachments of road construction

machinery and equipment, when moving in same vehicle with presently authorized commodities, from and to points and areas specified in appendix.—Id., 92 M.C.C. 677 (685-6)*.

Application by vendee authorized to purchase rights to transport machinery, equipment, and supplies used in operation and maintenance of industrial plants, for enlargement of the commodity authority to embrace a complete heavy hauling service, also application of another carrier for duplicative authority, denied. Supporting shippers' testimony merely shows desire for a locally based heavy hauler at Chattanooga, and fails to show any material inadequacy in facilities or services of existing heavy haulers or any need for additional service of that type.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (189-90).

While applicant's proposal to integrate its current transportation of motion picture films and related commodities with small shipments of general commodities would not be impractical when observing fixed delivery times on all shipments it accepts, in initial phases of proposed operation applicant, with its limited vehicle space, would have to choose its traffic from selected shippers and neglect others. Denied, as existing carriers are able to meet the public's reasonable needs for handling of small shipments.—Transway, Inc., Extension, 89 M.C.C. 513 (521).

Extension authority sought to transport gas pipeline condensate, denied when that commodity is found to be within two protestants' authority for petroleum products, and supporting shipper is satisfied with service of one of them.—Bridge Extension, 89 M.C.C. 494 (495, 497)*.

35. Operations by and with railroads.—[Vols. 10-15, 17-19].—In finding that plaintiff had failed to establish that present or future public convenience and necessity required the alternate-route authority sought, the commission reached a permissible conclusion; its order denying the application is sustained by substantial evidence; it did not improperly exercise its statutory authority.—Great Northern Ry. Co. v. United States, 209 F. Supp. 234 (237)*.

See also Great Northern Ry. Co. v. United States, 209 F. Supp. 230, §206(b), n. 18, and n. 25 Necessity, above.

Grant of authority to serve supporting shipper's new plant at Oakbrook, Ill., sought by one rail-affiliated applicant, is unnecessary because Oakbrook is within its parent railroad's Chicago terminal area and, thus, applicant can provide proposed service under the partial exemption of §202(c)(2) as railroad's agent without specific authority therefor. Proposed plan III TOFC service is the same integrated service, albeit under the guise that applicant would act independently of its rail parent in offering shipper a different service, as plan II service now offered by the railroad; the difference is in form, not in substance. A carrier which can provide a transportation service under existing laws or regulations should not be granted additional authority, regardless of whether proposed operation can be performed by virtue of carrier's outstanding authority or because it is partially exempt from commission regulation.—New York Central Transport Co. Extension, 99 M.C.C. 94 (100-1)*.

But service proposed by second applicant, notwithstanding that it is an affiliate of another railroad, will not be performed as an incident of rail service; and, as Oakbrook is outside the Chicago commercial zone, applicant cannot serve that point, under the §202(c)(2) exemption, in connection with its authorized unrestricted regular-route operations extending from Chicago to a large number of midwestern points. However, record is convincing that "special circumstances" warrant a grant of the independent authority sought to serve Oakbrook as an off-route point. Applicant has been serving shipper's Chicago plant; shipper indicates a need for continuation of that service from its new Oakbrook plant; no competing carriers oppose the application, and there is no evidence as to service which competing carriers are ready, willing, and able to provide; and denying the application would deprive shipper of a service enjoyed in the past and which it needs in order to use effectively and economically its new facilities. Functionally unrestricted authority, subject to plant-site and certain locality restrictions, granted.—Id., pp. 98-100, 102.

See also American Trucking Associations

v. United States, n. 9, above.

Applicant railroad has met its burden of showing special circumstances justifying proposed operation by it as a motor carrier, without the usual rail-auxiliary restrictions, between Barron and Wheeler, Wis., serving certain intermediate points. Applicant's branch line serving those points has been abandoned, and motor carrier performing substituted service for applicant in that area can no longer serve them, since its authority is limited to points that are stations on the railroad, as well as to rail-auxiliary service. Applicant desires to continue serving shippers located at such former rail points, and no other motor service is shown to be available; where businesses have been established in reliance on transportation furnished by the railway, it should be permitted to continue supplying service. Granted for transportation of general commodities, with usual exceptions including class A and B explosives, as to which no affirmative showing of need has been made.—Soo Line R. Co. Extension, 94 M.C.C. 19 (20-1).

Inasmuch as there is no motor carrier opposition and the evidence shows an all-motor service to be needed, proposed operation by railroad subsidiary is authorized without the usual substituted motor-for-rail restriction, Primary objective of such restrictions is to protect competing motor carriers from the "dual competition of all-motor service (operated by a railroad) in addition to the rail service." In absence of any motor carrier opposition, however, reasons for the imposition of the restrictions largely disappear. Thus, where evidence shows that an all-motor service is needed, imposition of restrictions would prevent the authorized service from being responsive to the shown need.—Burlington Truck Lines, Inc., Extension, 94 M.C.C. 195 (198).

When rail-subsidiary applicant relied on a showing that certain operating efficiencies and economies would accrue if merchandise car traffic could be handled in proposed motor carrier service between Phoenix and Wickenburg, Ariz., but no special circumstances were shown, it failed to reasonably satisfy the criteria in 92 MCC 573 which warrant a grant of unrestricted authority to conduct substituted motor-for-rail service. However, record shows that significant savings would accrue if rail cars moving to and from Phoenix could be eliminated; therefore, in order to provide shipping public with optimum service and, also, make applicant's operations between Los Angeles, Calif., and Phoenix subordinate to those of its parent railroad, so as to protect existing motor carriers against a new competitive service, grant of the authority sought is subject to key-point limitations at Los Angeles and Aguila, Ariz., both points on applicant's previously authorized routes.—Santa Fe Trail Transp. Co. Extension, 94 M.C.C. 723 (725-6)*.

But on further consideration, on complaint of competing carriers, record shows that two months after respondent received its restricted Phoenix-Wickenburg authority it instituted joint-line motor service between Los Angeles and Phoenix with another motor carrier which hauled the loaded trailers between Los Angeles and Pomona, about 35 miles, where they were interlined. In the circumstances presented, however, such motor operations by respondent cannot reasonably be said to be subordinate to its parent's rail service; respondent is quite obviously performing what amounts to an independent motor service, functionally unrelated to the rail service. Therefore, in order to insure that respondent's future service is limited to that auxiliary to and supplemental of rail service, its Phoenix-Wickenburg authority is modified by replacing the key-point restriction with a restriction providing that the route authorized may be used only for transportation of shipments having a prior or subsequent movement by rail.—Id., 103 M.C.C. 164 (169-73)*.

Where requested authority will enable applicant railroad to initiate regular daily motor service in place of less frequent rail operations, boxcars will be released for more efficient use, and reduction in operating costs can be reasonably anticipated, improved public service will result. While applicant will contract for tractors and drivers required to move railroad-owned trailers, the railroad will exercise full and effective control over the proposed substituted motor operation. And as service will be limited to rail traffic, the operations of existing motor carriers should not be

affected materially; granted.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (30-1).

And since, in view of grant of authority to the railroad, no need appears for additional auxiliary motor service, duplicative authority sought by motor carrier presently serving it under temporary authority is denied.—Id., p. 33.

In addition to authority granted railroad subsidiary, subject to rail-haul restriction, for transportation of bulk cement over its existing regular routes, unrestricted irregular-route authority is granted for distribution of cement from silo storage at Bridgeport, Conn., to points in Massachusetts and Rhode Island; there are no protesting motor carriers with requisite authority, and to deny unrestricted authority in face of established need for the service would not only create hardship for supporting shippers and their customers, but would deprive applicant of opportunity to retain traffic in which its parent railroad has been participating; benefits to the public from grant of unrestricted authority greatly outweigh any adverse effect which might result. —New England Transp. Co. Extension, 88 M.C.C. 703 (707).

Though applicants seek authority to transport certain traffic between Alabama railheads and other Alabama points to enable them to negotiate with supporting rail carriers for establishment of joint through routes and rates on (1) commodities which because of size or weight require line-haul movement by rail, or (2) shipments moving to or from jobsites beyond rail sidings, none of claimed advantages of proposed coordinated service can be related to a demonstrated service requirement of any supporting shipper or receiver in absence of any registered complaint about, or established deficiency in, the abundance of existing and available motor services. As those shippers have not demonstrated any interest in obtaining such coordinated service in connection with existing motor carriers, applications are denied.—Osborne Truck Lines, Inc., Extension, 94 M.C.C. 414 (418-9).

Limitations expressed in §5(2)(b) relative to railroad acquisition of motor carrier operations apply to §§ 207 and 209 proceedings, although the limitations may be relaxed upon a finding of "special circumstances"; ordinarily such a finding is justified only where authorized independent motor carrier service is nonexistent or not offered to the public. In effect, this means that the conventional standard of public convenience and necessity employed in §207 proceedings is inapplicable where the applicant is a railroad or railroad affiliate seeking unrestricted authority; in such cases the standard is one of compelling necessity.—Rio Grande Motor Way, Inc., Extension, 89 M.C.C. 199 (203).

Supporting shipper needs complete transportation service to the nearest standard-gage railhead where adequate and frequent rail service will enable it to be competitive with other shippers; its requirements are such that significant advantages are expected to be derived from coordinated motor-rail service; protestant is unable to handle ore and concentrates traffic with his present equipment and cannot provide the coordinated service offered by applicant. Proposed service, essentially a substituted motor-for-rail service, can be used to public advantage in railroad operations and without undue restraint of competition within meaning of §5(2)(b) as imported into §207; granted.—Id., pp. 201, 202.

No special circumstances are shown to justify grant of authority to railroad for cross-country routes not paralleling its rail lines, but with service limited to rail points. Proposed service is akin to all-motor service to off-rail points, and several protestants now serve supporting shippers at involved points with little complaint; though some shippers desire faster service to a number of small intermediate points, protestants' present service is in no way inadequate or unreasonable when relative size of those points is considered. Nor does protestants' ability to solicit same traffic give them unfair advantages; applicant's fears of loss of identity of shipments originated in its rail service, or even complete loss of that traffic, overlook inherent nature of both modes and fact that traffic moving economically by rail would not be diverted to all-motor movement. And that applicant would have to enter into multiple contracts to effect service to all those points through intermodal interchange cannot be considered unduly burdensome.—Illinois Central R. Co. Extension, 92 M.C.C. 106 (109).

"Special circumstances" do not exist which would justify grant of authority to rail-owned applicants to provide motor service essentially unrelated to rail service; although need for motor transportation of cement has been established, numerous independent motor carriers are willing and have been authorized to provide service adequate to meet transportation needs of cement producers and users in involved territory. While cement traffic has traditionally moved by rail, and applicants' parent railroads have derived a significant portion of their total revenue from such transportation, these facts do not constitute such "special circumstances" as would justify grant; denied.—Pennsylvania Truck Lines, Inc., Extension, 91 M.C.C. 167 (172-3)*.

Service by a railroad or affiliate at an off-rail point or a point on an unaffiliated railroad requires special justification. Applicant railroad's proposed interchange of TOFC traffic with Soo Line at a point on latter's line, to shorten the motor haul required by movement in substituted service for interchange at a point also on its own line, is as much a new service as an extension to points not served by rail at all. Not only is no special justification shown, but the record shows a plethora of existing rail and motor carriers authorized and willing to provide the type of service proposed; denied.—Green Bay & Western R. Co. Extension, 91 M.C.C. 363 (365-6).

Substituted freight service: [Vols. 17, 19].—See also Houff Transfer, Inc., Extension, §208(a), n. 30.

Authority for rail-auxiliary motor service recognizes the right of a railroad to retain traffic it has generated, by instituting a more efficient and economical operation; accordingly, an applicant seeking to provide a genuine substituted service may establish the requisite public convenience and necessity by showing that certain operating economies, efficiencies, or improvements in existing rail service will result. Proposed truckaway of automobiles and trucks from Phoenix and Tuscon to Hayden, Ariz., is genuine substituted service and applicant's showing of operating economies and attendant benefits entitles it to a certificate therefor; granted in part.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 645 (647, 649).

While institution of proposed motor-for-rail service will result in operating economies and financial savings to applicant, grant to it of unrestricted motor carrier authority at Waukesha, Wis., would result in diversion of substantial traffic from opposing motor carriers; projection of representative traffic handled by two protestants, shown to have been originated at Waukesha and handled to or through Chicago (recommended as a key point by the examiner), for an entire year would amount to over 16 million pounds handled collectively by protestants from and to those points. Therefore, authority granted is subject to key-point restriction at Waukesha in addition to rail-auxiliary and key-point restrictions recommended.—Soo Line R. Co. Extension, 94 M.C.C. 302 (303-4).

Grant of authority to applicant railroad for two additional motor routes in Mississippi is justified when service provided will be a true substituted motor-for-rail service and will result in certain operating economies, efficiencies, and improvements in its existing rail service; elimination of rail way cars will result in direct savings, and service on l.c.l. shipments will be more satisfactory.—Illinois Central R. Co. Extension, 92 M.C.C. 106 (108).

But service proposed over cross-country "alternate" routes sought cannot be considered in nature of substituted motor-for-rail service; although applicant seeks to serve no point it cannot serve by rail, those routes do not parallel its rail lines and proposed method of operation materially distorts the concept of substituted service. In essence, applicant is seeking to provide an all-motor service akin to service to off-rail points, and in the circumstances it must show, not only that the service is required by public convenience and necessity, but that there are special circumstances justifying service to such "off-rail" points. Evidence adduced falls far short of meeting that burden; denied as to those routes.—Id., p. 108.

In a substituted motor-for-rail operation a railroad is not obligated to continue using services of an independent motor carrier, even when such service is reasonably adequate. Being dissatisfied with substituted

service formerly provided by intervener, railroad filed application on its own behalf, and its showing of resulting benefits entitles it to authority sought; such grant would not render intervenor's rights useless, in view of possibility that it can negotiate a satisfactory contract with the railroad.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (31).

Applicant should not be precluded from transporting bulk commodities in its substituted service, even though they are not within usual scope of "merchandise traffic" and do not generally move in l.c.l. lots. Although claim that bulk shipments have been handled in its TOFC service is not substantiated, carrier which formerly performed its substituted service is authorized to transport general commodities without exception; applicant has thus held out to transport bulk commodities in substituted service over a long period, and grant of unrestricted general-commodity authority will merely continue the status quo. In addition, since applicant has been providing piggyback service in the territory involved, use of the substituted service in connection with TOFC operation will not amount to a new service, and will reduce unit costs of handling such shipments; restriction against TOFC movements, therefore, would not be justified.—Id., pp. 31, 32-3.

Applicant has shown that it cannot, in conjunction with its parent railroad, efficiently serve the intermediate points of Norden, Colfax, and Truckee, Calif., in movement of express shipments under its present authority which is subject to a key-point restriction on movements from, to, or through Truckee, but could do so upon elimination of Truckee as a key point; operating efficiencies having been proved, adequacy of existing motor-carrier service is not controlling; however, no need is shown for transportation of newspapers, milk, cream, or baggage moving separately from passengers, from or to any of those intermediate points; authority granted for transportation of general commodities moving in express service between Truckee and Reno, Nev., subject to rail-station restriction and observance of Reno and Sacramento, Calif., as key points.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 81 (83-4, 86, 87).

While substantial improvement in operating efficiency and economy that could be achieved under any modification of petitioner's certificate permitting use of trucks alone between points now served by both rail and substituted motor service with lightly loaded cars and trucks is a desirable objective, proposed elimination of 33 of 45 key points would permit expansion of all-highway operations to a degree dangerous to operations of independent motor carriers. Examiner's plan under which substituted service would be authorized within each of 12 zones defined around the retained key points, but not between points in different zones except break points between adjacent zones, would broaden flexibility of petitioner's operations while affording a considerable measure of protection to existing carriers; subject to specified restrictions, petitioner's certificate is modified accordingly.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (396, 407, 408).

Any increase in petitioner's operating costs as result of such modification would be negligible; although there would be some increase in loading and unloading costs and in highway mileage operated by its vehicles, it now conducts highway operations over all of its authorized routes from, to, and through each of the present 45 key points; operation under the zone plan would require no additional equipment, but would permit more efficient use of what it now has; and there would be some additional savings through elimination of need to domicile equipment and drivers at a number of locations.—Id., p. 406-7.

Although in a few zones highway distances between some points exceed 300 or 400 miles, the bulk of such long-haul operations can be performed under petitioner's present authority; frequency of service at rural points on those routes is necessarily limited by amount of traffic available, and utilization of truck instead of rail service over such long routes would not confer any marked competitive advantage. Necessity of a prior or subsequent rail haul in connection with interzone truck movements, involving time-consuming physical transfer of lading, provides sufficient guarantee that the highway portion of the operations will be subordinate to rail service. However, petitioner's request for a 150-mile high-

way exception so as to continue certain interzone transportation now permissible but barred under the zone plan is denied when it would unwarrantably enlarge scope of its operations.—Id., pp. 408-9, 412.

Grant of authority to railroad subsidiary for routes between Harrisburg and York and Lancaster, Pa., also certain connecting routes, in conjunction with elimination of York and Lancaster as key points, for performance of substituted freight service to and from Harrisburg as break-bulk point, will enable applicant and parent railroad to provide the public with an improved and more expeditious service. Proposed method of operation appears feasible and practical; and savings in boxcar miles and per diem payments, lower operating costs, and increased utilization of applicant's equipment are benefits reasonably to be anticipated.—Pennsylvania Truck Lines, Inc.—Key Points Restriction, 88 M.C.C. 505 (512).

Examiner's conversion of requested alternate-route authority into service-route authority was not error; proposed operation over the "alternate" routes will be substituted service auxiliary to or supplemental of the rail service, and applicant will not be permitted, nor does it propose, to provide a local service between Harrisburg and points in the authorized territory. Decision in 84 MCC 105 denying authority for an alternate route bypassing key points, because it would constitute new service, is not applicable.—Id., pp. 508, 512.

Though protestant has for 30 years performed satisfactory substituted service for the railroad between Harrisburg and York Haven (intermediate to York), and loss of that traffic would have substantial adverse effect on its freight business, the commission has long held that independent motor carriers are sufficiently protected so long as the substituted service can be considered auxiliary or supplemental to train service, and there is no prohibition against a railroad's having its own subsidiary perform the substituted service, with the commission's approval, even though it was previously performed by an independent carrier. Denial of applicant's request for a service route between Harrisburg and York would partially nullify the benefits anticipated from the proposed operation.—Id., pp. 514-5.

Restriction against applicant's transportation of l.c.l. freight having prior or subsequent rail TOFC movement is not warranted; applicant's transportation of trailers to or from railroad ramps will be a genuine substituted service, and it is immaterial whether the rail segment of the transportation is performed with boxcars or trailers loaded on flatcars. Although applicant's showing was confined to benefits anticipated from elimination of certain authorized classification cars, there is no reason why it should be restricted to boxcar traffic; so long as the service is subject to the usual restrictions designed to ensure that it will be a beneficial adjunct of the rail service, it may be approved without inquiring whether it can be used to equal advantage in all phases of the railroad's operations.—Id., p. 517.

And it will be permissible for applicant to provide a substituted service on express shipments transported by the railroad under its general contract with the Express Agency; authority granted includes, and applicant's outstanding authority is modified to include, shipments moving on through express receipts covering an immediately prior or subsequent rail movement to or from Harrisburg; such authority will not entitle it to provide the express company with any service auxiliary to or supplemental of service the express company is authorized to perform.—Id., p. 519.

But authority granted is restricted against transportation of household goods, bulk commodities, and those of unusual value or requiring special equipment; those classes of commodities do not generally move in l.c.l. service, and it is not shown that either applicant or the railroad has transported such traffic in the area involved; consequently, economies and operating benefits anticipated could not be realized from their transportation. However, a like restriction in the modified certificate issued in connection with the key-point elimination from applicant's existing authority would result in an unwarranted diminution thereof and is not imposed.—Id., p. 518.

While applicant's TOFC service involves traffic moving on parent railroad's billing and

having immediately prior or subsequent rail movement, it is not characteristic of the usual rail l.c.l. service; service is provided on demand, with relative infrequency, rather than on schedule; and shipments approach full t.l. volumes and are handled in standard, line-haul, motor vehicles. When transporting considered traffic, applicant is not acting in a subordinate capacity, aiding its parent's rail operations, but is competing directly with independent motor carriers; thus, its current and proposed operations are not auxiliary to and supplemental of its parent's rail service within the meaning of 340 US 419. Substituted TOFC service must be itself a bona fide substituted motor-for-rail service, auxiliary and supplemental to that of the rail carrier. Grant of authority sought would greatly enhance competitive position of the combined rail-motor service at the expense of existing motor carriers; and proposed route is completely unconnected with rail line of the railroad. Denied.—Pacific Motor Trucking Co. Extension, 95 M.C.C. 53 (59-60)*.

It would materially distort the concept of substituted motor-for-rail service to allow applicant railroad subsidiary, which seeks authority to transport traffic moving in express service of Railway Exp. Agency over a route some 38 miles shorter than its existing service route, to use the theory of gateway elimination, with its concomitant lesser burden of proof, (1) to institute a motor service which would replace a less direct highway movement rather than an inefficient rail operation, and (2) to provide an all-motor service over routes which are not appurtenant to a rail route which it owns or uses for movement of the traffic involved.—Central of Georgia Motor Transport Co. Extension, 94 M.C.C. 6 (10).

Genuine substituted motor-for-rail service by a railroad or its subsidiary is that performed in lieu of, and functionally related to, an existing rail operation of the railroad; therefore, authorized substituted service is generally restricted to points located on railroad's line. And while public convenience and necessity for a genuine substituted service may be established merely by a showing of resulting economies or improvements in the railroad's service, authorization of an unrestricted motor service by a railroad or an affiliate requires a showing of special circumstances. Application denied.—Green Bay & Western R. Co. Extension, 91 M.C.C. 363 (365).

Although independent motor carriers may be authorized to conduct substituted motor-for-rail service when a more economical, efficient, and improved service would result, and proposed highway transportation of TOFC trailers, in connection with a prior or subsequent rail movement, is genuine substituted service, applicant's burden of proof is not met when satisfactory motor carrier service is available and being used, and there is no apparent advantage in or need for additional service. Applicant has not shown that TOFC service is needed at points not served by protestant, which has served intervening railroad without complaint, and the sole basis for the railroad's support appears to be mere preference for applicant's service; denied.—Copey Trailers, Inc., 91 M.C.C. 551 (553).

Trailer-on-flatcar all-rail service: [Vol. 17]. —Highway transportation of piggyback trailers, with a prior or subsequent movement beyond by rail, is genuine substituted service; any restriction aimed at preventing TOFC service is an inappropriate limitation to place on substituted freight service.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (411).

Authority granted railroad subsidiary for performance of substituted freight service between Harrisburg and other Pennsylvania points includes transportation of trailers having prior or subsequent movement in TOFC service; thus, though the railroad has arrangement with one protestant for distribution of TOFC traffic from Harrisburg to many of same points, which it considers satisfactory and intends to continue, it could terminate that arrangement and have its subsidiary perform the service. However, protestant's compensation from such service is a relatively small percentage of its total revenues; moreover, only traffic moving in plan II TOFC service would be affected; proposed restriction against applicant's transportation of such traffic is not warranted.—Pennsylvania Truck Lines, Inc.—Key Points Restriction, 88 M.C.C. 505 (517).

Regulations of the Commission

32 FR 16084, Nov. 22, 1967: Guide to Restrictions and Descriptions in Motor Carrier Operating Rights, appended to report in 106 MCC 1 (Appendix II), published for information.

NOTE: For Republication and Redesignation of Regulations, see 32 FR 20003, Dec. 20, 1967.

33 FR 2711, Feb. 8, 1968, Part 1041 [former Part 265a, formerly Part 165a]: Interpretation—Certificates and Permits, a new §1041.13 Truckload lot restrictions, added, effective March 15, 1968.

33 FR 4467, March 13, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 Truckload lot restrictions, (33 FR 2711) postponed pending determination of petitions for reconsideration.

33 FR 5780, May 2, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 (33 FR 2711) postponed to June 3, 1968

33 FR 7629, May 23, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 (33 FR 2711) fixed as June 19, 1968.

Section 207. (b) [§307 (b) US.C.] Certificate not to confer proprietary or property rights in highways. —[Unchanged. See vol. 10, p. 8020.]

Section 208. [§308 (a) U.S.C.] Terms and conditions of certificate—(a) Specification of routes and termini; extension of routes; restriction on additions to equipment. —[Unchanged. See vol. 10, p. 8021.]

Notes of Decisions

Volume 10—p. 8021; Volume 11—p. 9450; Volume 12—p. 10401; Volume 13—p. 11077; Volume 14—p. 11598; Volume 15—p. 12204; Volume 16—p. 12853; Volume 17—p. 13553; Volume 18—p. 14462; Volume 19—p. 15720.

2. Construction and interpretation. —[Vols. 12-19].—Authority provided by §208(a) to delineate the area of a motor common carrier's service is specifically limited to certificates issued under §206 or §207; therefore, the commission has no statutory authority thereunder to impose restrictions as to pickup and delivery points on certificate issued in a conversion proceeding under §212(c), which contains no such statutory authority.—J.B. Montgomery, Inc. v. United States, 206 F. Supp. 455 (459-60)*.

The statute authorizes, but does not require, the commission to limit carriers of freight to specified routes; if the operations authorized are "not over specified routes or between fixed termini," it is sufficient if the commission names the territory within which carrier is authorized to operate.—Railway Exp. Agency, Inc. v. United States, 205 F. Supp. 831 (836)*; Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (571)*.

30. Routes, streets, points, to be served. —[Vols. 10-19].—Construction and interpretation of terms of certificates generally, see §212(a), n. 1.

Findings and reasoning of record do not support the commission's conclusion that the part of plaintiff's 'grandfather' certificate authorizing service between Akron, Ohio, and points in Alabama and Georgia—between Akron and the Alabama and Georgia State lines over regular routes specified in first portion thereof (which includes service at intermediate points thereon) thence, over irregular routes between northern borders of, and points in, those States—does not authorize service from irregular-route origin to a regular-route intermediate point by joinder of the irregulate-route segment with authorized regular route at a border point. "Regular and irregular route" portion of the certificate is ambiguous; the grandfather decision does not clearly show that plaintiff may not serve all intermediate points while traversing its regular routes north of the State borders; and the commission's finding of willful violation because service in issue was not authorized, based only on a reading of the certificate and the decision, is erroneous. Proceeding remanded for further consideration and findings.—Dixie Ohio Express, Inc. v. United

States, 263 F. Supp. 993 (995, 999, 1001-02)*.

See also United States v. W. J. Dillner Transfer Co., §222(b), n. 14.

Plaintiff's authorized route between New York City and Orange, N.J., via Newark is generally an east-west operation, and to operate directly 'over city streets and connecting highways' via Newark to Orange only one adjoining municipality—East Orange—need be traversed. While there are numerous more circuitous routes entailing traversal of one or more adjoining or intermediate municipalities, it would be extremely unreasonable and a gross distortion of the rights conferred to permit a carrier by using such routes to operate the length and breadth of New Jersey, over city streets and connecting highways via Newark to Orange. To say that plaintiff's interpretation of its "grandfather" rights over city streets in East Orange and Bloomfield as authorizing operation over Garden State Parkway to Orange would not be tantamount to such unreasonableness would ignore the innumerable possibilities of logical extension to that point; its traversal of the Parkway in those municipalities in an unwarranted north-south direction is a convincing portent of such a possibility.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (207-8)*.

While plaintiff's New York-Newark-Orange route is unrestricted, it would not be reasonable to interpret that authority so broadly as to authorize extensive circuity. That the route over the Parkway in Bloomfield and East Orange may be the best or most practical does not bear on the issue if it is unauthorized and not within the scope of lawful operations. It was not used previous to its existence, and, even if it had been used for a considerable time, a motor carrier acquires no prescriptive rights by operation over an unauthorized route. The commission's determination that the questioned operations were unlawful is warranted; sustained.—Id., pp. 208, 209.

See also Alabama Highway Exp., Inc. v. United States, §5(2), n. 48 *Conditions*.

While Congress has entrusted to the commission delineation of the area a carrier may serve, characteristics of the transportation service involved, and the geographical area serviced, are relevant to territorial scope of authority that may be granted under the "grandfather" clause.—Winter Garden Co. v. United States, 211 F. Supp. 280 (285)*.

Defendant, whose authority to transport passengers between New York City and Long Branch, N.J., is neither restricted to specified streets nor otherwise limited, may serve any and all areas within the municipal limits of Long Branch including the northern portion which now, due to action of racetrack operators, can only be reached by way of a bridge over a stream and a private road over racetrack property that is outside Long Branch municipal limits. The commission has never permitted action of any city or municipality to remove any territory from a carrier which was originally encompassed in a grant of operating authority; it follows that the commission cannot permit action by individuals or corporate entities to withdraw from motor carriers that area included with a grant of authority which is predicated on proof of a public need for the service authorized. To permit such a result would be tantamount to a partial revocation of defendant's certificate by the racetrack operators. Asbury Park-Transit v. New York, K., L.B. Bus Line, 95 M.C.C. 452 (455).

Generally, grants of regular-route authority confer only authority to serve intermediate points and termini on routes involved, and carriers have implied authority to serve points within 1 mile of the highway traversed and points within the commercial zones and terminal areas of the communities served. The commission, in the absence of a specific need, will not grant authority to serve more extensive radii about regular routes. Applicant has failed to show such need for proposed service at points within 5 miles of service routes and 15 miles of principal points thereon; service is authorized only at the terminal and intermediate points of proposed service routes.—Braswell Freight Lines, Inc., Extension, 95 M.C.C. 457 (464)*.

As the route originally sought by applicant has a bridge with a 5-ton weight limit, it now proposes to use a detour route available for heavy trucks, which avoids the bridge. The two routes are substantially similar, as the detour route does not diverge from that originally proposed for more than 5 miles. Moreover, there appears to be no service points of consequence on the detour route; public wit-

nesses did not give evidence of need for service at points on the highway which are avoided by the detour, and a grant will permit applicant to provide service shown to be required. —Continental Tennessee Lines, Inc., Extension, 95 M.C.C. 728 (731)*.

The words 'Merrick, Long Island, Nassau County, N.Y.' in applicants present irregular-route authority refer to a single point of origin —Merrick, N.Y., and do not confer on it authority to originate the commodities concerned from any other point on Long Island, or from any other point in Nassau County, N.Y. That application sought authority 'within 50 miles of New York, N.Y.' and apparently the surplus wordage 'Long Island, Nassau County' was used in an effort to be specific in the location of Merrick, the only authorized origin. While applicant claims that its past service from origins other than Merrick was under a 'color of right,' it took advantage of a surplusage of words in its certificate to create an ambiguity which suited its purpose; past operations from points other than Merrick were unlawful.—Kennedy Motor Lines, Inc., Extension, 95 M.C.C. 499 (501).

Inasmuch as protestant's authority to transport household goods 'between all points in the United States' was issued prior to Alaska's admission as a State, it authorizes transportation between all points in the contiguous 48 States, but does not authorize service to or from Alaska. See 81 MCC 701.—Trans American Van Service, Inc., Extension, 94 M.C.C. 248 (250).

Since Alaska is not contiguous to the other 48 continental States and there are no common points of service for joinder of separate grants in Alaska and other States, neither recommended authority between interior Alaska points and Alaska ports of entry, restricted to traffic moving to, from, or through Idaho and Washington ports of entry, nor authority between points in Alaska, restricted to traffic moving to or from points in other States, would enable applicant to perform contemplated service between Alaska and Seattle or Tacoma, Wash. Since applicant's authority for latter points leads to one or more of the Washington and Idaho ports of entry, authority is granted between those ports of entry and points in Alaska, creating common points of service and permitting through service to Alaska and authorizing an operation coextensive with applicant's pertinent present authority.—Lynden Transfer, Inc., 92 M.C.C. 797 (801).

Where statewide "grandfather" authority within Alaska is sought, and applicant has conducted substantial operations before and since the critical date, no cogent reason appears for excluding portions of the State where improved roadways may be located at some future time, remote as such possibility may be in some areas, considering the terrain. —Alaska Truck Transport, Inc., 92 M.C.C. 787 (791).

Although applicant seeks regular-route authority between Twin Cities and Minot, N. Dak., it already has a route between St. Paul and Bismarck, N. Dak., and as additional route sought between Minneapolis and Bismarck is not wholly completed, authority is granted only for a route between Bismarck and Minot.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 92 M.C.C. 558 (564)*.

While the commission does not ordinarily grant regular-route authority over nonexistent highways, and actual highway mileage on Kenai Peninsula is extremely limited, that area is undergoing what for Alaska might be termed rapid development; in view of the type of service rendered by applicants at Kenai points, their willingness to continue such blanket coverage, and prospective development of the area, restriction of their regular-route authority to the existing highway would be a short-sighted exercise of the commission's quasi-legislative powers. Authority granted over such highways as may in future be constructed on Kenai Peninsula, including all intermediate points.—Al Renk & Sons, Inc.—Alaska 'Grandfather' Application, 89 M.C.C. 91 (104, 105).

As stated in 79 MCC 491, while there is no definite rule as to how far an off-route point may be from the authorized route, off-route operations must be conducted in connection with a service route to which they may be said to be appurtenant. Applicant will use as regular routes the two major east-west highways in Tennessee, and almost all points in the State are located within 50 miles of one of those highways. Service is now being ren-

dered throughout the territory by applicant under its present irregular-route authority, and no other carrier is known to be able to render proposed scheduled service shown to be needed. The considered east-west regular routes being two of the most practicable for traversing the State, all points therein are functionally appurtenant to those routes; therefore, a grant of authority to serve all off-route points within Tennessee is appropriate. —Thurston Motor Lines, Inc., Extension, 94 M.C.C. 131 (133).

A unified certificate will generally confer that authority contained in its components; it may do otherwise, however, if in the commission's approval thereof a different intention is manifested by proper findings. Analysis of cases wherein petitioner acquired unrestricted rights between Indianapolis and Louisville, including intermediate points of Franklin and Columbus, Ind., which it could not serve under its own rights, is convincing that by the statement that after unification petitioner would not be entitled to serve Franklin, Columbus, or Louisville on traffic to and from points south of Louisville, division 4 intended simply to establish parity with operations permissible under the separate rights, and that language serves merely to proscribe operations which would extend the merged authorities. Therefore, as the unified certificate may fairly be interpreted more restrictively than was intended, it was incorrectly drawn; and petitioner is entitled to modification.—Terminal Transport Co., Inc., Petition for Modification, 94 M.C.C. 770 (772, 774).

Vendor's authority to transport uncrated furniture from Baltimore and points within 50 miles thereof to points in 14 States and District of Columbia, restricted against service to or from points within 35 miles of, but not including, Hagerstown, Md., precludes it from serving Hagerstown, since as issued to its transferor those rights were limited to points within 50 miles of Baltimore and Hagerstown is beyond that radius.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (126, 128).

Although vendee holds authority from "Doe Run, Ky.," to numerous States, Doe Run is not a "point" properly known by that name, but is officially shown on State highway map as only the designation of a creek extending some 5 miles from Ohio River, and its designation as an origin point in vendee's certificates apparently intended to authorize service from a plant on west bank of the creek, the source of the described commodities. Therefore, as Doe Run is not a town or unincorporated community, has no commercial zone, and is not the name of the location of vendee's terminal over 2 miles from the creek, that terminal is not an authorized point from which shipments may be moved, and vendee could not lawfully interchange shipments there under that authority. That vendee may have put "Doe Run" on its terminal list or maps, that other business establishments use those words in their names, or that a railroad map shows Doe Run as a point of service, do not establish it as the actual geographical name of any such location.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428-9).

Restrictions in defendant's certificate against service at the intermediate points of Franklin and Columbus, Ind., and Louisville, Ky., on "traffic moving to and from points south of Louisville" are unambiguous and under commonly accepted rules of construction prohibit both direct and indirect service; to infer that only direct service is proscribed does violence to plain meaning of the language; also, those restrictions prohibit handling of such traffic by any indirect or circuitous means, regardless of gateways used. And described method whereby defendant handles traffic originated or delivered at the three restricted points in interline movement to or from points south of Louisville are likewise barred; performance of interchange or interline service at a point is a transporation service, and authority broadly restricted against service at a given point in connection with certain traffic also precludes interline service on the prohibited traffic at that point.—Alabama Highway Exp., Inc. v. Terminal Transport Co., 91 M.C.C. 635 (638-40).

Search of the record in lease and purchase proceedings underlying defendant's authority would not change these conclusions. The commission has broad authority to impose conditions and restrictions on unification of separate operating rights, and there is no legal

basis for defendant's theory that approval means that all permissible operations under the separately held rights are ipso facto authorized under unified grant. No distinction for purposes of a restriction is indicated in those decisions as between the most direct and less direct means of operation between involved points; the restrictions as interpreted were intended to be imposed. And since Buckner, Ky., may be served only as an off-route point in connection with operations authorized at Louisville, the same restrictions also apply thereat.—Id., p. 641.

Since considered "townships" which are mere political subdivisions of a county are found not to be municipalities, and housing development adjoining authorized highway is found not to be an unincorporated community for purposes of the commercial zone exemption, respondent may not serve plant site 4 miles from the highway as a point within commercial zone of any of them. Respondent's right to serve points adjacent to the highway, under its authority for all intermediate points, is therefore governed by Administrative Ruling No. 84 of Bureau of Motor Carriers (acquiesced in by the commission), which permits it to serve all points wholly within 1 mile of the highway; thus, it may serve only those points in the townships along its route which lie wholly within 1 mile of the highway, and considered plant site is not an authorized service point.—Cross Transp., Inc., Interpretation of Certificate, 91 M.C.C. 51 (53, 56-7).

As the whole of Neville Island is within 1 mile of one of applicant's Cleveland-Pittsburgh routes, under Administrative Ruling No. 84 any point on Neville Island is in effect an intermediate point on that route.—Lattavo Bros., Inc., Extension, 91 M.C.C. 643 (644)*.

Examination of record in applicant's "grandfather" proceeding reveals that ambiguously worded restrictions on its authority between Louisville and Memphis were intended to preclude southbound service from all intermediate Kentucky points except Camp Knox; direct movement from Franklin or Bowling Green is therefore forbidden. Pickup of Memphis-bound freight at those points and transportation thereof to Memphis after a backhaul to and from Louisville is likewise proscribed, since applicant may not transport freight from either origin to a point which lies south thereof; no combination of routes, circuitous or direct, and even though authorized in separate paragraphs of the certificate, can be utilized or tacked in such manner as to convert a southbound into a northbound movement.—Southern Forwarding Co. Extension, 91 M.C.C. 221 (223, 226).

Nor may the restriction be circumvented by applicant's pickup of Memphis freight at Franklin and interchange thereof with another carrier for movement to Louisville, after which applicant hauls it to Memphis; applicant may not in any manner originate traffic at either origin which at the time is intended for ultimate movement to a point south of either. But transportation to Memphis of traffic from Franklin or Bowling Green which applicant receives for the first time at Louisville as interline carrier is lawful provided it is in no way involved in pickup of the shipment at those origins; the restriction applies to extent of service authorized at a particular point, as opposed to a restriction on use of the routes involved.—Id., pp. 223, 226-7.

Since, when defendant's predecessor obtained his "grandfather" certificate his Boulder City, Colo. Phoenix, Ariz., route was his only interstate route, restriction of service at points between Phoenix and Kingman, Ariz., to traffic moving to or from points "north and west" of Kingman related to points on the Boulder City-Kingman segment or points beyond in same general direction. The same restriction in certificate issued defendant as subsequent purchaser of the Phoenix-Kingman segment therefore restricts service at intermediate points to traffic to or from points both north and west of Kingman.—Consolidated Copperstate Lines, Inc. v. Navajo Freight, 91 M.C.C. 597 (602)*.

Fact that in certificate originally issued for authority now held by respondent as fifth transferee the description of intermediate-point authority followed separate descriptions of the basic authority for transportation of general commodities from Charleston, W. Va., to Cincinnati and of gas cylinders and rubber tires in reverse direction, did not enlarge scope of the basic authorities and did not authorize eastbound transportation of

general commodities from the intermediate points. Respondent's present certificate describing authority for general commodities from Charleston to Cincinnati, serving specified intermediate points, and for gas cylinders and tires from Cincinnati to Charleston, serving the same intermediate points, thus accords with authority held by the original grantee and the four predecessor transferees; its transportation of general commodities eastbound from the intermediate points therefore was and is unlawful in violation of §206(a).—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (576, 578)*.

Under applicant's general-commodity authority between Clinton, Ky., and St. Louis, and its authority for malt beverages from Milwaukee to Jackson, Tenn., it may not transport beverages from Belleville, Ill., a point in St. Louis commercial zone, to Jackson via the common point of Union City, Tenn.; though order in 76 MCC 418 redefining the St. Louis zone vacated order in 61 MCC 489 insofar as it defined that zone, remainder of latter order, including portion removing the commercial zone exemption as to Belleville, was in no way affected.—Edwards Extension, 88 M.C.C. 318 (321)*.

Principle of the Philipp case, 64 MCC 542, that a restriction against serving a given municipality applies only to the point named and does not prohibit serving other points in the commercial zone thereof, has been recognized in subsequent cases and is controlling on interpretation of restriction in respondent's certificate against transportation, under combination of his rights, of traffic moving between St. Louis, on one hand, and Louisville and Cincinnati, on the other; that restriction applies only to points within municipal limits of those cities and does not restrict service when pickup, delivery, or interchange is made at points outside those limits. —Schroder's Exp., Inc.—Investigation of Operations, 89 M.C.C. 143 (145-6).

Two motor common carriers may interchange traffic at any point to which one is authorized to transport it and from which the other is authorized to transport it; restriction on applicant's authority for new pianos against transportation from De Kalb, Ill., does not preclude it from interchanging at Rockford, Ill., shipments originated at De Kalb by a connecting carrier.—Trans-American Van Service, Inc., Extension, 89 M.C.C. 48 (51).

Destination areas sought are the normal sales and marketing areas for considered cement plants; evidence concerning location of supporting shippers' customers, while somewhat general, is convincing that there will be definite and constant need for motor service to numerous destinations, which will change from time to time, throughout those areas; shippers' evidence is corroborated by that of opposing rail carriers respecting points and areas to which they have transported such traffic; therefore, since it would be impractical and unduly restrictive to limit authority to specific destinations, statewide destination authority is granted.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (411-2); and authority is granted to serve Alabama, in which authorized origins are located, since such service is needed for shipments having subsequent water movement to points beyond, or to enable shippers to reconsign shipments already enroute.—Id., p. 413.

When a city, town, or other incorporated municipality is traversed by the boundary line of a territorial grant of authority, only that part of the point in question which is within the boundary line may be served. But though the exact limitation of a radial territory surrounding a municipality may change from time to time as the city limits change, it will not be reduced.—Pilot Freight Carriers, Inc. —Purchase—Bison Fast Freight, 90 M.C.C. 709 (711-2).

Since vendee seeks certificate for precisely the same physical operations as are authorized by vendor's Kansas intrastate certificate covering its interstate "grandfather" operations under §206(a)(7), and vendor's irregular-route territory is almost entirely coextensive with that of its regular routes, authority for the irregular-route points is granted as off-route-point authority appurtenant to the several regular routes traversing the same area.—Denver-Limon-Burlington Transfer—Purchase—Kansas Interm., 93 M.C.C. 210 (214)*.

See also Deaton Truck Line case, §207(a), n. 26.

Where vendee seeks authority for three regular routes between Knoxville, Tenn., and a southwestern North Carolina area in lieu of limited irregular-route authority authorized to be purchased, examiner's selection of the most circuitous route to exclusion of the other two is unrealistic when it would tend to render useless vendee's terminal nearest that area in handling the Knoxville traffic in which supporting shippers are primarily interested, and would not meet their need for the most direct and expeditious service, but would enable him to provide new competition over the most direct route between Knoxville and Asheville, N.C., to and from his irregular-route territory east of Asheville embracing the most populous and industrialized portion of the State. Grant of the other two routes instead, for use as operating conditions dictate, will meet shippers' needs and tend to preserve protestants' competitive advantage in operating over the third route.—Cope—Purchase—Hill and Burdick, 90 M.C.C. 71 (76-7)*.

Authority to serve all points in named border States includes service at ports of entry on Canadian boundary line and no specific authority therefor is required.—Maas Transport, Inc., Extension, 92 M.C.C. 534 (541)*.

Since proposed service between New York City airports and seven points in Middlesex County, N.J., that are within airlines' terminal areas is found to be line-haul service of an independent motor carrier rather than pickup or delivery for air carriers, and no other motor service is shown to be available, those points are included in authority granted between the airports and points in Middlesex and Somerset Counties.—Con-Ov-Air Air Freight Service, Inc., 92 M.C.C. 526 (529).

Proposed substitution of plan I TOFC service between Charleston, W. Va., and Staunton, Va., on traffic moving between Charleston and points within 50 miles of Washington, D.C., and, by tacking at a point in the Washington area, certain points beyond, is within scope of applicant's existing authority. Though in its highway operations applicant must operate somewhat circuitously between Charleston and Staunton through a point in the Washington area, it holds authority between Staunton and all points it would serve in the manner proposed, and the through rail-highway operation contemplated is less direct than all-highway routes which it may now use. There is therefore no unlawfulness in the proposed operations.—Houff Transfer, Inc., Extension, 92 M.C.C. 702 (703).

Although authority for transportation of express between Atlanta and Macon, Ga., would not permit service at Robins Air Force Base, near Macon but not within commercial zone thereof, record as a whole is persuasive that service at the base was intended to be part of the authority sought, and that the chief aim of the proposed operation is to provide expeditious service for outbound military express traffic to all points in United States. Thus, grant of application as filed would not be responsive to a significant portion of evidence concerning requirements of the primary supporting shipper and would preclude applicant from rendering express service to same extent as when rail service was used between those termini, with applicant performing local motor pickup and delivery at the military site. As failure to specify Robins Air Force Base as a service point in application was merely an inadvertent error, authority granted will include the right to serve it as an off-route point.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 887 (889-890, 892)*.

Authority to serve points in a single State does not authorize a carrier to serve points on the boundary line between that State and a neighboring State.—J. O. (Red) Willett Pipe Line Stringing Corp. Extension, 92 M.C.C. 41 (46)*.

In territorial descriptions setting forth imaginary lines as boundaries between certain areas, words descriptive of direction have always been used in their generally accepted sense. In determining territorial scope of defendant's authority to serve points in New York "on and south of" a line beginning at Oswego and extending along specified highways between named points to the Massachusetts State line, it is significant and controlling that the commission did not describe any boundary extending south from Oswego to the Pennsylvania line as a limit on that authority; and in its absence none can be implied. This indicates the commission's intention to

grant all points in New York except those north of the Oswego line, and there is nothing in New York of such line and west of Oswego; therefore, defendant is authorized to serve points in all areas of New York which are not north of the Oswego line, including that portion which is west of Oswego.—Pilot Freight Carriers, Inc. v. Malone Freight Lines, 91 M.C.C. 58 (59, 60).

Authority to serve "all intermediate points" on U.S. Highway 11 between Mattawamkeag and Ashland, Maine, authorizes service only at points "on" the highway, which in case of New England type towns embraces only the communities located in such towns which are located on the highway.—Border Exp., Inc., Extension, 88 M.C.C. 491 (493).

Authority granted for transportation of cement from Alabama origins includes Alabama destinations because a load destined to one point is often reconsigned for delivery to a different point without return to origin, and such reconsignment may involve crossing the State line for ultimate delivery to an Alabama point; however, applicant is cautioned that such authority does not include intrastate traffic.—Schwerman Trucking Co. of Ala., Inc., 89 M.C.C. 628 (630)*.

Past grants of territorial authority in terms of a radius about a particular point have led to interpretive problems and are impractical and administratively undesirable; though application for broadened commodity authority proposes to duplicate the 250-mile radius of Texarkana described in applicant's present certificate, four important shipping points are situated at or near the periphery thereof; territorial description is therefore restated in terms of boundaries including those points, conditioned on applicant's requesting coincidental revocation of its duplicative authority for composition shingles in the radial territory.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (736).

Although the new description is somewhat broader than the Texarkana radial territory named in applicant's present authority for lumber and certain other commodities, latter authority is left unchanged, since those commodities are not at issue in extension application and apparently are not intermingled in transportation with those sought, so that the separate grants are not interdependent. Applicant is cautioned, however, particularly when operating within the radial territory, to ascertain the limits of its respective territories and avoid operating beyond them.—Id., pp. 736-7.

31. Combination of routes.—[Vols. 12-19].—In action to set aside the commission's grant of alternate-route authority to intervening defendant, the court feels bound by the commission's interpretation of its own certificate of convenience and necessity when that interpretation does no violence to the principles of logic and common sense. In view of the commission's holding that phrase "otherwise authorized routes" in intervenor's certificate for a north-south route had a prospective application and applied to routes thereafter acquired by it, that route could be combined with its subsequently acquired east-west route for through movement of traffic between considered Midwest and Southeast areas.—Campbell Sixty-Six Exp., Inc. v. United States, 258 F. Supp. 529 (533)*.

See also Kenosha Auto Transport Corp. v. United States, §212(a), n. 1.

It is clear that when plaintiff's "grandfather" authority for Route (3) between New York City and Orange, N.J., via Newark and Route (1) between New York City and Caldwell via Bloomfield was granted the commission determined that both were east-west operations and that plaintiff did not intend to perform a through service via East Orange and Bloomfield in a north-south direction. Though those routes separately authorize operation over all city streets and connecting highways in East Orange and Bloomfield, analysis thereof discloses no common gateway at which the right to serve East Orange under Route (3) may be tacked to the right to serve the adjoining municipality of Bloomfield under Route (1) to provide through service between New York and Orange via Garden State Parkway through those municipalities. The commission's conclusion that such tacking would be unlawful under its decision in 45 MCC 267, sustained.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (208-9)*.

Though respondent's authority to transport

raw and processed foodstuffs from New York City to Chicago is restricted against tacking with its right to transport similar commodities from Chicago to Council Bluffs and Sioux City, its purchased authority between latter points is not restricted against tacking, hence is not a duplication; therefore, respondent may lawfully tack its authority from New York to Chicago with the purchased authority, to perform single-line through service.—Cocoa Powder from New York, N.Y., to Council Bluffs, 322 I.C.C. 255 (256-7)*.

Applicant's alternate-route authority between St. Joseph, Mo., and Kansas City commercial zone over US Highway 71, restricted against service between the termini, is clear and unambiguous; and it can be joined with applicant's otherwise authorized regular-route authority for transportation of traffic originating at one of the termini and destined to points other than described points in Kansas beyond the other. Conclusions in prior report with respect to service applicant can perform in joining such restricted alternate route with its otherwise authorized regular routes, not being in accord with decision in 49 MCC 440, are vacated and set aside.—Transamerican Freight Lines, Inc., St. Joseph Alt. Routes, 96 M.C.C. 243*.

Where a carrier holds separate authorities for the same traffic from A to B and from B to C, with one or both restricted against tacking, through transportation of a shipment from A via B to C, with or without a dropoff at B, would constitute the prohibited tacking and would violate such restriction. However, though applicant's permanent authority to transport dairy products from Missouri points to California and its temporary authority from Missouri to Utah points are restricted against tacking, its past transportation of dairy products from Clinton, Mo., to Los Angeles, with a stop for partial unloading at Salt Lake City, is completely valid and is not prohibited by a tacking restriction. Applicant has merely provided service under two separate authorities by loading the shipment at an origin common to both, dropping off part at a destination authorized in one grant, and making final delivery at a point authorized in the other; such through operation, with service provided in the same vehicle, is entirely lawful.—Raye & Co. Transports, Inc., Extension, 94 M.C.C. 554 (558-9)*.

See also Public Service Coordinated Transport case, §208(c), n. 1.

The right of common carriers to tack separate grants of authority is well settled as long as (1) there is a point of service common to both authorities, (2) the physical operation actually is rendered through that point, and (3) the character of the service (regular- or irregular-route) is strictly preserved. Tacking operation must also be conducted subject to such limitations or restrictions as are applicable to the common point, whether in separate certificates or separate grants in same certificate, and "service" as so used may consist of interchange, as well as pickup and delivery.—Consolidated Copperstate Lines, Inc. v. Navajo Freight, 91 M.C.C. 597 (601-2)*.

All possibilities of service cannot be foreseen when certificate is issued; the plain language thereof must govern, but failure to specifically prohibit questionable service, not otherwise authorized, is no real predicate for contention that such service is authorized. Even though defendant may originate traffic at Phoenix, an unrestricted point, service at Wickenburg and Congress Junction, Ariz., the common points where the challenged interchange or tacking takes place, is restricted to traffic moving to or from points both north and west of Kingman, Ariz. Therefore, since Los Angeles is not north of Kingman, through service between Phoenix and Los Angeles via Wickenburg or Congress Junction as gateway is precluded; however, such service could lawfully be performed via the Kingman gateway which is not restricted.—Id., p. 602, 603.

However, at time defendant's purchase of the restricted Phoenix-Kingman rights was approved there was more than one school of thought as to whether a restriction on service at a given point related to interchange and tacking as well as to actual pickup and delivery of shipments; defendant's subsequent through service between Phoenix and Los Angeles via the restricted points was therefore performed under color of right. As the record and report in the purchase proceeding indicate the understanding of all parties involved, as well as former division 4, that defendant would acquire rights which com-

bined with those it then held, would allow through service between points on the purchased route and all major points on its existing routes, it appears certain that, had decision in 81 MCC 201 that service at a point includes tacking and interchange been previously rendered, approval would have provided for removal of considered restriction. In the circumstances, certificate granted in the purchase proceeding should be modified accordingly and complaint dismissed.—Id., 92 M.C.C. 516 (518-9)*.

Since Coraopolis, Pa., is an intermediate point on one of applicant's Pittsburgh-Cleveland routes and Neville Island, Pa., is made such by Administrative Ruling 84, its regular-route authority may be tacked with its irregular-route authority from those points to West Virginia, provided distinction between the two types of service is preserved. But since its authority to serve Neville Island is territorial and does not embrace a terminal area beyond the island, it may not tack those authorities at Pittsburgh on theory that Pittsburgh is within a commercial zone or terminal area of Neville Island.—Lattavo Bros., Inc., Extension, 91 M.C.C. 643 (644, 646)*.

A carrier's authority to serve any specific municipality includes the incidental right to serve all points in commercial zone thereof as its terminal area (54 MCC 21); therefore, defendant may tack its Philadelphia-Newton Square, Pa., route with its regular route authority between Holyoke, Mass., and Trenton, N.J., serving Bristol, Pa., as an off-route point, at the area where the commercial zone of Bristol overlaps the Philadelphia commercial zone and, thus, conduct operations between points on the Holyoke-Trenton route and those on the Philadelphia-Newton Square route. However, since defendant's right to serve the Philadelphia commercial zone appertains exclusively to its Newton Square route, it may not transport traffic between points in the commercial zone and points on its Trenton-Holyoke route.—Joint Northeastern Motor Carrier Assn., Inc. v. Creger, 91 M.C.C. 494 (495-6).

Under protestant's separate authorities for transportation of fresh and cured meats from six Georgia points to the Carolinas, and from Florida to points within authorized radial distances of five of the same Georgia points, points beyond the municipal limits but within the commercial zones of those five points are common points of service; therefore, protestant may combine those rights to transport frozen meats from all points in Florida to all points in the Carolinas, provided vehicles are routed through any point in commercial zones of the five Georgia points other than the municipalities themselves.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (48).

The prohibition against automobile haulers' tacking of initial- and secondary-movement rights is directed towards immediate joinder of authorities by the same carrier to provide an unauthorized through movement. But where there is an intervening movement by another carrier, such as substituted rail-for-motor service, that limitation does not apply, since in genuine substituted service joinder of the pre-rail and post-rail movements of the same vehicle is not designed to circumvent the restriction; however, that conclusion does not apply to situations where circumvention is the sole or primary purpose of the arrangement.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (414).

Since the usual rail-haul restriction contains no specific prohibition against tacking, a Railway Exp. Agency certificate containing such a restriction may be joined with other certificates so long as the traffic moved thereunder is not transported in a wholly motor movement.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (332-3)*.

But though REA's tacking of its certificates which contain rail-haul restrictions to perform wholly motor services is found not to be permissible, its practices in that respect are of such duration and the public interest as a whole is so affected that equitable opportunity should be afforded to resolve the situation openly. Therefore, in instances where REA is now conducting or proposes to conduct operations wholly by motor vehicle under certificates containing rail-haul or similar restrictions, it should file petitions for modification of such certificates; and in any future application by REA which involves joinder of existing certificates containing such restrictions it should fully set forth and develop such issues and concurrently seek any necessary modifi-

cation of the existing authority.—Id., pp. 333-4.

Limitation imposed by 62 MCC 261 on off-route-point service—that it be performed in connection with, and as an integral part of, a good faith operation over the regular route to which it appertains—does not prohibit tacking of separate regular- and irregular-route authorities at an off-route point which is a service point common to both routes; it is sufficient if the off-route point be served from the regular-route point over the most direct highway without traversal of the regular route to any great extent. Thus, initial carrier authorized to serve Philadelphia, Pa., and off-route points within 35 miles thereof may, so long as it serves Philadelphia, operate over most direct highways to New Jersey off-route points that are common points of service with delivering carrier's irregular-route operations, without passing through any point on its regular route north of Philadelphia.—Pennsylvania Public Utility Commission v. Jones Motor Co., 89 M.C.C. 605 (613)*.

Under the law the several authorities of a regular-route common carrier have always constituted a single system of routes; a certificate authorizing operation over two or more routes having one or more service points in common confers the right to operate over all combinations of such routes and between all the designated points thereon, unless otherwise specifically restricted in the certificate.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (419-20); however, the general requirement that motor common carriers provide adequate service [§216(b)] does not extend to service which may be provided under a combination of authorities.—Id., p. 424.

In considering proposals that common carriers of property be allowed to operate directly between points they may now serve only circuitously under combinations of their rights, the manner in which they may obtain authority to provide through service should not be overlooked. In case of irregular-route carriers, the authorities which may be tacked at common points have usually been obtained separately, without intention or realization that they might be used in combination; thus it is not any requirement of the act or the commission that forces such a carrier to operate circuitously, but rather its own wish to join its authorities to provide a through service not specifically authorized by its certificate and for which it has never shown public need. Moreover, while irregular-route carriers are permitted to tack separate authorities so as to use their equipment more efficiently, they cannot be compelled to do so.—Id., p. 423.

Adherence to the Brady criteria for distinguishing between regular- and irregular-route service (47 MCC 23) has not caused confusion or uncertainty, except possibly in requirement on tacking of regular- and irregular-route authorities that the separate character of each type of service be maintained. However, purport of §5 cases is that where such authorities are combined it is the characteristics of the irregular-route service that must be preserved; this is necessarily so because, although an irregular-route carrier is not permitted to provide a regular-route service, a regular-route carrier, so long as it provides reasonably adequate service at authorized points on its routes, is not required to operate on a fixed schedule and is not restricted against performing a call-on-demand, truckload type of service.—Id., pp. 434-5.

As vendee's present authority at Kansas-Colorado State line near Sharon Springs, Kans., does not physically connect with vendor's Kansas "grandfather" authority under §206(a)(7), since neither is authorized to cross the State line, route granted vendee between Sharon Springs and the State line is authorized to be joined to its present route at the State line. But as vendee's authority to serve Kanorado, Kans., is limited to traffic destined to that point, even though certificate granted is unrestricted as to Kanorado and would physically connect with its present route it cannot lawfully use Kanorado as a gateway for movement of either eastbound or westbound shipments under the combined rights; it will be expected to observe the restriction in its present authority and route Colorado-Kansas traffic through either Sharon Springs or Tribune.—Denver-Limon-Burlington Transfer—Purchase—Kansas Interm., 93 M.C.C. 210 (214)*.

Acquired carrier's authority from points in 15 States to Waunakee, Wis., and from Madi-

son, Wis., to 37 States could lawfully be tacked at Madison via Waunakee, which is within commercial zone of Madison. That the commission in granting the 37-State authority specifically denied application as to the identical territory carrier is tacking via Waunakee is not controlling; so long as the certificates are not expressly restricted against use in combination with another of carrier's certificates, they may be tacked at a lawful joinder point; question of circuity making tacking at that point improbable is likewise immaterial in absence of any specific evidence that the tacking point was not in fact observed.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (265).

While it is permissible for carrier holding radial authority between King City, Mo., base area and points in Iowa, Kansas, and Nebraska to transport a shipment from any point in the radial territory to any point in the base area which is common to its regular-route authority, thence to a point on the regular route, it may not again tack its regular-route authority to the same irregular-route authority to perform a through movement between two points in the radial territory. Thus, though King City and certain other points within the authorized 10-mile radius thereof are common to both authorities, transportation of shipments from Iowa to one such point, then over the regular route for a short distance to another, then to a point in Kansas or Nebraska, was unauthorized cross-hauling.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (449).

Separate grants of unrestricted authority may be combined if there is a point of service common to both and "service" includes not only pickup and delivery by carrier, but also the interlining of traffic with other carriers or the tacking of two separate authorities; accordingly, a restriction in a carrier's certificate against performance of service at certain points prevents the carrier from tacking at one of those points for purpose of rendering a through service to another point. Therefore, since defendant's authority between Medford and Portland, Oreg., is restricted against performance of local service at certain intermediate points, including Eugene, Oreg., that authority may not be tacked at Portland with its separate authority between Seattle, Wash., and Portland for purpose of providing through service from Tacoma, Wash., to Eugene. And its past interlining of Tacoma-Eugene traffic at Portland also violated terms of the restriction and was unlawful; cease-and-desist order entered.—McCracken Bros. v. Oregon Nev. Calif. Fast Freight, 96 M.C.C. 192 (194).

However, as held in 62 MCC 694, a phrase in a certificate "restricted to traffic moving to and from" designated service points does not preclude a carrier from interlining or tacking said authority to provide a through transportation service to other points. That restriction is satisfied if the traffic moves to and from the designated service points, and separate operating authorities may be combined if any restrictions in each certificate are not violated. —Id., pp. 194-5.

Petitioner may not tack its regular-route authority between points in southern New England, restricted to traffic moving to or from Pittsburgh, Pa., and its authorized points west of Ohio-Pennsylvania State line, with other outstanding authority in order to conduct operations between such New England points and points in Ontario, Canada, via ports of entry at or near Buffalo, N.Y. The restriction is unambiguous and "authorized" as used therein refers only to points authorized by its existing certificates and does not refer to any points beyond the commission's territorial jurisdiction. Shipments transported under combination of considered certificate and petitioner's other certificates, which are destined to a point off its lines, may not be interchanged at any point east of that State line, except Pittsburgh; thus, it may not use that certificate to transport shipments between points authorized therein and ports of entry east of that line even though ultimate destination or origin in Canada is west thereof.—Transamerican Freight Lines, Inc.—Interpretation, 95 M.C.C. 121 (123-4)*.

Nor may that restriction be evaded by routing the traffic through Pittsburgh or a point west of the Ohio-Pennsylvania line either prior or subsequent to a movement through ports of entry east of that line. To hold otherwise would nullify the restriction with respect to points in Pennsylvania and western New York and, to that extent, defeat the purpose

for which it was imposed in the transfer proceeding in which the certificate was acquired. —Id., p. 125.

Protestant's proposal to join two separate grants of irregular-route authority by operating through a point of service common to both, despite the fact that one of these is restricted against joinder "...with any other authority held by it..." is not within scope of its existing authority. When the commission has determined that a no-tacking restriction should not be pertinent to other subsequently acquired authorities, certain qualifying words have been added to effectuate this purpose; considered restriction is clear and applicable on its face not only to authorities held by protestant at time of imposition thereof, but also to any operating rights thereafter acquired by that carrier. Consequently, proposed joinder is outside protestant's existing authority.—Alterman Transport Lines, Inc., Extension, 94 M.C.C. 187 (193).

Authority to serve points in a single State does not authorize a carrier to serve points on the boundary line between that State and a neighboring State; accordingly, since carriers may tack separate grants of authority only at a point of service common to both, separate authorities for operations in contiguous States may not be joined to provide a through service unless specifically authorized upon a showing of public convenience and necessity. —J. O. (Red) Willett Pipe Line Stringing Corp. Extension, 92 M.C.C. 41 (46)*.

Nor may separate authorities be joined for purpose of performing through service where the common point or area lies beyond the jurisdiction of the United States. Although applicant's existing authorities cover service between points in the 48 contiguous States, including Canadian boundary points, extension authority granted for service between points in Alaska may not be joined therewith, notwithstanding any permission that might be granted by Canadian authorities to traverse the intervening Canadian territory. Traversal of territory is not synonymous with service, and tacking by definition requires a common point of service, which in instant case the commission has no jurisdiction to authorize. Moreover, no public need was shown for through service to and from Alaska.—Id., p. 46.

When carrier's separate authorities between points in Missouri and Muscatine, Iowa, and between points in a 5-State area including Illinois are subject to restriction that they may not be tacked or joined for purpose of performing through transportation, it cannot perform single-line service from Missouri origins to eastern destinations by "bridging" those authorities with its unrestricted authority between Muscatine and Chicago.—Bilyeu Refrigerated Transport Corp. Extension, 92 M.C.C. 633 (639-40).

Separate grants of authority may be joined only at common points of service. Since applicant's authority between points in Mississippi and specified points in Arkansas is restricted against transportation of yeast moving between St. Louis and such Arkansas points, there are no common service points at which it could tack its authority between points in Missouri and Arkansas to perform through transportation of yeast from St. Louis to Jackson, Miss.—Frozen Food Exp. Extension, 91 M.C.C. 592 (593-4).

Applicant may not join its regular-route authority between Cleveland and Pittsburgh, including off-route points within a 25-mile radius of each terminus, and its irregular-route authority between "Neville Island" and points in Ohio and West Virginia not on its regular routes, for performance of through service on assumption that Pittsburgh is within the commercial zone of Neville Island and latter may therefore be used as a common gateway; "Neville Island" is not a municipality or unincorporated community, but a territorial description which confers no commercial zone rights.—Lattavo Bros. Inc., Extension, 89 M.C.C. 600 (602, 603)*.

Moreover, in performing through service between points in the Pittsburgh radial area and points not on or appurtenant to its regular route, via Pittsburgh and Neville Island, applicant would use its regular-route authority, not to accomplish any transportation over the regular route, but merely to enlarge the base area of its irregular-route service, contrary to established principle that off-route point service must be rendered in connection with and

as an integral part of operation over the regular route. Decision in 62 MCC 261, involving similar cross-hauling and identical radius, is controlling; applicant's described operations are unlawful.—Id., p. 603.

35. Duplicate operating rights.—[Vols. 11-16, 18, 19].—The phrase "with duplications eliminated" in a certificate issued to a vendee means that after purchase vendee would have only one right to render the same service; its purpose is merely to describe what actually happens upon consummation, namely, unification of the duplicating rights, emphasizing their future inseparability, and it does not preclude any service previously permissible under vendee's rights, under the purchase rights, or under a combination thereof.—Cocoa Powder from New York, N.Y., to Council Bluffs, 322 I.C.C. 255 (257)*.

Since vendee has authority for regular routes in Montana that duplicate certain routes sought in related §207 application, vendor holds certificated authority duplicating certain of its proviso operations, both of which are included in proposed purchase, and evidence justifies continuance of vendor's services by vendee in combination with its own, certificate granted vendee for continuance of vendor's proviso operations covers, as far as possible, only nonduplicating routes, and should not be construed as conferring more than one operating right between the same points.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (347).

Since authority granted petitioner in 86 MCC 327 to transport specified missile parts is partially duplicative of authority now granted for unrestricted transportation of missile parts, but no certificate has yet been issued therein, the authority now granted is conditioned on receipt of a written request from petitioner for dismissal of the duplicative portion of the application in that proceeding.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (256)*.

Extension authority granted for transportaion of fertilizer from and to additional points, to the extent that it duplicates any of applicant's existing authority, shall not be construed as conferring more than one right, and may not be severed by sale or otherwise.—Clark Tank Lines Co. Extension, 95 M.C.C. 422 (424)*.

In view of the limited extent to which regular-route authority granted between Bismarck and Minot, N. Dak., duplicates applicant's irregular-route authority between Bismarck and North Dakota points within 100 miles thereof, including Minot, cancellation of the duplicating authority is not required, but such duplication shall not be construed as conferring more than one operating right.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 92 M.C.C. 558 (564)*.

Although ordinarily grant of "grandfather" authority duplicative of that embraced in applicant's existing certificates covering transportation of frozen fruits and vegetables would not be justified, it is neither feasible nor practical to eliminate such duplications physically from grant of "grandfather" rights established for frozen fruits, berries, and vegetables; however, authority so granted shall not be construed as conferring more than one operating right.—Home Transfer & Storage Co., 88 M.C.C. 223 (229)*.

Section 208. (b) [*§308(b) U.S.C.*] Deviation from route.—[Unchanged. See vol. 10,p. 8023.]

Notes of Decisions

Volume 10—p. 8023; Volume 11—p. 9452; Volume 14—p. 11600; Volume 15—p. 12207; Volume 16—p. 12857; Volume 19—p. 15732.

1. Construction and interpretation.—[Vols. 10, 11, 14-16, 19]. —Although authority conferred on the commission by §208(b) to permit a carrier "occasionally" to deviate from a

certificated route or terminal cannot be construed as authorizing a regulation governing designation of a regular alternate route which may become the carrier's principal route between the cities involved, those provisions of §211.1(c)(8) of the deviation rules are reasonably adapted to carry out the purpose of the Motor Carrier Act and therefore within the commission's general rulemaking powers under §204(a)(6).—Greyhound Corp. v. United States, 221 F. Supp. 440 (444)*.

5. Regulations governing.—[Vol. 19]. — Section 211.1(c)(8) of the commission's deviation rules, governing use of alternate operating convenience routes, applies only to a motor carrier previously certificated after a finding of convenience and necessity to serve the cities in question, and spells out the criteria which an applicant for such an alternate route must satisfy; if the commission after appropriate investigation determines the facts respecting those criteria, there is no reason for redetermination of all the numerous elements required in the initial certification. However, in its order authorizing plaintiff's competitor to use a shorter alternate route between Columbia and Orangeburg, S.C., the commission made no specific determination that any of the criteria established by it had been satisfied, but merely found generally that requirements of the deviation rules were met; neither the parties nor a reviewing court can determine whether such an order has a rational basis in fact. Order set aside and case remanded for further proceedings.—Greyhound Corp. v. United States, 221 F. Supp. 440 (444-5)*.

See also Greyhound Corp. Extension, §207(a), n. 28 *Deviation rules.*

Spaulding Turnpike and Interstate Highway 95 in Massachusetts are superhighways within §211.1(c)(8)(i) of commission's deviation rules when access thereto or exit therefrom is limited to specified interchanges. Applicant holds authority between Boston and Portsmouth, N.H., over service routes of comparable length to the turnpike and superhighway routes sought, and use of latter would not materially change its competitive relations with other carriers; applicant may obtain permission to use involved highways by filing appropriate notices under the deviation rules.—Trailways of New England, Inc., Extension, 92 M.C.C. 434 (437-8).

Adoption of proposals which (1) would allow property carriers holding regular-route authority to use any highways they wish in operating between service points on the same or different routes, so long as they furnish adequate service at terminal, intermediate, and off-route points and serve no points not specifically authorized; (2) would allow carriers holding separate irregular-route, or regular- and irregular-route, authorities to operate directly between authorized points instead of via common gateways; (3) would allow carriers holding radial authority to operate between radial points either directly or via the base point; and would require all common carriers of property, where practicable, to use the shortest and safest available route in performing authorized service, found not justified.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (419-21, 423).

While at first blush some merit may appear in allowing motor carriers to operate directly between points they are authorized to serve over circuitous routes and thus minimize inefficient use of equipment, adoption of those proposals would allow both regular- and irregular-route carriers to institute totally new services for which no public need has been shown, and in case of regular-route carriers might work to disadvantage of shippers and consignees at smaller points along their service routes. Though it is in public interest to encourage efficiency and economy in operation and promote best use of transportation facilities, means now open to all common carriers for obtaining alternate-route authority or elimination of gateways, together with existing Deviation Rules, are adequate to meet those aims.—Id., pp. 423, 424, 425.

The commission's deviation rules, particularly §211.1(c)(8)(ii), authorizing regular-route carriers to deviate from their authorized routes in certain circumstances without specific authority, apply only to deviations from authorized service routes as defined in §211.1(b)(4), and do not permit deviation from an alternate operating-convenience route.—Viking Freight Co. Extension, 88 M.C.C. 720 (721).

Section 208. (c) [§*308(c) U.S.C.*] Transportation of special or chartered parties.—Any common carrier by motor vehicle transporting passengers under a certificate issued under this part[1] pursuant to an application filed on or before January 1, 1967, or under any reissuance of the operating rights contained in such certificate, may transport in interstate or foreign commerce to any place special or chartered parties under such rules and regulations as the commission shall have prescribed. (Aug. 9, 1935, c. 498, §1, 49 Stat. 552; Nov. 10, 1966, Pub. L. 89-804, 80 Stat. 1521.)

1 Incidental special or charter-party rights eliminated by act of Nov. 10, 1966.

Historical Note, vol. 17, p. 13556; vol. 19, p. 15733.

Notes of Decisions

Volume 10—p. 8024; Volume 11—p. 9452; Volume 12—p. 10404; Volume 13—p. 11080; Volume 14—p. 11601; Volume 15—p. 12207; Volume 16—p. 12857; Volume 17—p. 13556; Volume 18—p. 14465; Volume 19—p. 15733.

1. Construction and interpretation.—[Vols. 10-19].—The statute authorizes transportation of special or chartered parties under such rules and regulations as the commission shall have prescribed, and failure of the commission to prescribe valid rules and regulations would raise serious doubt whether any such operation might be conducted; if the regulations adopted by the commission to implement §208(c) were held invalid, the result would be the same as if no regulations had been promulgated.—Atwood's Transport Lines, Inc. v. United States, 211 F. Supp. 168 (169)*.

Neither §208(c) nor the rules promulgated thereunder contemplate a distinction between "ordinary" regular-route passenger operations and all other regular-route operations which by reason of their specialized character are not typical; and when the commission grants regular-route authority, incidental charter rights are thereby created unless such authority is limited to "special operations" either expressly or by language of similar import. Though defendant conducts an airport limousine service restricted as to number of passengers per vehicle, it provides a regular, frequent, and expeditious service at designated stops under published schedules, which it could not do under special-operations authority, and the commission found in its application proceeding that it was entitled to ordinary regular-route authority. The commission has no authority in subsequent complaint proceeding to modify defendant's certificate, under guise of interpretation, by confining its regular-route operations to those classified as "special," and would not be warranted in doing so if it could. Defendant therefore holds incidental charter rights.—Arrow Lines, Inc. v. Connecticut Limousine Service, Inc., 96 M.C.C. 1 (4-6).

While the legislative history of §208(c) does not disclose whether Congress intended the scope of incidental charter authority to be governed by service limitations in the certificate on which it is based, such authority has always been regarded as incidental to or supplementary of the regular-route operations; thus, some degree of correspondence between incidental charter authority and the certificate which creates it is implied by the act. Further indication of congressional intent appears when subsection (c) is read in context of entire §208: subsection (a) authorizes the commission to specify the type of service to be rendered and the route and other geographical requirements respecting such service; subsection (b) provides for exceptions from those geographical requirements; and subsection (c) authorizes carriers to engage in charter operations "to any place" without regard to such geographical restrictions in their certificates. Had Congress intended to confer incidental charter authority irrespective of the type of service authorized under subsection

(a), it is reasonable to suppose that subsection (c) would have specifically provided that the carriers might engage in such operations.—Id., pp. 6-7.

In providing for incidental charter authority, Congress no doubt desired to facilitate optimum use of equipment by regular-route common carriers of passengers. Such carriers, being required to provide reasonably adequate service regardless of fluctuations in demand, should be permitted to use their excess capacity when demand for their regular-route service is relatively light; and it is significant that they are not obliged to provide service under their incidental charter authority. Use of buses in charter operations would not be incidental to defendant's certificated limousine service, nor would it foster economical service or sound economic conditions in transportation in manner contemplated by §208(c), as supplemented by the national transportation policy. Conclusion that the type-of-service restriction in defendant's certificate applies to its charter operations is consistent with interpretation of §208(c) in prior cases involving seasonal or intermediate-point restrictions, and is based, not on any assumed power to regulate competition among carriers engaged in such operations, but solely on the commission's understanding of the purpose and effect of §208(c).—Id., pp. 7-8.

This is not to suggest that all certificate restrictions as to type of service are applicable to incidental charter operations, as application of some service restrictions would nullify the command of §208(c) that incidental charter service be permitted "to any place." For example, to attach to such charter operations a service restriction to passengers having a prior or subsequent movement by air would in effect impose a geographical limitation forbidden by §208(c); similarly, a restriction to passengers picked up or discharged at a plant site could not be applied to incidental charter service at intermediate points without depriving the carrier of its right to transport charter parties to any place in the United States. Moreover, incidental charter authority is conferred by operation of law, and the commission lacks authority to restrict charter privileges conferred by §208(c) even though proposed by the carrier. However, no reason appears why defendant could not as a practical matter provide charter service "to any place" even though restricted to transportation of not more than 11 passengers in any one vehicle, as specified in its certificate.—Id., p. 8.

The incidental charter rights which under §208(c) automatically accrue to a regular-route passenger carrier, but impose no duty or obligation on the carrier to provide charter service, do not "duplicate" certificated charter rights arising out of a "grandfather" proceeding under §206(a)(1) or a public convenience and necessity proceeding under §207(a). —Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (24).

The commission's statutory authority to make such rules and regulations as are necessary to implement and enforce the provisions of §208(c) is clear from a plain reading of the act and section; and determination of limits of the scope of §208(c) charter rights which the commission must administer is an agency statement of general applicability and future effect designed to implement and interpret the Motor Carrier Act within meaning of §§ 2(c) and 4 of Administrative Procedure Act. Regulations thus promulgated are not solely for carriers' benefit: the public has an interest as well, and it is for the commission to balance and determine how such interests should be preserved.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (904).

A carrier must be actually transporting passengers over its authorized regular routes in order for the incidental charter rights conferred by §208(c) to accrue to it.—Id., p. 903.

A carrier holding two or more separate grants of authority, each authorizing special operations over irregular routes from different origins but to the same destination, may utilize a single vehicle under such rights to transport passengers from both origins to the common destination and return them to their respective origins. Such combining of passengers in the same vehicle under different authorities does not amount to joinder of separate authorities or institution of a new unauthorized service.—Public Service Coordinated Transport Extension, 88 M.C.C. 382 (385).

3. Definitions.—[Vols. 11-19]. —***Charter operation:*** A certificate authorizing charter service contemplates the transportation of groups, such as lodges, bands, athletic teams, schools, or other travel groups, assembled by someone other than the carrier, who collectively contract for the exclusive use of certain equipment for the duration of a particular trip or tour.—Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (23).

Respondent's "lease" of buses to passenger groups for transportation to points outside California, with drivers used in his similar intrastate operations, is an unauthorized interstate charter service, which by definition contemplates transportation of groups assembled by someone other than the carrier, who collectively contract for exclusive use of the equipment for duration of the trip; and lease provisions designed to place ostensible control in the passenger group do not alter essential nature of the service thus provided.—Roesch Investigation of Operations, 91 M.C.C. 824 (825-6).

Special operation: See also Arrow Line, Inc. v. United States, §207(a), n. 5.

A certificate authorizing special operations contemplates a service rendered generally on weekends, holidays, or other special occasions to a number of persons which the carrier itself has assembled into a travel group through its own sale to each individual passenger of a ticket covering a particular trip or tour planned and arranged by the carrier. Special operations involving door-to-door service restricted to a limited number of passengers in any one vehicle are likewise distinguishable from charter service and are particularly attractive to family groups with small children or persons who are aged or infirm.—Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (23).

Applicant proposes to provide an unusual driveaway, by chauffeur, service to owners of private passenger automobiles when the car is accompanied by the owner, his dependents or relatives, employees, or others designated by him, and their baggage; however, proposed service is not intended to be a for-hire passenger service available to the public. While there would be occasions where the owner or his dependent is a passenger, and would have direction and control of the vehicle, it also is evident that there would be occasions where control and direction of the automobile would be questionable, particularly if the owner is not a passenger. Proposed operation is neither the regular-route type of passenger operation nor charter operation; it is, however, a type of special operation contemplated by the statute and will be so designated in the authority granted.—Adams, 94 M.C.C. 290 (292-5).

4. Evidence.—[Vols. 14, 17-19].— The record amply justifies the commission's grant of charter authority from Long Island to five applicants; the large and expanding population of that area—some 2 million at time of decision—was serviced by plaintiffs, two admittedly small carriers, and the commission could properly infer that their limited facilities would be inadequate to meet needs of the many residens of the Long Island counties. One of 31 supporting public witnesses testified that his booking of charter tours from Long Island had increased 500 percent during the 5 years preceding hearing, and that he had trouble in chartering buses when the field was limited to plaintiffs. In addition, while fact that four applicants had for many years conducted considerable charter business from Long Island, in good-faith albeit mistaken belief in their incidental right to do so under their existing authorities, may not conclusively establish necessity for such service, it is certainly competent evidence of need. Sustained.—Campus Travel, Inc. v. United States, 224 F. Supp. 146 (147-8)*.

See also Sechelt Motor Transport, Ltd., case, n. 10, below.

10. Special or charter party operations.—[Vols. 10-12, 14-19].—In complaint which is in effect an appeal from the commission's order granting certificate to defendant carrier, authorizing special and charter party operations originating in named New Jersey and Pennsylvania counties and extending to points in 30 States and the District of Columbia, the record reveals ample evidence that proposed charter and special services are needed by the public; and though plaintiff's (protestant) contention that it could meet present and future demands for service apparently was not disputed, that is of no importance decisionally. Also, the commission's

findings that applicant's past violations of the act did not justify finding it unfit, since they were not willfully or deliberately committed, and that such violations were not enough to destroy sound merits of the application, were within expert discretion of the commission; and that discretion was soundly exercised. Complaint dismissed.—Public Service Coordinated Transport v. United States, 247 F. Supp. 985 (986, 988)*.

Although authorization of applicant's proposed special and charter-party service may divert some traffic now handled by existing buslines, the amount of diversion will not be substantial. Moreover, the limousine service proposed, which involves a more flexible, nonscheduled, door-to-door service for the transportation of small parties, is a significantly different type of service from the bus service offered by protestants; it is a premium service involving a different rate structure. Since public need for such a distinctive service is demonstrated, the existence of a reasonably adequate bus service need not preclude a grant of authority to extent of need shown.—Canzano, 95 M.C.C. 568 (573)*.

Application for authority to conduct charter party operations beginning and ending at ports of entry on the international boundary in Washington and extending to points in 11 States is, in effect, a petition to eliminate restrictions at Canadian origin points which are in Canadian applicant's existing certificate; and evidence of record centered on need for service at the restricted Canadian points. However, in accordance with the decision in 92 MCC 82, since applicant holds authority from Canadian origins to appropriate border points, evidence of need for service at those origin points is not necessary for disposition of the matter. Restriction against traffic originating at two Canadian origins should be removed from applicant's certificate.—Sechelt Motor Transport, Ltd., Extension, 98 M.C.C. 128 (129-30).

Authority granted for round-trip charter operations from four eastern Virginia counties to New York City, Washington, D.C., and points in Maryland and North Carolina. Involved origin area is predominantly rural and prospective patrons in low income bracket consider protestant Greyhound's charges prohibitive. Moreover, applicant's past unauthorized service was found highly satisfactory, particularly in personalized services for both small and large groups which protestant does not provide, such as individual pickups at rural locations and return of passengers directly to their homes at late hours, which the public, because of its largely rural location, requires.—Blunt, 92 M.C.C. 306 (307-8, 309)*.

Authority granted for round-trip charter operations between described portion of Indiana County, Pa., and points in Kentucky, New Jersey, New York, Ohio, Virginia, and District of Columbia. Supporting school, religious, and civic organizations need a locally domiciled charter service to advance their health, cultural, and educational programs; owing to depressed economic condition of involved origin area, transportation costs, including deadhead mileage charges, tend to deter interstate charter travel by its inhabitants. However, as no definitely planned or contemplated trips by the supporting groups, or other requests for service, to four additional States sought are shown, application is denied as to those States.—Lanich Bus Lines—Charter Service, 92 M.C.C. 156 (157-8).

Authority granted five applicants for one-way or round-trip charter operations from Nassau and Suffolk Counties, N.Y., three to certain States, and two to all the continental United States. Considering potential capacity of the two existing operators to satisfy the present and prospective need for charter service on Long Island with their limited number of regularly available buses, there is real need for more service than they can be expected to provide. Four applicants are substantial regular-route operators to and from New York Metropolitan area, with large fleets of buses, and proposed service is a natural complement to their regular-route and incidental charter operations; fifth applicant is a close affiliate of a regular-route busline, and proposed operations can be an important source of revenue to help sustain latter's operations.—Hudson Transit Lines, Inc., Extension, 92 M.C.C. 586 (590, 591)*.

The size of Long Island, its geographical proximity to New York City, and capacity of its burgeoning population to generate traffic

are convincing that its residents are entitled to the charter services proposed. Difficulty of effecting connections with applicants' existing charter services in New York City is another persuasive factor; in many cases it involves use of taxis or private automobiles, and in others inconvenient and time-consuming transfers from one carrier to another. Bearing in mind that the New York City area is provided charter service by a large number of carriers, and that applicants served Long Island points under color of right for over 20 years, the competition arising from resumption of those services should not harm protestants.—Id., pp. 591, 592.

Authority granted one Canadian carrier for charter operations, in foreign commerce only, between ports of entry on international boundary at the St. Lawrence, Niagara, Detroit, St. Clair, St. Marys, Pigeon, and Rainy Rivers and all points in the 48 contiguous States; similar authority granted a second between ports of entry on the boundary in Michigan and New York and all of those States to which it does not already hold authority. In view of the broad territory sought and the numerous specific points to which public witnesses showed need for service, authority granted should not be atomized by limiting its application.—Norton, 92 M.C.C. 82 (87).

Authority sought by Canadian carrier for charter operations between ports of entry at Pembina, N. Dak., and Noyes, Minn., and points in those two States, denied when service available from three Canadian protestants holding charter authority for those States, as well as from Greyhound, is not shown to be inadequate in any material respect. Groups represented by supporting witnesses have little used those existing services in recent years, and their few complaints generally relate to occurrences long before hearing and before current management assumed operation of two protestants. Though Greyhound's service has apparently not been used because of its rates, they are not shown to be excessive or substantially higher than those of other existing carriers.—Eagle Bus Lines, 92 M.C.C. 793 (795).

Authority granted for transportation of stockmen in special operations between Ames, Iowa, and Chicago, serving intermediate points on US Highway 30 in Iowa, and restricted to passengers picked up or discharged at the stockyards; proposed service is analogous to assembly and distribution of mill workers or plant employees, which has been recognized as a special operation.—Myers, 89 M.C.C. 125 (129)*.

Though applicant may operate limousine-type service between Washington, D. C., and National and Dulles International Airports and between those airports under air-passenger exemption, that exemption does not apply to persons who will not travel by air themselves but have good reason to utilize the service proposed; while their number may not be large from standpoint of a scheduled regular-route operation, no reason appears for preventing them from using applicant's service, and though no present need therefor is shown, it is apparent that such need will arise. Authority granted for special operations in nonscheduled, door-to-door service between Washington and Dulles Airport without restriction on type of equipment, and between Dulles and National Airports, limited to transportation of not over 14 passengers in one vehicle, exclusive of the driver.—A.B. & W. Transit Co. Extension, 88 M.C.C. 175 (182-3, 185).

Authority granted for special operations in transportation of passengers in round trip ski tours beginning and ending at Newark, N.J., and extending to points in five States; protestant's service to ski patrons in the Newark area is inconvenient and inadequate, and in view of the small proportion of its patrons picked up at the Newark terminal grant to applicant will not adversely affect its operations.—Public Service Coordinated Transport Extension, 88 M.C.C. 382 (385).

Extension of special-operations authority granted two applicants for conduct of round-trip tours from Philadelphia, and from Philadelphia and nearby points, to points in 12 of 22 destination States for which authority is sought; broker protestants, in conjunction with applicants or with other motor carriers authorized to provide charter service in remainder of the territory sought, can provide tour services that are not shown to be inadequate.—Auch Inter-Borough Transit Co.

Extension, 88 M.C.C. 455 (457).

15. Applicability of rules.—[Vols. 11, 12, 18, 19].—Rules and regulations promulgated by governmental establishments have the force and effect of law and are subject to the same tests as statutes; while a statute must be specific enough to apprise persons affected by it of its requirements and of the elements constituting any criminal offense, the law does not require the impossible or even the impracticable. Absolute detailed certainty with the precision of a mathematical formula is not exacted; some leeway must be left to discretion of the courts and administrative agencies in interpreting and enforcing a statute or regulation, even if it has a criminal aspect; it is sufficient if members of the public are placed on notice as to what is required or prohibited, and what would be deemed a criminal violation. Even though a knowing and willful violation of the commission's charter service regulations is a criminal offense, Rule III thereof is not invalid for vagueness because it refers to origin points "within the territory served" by the carrier's regular route or routes.—Atwood's Transport Lines, Inc. v. United States, 211 F. Supp. 168 (170)*.

The commission has declined to define by purely mathematical standards or mileage formulas the incidental charter territory conferred by §208(c) on motor carriers actually transporting passengers over regular routes. Determination of such charter rights requires an exercise of judgment, considering all facts pertinent to the particular situation with due regard to practical administration of the commission's duties under the act. However, there should be some relationship between the territory served by carrier's regular routes and that claimed as its incidental charter area, and past decisions have delineated a number of criteria for determination of "territory served" which are pertinent where involved origins are not located on the regular routes; see 88 MCC 201 and cases cited therein.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (903).

The incidental charter territory which may be served under §208(c) cannot be defined with mathematical precision; determination thereof requires exercise of judgment based on all facts pertinent to the particular situation. It is fundamental that there be some mutuality between the traffic served by carrier's regular routes and that to be served from the claimed incidental charter territory; moreover, boundaries which are generally well known should be observed and consideration given to the character of the terrain and its occupancy. [76 MCC 215].—Mohawk Coach Lines, Inc. v. Hudson Transit Lines, Inc., 89 M.C.C. 507 (511).

While in the West the origin territory authorized by the incidental charter section has been found to extend many miles, and application of the same rules would result in Plainfield, N.J., within 3.5 miles of defendant's regular route, being considered within its origin territory, rules applicable in the less populated sections of the West would be unworkable in the more densely settled East, for in fixing the origin territory it is of prime importance to keep carriers from encroaching on the charter rights of competitors.—Somerset Bus Co., Inc. v. Suburban Transit Corp., 88 M.C.C. 13 (16).

It was recognized in the Regulations case, 29 MCC 47, that a rigid rule or mathematical method of defining incidental charter authority would be unworkable, because the same standard would necessarily be applied in both sparsely settled and densely populated areas; therefore, to provide sufficient flexibility to encompass the varied factors involved in determination of what constitutes territory actually served, the phrase "within the territory served by its regular route or routes" was inserted in Rule III and has proved salutary in application.—Blue Line, Inc. v. Short Line of Connecticut, Inc., 88 M.C.C. 201 (202).

Definition of incidental charter territory requires exercise of judgment based on all facts pertinent to the particular situation, with due regard to practical administration; extent of territory which may be deemed to be served by a carrier's regular routes depends on terrain, density of population, proximity of other highways, and operations, if any, of competing carriers thereover; there must be some mutuality between traffic served by the regular-route operation and that proposed to be served in the claimed incidental charter territory. Moreover, boundaries generally well known should be used and consideration

given to character of the terrain and its occupancy, including distinctions between strictly urban communities and their suburban residential appendages. [52 MCC 670 and 76 MCC 215.]—Id., p. 203.

Thus, mere proximity of points to a carrier's regular routes is not controlling in deciding whether they may be served in charter operations as an incident to the holding of a regular-route certificate; and even if, as claimed by defendant, authority to serve a New England type town embraces the entire township rather than merely the urban community of the same name, it does not necessarily authorize charter service from a point in the vicinity of an authorized New England type town.—Id., p. 203-4.

The mere fact that a carrier has provided charter service from claimed points or territory for many years confers no right to continue such service; nor is it relevant or material that during such time existing carriers may or may not have failed to meet whatever demand for charter service there may have been at such points.—Id., p. 203.

16. Origins.—[Vols. 11-16, 18, 19].—In defining the permissible origins of charter operations which a passenger common carrier may conduct under §208(c) as "any point or points within the territory served by its regular route or routes," the commission acted reasonably in not defining or restricting the "territory served" more precisely; a reasonable flexibility is necessary in order that adequate service may be available to communities in sparsely settled areas, such as in the West, as compared with available service in the more densely settled areas of the East. Authorities cited amply support conclusion that the wording of Rule III of the charter service regulations is sufficiently definite and not vulnerable to objection that it is too vague; although not conclusive, it is significant that this regulation has been accepted and acquiesced in by the industry, without challenge of its validity, for over 20 years.—Atwood's Transport Lines, Inc. v. United States, 211 F. Supp. 168 (169, 170, 173)*.

The record fully justifies the commission's conclusion that Alexandria and Fort Belvoir, Va., are not within the "territory served" by plaintiff's regular routes: plaintiff has no authorized routes in Virginia, its only routes extending southwesterly and northerly or northwesterly from its terminal in downtown Washington, D.C., to specified points in Maryland without traversing any section of Virginia; Alexandria and Fort Belvoir are on the Virginia side of the Potomac River, the former being about 2 miles, and the latter 14.5 to 19.5 miles depending on the route used, from the District of Columbia boundary. The commission's order directing plaintiff to cease and desist from originating charter parties at Alexandria or Fort Belvoir, sustained.—Id., p. 173.

See also Greyhound Corp. v. Consolidated Term. & Travel Bureau, §212(a), n. 35

In authorizing two Canadian carriers to conduct charter operations in foreign commerce between ports of entry on international boundary and points in United States, no reason appears for restricting origin points to specific points within territorial limits of applicant's Canadian authorities.—Norton, 92 M.C.C. 82 (87).

West Point and Bear Mountain, N.Y., are "within the territory" in which defendant may originate charter parties under §208(c). West Point is a part of the Military Academy reservation, which comes within 1.3 miles of defendant's routes, and residents thereof rely on defendant's regular service for use in connection with taxicab or private automobile transportation; distance between West Point and the most convenient taxicab connection is about 7 miles, which, considering the sparsely settled character of the area, cannot be considered too remote for a finding of some mutuality between the traffic so served and that which defendant would serve under its claimed incidental charter right.—Mohawk Coach Lines, Inc. v. Hudson Transit Lines, Inc., 89 M.C.C. 507 (509, 511).

Though defendant's routes run through the westernmost portion of the Harriman section of Palisades Interstate Park and the contiguous Bear Mountain section lies generally east thereof, there is no well-known boundary between the two sections, which are connected by roads and hiking trails. Distances between defendant's routes and the point of Bear Mountain, where the questioned charter operations have originated, are not considera-

ble, and facilities at Bear Mountain can readily be reached by persons using campsites in the Harriman section. Thus, defendant's charter operations from Bear Mountain and West Point are not shown to be unlawful or in violation of the commission's regulations.—Id., pp. 509, 511.

The best method of ascertaining the origin territory authorized by the incidental charter rights section is to consider each proceeding on its own particular circumstances, taking into consideration the terrain, density of population, proximity of highways, practical administration of the service, and operations of competing carriers and their ability to perform the service involved. Since §208(c) was clearly intended to authorize charter operations incidental to or supplementary of regular-route operations, the problem is to determine whether there is a mutuality between the traffic being served by the carrier's regular-route service and that served under the claimed incidental charter authority.—Somerset Bus Co., Inc. v. Suburban Transit Corp., 88 M.C.C. 13 (15).

Such mutuality exists as to South Plainfield, N.J., approximately 1.6 miles from defendant's regular route and nearly equidistant between its routes and those of complainant; both services are important to commuters, terminate at same point in New York City, and patrons are drawn from South Plainfield to both lines; in addition, a connecting bus service between the Plainfields and defendant's regular routes facilitates use of its regular service. As areas within reasonable proximity of a carrier's regular routes are considered to be "within the territory" served by such routes, defendant's charter operations from South Plainfield are lawful.—Id., p. 16.

But no such mutuality is shown between traffic generated by the city of Plainfield and defendant's regular service; Plainfield is about 3.5 miles from its regular route and residents thereof have available the nearby service of complainant and are unlikely to depend on defendant's similar service; recognition of fact that in fixing origin territory it is of prime importance to keep carriers from encroaching on the charter rights of others, coupled with necessity for practical administration of §208(c), impels conclusion that Plainfield is not within defendant's origin territory as contemplated by that section.—Id., p. 16.

See also Rose Extension, §207(a), n. 25 *Past operation.*

As defendant's authorized route extends over highways a substantial distance to the east of Portland, South Portland, Gorham, and Lewiston, Maine, it would not be feasible for interstate passengers to or from those cities to use any part of its regular-route service. Also, the Portland area is separated from defendant's routes by 10 miles of open water and is 24 miles from Brunswick, while Gorham and South Portland are more distant; Lewiston is about 18 highway miles from Brunswick, and there is no discernible mutuality of traffic between Lewiston area and defendant's regular route. Considering nature of the points involved, all of which except Gorham are larger than the largest point on defendant's authorized route, and the character of the terrain and its population, it cannot be found that defendant's incidental charter rights extend to those four points; defendant's transportation of charter parties therefrom is unlawful; cease-and-desist order entered.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (904).

Assuming that defendant's authority to serve New England type towns along its routes permits it to serve the entire township, no mutuality of traffic is shown between its regular-route operations and university at Storrs, Conn., in vicinity of a number of authorized New England type towns; assertion of a close relationship between the university at Storrs and Hartford, which it serves, because a substantial number of students reside in the Hartford area, is unsupported by any evidence that those students rely on or even use defendant's regular-route service; and a number of highways, served as regular routes by several competing carriers, lie much closer to Storrs than defendant's routes. No economic, social, or transportation relationship between the Storrs campus and the Hartford area which would justify defendant in performing incidental charter operations from Storrs is shown; cease-and-desist order entered.—Blue Line, Inc. v. Short Line of Connecticut, Inc., 88 M.C.C. 201 (204).

But since propriety of incidental charter

service at Storrs by other carriers mentioned in the record is not in issue, conclusions in instant proceeding should not be interpreted as approving or disapproving such service except as to defendant.—Id., p. 204.

Section 208. (d) [*§308(d) U.S.C.*] Transportation of baggage, newspapers, express, or mail.—[Unchanged. See vol. 10, p. 8028.]

Historical Note, vol. 17—p. 13557.

Historical Note

Under Pub. Law 88-239, Dec. 31, 1963, 77 Stat. 476 (39 USC §6402a), the Postmaster General may enter into agreements, under such terms and conditions as he prescribes, with motor common carriers of passengers for the transportation of mail in passenger-carrying vehicles over the carrier's authorized regular routes.

Notes of Decisions

Volume 10—p. 8028; Volume 11—p. 9459; Volume 12—p. 10406; Volume 13—p. 11080; Volume 14—p. 11602; Volume 15—p. 12208; Volume 17—p. 13557; Volume 18—p. 14469; Volume 19—p. 15737.

1. Construction and interpretation.—[Vols. 10-15, 17-19].—Though §208(d) provides that a certificate for transportation of passengers may include authority to transport express in same vehicle, 1 MCC 471 explicitly limited authority therein granted for such transportation to shipments which could be transported without disturbing the comfort and convenience of passengers or interfering with safety, speed, and other essential qualities of common-carrier passenger service; consistently with that view, certificates authorizing such transportation have been construed as not permitting transportation of express in trailers attached to passenger sedans or in combination vehicles constructed primarily for transportation of express.—Continental Southern Lines Extension, 88 M.C.C. 547 (549).

To adopt position that a trailer towed by a bus should be considered with the bus as one and the same vehicle, where the carrier's business remains primarily the transportation of passengers and transportation of express is related thereto, would overrule the commission's previous holdings based on sound principles. To assure good passenger service and to prevent passenger carriers generally from going into direct and aggressive competition with common carriers of freight, without proof of need for their services, they must be expected to handle express only as an incident to their primary passenger business. Application for authority to transport express in pup semitrailers drawn by passenger-carrying vehicles must therefore be considered as one for authority to operate as a common-carrier of property under §207.—Id., pp. 548, 550.

10. Property, mail, etc., transported with passengers.—[Vols. 10-12, 14, 18, 19].—Authority for transportation of express in same vehicle with passengers does not authorize transportation of express in carrier's buses when no passengers are transported therein, if it is being conducted for purpose of transporting express alone and not as an incident to transportation of passengers.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (363).

Section 209. [*§309(a) U.S.C.*] Contract carriers by motor vehicle.—(a) (1)-(3) Permit essential to operate; carriers in bona fide operation on July 1, 1935; laws relating to national parks and monuments unaffected; traffic moving to and from Territories and possessions; "grandfather" provisions.—[Unchanged. See vol. 10, p. 8031, vol. 15, p. 12208.]

Amendments, see footnotes, vol. 10, p. 8031, vol. 15, p. 12209.

Historical Notes

In view of creation of the Department of Transportation by Public Law 89-670, effective April 1, 1967 (32 FR 5453), the Commission and the Department of Transportation entered into a Memorandum of Agreement on April 3, 1967 (32 FR 5744, Apr. 8, 1967) for the purpose of accomplishing continuity, liaison, coordination, and support with respect to transferring from ICC to DOT personnel and functions concerned with (1) motor carrier safety matters; (2) certain pending ICC proceedings; (3) pending court cases transferred to DOT; (4) housekeeping operations for ICC personnel transferred; (5) access to, and provision of, reports and other documents, and (6) liaison and cooperation between ICC and DOT.

The commission recommends that part II be amended to authorize the commission, after opportunity for hearing, to deny certificates, permits, licenses, or other operating authority when, in application proceedings, perjury, or subornation of perjury, has been committed before the commission, and the commission finds that the director, officer, or person convicted of such crime has such an interest in the business that the conviction affects the fitness of the carrier or broker.—Annual Report, 1962, p. 207.

Notes of Decisions

Volume 10—p. 8032; Volume 11—p. 9459; Volume 12—p. 10406; Volume 13—p. 11081; Volume 14—p. 11602; Volume 15—p. 12210; Volume 16—p. 12859; Volume 17—p. 13558; Volume 18—p. 14469; Volume 19—p. 15738.

4. Interstate and foreign operation.—[Vols. 10, 12, 18, 19].—Transportation currently being performed by Canadian applicant and that proposed from Seattle, Wash., to ports of entry on the international boundary in Idaho, Montana, and Washington constitutes a part of a through movement from Costa Rica to Canada and, under §203 (a) (11), such transportation is not subject to the permit or certificate requirements of the act; therefore, application for permit is dismissed.—B-Line Fast Freight, 94 M.C.C. 702 (703).

5. Contract carrier, in general; definitions.—[Vols. 10, 15, 16, 18, 19].—The court agrees with the commission that grant of contract carrier permit will not contravene the national transportation policy, even though applicant's president, who owns 50 percent of its stock, is superintendent of motor transportation for the sole supporting shipper. A contract carrier is under no obligation to render impartial service to the public; in fact, since shipper's need for unusual service is the primary basis for granting a permit, a carrier in close connection with shipper might be better able to fulfill shipper's needs than a totally unconnected carrier, thus the relationship would provide a further reason for granting permit. —Deioma Trucking Co. v. United States, 233 F. Supp. 782 (784)*.

Even assuming correctness of the commission's conclusion that, while applicants (plaintiffs) indicated willingness to accept a restriction of authority sought to service for named supporting shippers, they manifestly would do so only to become eligible to receive contract carrier permit, such a natural reaction should not be considered fatal to their permit application. The commission is empowered by §209(b) to impose such terms or limitations as may be necessary to assure that the business is that of a contract carrier; it may regulate the number of shippers with whom a contract carrier may contract, and also has power under §212(c) to reexamine each outstanding permit. Moreover, it made no finding that plaintiffs were unwilling to perform service of a contract carrier or to conform to the provisions of the law and the regulations and requirements of the commission. —Eddleman v. United States, 229 F. Supp. 231 (238-9)*.

Since supporting warehouse company owns the commodities other than frozen foods embraced in application and pays the freight for their transportation, it is a qualified shipper thereof. And though it does not own the frozen foods which it stores in its warehouses for its customers and in most instances does not pay the freight for their transportation, it is nevertheless a proper shipper qualified to enter into a contract with applicant for such transportation. It is bailee of the frozen foods and by agreement with the producers routes 70 percent of the local traffic passing through its warehouses and 40 percent overall; in such circumstances it is not required that it pay the freight for transportation of the traffic that it

routes, in order to qualify as a shipper.—Jacobs Extension, 96 M.C.C. 87 (90, 92)*.

And the contract entered into by applicant and shipper is bilateral even though it imposes no obligation on shipper to tender applicant any minimum volume of traffic, since performance of either of the promises is made to depend on performance of the other; the several conventions are commonly deemed one convention, which is then said to be "bilateral." Moreover, absence of fixed amounts of traffic in the contract terms does not render the contract invalid, and provisions therefor in the contract are not required by 1 MCC 628; however, it is necessary that the contract cover a series of shipments over a period of time.—Id., p. 92.

Contract carriers which were not converted to common carriers at time of the 1957 amendment of the act (which provided a statutory plan for conversion to common carriers of contract carriers not meeting the new definition of contract carriage), and those which instituted interstate contract carrier service after August 22, 1957, must be presumed to have sought and obtained contract carrier authority since that date with full knowledge of provisions of the amended statute and the restrictions thereby placed on contract carrier operations.—Connell Transport Co., Inc., Conversion, 95 M.C.C. 312 (318).

While decision that transportation by armored-car operators of business documents, film, optical or dental supplies, precision instruments, or the like is common carriage because it requires no special equipment or protective measures will have serious and far-reaching effect on applicants and other armored carriers holding contract-carrier authority, considering the history and development of armored-car service, and particularly the recent expansion of such carriers into areas other than their traditional field, there is no alternative but to foreclose continued expansion of their contract-carrier operations. However, as their contract carrier status has been confirmed and they now hold permits for transportation of commodities similar to those for which they seek extension authority, effect of instant decision is only to say that they may not be granted additional authority to transport commodities of types involved, as contract carriers.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (362-3).

While grant of additional authority that will enable applicant under 7 permits to serve a total of 4 shippers all engaged in related activities in same geographical area is not inconsistent with the "limited number of persons" requirement of §203(a)(15), applicant is cautioned, in light of decision in 91 MCC 691, that continued pursuit of additional shippers may result in a de facto change in its status to common carriage.—Nationwide Carriers, Inc., Extension, 92 M.C.C. 1 (4, 6)*.

See also Major Extension case, §203(a)(15), n. 1.

Contract carriers whose services do not possess a high degree of specialization are put on notice that attempts to expand their operations by offering service to more than six or eight separate shippers will be scrutinized to ensure that they are not thereby serving more than the limited number of persons permitted by §203(a)(15).—Umthun Trucking Co. Extension, 91 M.C.C. 691 (697).

Although applicant now holds authority to serve but three shippers, his pattern of expansion is similar to that found in 91 MCC 691 to result in a common-carrier operation; his many temporary authorities and pending applications demonstrate beyond doubt that he intends to seek out new business in much the same way that common carriers do. While proposed operation for a new shipper, lasting for less than a year, will not cause applicant to serve more than a "limited number of shippers" and may be authorized, he is put on notice that he must either restrain his tendency to expand operations through offering service to additional shippers, or seek to convert his authority to common-carrier.—Williams Extension, 91 M.C.C. 929 (931).

Applicant holding a number of permits, with applications pending for several others and apparently intending to seek more contract shippers, cannot properly be said to be serving only a "limited number" of shippers within the definition of a contract carrier in §203(a)(15); applicant cautioned that continued pursuit of additional customers will almost certainly result in de facto change in its status to that of a common carrier.—Nation-

wide Carriers, Inc., Extension, 89 M.C.C. 675 (679).

It is the commission's constant duty to police activities of regulated motor carriers in such a manner as to preserve the essential distinction between contract and common carriage; rendition of purported contract-carrier services by vast numbers of commonly controlled carriers compounds this problem immeasurably, since scope and character of the collective services afforded must be evaluated to determine whether they are in fact unauthorized common carriage. Proposed system of multiple, commonly-controlled contract carriers would complicate regulation and increase administrative problems, contrary to public interest; it is therefore unnecessary to determine whether control applicants, through their present and proposed corporate carriers, would provide common-carrier service under guise of contract carriage.—Best Transport, Inc., 88 M.C.C. 147 (159)*.[But see dissent.]

Applicants' attempt to justify a multiplicity of commonly controlled contract carriers reflects a belief that creation of multiple carrier entities may be used as a device to avoid the statutory restrictions on contract-carrier service. While applicants' present or proposed operations, viewed as a whole, do not necessarily violate the statutory requirement that service of a motor contract carrier be confined to one or a limited number of persons, possibility exists that establishment of numerous commonly controlled carriers, each serving one or a limited number of shippers, could lead to performance of what are essentially common-carrier operations, and this possibility becomes probability with a wholesale increase in the number of contract carriers controlled or managed in a common interest.—Id., pp. 158-9.

7. Interchange arrangements.—[Vols. 10-12, 15-17, 19].—Proposed contract carrier operation from Hintington to New York, N.Y., limited to traffic delivered to common carriers or freight forwarders for subsequent movement in interstate or foreign commerce, involves an apparent interchange by a contract carrier. Since earliest days of regulation, however, such an arrangement has been held to contravene the commission's policy, except where the shipper employs the contract carrier as its agent for purpose of arranging for transportation by common carriers beyond points reached by it—the theory being that the agency relationship establishes constructive intervention by shipper at the connecting point and, thus, it is the shipper's tender, not contract carrier's. While all the cases involved union by contract with common carriers, rationale therein may be equally applied where proposed tender is to a freight forwarder. Therefore, since record discloses no facts that evidence an arrangement other than that born of described restriction, instant application is denied.—Holck Extension, 94 M.C.C. 393 (394).

See also National Auto. Transporters Assn. case, NTP, n. 10 *Substituted service.*

While contract carriers may not interchange freight moving beyond their own lines, they may act as shipper's agent in turning shipments over to another carrier at a common point of service. However, arrangement whereby applicant, purportedly as shipper's agent, turns traffic over to another contract carrier at Rochelle Park, N.J., for delivery to New York under a one-way equipment lease constitutes unauthorized through service by applicant in violation of the statute, even though shipper has a separate contract with the second carrier, when latter has no control over the service performed in its name and the arrangement amounts to an unlawful lease of its operating rights.—Connell Transport Co. Extension, 91 M.C.C. 113 (116, 120, 122).

10. "Grandfather" clause; bona fide operation.—[Vols. 10-14, 19].—The "grandfather clause" confers a special privilege on those carriers coming within its terms and extends only to carriers plainly within its terms; it contemplates substantial parity between future operations and prior bona fide operations as of the statutory date. Applicant for a grandfather permit is entitled thereto, as a matter of right, upon proof of substantial bona fide operations on and continuously since the statutory date; however, actual and substantial, rather than merely potential, sporadic or infrequent, service by applicant is required before such permit can be issued. The commission, by finding that carrier's evidence "falls

short" of substantiating allegations of its petition for reopening its "grandfather" proceeding, did not depart from established principles and establish an entirely new concept.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (465)*.

12. Competition.—[Vols. 10-19].—Although service of protesting common carriers in transportation of frozen foods has been generally satisfactory to supporting shipper, and grant of permit to applicant may result in some diversion of that traffic from them, such diversion should not cause them any significant loss, since they will retain shipper's outbound traffic entirely, and indications are that the overall volume of traffic available will increase. Protestants cannot provide the flexible "house carrier" service applicant offers, and whatever loss of traffic protestants may suffer is outweighed by shipper's needs and advantages accruing to the public from proposed service. Granted.—Jacobs Extension, 96 M.C.C. 87 (90, 93)*.

Grant of authority sought by applicant will not materially harm protestant common carriers when even collectively they lack sufficient territorial and commodity authority to provide the complete service shown to be required; they now handle only a small portion of supporting shipper's traffic, and additional traffic applicant will receive will apparently be diverted from private carriage. Moreover, the protestant holding the most extensive authority is controlled by and provides most of its services for two competitors of supporting shipper, and another holding authority for a large part of the territory involved has allowed applicant to provide the actual transportation for shipper under a lease arrangement. Potential advantages to shipper far outweigh any possible disadvantages to protestants.—George W. Kugler, Inc., Extension, 95 M.C.C. 288 (298)*.

Satisfactory performance of essentially comparable service by authorized common carriers may not be disregarded; lawful carriers that have dutifully submitted to regulation have been deprived of the opportunity to transport traffic within their authority, and of revenues therefrom, as a result of an unlawful lease arrangement between supporting shipper and applicant or its affiliates; and grant of the application would enable shipper to divert to applicant much of the substantial volume of traffic now being handled satisfactorily by protestants. Denied.—Interstate Distributing Co., 91 M.C.C. 36 (41)*.

Since transportation of truckload traffic is likely to be more profitable than the handling of l.t.l. shipments, it would not be sound regulatory practice to authorize a contract carrier to skim off the more profitable volume traffic while leaving the motor common carriers of general commodities—which are obligated by law to accept whatever freight is tendered to them—with nothing but the less profitable small shipments; denied.—Sears, 89 M.C.C. 173 (178).

Where no definite need for applicant's proposed service is shown and there is no showing that either it or supporting shipper would suffer materially from denial of application, whereas it is clear that shipper would deprive protestants now serving it (other than heavy haulers) of some 15 to 20 percent of traffic which they now transport, directly or by interline, from the four origins involved, the material detriment to those protestants strongly outweighs any possible disadvantages resulting from denial to applicant and shipper.—Tractor Transport, Inc., 88 M.C.C. 117 (122-3).

The Supreme Court in 368 US 81 rejected the raising of a presumption that a grant of competitive contract carrier authority would adversely affect existing carriers, stating that the commission should not load the scales in favor of any one of the criteria of §209(b) where another has contrary implications; thus, where a grant of authority would adversely affect operations of protesting carriers, whereas denial would adversely affect supporting shipper, the commission must carefully consider the conflicting interests without giving undue weight to either.—Moyer, 88 M.C.C. 767 (775).

While private carriers can avoid some of expenses incurred by authorized carriers, they often suffer the disadvantage of one-way movements; therefore, if the private carrier can overcome that disadvantage by operating as a for-hire carrier in one direction, advantages which it enjoys as a private carrier will enable it to compete on better than even terms

with for-hire carriers, both common and contract. For this reason the commission has frequently held, beginning in 7 MCC 369, that an applicant's private-carrier operations bar a grant of authority.—Derrico Co., Inc., 88 M.C.C. 17 (18).

14. Desire of shipper to engage particular person.—[Vols. 10-13, 16, 18].—When authorized common carriers, with or without dedication of equipment, are satisfactorily providing an essentially comparable and sufficiently dedicated service on supporting shipper's traffic, to disregard that service by grant of contract carrier application would weaken the fabric of the regulated transportation system upon the mere whim of a shipper who may be shopping for an overabundance of service, and would open the door to grants based on desires shaped purely in terms of how likely they are to produce such grants. Denied.—Interstate Distributing Co., 91 M.C.C. 36 (41)*.

Where applicants have been serving shipper from its East St. Louis pipeline terminal for more than 10 years under intrastate authority and have been helpful to shipper in soliciting sales and in developing good customer relations, denial of authority from its new terminal near Oakland City, Ind., would seriously inconvenience not only shipper but its consignees, all of whom deal with applicants on thoroughly tested basis; applicant can best provide shipper with service it desires; granted.—Cox, 91 M.C.C. 275 (276,278)*.

15. Violation of act as affecting fitness.—[Vols. 10-12, 16-19].—Applicant has stated, and there is no evidence to the contrary, that it conducted prior challenged buy-and-sell operations in the belief they were in the realm of private carriage; its bona fides is demonstrated by fact that when informed that those operations were suspect it filed instant application. In the circumstances, applicant acted in good faith, and the prior unlawful operations are not a bar to an otherwise warranted grant.—Petroleum Marketing Co., Inc., 94 M.C.C. 782 (786).

Though applicant has conducted certain operations on behalf of supporting shipper for several years without appropriate authority, and such past unauthorized operations are not condoned, he has recently made amends and indicates a desire to comply with all regulations; accordingly, present circumstances do not require that applicant be penalized by an unfavorable fitness finding. Granted.—Feagin, 94 M.C.C. 695 (698); similarly, since applicant has not flouted regulation, and professes willingness to comply with the commission's requirements, he has demonstrated his fitness to perform proposed service.—Hoyt, 92 M.C.C. 189 (194).

Past unauthorized operations do not necessarily bar grant of authority to perform a needed service. Although at time of hearing applicant had not entirely discontinued unauthorized interstate operations and in the following month was fined on 9 counts of such violation, he stated under oath at hearing that he would discontinue his unauthorized operations until he received the requisite authority, and explained that they had been conducted as the only means of supporting his family. While his past violations are not condoned, in light of his apparent lack of intent to flout the law, and his financial fitness, a finding of unfitness is not required.—Sears, 92 M.C.C. 602 (603-4).

Although past unauthorized operations are not an absolute bar to a grant of authority, since the commission is concerned primarily with applicant's present and future fitness to comply with the act and regulations thereunder, they must be weighed in determining such fitness. Applicant did not understand the leasing regulations and his limited knowledge indicates that in conducting unauthorized for-hire operations he did not willfully violate the act and commission's regulations; he has demonstrated he will operate lawfully in the future and is fit to hold authority for which need has been demonstrated. Granted with admonition to refrain from unauthorized operations in the future.—Trushenski, 91 M.C.C. 502 (506).

Although it is clear that applicant's parent corporation and principal supporting shipper has engaged in unlawful for-hire operations in performing some of same services as involved, evidence is insufficient for a like conclusion as to applicant's past operations; as applicant has applied for authority under direction of the parent corporation, and there

is no evidence that either has been indifferent to, or contemptuous of, motor carrier regulation, there is no justification for an unfavorable finding as to applicant's fitness; however, it is admonished to conduct its operations separately from those of its parent and to inform itself fully of the regulatory provisions under which it will operate as a contract carrier.—S. Klein Trucking Corp., 89 M.C.C. 53 (57).

Applicant has the burden of establishing his fitness to perform proposed service. While the commission has been lenient towards carriers acting in good faith under honest belief that they were exempt, applicant had full knowledge that he was conducting unauthorized operations, and fact that he may have acted on advice of counsel does not relieve him of responsibility; he has long been active in the transportation field and cannot plead ignorance of statutory requirements, especially since he was informed by a commission representative that his operations constituted for-hire carriage. Thus, his unlawful operations have been conducted willfully and finding of fitness would not be justified; application denied.—Kapke Investigation of Operations and Practices, 91 M.C.C. 377 (387-8).

The commission takes official notice that applicant was convicted by a federal court on eight counts of unauthorized interstate operations. And though it is not the commission's function to enforce State laws, it is its duty to assess all relevant factors bearing on an applicant's fitness; a clearly demonstrable violation of a State statute is such a factor, and applicant's employment of owner-operators who operate with tags authorizing private rather than for-hire operations violates Mississippi law. These matters, together with other indications of unfitness, would require denial of application even if applicant's operation were bona fide contract carriage.—T. P. Trucking Co., Inc., Extension, 91 M.C.C. 764 (769).

Motor carrier operations must be conducted in good faith without a shadow of subterfuge or attempted evasion of the letter or obligation of the law. Applicant's president and sole shareholder has been engaged in transportation for some 10 years and is familiar with the commission's regulations, yet has continued to operate illegally through lease of vehicles to shipper for which he is traffic manager, and for which he has performed an unauthorized transportation service under the guise of a purported private carrier operation. Such concealing of a for-hire operation evinces a clear, unmistakable intent to evade regulation, which cannot be permitted to succeed; in the circumstances, applicant cannot be found fit to conduct proposed operation; application, therefore, must be denied.—Frost Motor Exp., Inc., 89 M.C.C. 155 (157-8).

18. Conditions imposed; scope stated in permit.—[Vols. 10-19].—Construction of terms of permits generally, see §212 (a), n. 1.

Applicant's permit authorizing it to provide service for certain shippers from Milwaukee and Chicago is limited to traffic moving in mixed shipments with eggs from Random Lake, Wis., to the same destinations; and in attempting to effect technical compliance with that restriction, a case of eggs has been placed in each vehicle leaving Milwaukee. However, the eggs are not picked up by applicant at Random Lake, but are obtained from a supplier at that point who delivers them to Milwaukee, whence they are transported to the destination and then returned to applicant's president (who is apparently their owner) at his home; since such operation is obviously a subterfuge to evade restriction in its permit, transportation applicant has provided from Milwaukee and Chicago has been unlawful.—Connell Transport Co., Inc., Conversion Application, 95 M.C.C. 312 (314).

Since supporting shipper is interested in shipping wire cloth made of aluminum, brass, bronze, copper, iron, and steel, and since commodity description in the application is redundant and confusing, authority is granted simply for wire cloth.—Toomey, 95 M.C.C. 331 (337).

As trucks to be moved in proposed driveaway service include truck bodies which move with and as a part of the trucks, and considering contracting shipper's operation in which it installs its manufactured bodies on customer's chassis, authority is granted for driveaway of "trucks, chassis, and bodies, and parts thereof when moving in such vehicles."—Chadwick, 92 M.C.C. 271 (274).

Authority granted to transport processed foods is limited to pickles, sauerkraut, and peppers, those being the only products manufactured at contracting shipper's plants; and authority for inbound transportation of glass containers is limited to origins specifically named by shipper; but since the commodities authorized apparently do not require refrigeration, proposed restriction against transportation of goods requiring refrigerated equipment is unnecessary.—Dibble, 92 M.C.C. 610 (617).

Although applicant proposes to transport coke and pig iron in dump trucks, imposition of such an equipment restriction is unnecessary and administratively undesirable, especially where the service will be performed under contract for a particular shipper. But since the coke will be transported in a fungible mass, authority therefor is limited to shipments in bulk.—McFeeley Xtension, 92 M.C.C. 769 (772)*.

Certain of applicant's presently held authority is restricted to transportation of a particular appliance in mixed loads with other appliances; consequently, there is no reason why a similar restriction should not be put on instant outbound authority as requested by applicant.—Capital Exp., Inc., Extension, 91 M.C.C. 819 (823).

Supporting shipper is carrying out modernization and expansion programs at its plants at destinations named, and though proposed contract carriage of control panels and related equipment meets a distinct need for service not otherwise available, those programs are scheduled for completion by end of 1963; authority granted is therefore limited to a period ending December 31, 1963.—Williams Extension, 91 M.C.C. 929 (931).

Since irradiated (radioactive) fuel elements are within definition of class D poisons in the dangerous-articles regulations, permit for their transportation is limited to a period expiring 5 years from date of issuance.—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (380); likewise, permit granted for transportation of explosives, blasting agents, blasting materials and supplies, and materials used in manufacture of explosives is limited to expire 5 years from effective date thereof. But since it appears that supporting shipper is developing an explosive slurry called flogel, which is to be delivered directly to the shothole in a tank truck, applicant should not be restricted against transportation of bulk liquids in tank vehicles.—H. Messick, Inc., Extension, 89 M.C.C. 209 (216)*.

Even though the commission has adopted a policy of not including a particular restriction in operating authorities, such a restriction in outstanding certificates or permits may not be flouted with impunity.—Fox-Smythe Transp. Co. Extension, 88 M.C.C. 57 (61).

See also Dyer-O'Hare Hauling Co. case, §5(2), n. 48 *Conditions imposed*.

Since applicants are engaged in proprietary motor carrier operations, grant of contract carrier authority is subject to condition that their private and for-hire transportation businesses shall be conducted separately and separate books maintained.—Cox, 91 M.C.C. 275 (278)*.

It is unnecessary to condition grant of permit for transportation of prefabricated buildings and related articles from Wadena, Minn., to points in seven States on surrender of applicant's certificate for a 47-mile route between Wadena and Alexandria, Minn., since both those termini and intermediate and off-route points are small towns and service consists principally of traffic interchanged with originating carriers for delivery.—Polman Extension, 92 M.C.C. 114 (115)*.

In view of applicant's failure to except to joint board's recommended denial of authority to serve Muncie and Evansville, Ind., in transportation of residual fuel oil from oil company's plant near Robinson, Ill., and its apparent lack of interest in that traffic, which protestants are handling in motor-barge service, those points are excluded from authority granted to points in Ohio and Indiana.—Kendrick Cartage Co. Extension, 91 M.C.C. 743 (746).

Though fact that applicant's parent corporation has separated most of its stores and retail activities into separate corporate entities for tax, liability, or other business purposes has little effect on its transportation problems, points authorized to be served must be limited to the stores and those facilities that qualify as warehouses of the parent company and its subsidiaries, otherwise the

description of service points would be too indefinite for practical regulation; however, between those store points concessionaires of the parent or subsidiaries may ship the involved commodities under contracts with applicant. So limited, there appears to be no possibility that applicant could invade the common-carrier field.—S. Klein Trucking Corp., 89 M.C.C. 53 (56, 57).

20. Operations by railroads.—[Vols. 10, 18, 19].—Special circumstances justify grant of contract carrier authority to railroad subsidiary, without rail-auxiliary restrictions, for initial-movement transportation of new automobiles and trucks from automobile manufacturer's assembly plant at Fremont, Calif., to points in Nevada on and off rail lines of the parent company. Applicant is presently rendering identical service from shipper's Oakland, Calif., plant which is to be closed, and is the only carrier able to provide both the interstate and intrastate service of type needed by shipper from its new plant being constructed at Fremont.—Pacific Motor Trucking Co. Extension, 91 M.C.C. 61 (63, 65).

Denial of the application would result in applicant losing traffic and revenue it has enjoyed for several years and, in effect, would deny shipper the privilege of negotiating a contract with carrier it deems best fitted to meet its particular requirements. Also, contract carrier protestant not only failed to take exception to examiner's ultimate findings, but did not challenge the finding that it is serving a competitor of supporting shipper, which it could favor in event of conflict in service requirements between them. Granted.—Id., p. 65.

24. Proceedings remanded.—[Vol. 19].—In its report and order denying plaintiff's contract carrier application, the commission did not properly employ the statutory procedures; nor did it properly evaluate the requisite §209(b) criteria in that its erroneous, and unnecessary, conclusion of no distinct need under the contract carrier definition in §203(a)(15) was apparently carried forward as the primary reason for a negative finding under §209(b). Furthermore, commission findings with regard to (1) nature of the proposed service, (2) effect a grant would have on protesting common carriers, (3) effect of denial on applicant and or shipper, and (4) the changing character of that shipper's requirements are not supported by substantial evidence. Therefore, the order is set aside, and the case remanded for the commission's further consideration consistent with the court's opinion. —Midwest Truck Lines, Ltd. v. United States, 269 F. Supp. 554 (560-1, 562-6, 567)*.

Proceeding in which contract carrier authority was granted is remanded to the commission solely for purpose of permitting plaintiffs (protestants before the commission) to examine proposed new contract between applicant and its supporting shipper, claimed to be bilateral, and present their objections thereto. Plaintiffs' request for an opportunity to examine that contract and state their objections was denied by the commission on authority of §220(a); however, since the commission requires that there be a bilateral contract as a condition to the right to operate as a contract carrier, plaintiffs are entitled to examine the contract as part of the formal application proceeding and it is consistent with the public interest to permit them to do so.—Exley Express, Inc. v. United States, 254 F. Supp. 363 (364-5)*.

The court, though not unmindful of the commission's wide range of discretion and the latitude extended to it to apply its expertise, must uphold the commission's orders on basis of the reasons given by it. This cannot be done where, in disposing of plaintiffs' contract carrier application, the commission failed to apply the standards of §209(b), but instead found the proposed operation to be common carriage and denied the application on ground that plaintiffs had failed to establish a public need for their service; the commission's failure, in so doing, to afford plaintiffs a full and fair hearing on the issues raised by their application was clear error; remanded for further proceedings consistent with the court's views.—Eddleman v. United States, 229 F. Supp. 231 (236, 238, 240)*.

In passing on contract carrier's extension application the commission, in discussing the five criteria which Congress directed it to consider and in applying them to the facts before it, erroneously assumed that those criteria might be treated as though they were factors in an algebraic equation which might

be solved mechanically. While the commission explicitly stated that "the weighing of all five factors warrants, on balance, a finding that issuance of a permit *** will be consistent with public interest and the national transportation policy," careful reading of its opinion and the entire record it was considering is persuasive that it attached equal weight to each criterion, thereby employing a standard which, in the circumstances of the case, was not a proper one. The proceeding must therefore be remanded for further consideration of the present record, supplemented in any manner the commission deems appropriate, in light of the views expressed.—Baggett Transp. Co., Inc. v. United States, 231 F. Supp. 905 (907)*.

The commission's report granting contract carrier authority on basis of shippers' need for the special services proposed does not distinguish between their transportation and nontransportation needs. The statute requires that distinction to be made, and before the commission may give weight to shippers' distinct needs it must first determine that those needs pertain to a transportation service. The court declines to make such determination in advance of commission action: delineation of what are transportation services is peculiarly within the competence and expertise of the commission; it should make the determination in the first instance and its decision may then be reviewed by the courts. The commission's order set aside and the case remanded for further action in accordance with the court's views.—National Trailer Convoy, Inc. v. United States, 227 F. Supp. 730 (734)*.

25. Necessity, demand, for service; in general.—[Vols. 10-19].—In granting authority to a contract carrier, the standard is whether a distinct need exists for the service requested by the shipper. Substantial evidence supports the commission's conclusion that protestant in application proceeding (plaintiff) could not afford to shipper the type of service and equipment necessitated by its business and that applicant, requested to secure the contract carrier authority, did meet all of shipper's requirements and needs. Sustained.—Erskine & Sons, Inc. v. United States, 235 F. Supp. 907 (908-9)*.

The court is satisfied that the commission approached considered contract carrier application in light of the Supreme Court's holding in 368 US 81 that willingness or ability of existing carriers to render the service involved is not determinative; that shipper's distinct need for the proposed service must be weighed against existing services; and that adequacy of existing services does not require denial of application if shipper's distinct needs can be better served by applicant. The commission had before it detailed evidence pertaining to supporting shipper's special requirements for service being furnished by applicant and to its difficulties encountered in using plaintiff's service; appraising the record in totality, the commission's finding that applicant was the only existing carrier able to provide shipper with the service it requires is supported by substantial evidence. The commission properly considered the criteria of §209(b) and did not load the scales in favor of any one; sustained.—Clark Transport Co. v. I.C.C., 233 F. Supp. 839 (842)*.

The commission's conclusion that a complete service was shown to be required by supporting shipper was a sufficient finding of "distinct need" for applicant's proposed service. Examiner's report, which the commission adopted, describes facts which caused shipper to seek the service applied for, and those facts clearly show a distinct need on shipper's part; his failure to list those facts under heading "Findings" or "Conclusions" does not detract from their weight or acceptance. His report reveals that he considered each of the five factors enumerated in §209(b) and made sufficient findings thereon. The commission's determination that a distinct need had been established for applicant's service, which plaintiffs could not meet, is supported by ample evidence of record; sustained.—Deioma Trucking Co. v. United States, 233 F. Supp. 782 (783)*.

While, in view of remand of application for reconsideration on other grounds, the court is not disposed at this time to decide whether or not the commission's finding that trailer retention is a transportation service was supported by substantial evidence, the commission should take another look at the facts in light of conclusion in 227 F. Supp. 730 (with which the court agrees) that before it may give

weight to a shipper's distinct needs it must first determine that those needs pertain to a transportation service. The undisputed fact that shipper has demonstrated a distinct need for trailer retention up to 14 days at jobsite or magazine, without additional charge, for purpose of storing nitro carbo nitrate merely frames the question wheter such service is tailored to its transportation or to its sales needs; activities pertaining to sale are beyond scope of transportation.—Baggett Transp. Co., Inc. v. United States, 231 F. Supp. 905 (908)*.

The needs of shippers are varied and diversified, some of which relate to transportation and some do not. In determining whether or not contract carrier authority should be granted, distinction between transportation and nontransportation needs of shippers must be made; and before the commission may give weight to a shipper's distinct needs, it must determine that those needs pertain to transportation service. Delineation of what are transportation services is peculiarly within the competence and expertise of the commission; it should make the determination in the first instance and its decision may then be reviewed by the courts.—National Trailer Convoy, Inc. v. United States, 227 F. Supp. 730 (734)*.

In denying plaintiff's permit application, the commission did not properly evaluate requisite §209(b) criteria when (though "nature of the service proposed" naturally involves the question of need for the service) its unnecessary conclusion of no distinct need under the definition in §203(a)(15) was carried forward and adopted as the primary reason for a negative finding under §209(b). Applicant (plaintiff) would serve one contracting shipper-consignee and devote nine tractor-trailer units to its exclusive use; would provide multiple pickup service on bus parts, equipment, and materials from shipper's suppliers from 15 named origins on a routing basis; and, to meet rigid delivery requirements of shipper's production schedule, would assure delivery within four days from initial-origin pickup. Also, considering the entire record, substantive evidence does not support commission findings that grant of the permit would adversely affect protesting common carriers, and that supporting shipper would not be adversely affected by a denial. Order set aside, and case remanded for further consideration consistent with the court's opinion.—Midwest Truck Lines, Ltd. v. United States, 269 F. Supp. 554 (557-8, 561-6, 567)*.

Supporting shipper has shown a distinct need for an "on-demand" service capable of rendering prompt pickup and delivery and expeditious transportation in round-robin movement of frozen foods and pallets and of emergency shipments of plant equipment and supplies between its cold-storage warehouses and customer's processing plants, to be available 24 hours a day, 7 days a week. Protesting common carriers, though they have satisfactorily served that shipper in transportation of frozen foods and will retain its outbound traffic therein, do not appear willing to handle the other traffic involved and thus cannot provide the flexible "house carrier" service applicant offers. On balance, the criteria of §209(b) have been satisfied; granted.—Jacobs Extension, 96 M.C.C. 87 (90, 92, 93)*.

Applicant is better equipped to meet contracting shipper's distinct needs than protestants who have handled very little of the type of traffic involved, and cannot offer territorially as broad and flexible a service as applicant proposes. Moreover, physical transfer of l.t.l. shipments, involved in protestants' service, would tend to damage shipper's fragile product. Grant would not adversely affect protestants' operations, whereas denial would deprive applicant of opportunity to provide a service shown to be needed, and deprive shipper of a service particularly responsive to its requirements, as well as force it to continue private carrier operations which it wishes to discontinue.—Toomey, 95 M.C.C. 331 (336-7).

While proposed service is one-way only, it will be economically feasible, since applicant can obtain backhaul loads of exempt commodities or lease its equipment for the return trip. Moreover, shipper has been operating in this way for years, and applicant has been assured that its outbound equipment will be fully utilized on return trips; granted.—Id., p. 336.

In weighing the criteria of §209(b), as was discussed in 368 US 81, there is no room for a presumption in favor of or against any of the

five factors which must be considered in determining whether or not issuance of a permit will be consistent with public interest and the NTP. In determining where the public interest lies, the distinct need that a contract carrier's service is designed to meet, and not the existence of reasonably adequate transportation, is the critical issue to be considered.—Russell Transfer Co., Inc., 95 M.C.C. 412 (419-20).

Applying criteria of §209(b), proposed operation is consistent with the public interest; applicant proposes to serve only a single shipper, offering a specialized service designed to meet shipper's distinct needs for transportation of butanes. Should application be denied, applicant would not be able to engage in the trucking business, and shipper would be denied the use of dedicated specially equipped vehicles, thus preventing it from obtaining scheduled and directed service from all its supply points; furthermore, absent dedicated equipment, the butanes remaining in a tank truck after unloading would be lost when the vehicle is cleaned, resulting in financial losses to shipper. Since protestants are not now participating in the involved traffic, effect of a grant on their operations would be minimal.Granted.—Petroleum Marketing Co., Inc., 94 M.C.C. 782 (787).

Shipper's outbound movement of dry fertilizer during the spring months is often made on exceedingly short notice; and, since those movements are either l.t.l. or truckload and dropoffs at more than one farm site frequently are necessary, shipper requires a coordinated service in order to assure its consignees of deliveries timed to meet their individual needs. On inbound shipments to its storage facility during the fall season, shipper requires a carrier able to furnish equipment promptly in order to move a large volume during a relatively short shipping season. Applicant would provide a specialized "house carrier" service closley integrated with shipper's operations with respect to both inbound and outbound movements. Grant of authority would produce no diversion of traffic from existing carriers since considered traffic has not been handled by any other carrier; on the other hand, denial would leave shipper without a service particularly well suited to meets its transportation needs.—Feagin, 94 M.C.C. 695 (697, 698).

Protestants have not established their willingness and ability to meet shipper's distinct needs; one does not hold authority to perform the required outbound service, and its limited authority would not be responsive to shipper's inbound requirements. The other could not perform the expedited and specialized service required, and there is no certainty that its equipment would be available to shipper on an assured basis.—Id., p. 697-8.

It is well established, see 368 US 81, that a protestant must show that it can meet supporting shipper's distinct needs for specialized transportation service as well as can the applicant. However, protestant holds no authority to serve the county where shipper's new store will be located, thus, it is not clear how it expects to meet shipper's complete needs. Moreover, protestant has failed to show that it could provide shipper the personalized service comparable to that provided by applicant, involving, among other things, the inspection of meat prior to its acceptance from the supplier.—Muzzillo, 94 M.C.C. 563 (565).

In construing the statutory requirements of §209(b) to determine whether or not grant of permit sought would be consistent with the public interest and the national transportation policy, all of the factors must be weighed in determining on balance where the public interest lies, see 368 US 81. Applying those criteria, grant of authority to perform an enlarged service for shipper already served will not affect applicant's contract-carrier status; applicant would provide an expeditious interstore and warehouse service tailored to particular needs of department store shipper, including ancillary services which protestant cannot render. Also, while grant of the permit will cause some diversion of protestant's traffic, latter failed to show that such diversion will result in impairment of its other services to the detriment of the public; on the other hand, denial would adversely affect shipper's business operations, since its manner of rotating stock at all its stores necessitates a flexible service of the type proposed; granted. —A.B.C. Exp. Co. Extension, 94 M.C.C. 386 (390-2)*.

Applicant is better equipped to meet the

distinct needs of shipper than protestants; applicant will backhaul shipper's papermill supplies to balance its presently authorized outbound deliveries of paper by the return movement from those delivery points. Use of private carriage gives shipper's competitors a more complete service than that which is now available to shipper from common carriage; furthermore, shipper cannot compete effectively if it is forced to pay higher rates for present outbound shipments. Protestant common carriers failed to show that traffic they would lose constitutes a critical proportion of their total operations; and, if application is denied, shipper will be forced to change to unregulated private carriage, to the ultimate detriment of applicant as well as the existing common carriers.—H.H. Follmer Contract Hauling, Inc., Extension, 94 M.C.C. 276 (279-80).

Ford Motor Co. has a distinct need for proposed truckaway of automobiles and trucks in secondary movements from its plant at St. Paul, Minn., to points in North Dakota by applicant which already serves it from that plant to four surrounding States. Rail shipments brought into that plant are reshipped in mixed loads with automobiles manufactured there in integrated operations performed with a high degree of efficiency, and closing of the gap in applicant's authority would enable Ford to reap full advantage of location of that plant at the railhead used by it for that traffic. Proliferation of automobile models in recent years has required Ford to manufacture about half the models sold in the 5-State area at other plants, and changes in distribution methods in the industry, emphasizing rail-motor movements, require service that will enable full use of the St. Paul plant as a rail terminal. Applicant is the only carrier able to meet those requirements, and denial would affect Ford adversely.—K. W. McKee, Inc., Extension, 92 M.C.C. 805 (808, 811-2)*.

Protestant's service is primarily designed to meet requirements of shippers not having their own railhead facilities at Twin Cities, and in adapting its service to Ford's needs it would have to engage in the wasteful operation of trucking Ford's automobiles across town to its own terminal for unloading and reshipment to destination; moreover, in using protestant's service Ford would be unable to control the composition of its loads and would have to provide extra handling and facilities at its plant for automobiles set aside for protestant. Though protestant would be adversely affected by grant to applicant, it should not suffer any serious financial crisis as a result, and any disadvantage it would suffer from loss of potenial traffic would be outweighed by advantages to Ford of applicant's service. Granted.—Id., pp. 811, 812.

In proposed transportation of processed foodstuffs applicant would furnish, as a substitute for contracting shipper's private carrier operation, an on-call, multistop service closely keyed to both shipper's distribution schedules and unloading schedules of its consignees. Applicant would station vehicles at shipper's plant for dispatch directly by shipper's personnel, which is required because its business is highly competitive, timely deliveries are essential to maintain its position in the market, and provision thereof can be assured only if it retains close control over its traffic movements. Proposed transportation of glass containers on return will fulfill shipper's need for periodic coordination between delivery of those items and its production schedules. Proposed operation would thus be virtually a part of shipper's organization and is designed to meet its distinct needs. Moreover, since its customers are located throughout a wide territory, its requirements may change in character and its distribution pattern is likely to vary from shipment to shipment.—Dibble, 92 M.C.C. 610 (615, 617).

While protestant common carriers, collectively, can serve most points where shipper has customers and all points where it purchases glass containers, they have not shown that they can meet its distinct needs; no one of them could provide all the service required, and their unwillingness to permit dispatch of vehicles by shipper's personnel renders their service deficient in a vital area. Patently, they are unable to offer the strictly controlled, territorially broad, flexible distribution service shipper requires to meet demands of its customers, or to assure the necessary coordination of container deliveries with its production schedule.—Id., p. 616.

Denial of the application would deprive

shipper of service particularly suited to its needs and would impel it to continue the proprietary trucking which it desires to curtail; and its motives for curtailing private carriage are immaterial, since common carrier service cannot meet its distinct needs. Furthermore, proprietary trucking is a form of carriage which, regardless of circumstances, contract carriage ought to be free to replace completely and satisfactorily. Weighing in balance the criteria of §209(b), grant of authority for the transportation shown to be required is warranted.—Id., pp. 616, 617.

Supporting shipper has a distinct need for multiple pickups of cheese, keyed to numerous manufacturers' production patterns and responsive to fluctuating purchase requirements of its customers; protestant common carriers have never handled the traffic and are unable to offer a service territorially broad and flexible enough to meet shipper's needs as satisfactorily as that proposed by applicant, thus would not be adversely affected by a grant, whereas denial would deprive applicant of opportunity to provide a service shown to be needed and would deprive supporting shipper of one particularly responsive to its shifting requirements, as well as unduly impeding realization of its desire to discontinue private carriage and concentrate on its primary business; granted.—Nationwide Carriers, Inc., Extension, 92 M.C.C. 1 (5-6)*.

The changing character of supporting shipper's requirements demands a flexible service of type proposed for transportation of animal feeds and ingredients from California points to Klamath Falls, Oreg. Though assignment of vehicles would meet a distinct need of that shipper, protestants have not shown that they could meet its scheduling requirements, and their failure to solicit shipper after receiving its inquiry regarding service indicates lack of interest in the traffic. As shipper has not used their services and would not use them if application were denied, grant would not adversely affect them, whereas applicant requires the authority sought in order to remain in the trucking business, and in event of denial shipper contemplates private carriage. Granted.—Hoyt, 92 M.C.C. 189 (193).

Permanent authority for applicant to continue serving contracting shipper in transportation of treated poles and piling from Winnfield, La., to eastern Texas is warranted. In view of changing character of shipper's requirements, service of rail carriers or their motor subsidiaries is inadequate on poles 50 to 85 feet long, which comprise about 30 percent of shipper's present business, and it lacks sufficient private equipment to take advantage of expanding sales opportunities in that destination area. Protestant motor carrier's nearest terminal for pole-trailer equipment is about 100 miles from shipper's plant, whereas applicant, from his nearby terminal, can provide on-call service with long-pole trailers responsive to shipper's need of timely service by a local-based carrier to off-road construction sites, which will supplement its private-carrier operations; granted accordingly.—Smith Extension, 92 M.C.C. 238 (239-40).

Proposed transportation of lumber used chiefly for oilfield decking or roadbuilding, between points in Louisiana and Texas, will meet supporting shippers' distinct needs. Shippers require jobsite delivery, usually on very short notice; as driving conditions are difficult, flat-beds used must be equipped with pull bars; and shippers' customers require delivery to out-of-the-way and almost inaccessible oilfields, with stringing of lumber through those oilfields for roadbuilding purposes. Shippers who have used or attempted to use protestant common carriers' service have found it wanting to extent that they consider private carriage the only feasible alternative to service proposed by applicant; and as all experience seasonal peaks in their business, and their sales in involved territory are increasing, they require a responsive transportation service such as that proposed. Granted, limited to service for the four shippers named.—Sears, 92 M.C.C. 602 (605, 606, 608).

As applicant's equipment is especially designed for transportation of lumber, its assignment of vehicles exclusively to supporting shipper, a manufacturer and wholesaler of lumber, would meet a distinct need of that shipper; protestants' equipment is designed for other commodities and therefore less suitable, whereas applicant, by use of specialized equipment, would provide a distinctive serv-

ice that protestants are unable or unwilling to furnish. Granted.—Bursch Extension, 91 M.C.C. 953 (957)*. [But see dissents.]

Applicant can provide a service better suited to supporting shipper's distinct needs for transportation of aircraft assemblies from Montreal to California points than could protestant. Although the commission can issue authority only from the international boundary, shipper requires a complete specialized service from Montreal, which applicant would provide, whereas protestant can only provide service from the boundary to destinations, and though it claims it could interline with a Canadian carrier there is no evidence as to facilities or experience of such a carrier. Denial would deprive applicant of traffic it has handled from a previous origin and leave shipper without a carrier that could perform the complete service needed, whereas protestant has not handled involved traffic in the past. Granted.—J-T Transport Co., Inc., Extension, 91 M.C.C. 911 (916-7)*.

Since overwhelming preponderance of applicant's interstate service is performed for supporting shipper and applicant has provided it with almost a complete service for many years in what is tantamount to house carrier service, a denial would prevent applicant from providing service it has provided in the past and would deprive shipper of the comprehensive service relied on for more than 30 years. Shipper desires to modify its marketing practices by bringing two commodities not previously shipped from Grand Rapids, Mich., to that point for reshipment in consolidated loads to dealers and distributors. Although opposing carriers can provide service to and from some points in the area, they can not provide complete outbound service required. Granted.—Capital Exp., Inc., Extension, 91 M.C.C. 819 (823).

The highly competitive nature of the sugar industry and consequent low margin of profit, together with customers' demand for prompt service and frequent need of l.t.l. deliveries, are special circumstances evidencing a "distinct need" of supporting shippers for applicant's proposed service, which includes exclusive assignment of vehicles, timely delivery of lading, split deliveries and dropoffs in transit, and Saturday pickups. Protestant motor carrier cannot provide the flexible, multiple-delivery service required, and rail service is not feasible because most consignees are located off-rail and are unable to receive c.l. shipments. Supporting shippers have customers at a sufficient number of points in Texas and Oklahoma to warrant grant of statewide authority, but since Clovis is the only New Mexico point where any of the shippers has a customer, only that point may be authorized in that State. Permit granted from three Louisiana points to those destinations.—Redland Oil Co., Inc., 91 M.C.C. 771 (776-7).

Supporting shipper has shown a distinct need for exclusively assigned, calibrated tank vehicles to achieve fast, flexible, and dependable transportation of its residual fuel oil from plant site at Robinson, Ill., to points in Ohio and Indiana. Protestants are handling the traffic to Muncie and Evansville, Ind., but are unable to offer the territorially broad and flexible service required, and would not be adversely affected by grant of permit to applicant, whereas denial would prevent applicant from rendering service from a new origin on traffic it has been handling from another, and would deprive shipper of a service particularly well adapted to its changing requirements, compelling it to resort to private carriage to satisfy its transportation needs. Granted, except to Muncie and Evansville.—Kendrick Cartage Co. Extension, 91 M.C.C. 743 (746).

Weighing the evidence relative to §209(b) criteria as interpreted in 368 US 81, applicant's proposed fast, flexible delivery service would be "better tailored to fit the special requirements of the shippers' business" and the "select nature of the delivery service that is desired" than service now available from opposing carriers—which are either limited to points on their regular routes or to relatively small areas; applicant is better equipped than protestants to meet supporting shipper's distinct needs for delivery of l.t.l. shipments on short notice, and denial of application would probably lead shippers to continue to use or to institute private carriage; granted.—Reddish, 91 M.C.C. 543 (547-8)*.

Outbound movements of shipper's products are frequently required on exceedingly short notice and applicant's proposed service,

closely integrated with shipper's operations, will be virtually part of shipper's organization designed to meet its distinct needs. The volume is small, thus any loss which protestants might suffer will be outweighed by advantages to supporting shipper. Weighing in balance the above criteria, grant is warranted.—Trushenski, 91 M.C.C. 502 (505-6).

Applicant's proposed operations will provide a service closely integrated with shipper's processing operations respecting both outbound and inbound movements of perishable meat and "kosher" products involved, using temperature-controlled equipment with overhead "tram" rails and switches which shipper considers necessary. As protestants are unable to provide the type and quantum of service required, shipper would be adversely affected by a denial and, while several of protestants might lose some traffic, any losses are outweighed by advantages to supporting shipper of the personalized service applicant would give.—Garmarc Transp. Co., Inc., 91 M.C.C. 489 (492)*; however, as all shipper's traffic moves to or from Rochester, N.Y., radial authority is granted instead of nonradial requested.—Id., p. 493.

Applying statutory criteria of §209(b) in light of 368 US 81, and in view of carrier's place in shipper's overall organization and relationship between applicants and shipper's customers whom they have served under intrastate authority for many years, applicants can best provide shipper with service it desires; moreover, grant would divert no traffic from existing carriers since they have never handled involved traffic, while denial would cause applicants to lose practically all of their transportation revenues; granted from shipper's new out-of-State pipeline terminal to specified bulk plant localities.—Cox, 91 M.C.C. 275 (277-8)*.

Application of criteria of 368 US 81 warrants conclusion that applicant's service would be more responsive to supporting shipper's need for expeditious bulk transportation of sulphate of ammonia than that of protestants. Applicant has provided a "house carrier" service for that single shipper for many years, and closing of nearby source of supply has led shipper to seek sulphate of ammonia at out-of-State origins not served by applicant and, thus, has changed character of its transportation requirements. One protestant's service has been less than satisfactory because his waiting-time charges make it difficult for shipper to gage in advance its transportation costs and thus its overall production costs; also, that carrier might not be able to supply equipment when needed because of commitments to use in his own private-carrier operations; the other protestant, in past, has shown unwillingness to serve shipper and is not authorized to perform the complete service needed; permit granted.—Patterson Extension, 91 M.C.C. 249 (251)*.

However, since the plant in Falls Township, Bucks County, Pa., one of considered origins, and supporting shipper's plant at Yardville, N.J., are both within the commercial zone of Trenton, N.J., specific authority for that operation will not be granted.—Id., p. 252.

Weighing criteria of amended §209(b) in light of "distinct need" of each customer, as set forth in 368 US 81, existing common-carrier services, even though they might be considered adequate, cannot meet supporting shippers' distinct need for transportation of various building materials as well as could applicant, particularly where use of connecting carriers would be necessary. No protestant holds authority for complete service needed, nor is it shown that they could provide service at times and in manner required, and due to difficulty in obtaining service suited to their particular businesses shippers have turned to private carriage, thus denial would adversely affect those shippers; granted to extent shown in appendix.—Atlantic Truck Lines, Inc., 89 M.C.C. 687 (689)*.

In applying the broad principles stated in 368 US 81, each individual contract carrier application must be decided on its own facts in light of the Court's comments on the overall problem, since the particular characteristics of whatever specialized need may be present will vary from case to case. In holding that the standard is whether supporting shipper has a "distinct need" for a different or more specialized service, and that protesting carriers must show that they can fill that need, not merely that they can provide reasonably adequate service, the Court also held that it

must be determined whether advantage of lower rates or cost of service to the shipper, where relied on by applicant, establishes a "need" that overrides conterbalancing considerations; thus, cost to shipper is an additional fact to be weighed in determining where, on balance, the public interest lies.—Moyer, 88 M.C.C. 767 (771-2).

Grant of authority to applicant already serving supporting shipper's plant in outbound movements to States involved, for return-haul movements of liquid chemicals and vegetable oils used as raw materials, is warranted to meet shipper's changed transportation requirements resulting from a recent innovation in ratemaking by common-carrier tank truckers; as protestants are not now handling any significant portion of such traffic, grant will not adversely affect their services, whereas denial would compel applicant to discontinue operations; only common carrier holding two-way authority to serve the plant did not oppose application, and whether it could handle traffic applicant is now transporting is purely speculative.—Chemtrans, Inc., Extension, 88 M.C.C. 238 (240-1).

Recent reduction of about 50 percent in common-carrier rates for return movements arranged by consignor of outbound load applies to operations of carrier holding two-way authority to serve shipper's plant; neither applicant not protestants have two-way authority required to compete with that carrier; shipper cannot be expected to pay rates to applicant for outbound movements and to common carrier for inbound movements that exceed the two-way common carrier rate or cost of round-trip private carriage by $100 to $200; and, to extent the common carrier could not handle applicant's traffic, denial would probably force supporting shipper to resort to private carriage.—Id., p. 240.

Applicant's proposed transportation of farm equipment is not designed to meet any "distinct need" of shipper; in fact, authority sought is essentially the same as that proposed in an earlier application by same applicant. Further, there is no evidence of record of either deficiencies in existing service or of facts establishing that applicant's present authority is no longer responsive to shipper's requirements; and evidence of shipper's needs is vague and indefinite. Though shipper claims that proposed service is required to points in its entire sales area, its manifests cover shipments to only a few of those States and consist of items embraced in one of applicant's sub-permits; also, only reference to a multi-State movement involved cribs and roofing both of which commodities are included in applicant's permit. In those circumstances, there is hardly the pattern of distribution necessary to support the broad authority requested.—Sperry Transp. Co. Extension, 96 M.C.C. 95 (98).

In addition, proposed service does not provide any "specialized service" for shipper. Particular emphasis was placed on the shipper's requirement that drivers be familiar with the parts in order to instruct consignees as to assembly; however that problem arises principally in the case of transportation of cribs which commodities are already contained in applicant's authority; moreover, to the extent that its rendition constitutes a non-transportation service, consideration was inappropriate. Denied.—Id., p. 98.

Inasmuch as opposing common carriers are authorized to serve substantial portions of the pertinent territory and are specialists in the transportation of brick, and two of them have handled shipments destined to one or both of the supporting shippers, record is convincing that opposing carriers are equally as well qualified as applicant to provide the type of service required and to meet whatever distinct transportation requirements supporting shippers may have. Thus, denial of the application would have no adverse effect on the shippers, and a grant would place applicant in a position to divert from protestants traffic they now enjoy. Furthermore, it is not shown what effect a denial would have upon applicant and the changing character of shippers' requirements does not appear to be relevant to the issues presented. Denied.—James, 96 M.C.C. 272 (275).

While applicant concedes he will not assign vehicles to shipper's exclusive use, he argues that proposed operation meets alternative "distinct need" test of §203(a)(15) because the six enumerated services constitute the rendition of an overall service designed to meet supporting shipper's distinct need; how-

ever, it is clear that shipper will not use applicant's services unless the charges are lower than its private-carriage transportation costs. Therefore, in accord with the proper methods to be used in applying statutory requirements of §203(a)(15) and §209(b) in light of the decision in 368 US 81, as outlined in 88 MCC 767, the sole question is whether the burden is met of establishing that proposed service offers a bona fide economic advantage to the shipper. There is no evidence that proposed rate of 50 cents a mile either reflects any economies or advantages inherent in contract carriage or that it is economically feasible; also, applicant and shipper have not agreed as to just what such rate encompasses; burden has not been met. Denied.—Harris Extension, 94 M.C.C. 227 (229-30).

Applicant proposes to serve two affiliated shippers, to assign vehicles to their exclusive use, and to provide a repetitive motor service transporting t.l. shipments between two plants. This service is in no way specialized, and protestants which hold requisite authority should be able to meet shipper's indicated needs at least as well as applicant since they have adequate terminal facilities, maintain sizable fleets of equipment, and are experienced in transporting involved commodities. —Spruance Extension, 91 M.C.C. 864 (866, 867).

In view of the service available, the only way a denial might adversely affect supporting shipper is in depriving it of service better suited "to the length of its purse." The burden in this respect, however, is on applicant, who has failed to show he will provide service at lower cost than opposing carriers. Moreover, protestants appear willing to consider establishing commodity rates lower than class rates assertedly being charged. Denied.—Id., p. 868.

While both supporting shippers have manifested need for service closely coordinated with their assembly lines and using equipment individually designed and specially tailored to fit aircraft components and transport them efficiently and safely, protestant offers a highly specialized service which has been held out to the aircraft industry as a whole for a number of years; it is thoroughly experienced and has established its willingness and ability to meet shipper's requirements. Applicant has not established that it can better meet shippers' needs than protestant or that its proposed service is superior in any way to that presently available; shippers should be unaffected by a denial.—J-T Transport Co., Inc., Extension, 91 M.C.C. 507 (510-11)*.

Any adverse effect of denial on applicant would be difficult to measure, as it would consist chiefly of loss of traffic which might accrue to it if applications were granted, also possible loss in expense of reconverting certain equipment used under temporary authority; there is no indication that it would suffer any loss of traffic in its permanent operations. Considering both applications in light of the evidence, the public interest, the national transportation policy, and the criteria of §209(b), denial is warranted.—Id., p. 511.

While shipper's distinct need must be considered and not merely the existence of reasonably adequate service, applicant's proposal is not designed to meet any such distinct need. Even if shipper's desires for low-sided open-top equipment and overnight deliveries constitute "distinct needs," protestants have shown that they can meet these needs as well as applicant and in fact shipper intends to continue to use their service. Thus, denial could have no adverse effect on shipper while grant might adversely affect protestants' service. As applicant is not now handling any of shipper's traffic, denial could have no adverse effect on him.—Kotwica Extension, 91 M.C.C. 235 (237-8)*.

Shipper's general complaints about protestants' service do not establish need for applicant's service when it was unable to indicate definitely which carriers provided unsatisfactory service or when failures in service occurred; denied.—Id., p. 236.

Studebaker desires proposed secondary movement of its automobile traffic from St. Paul to surrounding four-State area, in mixed loads with shipments from Ford's St. Paul plant, to obtain advantage of efficient and economical distribution of its vehicles with the larger number shipped by Ford. But while proposed service is highly specialized, protestant common carriers are fully capable of providing it: one has a new terminal at St. Paul railhead from which it will distribute a

substantial volume of other manufacturers' traffic with which it can efficiently intermix Studebaker's smaller volume, with additional advantage that shipments need not be transported across town to the Ford plant; although that protestant does not serve Wisconsin, such traffic can be handled in connection with another. As protestants can thus provide service completely responsive to shipper's needs, denial will not adversely affect it; and as applicant would continue to serve Ford, there would be no adverse effect on its operations. Denied.—K. W. McKee, Inc., Extension, 89 M.C.C. 777 (781, 784).

Although supporting shipper claims that applicant's proposed service on tractors and other machinery is required to points in its entire sales area, evidence of its actual transportation needs is too vague and indefinite to support a grant of authority; applicant and protestant railroads currently transport all tractor shipments from the principal origin named, but tonnage and destinations of other shipments therefrom are not shown; nor are any data presented on volume or specific destinations of traffic which would move from the other origin points involved. Denied.—Tractor Transport, Inc., 88 M.C.C. 117 (122).

Specialized service: [Vols. 18, 19].—Supporting shipper desires proposed service because applicant's equipment can handle four of its machines in a single-load, single-line movement instead of interline service rendered by common carriers on l.t.l. shipments. However, single-line service cannot be considered a specialized service tailored to a shipper's distinct need, without a concomitant showing that shipper has an actual need for such service as distinguished from the normal desire therefor of shippers generally; without such a showing it cannot be found that denial of application would adversely affect the shipper. At most, shipper has shown a mere preference, rather than a specific need, for single-line service; denied.—Minnesota Trucking, Inc., 94 M.C.C. 58 (61).

Applicant proposes to perform for supporting shipper an operation akin to that of a house carrier, including services not strictly limited to transportation, in transportation of petroleum and products, with certain exceptions; salient features of its proposal include the use of double bulkhead trailers, taking orders directly from customers, the rendition of stopping-in-transit service, after-hour key deliveries, and inside pickup and delivery of packaged freight. Applicant has been performing similar service for contracting shipper in transporting similar commodities, and none of protestants is able to provide shipper with the specialized and complete service proposed for movement of bulk and packaged freight. Also, resultant advantages to shipper outweigh any possible adverse effect on existing carriers; granted in part.—Russell Transfer Co., Inc., 95 M.C.C. 412 (420).

Proposed transportation of clay products from all five of supporting shipper's plants to numerous additional States, with transportation of returned items and materials and supplies used in manufacture of clay products in reverse direction, will meet shipper's distinct need for a complete transportation service which existing common carriers cannot individually or collectively provide. About 75 percent of shipments require jobsite delivery, and 50 percent of sewer pipe shipments must be strung by carrier along the ditch where the pipe will be laid. Also, cranes mounted on the trailers for loading and unloading, which applicant has or will obtain, are an innovation which shipper's customers are demanding and must be provided to meet competition of other clay products manufacturers. Denial would deprive shipper of a complete personalized service to the broader destination territory required, and deprive applicant of traffic now moving in private carriage from those of shipper's plants it already serves. Granted.—George W. Kugler, Inc., Extension, 95 M.C.C. 288 (292, 293, 298)*.

Applicant proposes service which is specialized and devoted exclusively to serving shipper's needs. Applicant holds no authority from commission, but has provided the service sought here for supporting shipper for about 7 years, picking up meat in N.Y.C. and delivering it daily to shipper's stores. Applicant has become an integral part of shipper's organization, having performed, and proposing, in fact, a true house-carrier service. In addition, he would provide a number of services not strictly related to transportation, but which are necessary if the shipper is to con-

tinue to receive the service which it has come to expect. Denial of application would leave shipper without this service, and would clearly have an adverse effect on its operations; granted.—Muzzillo, 94 M.C.C. 563 (564).

Proposed contract carriage of malt beverages for four shippers affiliated with applicant will in substance preserve the status quo for those shippers, providing a service which they can control and coordinate to meet their inventory requirements and brewers' pickup schedules. Applicant would render a personalized, "house carrier" service fully integrated with shippers' operations as beer distributors, including keystop deliveries by drivers who will unload shipments with forklifts and rotate warehouse inventories when delivering shipments of fresh malt beverages; such ancillary services may be considered in comparing applicant's proposed service with protestants' services. Both motor and rail protestants have failed to show ability and willingness to provide the type of service those shippers require; giving due weight to other criteria of §209(b), grant of authority sought is justified.—Briggs, 92 M.C.C. 707 (714-5).

Applicant would provide a personalized driveaway service closely coordinated with contracting shipper's manufacturing operations and requirements of its customers, as a substitute for shipper's private carriage, and his services would be available on a 24-hour basis to any point in involved destination territory; owing to proximity of applicant's facilities to shipper's plant, he could furnish a driver within 1 hour after a request, and could render necessary maintenance to vehicles moving in driveaway service. Shipper requires proposed personalized service, which protestants cannot supply; granted.—Chadwick, 92 M.C.C. 271 (273-4).

Applicant proposes to render a specialized service in transportation of paint oils responsive to contracting shipper's distinct needs, which include provision of four-compartmented tank vehicles that are clean and available on short notice. Even if protestant's liquid chemicals authority were found to include paint oils, it is doubtful if, by dispatching equipment operating in the area or, if necessary, from distant terminals, it could provide the flexible and dependable service shipper requires; applicant is thus better able to meet shipper's distinct needs than protestant; one-way authority granted.—Manfredi Motor Transit Co. Extension, 92 M.C.C. 471 (474)*.

Although some of services proposed in connection with transportation of explosives are not strictly "over-the-road" services and may sometimes be considered accessorial, applicant is seeking authority for a contract-carrier operation closely akin to private carriage, and those services are directly related to the movement, loading, and unloading of the lading and are essential to shipper's total transportation requirements.—H. Messick, Inc., Extension, 89 M.C.C. 209 (215)*.

Service applicant proposes to render for supporting shipper is distinctive and highly specialized when it will (1) assign equipment specially adapted for explosives transportation to shipper's exclusive use; (2) spot equipment at plants prior to loading; (3) provide a trailer retention service at jobsites for storage of nitro carbo nitrate; (4) provide conveyors for loading and unloading; (5) conduct two-man operations with experienced drivers familiar with shipper's magazines who will assist in unloading; (6) provide 10-wheel trucks for delivery to points inaccessible to tractor-trailer units; (7) make dropoffs or deliveries at a definite day and hour at jobsite or magazine locations; and (8) furnish tank vehicles for transportation of explosive slurry.—Id., 92 M.C.C. 293 (297)*.

While the trailer retention service is an accessorial service, it may properly be considered in determining consistency with public interest of the proposed operation. It amounts to a dedication of equipment at destination, and is clearly a transportation service within meaning of the act, distinguishable from proposals of common-carrier applicants to provide such nontransportation services as spreading asphalt in road construction or washing and repairing foreign cars.—Id., pp. 299-300.

Applicant's parent corporation, its subsidiaries, and its concessionaires require an expeditious interstore, warehouse, and storage operation intransportation of general department store merchandise, with deliveries in some instances direct to selling floor or department locations; it does not appear that

protestants can provide the highly specialized service required; applicant has satisfied the tests prescribed by §209(b); granted.—S. Klein Trucking Corp., 89 M.C.C. 53 (55, 57).

Though National Aeronautics and Space Administration's representatives avoided stating a preference for contract-carrier service, applicant's proposed operation in transportation of irradiated fuel elements in lead casks will be considerably more responsive to its needs than common carrier protestants' joint-line service; ready availability of through service with same drivers will provide maximum control and flexibility; denial would cause NASA to resort to a service which by its nature could not provide the control and monitoring it believes necessary in handling such dangerous commodities. As none of the traffic has yet moved, and NASA intends initially to tender only one shipment a month, gradually increasing to three, diversion of that small volume of potential traffic will not adversely affect protestants. Granted. —Dealers Transit, Inc., Extension, 88 M.C.C. 375 (380).

Applicant's proposed transportation of pulpboard shipping containers from shipper's Rockford, Ill., plant to points in Iowa and Wisconsin would supply a distinct need which existing carriers cannot adequately meet; as shipper and many of its customers lack storage facilities, a service direct from its production line to customer's, with multiple dropoffs and prompt delivery of short-notice orders, is required. Due to dissatisfaction with common-carrier service, shipper has been transporting the bulk of its traffic from that plant in private carriage; applicant has been performing a satisfactory intrastate service for shipper and proposes a closely coordinated, personalized interstate service keyed to shipper's and its customers' production schedules. However, shipper concedes it has no need for for-hire emergency interplant movements of papermill rolling stock.—Moyer, 88 M.C.C. 767 (776-9).

Though protestants collectively serve all points where shipper has customers, they cannot provide the territorially broad and flexible service which shipper requires to meet demands of its customers; denial of application would therefore affect shipper adversely, whereas protestants would not be adversely affected by a grant, since they do not participate in the traffic to any great extent and will continue to enjoy shipper's patronage when time is not of the essence. Any disadvantage they might suffer from loss of potential traffic is outweighed by advantages to supporting shipper; granted for pulpboard boxes and containers.—Id., p. 779.

Denied as follows: [Vols. 18, 19].—It is doubtful that applicant's proposed operations would be those of a contract carrier since it has expressed no intention to dedicate equipment and there appears to be nothing inherent in nature of the service to warrant conclusion that it could be performed satisfactorily only by a contract carrier. There is no serious complaint about existing common carrier services and protestants should readily be able to provide all service for which need is expressed.—Estate of E.L. Northcutt, Deceased, Petition Proceeding, 94 M.C.C. 585 (602)*.

Even though applicant for contract-carrier authority to transport gasoline and refined petroleum oil for Humble Oil and Refining Company from pipeline terminals at Belton and Camp Croft, S. C., to bulk plants and highway service stations throughout Georgia would dedicate equipment to the shipper's service, imprint its trailers with the usual "Esso-Happy Motoring" sign, and equip them with double bulkheads and bottom loading devices, there is no positive assertion by applicant and/or its supporting shipper that they have entered, or would enter, into a bilateral contract for performance of proposed service. In the absence of such a continuing contract or contracts, the proposal fails to meet one basic statutory requirement of contract carriage as defined in the act. Accordingly, insofar as contract carrier authority is sought, the application is denied.—Infinger Transp. Co., Inc., Extension, 96 M.C.C. 551 (552, 554).

Applicant attempted to meet its burden of showing that proposed undertaking is specialized and tailored to shipper's distinct need by a mere showing that it intends to dedicate equipment to shipper's exclusive use; however, protestants have demonstrated that without such dedication of equipment they are

able to meet shipper's distinct need as well as applicant. Satisfactory comparable service by common carriers cannot be disregarded; denied.—Interstate Distributing Co., 91 M.C.C. 36 (41)*.

Although applicant's proposed service in transportation of uncrated airplane assemblies would meet supporting shipper's expressed need for a service closely connected with operation of its assemby lines, by which it would be supplied with equipment individually designed to fit particular aircraft components, protestant's service is likewise a highly specialized one, which it holds out to the aircraft industry as a whole. In performing such service, protestant has become thoroughly experienced in handling articles similar to those involved, and its willingness and ability to serve the shipper is clearly established. Applicant has not shown that its service would be superior to that available from protestant or that it can better meet shipper's specialized needs. Prior denial affirmed.—J-T Transport Co., Inc., Extension, 91 M.C.C. 911 (915)*.

While denial could have some adverse effect on applicant, there is no evidence that it would suffer any loss of traffic in its permanently authorized operations, and its service for supporting shipper under temporary authority cannot be considered. And fact that grant would not adversely affect protestant since only potential traffic would be involved has no significant bearing on reasons for denial.—Id., p. 915.

Considering §209(b) criteria and application thereof pursuant to 368 US 81, proposed transportation of coal is not designed to meet any distinct need of shipper whose only "distinct" requirement is its desire for repetitive dump truck service under direct control of its weighmaster, which 3 protestants are willing to provide. Shipper has shown only preference for a particular carrier, rather than need for a locally domiciled contract carrier; denied.—Bauman Extension, 91 M.C.C. 289 (290-1)*.

Supporting shipper's transportation requirements are not so specialized that they can be met only by a contract carrier; as shipper has adequate motor service available, denial of application should have no adverse effect on it; nor would applicant be adversely affected since it is not now an interstate carrier and cannot enjoy the traffic; denied.—Sears, 89 M.C.C. 173 (177-8); similarly, protestants are collectively authorized to provide required transportation, have adequate terminal facilities and equipment, and have shown that they are able and willing to meet shippers' needs in all respects. Applicants have failed to demonstrate that they are better equipped to meet supporting shippers' requirements than are opposing common carriers. Denied.—Sparacino, 91 M.C.C. 349 (352-3)*.

Proposed service of one applicant involves only a repetitive t.l. movement between two of supporting shipper's plants on a fairly regular basis, and no need is shown for service different from that which protesting common carriers are able and willing to provide. In view of availability of service completely responsive to shipper's every indicated need, denial cannot adversely affect it, nor is there any reason to believe that denial would have any adverse effect on applicant. Weighing criteria of §209(b) in light of requirement of national transportation policy to foster sound economic conditions in transportation, application must be denied.—Moyer, 88 M.C.C. 767 (774-5). [But see dissent.]

Though some need exists for proposed transportation of cement, increase in number of commonly controlled contract carriers by grant of permits to five new corporate applicants, each seeking to serve same shipper from a different plant site, would be inconsistent with public interest; as evidence does not establish that maintenance of separate corporations is essential to proper fulfillment of that shipper's reasonable transportation needs, but shows rather that they can be as well met by a single carrier entity capable of providing coordinated service to the plants involved, denial of applications is without prejudice to filing of petition for reconsideration and substitution as applicant of existing contract carrier affiliate already serving shipper from another location.—Best Transport, Inc., 88 M.C.C. 147 (160-1)*.

In view of denial of authority for control of applicant, a new corporation, in common with seven existing carriers all controlled by the same interests, its application for permit as a

contract carrier of cement must also be denied; but since some need for proposed service is established, denial is without prejudice to substitution of an existing affiliate as applicant.—Schwerman Trucking Co. of Ala., Inc., 88 M.C.C. 495 (498,499).

Even if existence of some need for applicant's proposed service be assumed, there is no showing that either it or supporting shipper would be materially adversely affected by denial of application; shipper is using protestants' considerable motor and rail services, without complaint, from the four plants involved to points throughout the destination area, for both t.l. and l.t.l. shipments, and could not recall a single occasion on which it had attempted to use applicant's existing authority for combination loads of much of the involved traffic to points in approximately one-third of the territory.—Tractor Transport, Inc., 88 M.C.C. 117 (122).

Although there is some evidence which, if believed, would indicate that one of applicant partners has terminated his association with a partnership holding common carrier authority, no application has been filed seeking applicant's elimination from that partnership, and common control is therefore an issue; however, as applicants have failed to demonstrate that proposed operation will be consistent with public interest, questions of common control, dual operations, or applicant's fitness need not be considered.—Sparacino, 91 M.C.C. 349 (350, 353)*.

27. Fitness, in general.—[Vols. 10-12, 15, 17-19].—Although applicant has performed unauthorized transportation for a number of years, and such past actions cannot be condoned, the facts and circumstances indicate that applicant's acts were not done in defiance of the commission's rules and regulations, but rather through his ignorance of the law. Applicant is found fit to receive permit, but is admonished to perform no transportation until the permit is issued, and to abide strictly by the terms of that permit in the future.—Muzzillo, 94 M.C.C. 563 (566).

Although examiner found that financial fitness of a new corporation proposed to be substituted for individual applicant had not been established, the substitution should have been allowed. In support of his substitution motion applicant submitted a pro forma balance sheet of that company, which was incorporated shortly before date of continued hearing, and though such a financial statement is by nature merely tentative, it did show the approximate condition of a corporation not yet functioning as an operating entity. Regardless of whether $1,000 cash is enough to launch a transportation venture, individual applicant is in complete control of the new company and is ready to use his personal resources to provide any additional capital needed; considering his net worth of about $140,000, the corporation has adequate support and is financially fit.—Briggs, 92 M.C.C. 707 (708, 713-4).

Applicant is financially fit to conduct proposed operation when, though he has no bank account, he has on hand an unspecified sum of money; has property assets worth $88,000 and liabilities of only $3,000; and has maintained vehicles leased to shipper in compliance with safety requirements.—Dibble, 92 M.C.C. 610 (613); likewise, while applicant conducts a small operation and his physical and financial assets are limited, his net worth and net profit for 1960 indicate that he is financially fit and able to perform proposed service.—Trushenski, 91 M.C.C. 502 (504).

Although applicant's current liabilities exceeded its current assets at time of hearing, it may be found financially fit to conduct proposed operations when it has conducted interstate operations for a number of years and has demonstrated its ability, financially and otherwise, to serve its contracting shippers adequately. Principal expense of launching proposed service will be downpayment on additional tractors needed, which will be provided by a stockholder who has already invested substantial sums in applicant's operations; his continued support seems assured both to protect his prior investment and by the community of interest between applicant and members of its closely held corporate structure. Further, applicant's overall financial condition indicates that it can meet its current obligations.—Nationwide Carriers, Inc., Extension, 92 M.C.C. 1 (6)*.

While applicant is under common control with supporting shipper, it was formed as a separate corporate entity to render a transpor-

tation service supplanting private carriage operations which shipper had terminated, and the common control is not objectionable in the circumstances.—Garmarc Transp. Co., Inc., 91 M.C.C. 489 (490, 492)*.

That one of three shippers applicant seeks to serve is in position to control its operations does not preclude grant of permit, since a contract carrier is under no obligation to render impartial service to the public. It may serve only those with whom it has contracts and, since other two shippers it is authorized to serve are free to negotiate contracts satisfactory to each, control of applicant by a third contracting shipper cannot realistically be used to disadvantage of the others.—Redland Oil Co., Inc., 91 M.C.C. 771 (775-6).

Nor does applicant's challenge in the Federal Courts of the decision in 89 MCC 281, which found that certain operations in which applicant and its principal stockholder (one of the shippers it now seeks authority to serve) buy and sell sugar constituted unauthorized for-hire carriage, warrant conclusion that it is unwilling to operate as a for-hire carrier.—Id., pp. 772, 773, 775.

Applicant cannot be found fit to conduct proposed operations when persons in charge thereof (who formerly operated as a family partnership), particularly its president who testified in its behalf at hearing, have a long history of noncompliance with certificate and permit requirements of the act. In fall of 1959 they were admonished by the commission to cease their unauthorized transportation, and soon afterwards the principal partner (applicant's president) was fined for unlawful operation; that lesson was apparently unlearned, for 2 years later he was again found guilty of violations of the act. Applicant's management should not be rewarded for their past unlawful activities by a grant of operating authority. Additionally, there is nothing to show that applicant is financially fit. Application denied.—Haywood Trucking Co., Inc., 92 M.C.C. 544 (546-7).

Even if applicant's operations were bona fide contract carriage, its application must be denied on issue of fitness. Its financial status is admittedly precarious, and it appears that needed additional capitalization will not be forthcoming. Also, applicant's safety program is deficient in that it is based on correction rather than prevention and falls short of the responsibility which should be assumed by authorized carriers.—T.P. Trucking Co., Inc., Extension, 91 M.C.C. 764 (769-70).

29. Operation in connection with other business.—[Vols. 10-12, 14, 15, 18, 19].—Although applicant would continue transporting potatoes in interstate commerce, grant of contract carrier authority to haul malt beverages would not result in an integrated private and for-hire operation contrary to principles of 7 MCC 369 and 92 MCC 248. Applicant has no financial interest in potatoes it might transport, but would serve unaffiliated shippers who regularly deal in that commodity; such operation is for-hire carriage. Moreover, transportation of potatoes in natural state is exempt from economic regulation, and any authorized interstate carrier may engage in such activities without affecting its status as a for-hire carrier under the act.—Briggs, 92 M.C.C. 707 (716-7).

Since applicant's proposed operation as a contract carrier of sugar will be its principal business, and its performance of intrastate backhauls of grain in private carriage for its principal stockholder will be subordinate thereto, it does not appear that its combined operations will be conducted in a manner detrimental to public interest; decision in 7 MCC 369, distinguished. However, as a safeguard authority granted is conditioned to require that applicant conduct its for-hire operations separately from any private carriage in which it or its stockholders may engage.—Redland Oil Co., Inc., 91 M.C.C. 771 (776).

A substantial part of applicant's operations consists of transportation of wastepaper and old bags in private carriage from the Bronx to supporting shipper at Whippany, N.J., and its present and proposed for-hire transportation of pulpboard from Whippany to Long Island and of skids, pallets, and chocks used in such transportation, on return, constitute a very small part of its total transportation. Evidence as a whole indicates that primary purpose of application is to provide a backhaul for the private-carrier operations; moreover, even though the for-hire operations were incidental to its regular business, applicant would be in position to deprive protestant common carrier

of traffic it is authorized to transport; such conduct of both private and contract-carrier operations would be inconsistent with the national transportation policy; denied.—Derrico Co., Inc., 88 M.C.C. 17 (19).

While there is some indication that proposed one-way transportation of nepheline syenite, as an incident of applicant's regular business of producing coal and clay and to help defray expenses of private carriage in reverse direction, would be common rather than contract carriage, there is no important difference—so far as application of principle of 7 MCC 369 is concerned—except that the effect of a grant on for-hire carriers might be more pronounced in case of mixed private and common-carrier operations. Grant of application would not be consistent with public interest or consonant with the national transportation policy.—Ralph A. Veon, Inc., 88 M.C.C. 279 (280)*.

34. Extension of operations.—[Vols. 10-19]. —Authority granted applicant, already serving supporting shipper in transportation of clay products from 4 of 5 plants in Pennsylvania and Ohio to a limited destination territory, to provide similar service from all 5 plants to numerous additional States, with transportation of returned products and materials and supplies used in manufacture of clay products in reverse direction, when protestants collectively lack sufficient territorial and commodity authority for the complete service required. Authority for returned items is necessary because, after some shipments are unloaded and stored at jobsites, concealed damage is discovered, and frequently a surplus remains after construction is completed. Also, since sources of materials and supplies change, shipper needs service on a statewide basis so that it can purchase those items from the most advantageous sources.—George W. Kugler, Inc., Extension, 95 M.C.C. 288 (294, 297-8)*.

But authority sought to transport plastic pipe, parts, and fittings, which supporting shipper is negotiating to have produced for its account by a manufacturer at another point, is denied when one protestant now serves that manufacturer to six of the destination States sought, and shipper has not established with reasonable certainty that it will have a need for any transportation from that point.—Id., p. 297.

In proposed extension of service for one of its present contracting shippers, applicant would transport coke and pig iron in dump vehicles in a service closely integrated with shipper's distribution schedules requiring timed deliveries keyed to customers' foundry operations, thus tailored to shipper's distinct needs. Granted.—McFeeley Extension, 92 M.C.C. 769 (771, 772)*.

Grant of authority to applicant for transportation of paint oils from Cleveland, Ohio, to Houston, Tex., will merely permit it to extend its service for one of its present contracting shippers and will not harm protestant, which has handled none of involved traffic, whereas denial would deprive applicant of additional traffic from shipper it now serves and would prevent shipper from obtaining an efficient transportation service coordinated with applicant's other operations for it. However, as no need is shown for similar transportation from Houston to Cleveland, only one-way authority is granted.—Manfredi Motor Transit Co. Extension, 92 M.C.C. 471 (474)*.

In addition to extension authority granted in prior report, transportation of explosives from points in Nebraska to contracting shipper's plants at Ishpeming, Mich., and Virginia, Minn., is needed when subsequent to hearing shipper purchased from the Government and stored at points in that State a large quantity of such materials which must be transported by applicant, since there are no rail facilities at the magazines. However, as no motor service is needed outbound from the plants to Nebraska, only one-way authority is granted.—H. Messick, Inc., Extension, 92 M.C.C. 743 (744-5)*.

Proposed operation is designed merely to extend applicant's service territorially for one of its present shippers and is clearly tailored to meet that shipper's distinct need for specialized split-delivery service n liquid acids and chemicals to points sought; existing carriers will not be adversely affected, whereas denial would be detrimental to both applicant and shipper, particularly to latter in view of changing nature of its requirements due to increasing consignee demands for less-than-tankload shipments; grant of application con-

stitutes a logical extension of applicant's present authority to transport liquid chemicals from considered origin area.—Harold Waggoner & Co. Contract Carrier Extension, 89 M.C.C. 1 (3-4).

Shipper which applicant has been serving as a contract carrier for years requires extension of service to its new warehouse facility at Hillside, N.J., and plans to expand its selling operations in New York commercial zone. Advantage to shipper of a flexible and complete service by applicant will more than offset any disadvantage to existing carriers through loss of potential traffic; extension granted for the additional destinations.—Connell Transport Co. Extension, 91 M.C.C. 113 (121, 123).

In proposed extension of service to additional territory, applicants would continue serving only the same two shippers they are now serving under continuing contracts. As only two protestants have been handling the shippers' traffic, and none holds authority to provide complete service to all of considered points, existing carriers are unable to meet supporting shippers' transportation needs as well as could applicants; thus, denial would adversely affect these shippers, which require direct, single-line service to various destinations, while a grant would not adversely affect opposing carriers. Granted to destinations named.—Rohrbaugh and Livelsberger Extension, 91 M.C.C. 618 (621)*.

Applicant presently has contracts with seven shippers, and grant of authority sought would permit it to serve an additional shipper; however, since its outstanding contracts at least approach the maximum number permitted a contract carrier, it cannot be considered to have made a significant showing under first criteria of §209(b). As to the nature of proposed service, applicant failed to show anything distinctive or specialized about it that differs essentially from that offered by common carriers, or that it is better able to meet the shipper's needs than are protestants; also, evidence with respect to any need for service to points other than those protestants serve is too vague and speculative to warrant consideration. Further, denial of the application would have no adverse effect on applicant, which does not presently handle the traffic, nor upon supporting shipper, as existing carriers can meet all its demonstrated needs; grant of authority could adversely affect existing carriers through diversion of some of their traffic; and no change in the character of shipper's requirements is shown. Denied.—Oyler Motor Transit Co., Inc., Extension, 94 M.C.C. 638 (641-2).

Regulations of the Commission

32 FR 16084, Nov. 22, 1967: Guide to Restrictions and Descriptions in Motor Carrier Operating Rights, appended to report in 106 MCC 1 (Appendix II), published for information.

NOTE: For Republication and Redesignation of Regulations, see 32 FR 20003, Dec. 20, 1967.

33 FR 2711, Feb. 8, 1968, Part 1041 [former Part 265a, formerly Part 165a]: Interpretation—Certificates and Permits, a new §1041.13 Truckload lot restrictions, added, effective March 15, 1968.

33 FR 4467, March 13, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 (33 FR 2711) postponed pending determination of petitions for reconsideration.

33 FR 5780, May 2, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 (33 FR 2711) postponed to June 3, 1968.

33 FR 7629, May 23, 1968, Part 1041: Interpretation—Certificates and Permits, effective date of order adding §1041.13 (33 FR 2711) fixed as June, 19, 1968.

Section 209. (a) (4), (5) Traffic moving from, to, and within Alaska; "grandfather" provisions.—[Unchanged. See vol. 19, p. 15758.]

Section 209. (b) [*§309(b) U.S.C.*] **Application for permit; form and contents; issuance of permit; terms and conditions.**—[Unchanged. See vol. 18, p. 14494.]

Historical Note

The commission recommends, in view of the prohibitions in 28 USC §1001, that §209(b) be amended so as to eliminate the mandatory oath provision therein, and that such requirement be made discretionary with the commission.—Annual Report, 1964, p. 72.

Notes of Decisions

Volume 10—p. 8057; Volume 11—p. 9468; Volume 12—p. 10410; Volumes 13—p. 11082; Volume 14—p. 11603; Volume 15—p. 12213; Volume 16—p. 12863; Volume 17—p. 13561; Volume 18—p. 14496; Volume 19—p. 15759.

2. Construction and interpretation.—[Vol. 19].—The five criteria which Congress directed the commission to consider may not be treated as though they were factors in an algebraic equation which might be solved mechanically.—Baggett Transp. Co., Inc. v. United States, 231 F. Supp. 905 (907)*.

In determining whether proposed contract carrier service is consistent with the public interest and the national transportation policy, the commission must evaluate the five §209(b) criteria. While distinct need is not mentioned in the criteria, evaluation of "the nature of the service proposed" naturally involves the question of need therefor; however, the term "distinct need" in §203(a)(15) is not the same as, and may not properly be used interchangeably with, determination as to need under §209(b) pursuant to the criteria. When the commission made an unnecessary finding of no distinct need under §203(a)(15) which clearly was carried forward to its §209(b) evaluation and adopted as the primary reason for its negative finding, such unnecessary finding may well have provided prejudicial coloration for the §209(b) evaluation. The commission did not properly employ the statutory procedures, and did not appropriately evaluate requisite criteria; order denying the permit is set aside, and case remanded.—Midwest Truck Lines, Ltd. v. United States, 269 F. Supp. 554 (560-1, 567)*.

While the commission found that contract-carrier applicant (plaintiff) would serve only one shipper, the brevity of its discussion of the first criterion of §209(b)—as to number of shippers—obscures the weight given that factor. Therefore, all parties are reminded that one of the militating factors in the 1957 contract carrier legislation was the desire to avoid the result of the Supreme Court's decision, 350US 409, which seemingly allowed a carrier to qualify as a contract carrier for an unlimited number of shippers. As the commission stated in 91 MCC 953, the first criterion means that an applicant's case is stronger r weaker in proportion to the number of its contracting shippers; and where an applicant seeks to serve only one shipper, no stronger showing under that test could be made.—Meat Packers Exp., Inc. v. United States, 244 F. Supp. 642 (648-9)*.

As to the second criterion—"nature of the service proposed'—evidence of record shows that applicant would provide the immediate, fast service in transportation of fresh and frozen meats and meat by-products that its contracting shipper requires; it would also meet shipper's need for split delivery or drop-off service, while common carriers would make a flat charge for each such stop. The commission should not disregard evidence of a saving to shipper of as much as $50 on a trip having four drop offs, through elimination of "drop-off" charges if the permit is granted, in its evaluation of the effect of a denial on applicant's supporting shipper; mere cost-cutting or profit-shaving need not be considered perhaps, but evidence of efficient operation must be heeded. Nor can it be said that benefit shipper would derive from its advertising on applicant's trailers would be "inconsequential" in the highly competitive meat-packing industry.—Id., pp. 649-50.

Also, record does not support the commission's conclusion that grant of plaintiff's application would have an adverse effect on competing common carriers; protesting carriers would not lose considered westbound tonnage because they have not heretofore

carried it; nor would they suffer competitively insofar as eastbound or return traffic is concerned, since plaintiff's proposed eastbound backhaul is limited to exempt commodities whereas protestants carry both regulated and exempt commodities on their eastbound hauls. It is only in an "unusual case" that new contract authority would adversely affect protestants not presently hauling the traffic; and, while such a case might include a situation where added backhaul competition has the adverse effect, it is not shown by the evidence of record. Order denying plaintiff's application set aside, and case remanded to the commission for further proceedings consistent with the court's opinion.—Id., pp. 650-2.

If the commission's action in denying plaintiffs' permit application on ground that the proposed operation was common carriage for which no public need wasshown were to be construed as a denial of contract carrier authority, it would have to be reversed for failure to apply standards prescribed by §209(b). In determining that the proposed service would not meet any distinct needs of supporting shippers, the commission gave no recognition to distinction between the questions (1) whether supporting shippers presented evidence that they have distinct needs, and (2) whether proposed operation is designed to meet those distinct needs; that distinction is crucial in light of philosophy expressed in the J-T case (368 US 81) that under the contract carrier statutes a shipper is entitled to have his distinct needs met.—Eddleman v. United States, 229 F. Supp. 231 (237, Note 2; 239)*.

The commission did not specifically find that supporting shippers had not shown a distinct need, and its conclusion that they had not shown service of existing carriers to be inadequate is not determinative: the J-T case made clear that the commission must consider the criteria of §209(b) without preferring any one of the five to others; it may not seize on one factor and ignore the rest. Thus, a showing of convenience to the shipper would at least be proper, though not a controlling factor, in determining an application for contract carrier authority; when placed in issue by evidence adduced at the hearing, it is a consideration to be weighed as an element of the fourth criterion—the effect of a denial on applicant and/or its shipper.—Id., pp. 239-40.

That services requested by supporting shippers are of type commonly performed by common carriers, thus tending to show that they meet no distinct shipper needs, cannot be controlling; otherwise many contract carriers would be driven out of business for inability to meet the test of performing service not provided by common carriers. And in determining whether supporting shippers have shown a distinct need, a finding that protestants, given adequate notice to enable them to schedule departures sufficiently in advance, can meet shippers' delivery-time requirements as well or nearly so as applicants is insufficiently supported unless it is clear that the commission has considered whether notice given adequately in advance to meet needs of existing carriers is also adequately short notice to meet needs of the supporting shippers. —Id., p. 240.

The context of §209(b) supports the view that "the nature of the service proposed," as a criterion for determining whether permit should be granted, relates to shipper's distinct need for transportation, as distinguished from nontransportation, services. Before setting forth the criteria to be considered, the statute says that a permit may be issued if the proposed operation is consistent with public interest and the national transportation policy; that policy is confined to transportation services. Further, the commission's jurisdiction under Part II is limited by §202(a) to regulation of transportation by motor carriers and the procurement of, and provision of facilities for, such transportation. Nothing in legislative history of the 1957 amendments of §§ 203(a)(15) and 209(b) indicates that Congress meant to give contract carriers the advantages which would ensue from furnishing nontransportation services. Therefore, in considering supporting shippers' distinct needs, the commission must first determine that those needs pertain to transportation services.—National Trailer Convoy, Inc. v. United States, 227 F. Supp. 730 (733-4)*.

Criteria inapplicable to applications for forwarder permit, see Frank P. Dow Co. case, §410(c), n. 2.

As the commission interpreta the criteria of

§209(b), criterion (1)—number of shippers served—means that applicant's case is stronger or weaker in proportion to number of its contract shippers; if number already served approaches the maximum permitted, its showing can be accorded little weight, whereas the strongest showing would be a proposal to serve but one shipper. Under criterion (2)—nature of service proposed—the controlling consideration is whether shippers have a distinct need for a service more specialized than that ordinarily provided by common carriers, and protestants must show that they can satisfy that need, not merely that they can provide reasonably adequate service.—Hoyt, 92 M.C.C. 189 (192-3); Sears, 92 M.C.C. 602 (606-7).

The question under criterion (3)—effect of grant on protestants' services—is whether protestants are willing and able to meet shipper's reasonable requirements. Criterion (4)—effect of denial on applicant or its shipper—is apparently intended to direct the commission's attention to possibilities of economic hardship. And criterion (5)—changing character of shipper's requirements—is satisfied by showing that shipper experiences unforeseeable peaks in its particular business and requires a service of the type proposed.—Hoyt case, pp. 193-4; Sears case, pp. 607-8.

Since it is a cardinal rule of statutory construction that language should not be regarded as mere surplusage if it can be given some reasonable interpretation consistent with the basic purpose of the statute when read as a whole, it would be improper to assume that the first criterion of §209(b)—as to number of shippers—is a mere reiteration of one element of the contract carrier definition in §203(a)(15). That criterion means that applicant's case is stronger or weaker in proportion to the number of its contracting shippers; if the number already served approaches the maximum permissible, applicant, even though qualifying as a contract carrier, cannot be considered to have made any significant showing under that test; but where applicant serves only one shipper and seeks to serve no other, no stronger showing could be made.—Bursch Extension, 91 M.C.C. 953 (956)*.

And the second test of §209(b), as to nature of service proposed, does not mean merely that applicant must qualify as a contract carrier within the §203(a)(15) definition. While an intention to assign vehicles to exclusive use of a shipper, without a showing that such dedication serves a distinctive need of the shipper or that the service proposed is specialized in character, is sufficient under that definition, such a meager showing would point toward a denial under the second criterion of §209(b). The standard is whether the proposed service meets a "distinct need" of the shipper for a different or more select or more specialized service (368 US 81).—Id., p. 957.

Under the third criterion, the commission may properly consider whether protestants are willing and able to meet the reasonable transportation requirements of the shippers involved. If protestants are actually providing such service, diversion of traffic by applicant would be a factor indicating that issuance of permit would not be consistent with public interest; but if protestants have not handled the traffic in question, a grant of authority would affect them adversely only in the unusual case.—Id., p. 957.

In connection with the fourth criterion—effect of denial on applicant and or shipper—it should be noted that the criteria of §209(b) are not mutually exclusive. If applicant proposes a highly distinctive service within the second criterion, denial would no doubt adversely affect the supporting shipper in most instances; however, the fourth test appears to be designed primarily to direct the commission's attention to evidence and to possibilities of economic hardship.—Id., p. 958.

10. Applications, in general; parties; notice.—[Vols. 10-15, 17-19].—Although pallets and certain other commodities described as plant supplies by supporting shipper are actually plant equipment described as plant supplies by supporting shipper are actually plant equipment and therefore beyond scope of application for authority to transport frozen foods and plant supplies, authority to provide service thereon should not be withheld in face of a showing of distinct need for transportation of plant supplies and equipment; furthermore, application as published is sufficient notice to the public that plant equipment might be involved in the authority sought.—Jacobs Extension, 96 M.C.C. 87 (92)*.

In granting contract-carrier application, commodity description is changed from "radioactive waste" to "irradiated fuel elements" to conform to the more accurate technical description, and destination of Arco, Idaho, is changed to Scoville to reflect the true location of consignee, the National Reactor Test Station. Because such changes may prejudice parties not receiving notice thereof, corrected notice will be published in Federal Register and 30 days allowed for petitions by such persons prior to issuance of permit.—Dealers Transit, Inc., Extension, 88 M.C.C. 375 (380).

Even though two applications involve similar commodities and are supported by same shipper, grant of one and denial of the other is not inconsistent; shipper's transportation requirements from its Rockford plant follow no preestablished or predictable pattern and thus differ substantially from its requirements for service between its Baltimore and Lynchburg plants, where the traffic moves in t.l. quantities at a fairly steady rate; facts presented by the two applications relative to shipper's specialized needs differ materially and compel opposite conclusions.—Moyer, 88 M.C.C. 767 (780).

It is well established that a contract carrier has standing to contest an application for motor carrier operating authority, and the commission has on occasion protected contract-carrier protestant's interests, see 71 MCC 367. This has been done only in unusual circumstances as when the protestant was already serving supporting shipper under contract, or when its authority had been obtained with that shipper's support. Under normal conditions, the commission has granted applications, at least in common carrier applications, if the alternative would be to impel a shipper to contract against its will with a particular contract carrier. That principle can be equally applicable to contract carrier proceeding where protestant has never served supporting shipper, and the latter is fully satisfied with applicant's services. Commission would not be justified in compelling shipper to contract with protestant unwillingly.—Muzzillo, 94 M.C.C. 563 (565-6).

The standing of common carriers to oppose contract carrier applications cannot be seriously questioned.—H. Messick, Inc., Extension, 91 M.C.C. 585 (588)*; the commission has always recognized the right of existing carriers to appear in opposition to applications for both common- and contract-carrier authorities. Also, §205(e) requires that interested parties be given an opportunity to be heard, and provisions of §209(b) contemplate appearance of opposing carriers; moreover, the Supreme Court in 368 US 81 recognized the right of common carriers to appear in opposition to a contract carrier application.—Moyer, 88 M.C.C. 767 (772).

Primary purpose of requirement of Rule 1.241(c)(1) of Rules of Practice that an applicant be given 10 days' notice of an opposing party's intent to file protest is to enable applicant to prepare its case more effectively by having definite knowledge of identity of its opponents prior to hearing. Although examiner refused to permit one protestant to participate as such on first day of hearing, because of its failure to give applicant timely notice, applicant became aware at that time of protestant's interest in the proceeding and cannot claim to have been surprised by its attempt to participate at continued hearing some 2-1/2 months later, during which time it gave applicant the required 10 days' notice. Under the circumstances, protestant complied with intent of Rule 1.241(c)(1) and was properly permitted to participate at the continued hearing; nor has applicant indicated any manner in which it was prejudiced thereby.—Briggs, 92 M.C.C. 707 (713).

Though only common carrier holding two-way authority to serve plant of supporting shipper did not oppose application of contract carrier serving the plant in outbound movements for return-load authority, there is no indication of any improper agreement between that carrier and applicant or the shipper.—Chemtrans, Inc., Extension, 88 M.C.C. 238 (241).

Although extension application seeks permit as a contract carrier, certificate is granted in view of conversion of applicant's outstanding authority to common-carrier since filing thereof.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (9)*.

See also the Goodman Motor Transport Co. case, §203(a)(15), n. 1.

Though application seeks permit as a contract carrier of cement, certificate is granted, following decision in 86 MCC 447 that, regardless of form of authority sought, only common-carrier authority should be granted applicants seeking to participate in cement traffic that has recently become available to the motor carrier industry.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (412); Chemical Express Extension, 89 M.C.C. 452 (454-5); while that decision was concerned only with needs of the cement industry in a number of eastern States, the same considerations apply in considered Mississippi Valley and southwestern areas.—Ruan Transp. Corp. of Kansas, 88 M.C.C. 65 (67)*; Ruan Transport Corp. Extension, 88 M.C.C. 123 (125); and same considerations apply to proposed contract carriage of cement in the South. While the matter might be viewed somewhat differently were it one of first impression, the division feels constrained to accept conclusions reached by entire commission in that proceeding.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (305-6).

Although application of a new corporation for permit as a contract carrier of cement must be denied because of denial of authority for control of applicant in common with seven existing carriers, some need for proposed service is established, and denial is therefore without prejudice to substitution of an existing affiliate as applicant; since all seven affiliates now hold, or have been conditionally granted, certificates for transportation of cement, selection of the substitute applicant is left to the controlling parties.—Schwerman Trucking Co. of Ala., Inc., 88 M.C.C. 495 (498, 499).

18. Burden of proof.—[Vols. 10-13, 16-19].—The rule of the J-T case (368 US 81) means, among other things, that the burden of proving inadequacy of existing services is not to be placed on applicant, and that proceedings involving contract carrier authority differ from those involving certification of common carrier authority, wherein a showing of convenience to the shipper is not enough; such a consideration would at least be proper, though not a controlling factor, in determining an application for contract carrier permit.—Eddleman v. United States, 229 F. Supp. 231 (240)*.

Although prior report denied permit to one of instant applicants without prejudice to substitution of a specific authorized contract carrier controlled by same interests, designation of latter was inappropriate because it bears the trade name of one of supporting shipper's competitors; as no need is shown for service to that shipper by five carriers, each from a different plant site, and still another carrier under same control already serves shipper from another location, denial of applications is without prejudice to petition for reconsideration and substitution of that affiliate as applicant.—Best Transport, Inc., 88 M.C.C. 147 (161)*.

Applicant for a "grandfather" permit has the burden of establishing his right thereto; in other words, he must prove substantial bona fide operations on and continuously since the statutory date. Since it had that burden, complainant carrier was required to prove the allegations of its petition for reopening the "grandfather" proceeding and modification of its permit. Accordingly, the commission decided the basic issue and determined that carrier had not met its burden of proof when it found that the evidence "falls short" of substantiating the petition; sustained.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (465)*.

The commission properly denied considered applications for contract carrier authority because, following denial of its motion at the hearing for an indefinite postponement thereof, applicant failed to prosecute the applications after being afforded ample opportunity to do so. Plaintiff (applicant) did not identify any of its alleged witnesses, their residences, when or where they would be available, or what testimony they would give; there was no showing that it had requested the commission, or the hearing examiner, to issue subpenas for witnesses in accordance with rule 56 of the commission's Rules of Practice, nor was it shown that depositions could not be taken of any material witnesses, as authorized by rule 57 thereof; sustained.—Burnham Trucking Co. v. United States, 216 F. Supp. 561 (563-4)*.

The burden of proof required to show that a proposed contract carrier service for specified shippers is consistent with public interest and the national transportation policy is lighter than that of a common carrier proposing to serve the public at large; existing carriers will not be so ready to oppose the contract carrier's application, and if they do they will be required to show not only that they are able to render a reasonably adequate service, but that they are as well situated as the applicant to meet whatever distinct transportation needs the supporting shipper may have.—Connell Transport Co., Inc., 95 M.C.C. 312 (319).

Proof required of automobile haulers authorized to file petitions in lieu of applications for modification of their outstanding authorities to enable them to continue participating, by use of substituted rail service, in traffic formerly handled in all-motor movements, outlined.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (415).

Where alternative proposals are presented pursuant to formal application for common carrier authority, applicant has burden to delineate operations clearly enough so that each alternative may be considered on a reasonable basis. Although applicant seeking to convert its operation to common carriage requested alternative extensions of its contract-carrier authority, it has not met that burden; no specific plan of contract carrier operation is set forth, there is no evidence of "distinct" need of the shipper nor expressed desire for exclusive assignment of vehicles; alternative proposal is therefore not considered.—Goodman Motor Transport Co., Extension, 91 M.C.C. 206 (209-10).

Once applicant has demonstrated that its proposed service is tailored to shipper's distinct need, the burden shifts to protestants to show their ability and willingness to meet shipper's specialized need. Protesting carriers have not shown that they are able to provide shipper with type and quantum of transportation service required; granted.—Garmarc Transp. Co., Inc., 91 M.C.C. 489 (492)*.

Where applicant does not propose to assign vehicles to shipper's exclusive use, it must, in order to meet the criteria of §209(b), demonstrate that its proposed undertaking is specialized and tailored to shipper's distinct need; protestants then may present evidence to show they have ability and willingness to meet that specialized need; and if that is done, the burden then shifts to applicant to show that it is better equipped to meet shipper's needs than protestants. Protesting carriers established that they can provide a service completely responsive to shipper's described needs; denied.—K. W. McKee, Inc., Extension, 89 M.C.C. 777 (783-4).

Neither applicant nor shipper can be charged with burden of showing protestant's inability or unwillingness to meet distinct need shown. Applicant first must demonstrate that proposed undertaking is specialized and tailored to shipper's distinct need, whereupon protestants may show they have ability and willingness to meet that specialized need; if that is done, burden shifts to applicant to demonstrate it is better equipped to do so. (368 US 81.) Protestant has adequately met its burden of proof when it has established its experience in transporting aircraft parts and its willingness and ability to serve supporting shippers, whereas applicant has not established that it can better meet shippers' indicated needs. Denied.—J-T Transport Co., Inc., Extension, 91 M.C.C. 507 (510, 511)*.

In absence of a showing of shipper's "distinct need," proposal to assign equipment is not alone sufficient to require finding that proposed operation will be consistent with public interest and the national transportation policy. The question is whether dedication of equipment alone will result in service better designed to meet shipper's needs than the same service provided by common carriers, absent only the dedication of equipment. Protestants have conclusively demonstrated that without such dedication of equipment they are able to meet shipper's distinct need equally as well as can applicant; denied.—Interstate Distributing Co., 91 M.C.C. 36 (40, 41)*.

20. Evidence; admissibility.—[Vols. 10-19].—Since plaintiffs' application sought issuance of permit for contract carrier operation, they could reasonably be required only to present evidence relevant to standards set forth in §209(b); and though their evidence may not have fulfilled those requirements, it was de-

signed to establish propriety of a contract carrier grant. In treating their application as one for common carrier authority in substance, though not in form, and in denying it for failure to establish public need for their service, the commission effectually denied plaintiffs opportunity to know by what standards they would be judged.—Eddleman v. United States, 229 F. Supp. 231 (236-8)*.

In considering the §209(b) criteria, the commission must depend largely on evidence introduced by an applicant through its supporting shipper witness regarding shipper's need for motor service, its transportation problems, and the like. Applicant has not offered such evidence except in the most general terms; though shipper states that it needs proposed transportation of lumber in area involved, it has given little indication of where it obtains or might obtain lumber, or where in the 10-State area it has present or even potential customers, so as to justify a broad grant of nonradial authority; and its complaints concerning services of common carriers are not supported by any factual data. Therefore, even if applicant could be found fit to conduct proposed operation, application must be denied on the merits.—Haywood Trucking Co., Inc., 92 M.C.C. 544 (547).

Evidence offered to show that, under its "grandfather" permit, applicant continuously transported naptha, toluene, toluol, xylene, xylol, and petroleum-based alcohol from prior to 1935 until spring of 1961, when it was advised that transportation of those commodities was not within its "grandfather" authority for "refined and crude oils," was properly excluded by the joint board; such evidence was not germane either to an interpretation of its permit, which is not ambiguous, or to the question of whether proposed service would be consistent with the public interest and the national transportation policy, which are the principal issues in instant proceeding.—Russell Transfer Co., Inc., 95 M.C.C. 412 (415).

See also C & E Trucking Corp. case, §212(a), n. 30.

Testimony by protestant's operating witness, offered to refute supporting shipper's complaints about protestant's service, was based on information not within witness's personal knowledge but obtained by him during course of the hearing in a telephone conversation with other employees of protestant, and was clearly hearsay. That evidence was not admissible under exception to the hearsay rule covering information obtained in normal course of business; principle underlying that exception is that information acquired as result of established, routine office procedures may be presumed to be accurate and thus admissible even though the person having firsthand knowledge of the pertinent facts is not available for cross-examination. Though the information in question was apparently from records kept by protestant in normal course of business, it did not come to the witness in that way, but had to be sought from other employees while hearing was in progress. Such testimony was improperly admitted over applicant's objection and is not considered.—Dibble, 92 M.C.C. 610 (612).

Statements in affidavit submitted with protestant's reply to exceptions concerning events which occurred since the hearing have not been subject to cross-examination by applicant and are not considered.—K. W. McKee, Inc., Extension, 89 M.C.C. 777 (779, 780).

Although applicant contends that it serves only four shippers, the commission's records, of which official notice is taken, disclose that it had contracts with seven shippers at the time of the hearing.—Oyler Motor Transit Co., Inc., Extension, 94 M.C.C. 638 (639).

Examiner properly took official notice of common-carrier authority of existing carrier which is not a party and did not oppose contract-carrier application.—Chemtrans, Inc., Extension.—88 M.C.C. 238 (241).

Though there is little evidence of changing character of supporting shipper's requirements, evidence of record is sufficient for the commission to take notice of practices and operations in the explosives industry concerning advent of new products and innovations in marketing and distribution.—H. Messick, Inc., Extension, 89 M.C.C. 209 (216)*.

25. Hearing, generally.—[Vol. 18].—See also Zuzich Truck Line, Inc. v. United States, §204(c), n. 55

A full hearing is one in which ample opportunity is afforded all parties to establish the propriety or impropriety, from standpoint of

justice and law, of the step asked to be taken. [261 US 184.] In holding that because of nature of their proposed operations plaintiffs' application for contract carrier permit was one in substance, though not in form, for common carrier authority, and in denying it on ground that plaintiffs had not established a public need for their service, the commission effectively denied them the full and fair hearing on the merits of their application required by §205. This purported preference for substance rather than form effectually denied plaintiffs opportunity to know by what standards they were to be judged, and the commission's failure to afford them a full and fair hearing on the "step asked to be taken" must be regarded as clear error. Order set aside and case remanded for further proceedings consistent with the court's views.—Eddleman v. United States, 229 F. Supp. 231 (236-8)*.

In denying plaintiff's contract-carrier application, the commission did not properly evaluate criteria set forth in §209(b), due perhaps to a confusing of "distinct need" under §203(a)(15) with the determinations to be made under §209(b). The applicant would serve only one contracting shipper, would provide immediate, fast service on fresh and frozen meats and meat by-products that the shipper requires (including split delivery or drop-off service shown to be needed), and would station trailers at shipper's plant to be immediately available. Also, the commission's conclusion that grant of the permit would adversely affect protesting common carriers is not supported by the evidence. The statutory law was not properly applied, and effect of the commission's decision is to place on applicant a burden of proof greater than was required. The commission should review the case and, in its determination of "consistent with the public interest," give such weight to the §209(b) criteria as they are entitled. Order set aside, and case remanded for further proceedings consistent with the court's opinion.—Meat Packers Exp., Inc. v. United States, 244 F. Supp. 642 (648-52)*.

Renewal in exceptions of motion for continuance of hearing on application, overruled; prior denial of continuance was within examiner's discretion, and no sufficient cause is shown for now granting a continuance.—Estate of E.L. Northcutt, Deceased, Petition Proceeding, 94 M.C.C. 585 (586)*.

Regulations of the Commission

31 FR 6058, Apr. 20, 1966, Part 7: List of Forms, Part II, Interstate Commerce Act, §7.78 OP-OR-9, Application for Motor Carrier Certificate or Permit, Form OP-OR-9 prescribed and approved for use on and after May 20, 1966. Form BMC 78 discontinued as of May 20, 1966.

Section 210. [§*310 U.S.C.*] Dual operations.—[Unchanged. See vol. 11, p. 9469.]

Amendments, see footnotes, vol. 11, p. 9469.

Notes of Decisions

Volume 10—p. 8963; Volume 11—p. 9469; Volume 12—p. 10411; Volume 13—p. 11083; Volume 14—p. 11604; Volume 15—p. 12214; Volume 16—p. 12864; Volume 17—p. 13562; Volume 18—p. 14499; Volume 19—p. 15766.

1. Construction and interpretation.—[Vols. 10-16, 18, 19].—Purpose of the prohibition of dual operations in §210 is to preclude discriminatory practices which might arise if a motor carrier or carriers under common control were permitted to hold simultaneously a certificate and a permit. Possibility of engaging in such objectionable practices is not limited to situations where the contract and common carrier services are competitive as between identical points: the statute forbids dual authority "within the same territory," and determination of whether such operations are within the same territory must be made with

particular regard to the status of the shipper to be served and its transportation requirements.—Petroleum Transit Co., Inc., 92 M.C.C. 414 (417).

3. Discrimination resulting from dual operation.—[Vols. 10-19].—Grant of certificate to applicant which also served as a contract carrier to a limited degree did not violate §210. The commission gave the dual operation situation full consideration, imposed conditions, and reserved the right to impose additional conditions to protect the public interest and guard against discrimination; §210 permits the commission, for good cause shown, to authorize dual operations, and the appropriate finding, backed by evidentiary support, was made.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (573)*.

Applicant granted permit as an individual for transportation of frozen foods and plant equipment and supplies is sole stockholder of a corporation holding certificate for transportation in same territory of commodities which could be plant supplies or equipment, thus creating possibility of objectionable dual operations. As applicant is willing to surrender the corporate certificate for cancellation, issuance of permit is conditioned accordingly.—Jacobs Extension, 96 M.C.C. 87 (89, 93)*.

Various aspects of common carrier applicant's organization relating to its being commonly controlled with certain contract carriers, and to its dual operations, were considered and approved in 88 MCC 147 and 91 MCC 82; thus, there being no reason to disturb those previous findings, dual operations are approved in granting extension authority.—Mitchell Transport, Inc., Extnsion, 94 M.C.C. 450 (452, 453).

Dual operation by applicant was approved when its general-commodity certificate for a 47-mile route between Wadena and Alexandria, Minn., was granted, and in view of small size of those and intermediate and off-route points and fact that service thereto consists of delivery of traffic received from originating carriers, grant of extension authority for contract carriage of prefabricated buildings, etc., from Wadena need not be conditioned on surrender of that certificate. Opportunity for discrimination on that route and in the area can be completely eliminated by restricting the certificate against service for applicant's contracting shippers and against transportation of commodities authorized in the extension permit.—Polman Extension—Montana, 92 M.C.C. 114 (115-6)*.

Since applicant railroad subsidiary is already performing the same service as a contract carrier of motor vehicles for same shipper from Oakland, Calif., as it proposes to perform from Fremont following relocation of shipper's plant, and the present service is not restricted to service auxiliary to or supplemental of rail service, grant of application would not change the character of its dual operations as previously approved; modification of its certificates to eliminate authority for transportation of new trucks and new automobiles is therefore not required.—Pacific Motor Trucking Co. Extension, 91 M.C.C. 61 (62, 64-5).

Removal of equipment restriction from applicant's common-carrier authority for citrus products from Florida, and continued holding by its chairman of the board of contract carrier authority for shirts and carbonated beverages from Atlanta to points in same States, would not aggravate dual-operating situation previously approved.—Clay Hyder Trucking Extension, 89 M.C.C. 757 (763).

Holding by railroad subsidiary of common-carrier authority for substituted motor service auxiliary to train service of parent railroad and of contract-carrier authority for transportation of new automobiles, trucks, and buses between specified points in California and Nevada having been found unobjectionable in 77 MCC 605 and 84 MCC 575, the limited additional common-carrier authority granted for substituted service on express shipments between Truckee, Calif., and Reno, Nev., will not lead to the kind of abuses contemplated by §210.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 81 (87); similar finding is warranted as to proposed truckaway service from Phoenix and Tucson to Hayden, Ariz. Nevertheless, certificate for truckaway service is conditioned on express reservation of the commission's right to impose further limitations to preclude any possibility of objectionable dual operations.—Id., 89 M.C.C. 645 (649, 650).

Extension authority granted applicant as a

common carrier of passengers, express, and newspapers will not be competitive with applicant's present authority to transport class D poisons for Atomic Energy Commission as a contract carrier, limited to transportation for United States Government. Since the two authorities are unrelated, there is no opportunity for the discriminatory practices which §210 is designed to prevent. However, jurisdiction is reserved to reconsider this issue at a future date.—Continental Tennessee Lines, Inc., Extension, 95 M.C.C. 728 (731)*.

Since commodities to be transported under common carrier authority granted (which excludes two commodities embraced in one of applicant's permit) differ substantially from those applicant is authorized to handle in his permits, his holding of the certificate and permits will not afford any opportunity for discriminating practices within §210; approved.—Major Extension, 94 M.C.C. 652 (656-7)*.

As proposed operation involves the transportation of sand, in bulk, it will not be competitive with operations of applicant's sole stockholder under his permit authorizing transportation of merchandise dealt in by persons who operate chain-retail and mail-order department stores in the same area. Straight van-type trucks are used to perform service under this permit, and they cannot be used for proposed bulk transportation. Holding by applicant of certificate applied for and by its stockholder of his permit, therefore, would be consistent with the public interest and the national transportation policy; however, approval should not be construed as a waiver of commission's right to reconsider this issue at a future date should the situation change.—J-E-M Transp. Co., Inc., Extension, 94 M.C.C. 573 (577)*.

Although applicant holds certain common-carrier authority, any operation thereunder would be for shippers other than the one supporting contract-carrier application, in movement of different commodities between different points than those involved; thus there appears little likelihood that grant of permit would lead to the discriminatory practices §210 is designed to prevent. Dual operation approved, but jurisdiction reserved to reconsider that issue should the situation change at any future time.—Nationwide Carriers, Inc., Extension, 92 M.C.C. 1 (6-7)*.

Applicant seeking extension of its common-carrier authority for package delivery service for manufacturers, wholesalers, and distributors also performs a similar service for retail stores as a contract carrier in part of same territory, and though shippers would prepay freight charges, thereby eliminating privity between applicant and receiving retail stores in its wholesale operations, it could alter that arrangement at any time, and even in absence of privity of contract with applicant some consignees might still be able to control shipments moving in the wholesale service; therefore, to prevent opportunity for discrimination, the common-carrier authority granted is restricted against applicant's serving any persons with whom it has contracts for service under its permits, and jurisdiction is reserved to impose any further limitations that may prove necessary to that end.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (713, 746)*.

Applicant's holding of common-carrier authority granted for liquid chemicals will not be inconsistent with its existing contract-carrier authority for dry cement in same territory, subject to future imposition of any conditions that may be found necessary.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (141)*.

Although applicant's stockholder and board chairman holds contract carrier authority in same territory applicant would serve as a common carrier, the proposed operation would not be competitive therewith in view of the different commodities transported and different class of shippers served; however, approval of resulting dual operations should not be construed as waiving the commission's right to reconsider the issue at any future date should the situation change so as to bring about discrimination or preference.—Refrigerated Transport Co., Inc., Extension, 88 M.C.C. 71 (74-5).

Since applicant's contract-carrier authority for specific commodities, and contract-carrier authority of another subsidiary of same railroad to transport diesel fuel for the railroad, are for territories remote from extension routes granted applicant for substituted

freight service as a common carrier, possibilities of discrimination are very slight; dual operations approved.—Pennsylvania Truck Lines, Inc.—Key Points Restriction, 88 M.C.C. 505 (519).

Grant of common carrier authority for cement will not result in objectionable dual operation because of applicant's affiliation with 10 contract carriers holding authority for other commodities and serving different shippers; and though applicant seeks authority from Union Bridge, Md., to Maryland points also served by an affiliated contract carrier of cement, only a minor portion of that traffic will move in interstate commerce and resulting dual operation may properly be approved, since opportunity for unlawful practices will be minimal. But authority sought from two Pennsylvania origins to Maryland would present opportunity for discriminatory practices; instead of denying that part of application, the parties are allowed a specified period to eliminate such dual operations.—Best Transport, Inc., 91 M.C.C. 82 (85-6)*.

Where commodity authorized to be transported by applicant as a common carrier is different from those transported by its affiliates under their permits and the operations will not be conducted for same shippers, there appears to be no opportunity for any of the discriminatory or undesirable practices against which §210 is aimed; dual operation approved.—Schwerman Trucking Co. of Ala., Inc., 89 M.C.C. 628 (630-1)*.

Although 2 of 3 affiliated applicants now granted certificates for transportation of mortar and or cement, as well as their parent company, each hold permits for other commodities, the common and contract carrier operations will not be conducted for the same shippers; opportunity is thus lacking for undesirable practices against which §210 is aimed. But as two other affiliates hold permits to transport cement or mortar for certain of same shippers served by applicants, though from different origins, resulting dual operations cannot be approved in view of opportunities presented for discriminatory practices and rate preferences. As grant of certificates to those affiliates in pending conversion proceedings will eliminate the objectionable dual operations, issuance of certificates to applicants is withheld pending determination of those proceedings.—Schwerman Trucking Co. of N.Y., Inc., Extension, 88 M.C.C. 661 (664-5).

Although carrier which will jointly control applicant granted certificate for transportation of cement holds permits as contract carrier of cement, their operations will not be competitive in view of the different territories and shippers involved; resulting dual operations may therefore be approved, especially as certificated authority granted acquiring carrier in 86 MCC 447 is conditioned on prior conversion of its outstanding permits, in which event no dual operations will exist.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (307).

See also Johnstown Motor Freight, Inc., case, §207(a), n. 25 *Fitness*.

Holding of contract-carrier rights authorized to be purchased by a carrier partnership and corporate carrier it controls, and of common-carrier rights by a partnership composed of two of the vendee partners, will be consistent with public interest in view of difference in nature of commodities transported and industries served.—Dyer-O'Hare Hauling Co.—Purchase—Merchants Transfer, 87 M.C.C. 768 (773).

Since purpose of §210 is to prevent the discriminatory practices described in 45 MCC 1, the circumstance that the common and contract carriers do not serve the same shippers and consignees is not controlling. The fact that opportunity would be afforded for discriminatory practices, even though carriers have no intention of engaging in them, is sufficient to warrant disapproval of the dual operations.—Lease Plan International Corp.—Control—National, 92 M.C.C. 173 (184)*; but dual operations resulting from common control of a common carrier and three contract carriers would be consistent with public interest and the national transportation policy when, owing to nature of the commodities transported and the shippers and receivers served under the respective rights, they would not be competitive.—Id., p. 180.

Objectionable dual operations contemplated by §210 include those within same territory as well as over same routes. Deceased vendor's contract carrier operations, upon their

acquisition by his widow as sole legatee, would be managed by their son who controls two common carriers, one of packinghouse products and groceries between points not too remote from extensive territory authorized by vendor's "chain grocery" rights, and the other of cranberries, fruits and vegetables, canned goods, and sugar in territory overlapping those rights and vendor's rights for fruits and vegetables. Therefore, the possibility of discrimination is sufficient to preclude approval of the holding of the certificates and permits, under common control.—McNichol —Purchase—McNichol, 90 M.C.C. 134 (137-8)*.

On reconsideration, based on certain revised terms of proposed transaction, while proposed cancellation of certain commodity rights of the common carriers controlled by the son would almost entirely eliminate the opportunity of affording a competitive common-carrier service, one common carrier's authority for "paper" embraces paper articles which might reasonably be expected to be stocked by chain food business concerns or industrial cafeterias served under the contract-carrier authority. Approval of proposed purchase and control through management by vendee's son, therefore, is conditioned on cancellation also of the affiliated common carrier's "paper" authority.—Id., 90 M.C.C. 429 (431)*.

Since vendee's contract-carrier authority for fresh meats overlaps common-carrier authority it seeks to purchase, and it does not expect to have further use for that permit owing to contract cancellation, purchase approval is conditioned on cancellation of that permit to remove an undesirable dual operation possibility; however, dual operations resulting under its remaining permit for liquified carbon dioxide and the purchase rights will not be objectionable.—Emsley Truck Rentals, Inc.—Purchase—Foodway Exp., Inc., 90 M.C.C. 414 (415-6).

Congress, by enacting §210, clearly intended to preclude any opportunity for motor carriers to discriminate. Issuance of certificate authorizing applicant to serve numerous shippers, many of which it can serve under its outstanding permit as an armored carrier, resulting in many instances in transportation of the same commodities in the same territory, would not be consistent with §210 in view of the clear opportunities for discriminatory practices and rate preferences; such opportunities extend to virtually all the contract-carrier authority held by applicant and its two affiliates. The most practical solution is that adopted in 92 MCC 336, wherein one of applicant's affiliates was required, if it elected to receive the common-carrier authority granted, to notify the commission within 90 days of service of the order that it had filed application for conversion of its outstanding permits to certificates, failing which its certificate application would stand denied. Not only must applicant meet this condition, but certificate may not be issued it unless both its affiliates elect or agree to similar action.—Southern Couriers, Inc., Extension, 94 M.C.C. 111 (117).

In as much as contract carrier's proposed service for two new shippers is found to be common carriage, and commodities involved are the same as, and areas to be served overlap, those authorized by its permit, grant of certificate would afford opportunities for discriminatory practices; while it is not implied that applicant would so operate, as a matter of general policy the door must be closed to even the possibility of such practices. Application denied.—E. W. Bohren Transport, Inc., Extension, 89 M.C.C. 266 (267-8).

Issuance of certificates to applicant armored-car operators for transportation of commercial papers, film, and related articles, thus authorizing them to serve numerous shippers they can now serve under outstanding permits, in many instances covering same commodities in same territory, would be inconsistent with §210 in view of resulting clear opportunities for discriminatory practices and rate preferences, which extend to virtually all their contract-carrier authority because of nature of the service provided; and, due to character of the commodities and service involved, imposition of restrictions or modification of the permits does not afford a practical solution. As denial of their applications because of the objectionable dual operations would work substantial hardship on applicants and a more immediate hardship on their supporting shippers, their application pro-

ceedings are held open for 90 days to permit them to seek conversion of their outstanding permits to certificates to bring their operations into conformity with §210.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (364-5).

The clear intent of Congress in enacting §210 was to eliminate possibility of a carrier engaging in prejudical or discriminatory practices, and there is clear opportunity for such practices where carrier is in position to serve same shipper both as a common and a contract carrier. Since applicant can now serve supporting shipper as a common carrier of pipe from Livonia, Mich., and Dayton, Ohio, to all points in Ohio, Michigan, Indiana, and Illinois, and certain points in Kentucky, and as a contract carrier of concrete slabs and beams from Livonia to a northwestern Illinois area, grant of extension permit for contract carriage of slabs and beams for that shipper or its affiliates from same 2 origins to all points in 4 of those 5 States would seriously aggravate its dual operations.—Telischak Trucking, Inc., Extension, 92 M.C.C. 553 (555-6).

Prior approval of applicant's present limited dual operations is not controlling; record in the prior case does not clearly show that shipper at that time shipped any commodity by contract carriage which applicant could handle as a common carrier, or that it manufactured concrete pipe as well as slabs and beams; more complete record in instant proceeding makes obvious the opportunity for discriminatory practices. Though applicant might never engage in such practices, the possibility of doing so would be unwarrantably enhanced; denied.—Id., p. 556.

Although applicant's proposed common-carrier operation as a small package delivery service in Kansas City area would meet certain transportation needs of shippers not presently being met by affiliated contract carrier of department-store merchandise to points in same area, it does not follow that resulting dual operations would be consistent with public interest. Section 210 was enacted to prevent discrimination between carriers as well as between shippers; some of shippers applicant proposes to serve are also served by the commonly controlled contract carrier, with resulting possibilities for favored treatment of those which might use both services; to approve dual operations in such a situation would accord the dual operator a favored position vis-a-vis competitors not similarly situated. Application denied.—merchants Delivery Co., 92 M.C.C. 195 (218).

Since applicant's proposed transportation of canned goods and sugar from Philadelphia to 8 Pennsylvania counties, limited to specialized service for a few shippers and consignees, is found to be contract carriage, and it already holds a certificate for transportation of same commodities from Baltimore to 2 destinations in same counties, permit must be denied because of the opportunity for discriminatory practices arising from ability to offer both kinds of service to points in same destination territory.—Beatty Motor Exp., Inc., Extension, 89 M.C.C. 190 (194).

That supporting shipper proposes to concentrate its distribution of petroleum products to involved destination States at Guntersville, Ala., and applicant and its carrier affiliates are not authorized to originate or terminate such shipments at points in Alabama is not determinative of the issue of dual operations. Applicant proposes to transport for that shipper as a contract carrier to States served by it and its affiliates as common carriers; as shipper is a nationwide distributor of petroleum products, it is not unreasonable to assume that it frequently has shipments to or from points in area now served by applicant and its affiliates; nor is it shown that they are not now engaged in providing that service for it. Opportunities for discriminatory practices against which §210 is directed are therefore present to such degree that before permit may be granted applicant must establish by convincing evidence that resultant dual operation for that shipper will be consistent with public interest and the national transportation policy. Applicant has failed to meet that burden; denied.—Petroleum Transit Co., Inc., 92 M.C.C. 414 (417).

Since all but one of extension operations proposed by applicant contract carrier are found to constitute common carriage, grant of authority sought would permit objectionable dual operations, with applicant transporting similar commodities between same points as both a common and a contract carrier. As applicant has shown no need for additional

common-carrier services, applications are denied except as to the service found to be contract carriage.—Connell Transport Co. Extension, 91 M.C.C. 113 (123).

5. Relinquishment of dual operation.—[Vols. 10-15, 18, 19].—See also Bowser and Campbell purchase case, §5(2), n. 48 *Dual operations.*

Grant of common-carrier extension authority for cement to applicant already holding contract carrier authority for that commodity and affiliated with another such carrier raises problem of dual operations, which may not be approved in view of resulting opportunities for discriminatory practices and rate preferences; accordingly, applicant should notify the commission within 90 days whether it elects to convert its existing contract carrier operations and those of its affiliate to common carriage or to forego the common-carrier authority granted.—Chemical Express Extension, 89 M.C.C. 452 (455).

Section 210a. [*§310a U.S.C.*] Temporary authority.—[Unchanged. See vol. 18, p. 14501.]

Amendments, see footnote, vol. 11, p. 9472; historical notes, vol. 11, p. 9472, vol. 12, p. 10412, vol. 18, p. 14502.

Note.—Section 102 of the Second War Powers Act, March 27, 1942, amended par. (a) by striking out the words "but for not more than an aggregate of one hundred and eighty days", but by provision of the act of June 29, 1946, it was provided (§1501) that such amendment should expire March 31, 1947.

Historical Note

In view of creation of the Department of Transportation by Public Law 89-670, effective April 1, 1967 (32 FR 5453), the Commission and the Department of Transportation entered into a Memorandum of Agreement on April 3, 1967 (32 FR 5744, Apr. 8, 1967) for the purpose of accomplishing continuity, liaison, coordination, and support with respect to transferring from ICC to DOT personnel and functions concerned with (1) motor carrier safety matters; (2) certain pending ICC proceedings; (3) pending court cases transferred to DOT; (4) housekeeping operations for ICC personnel transferred; (5) access to, and provision of, reports and other documents, and (6) liaison and coordination between ICC and DOT.

Notes of Decisions

Volume 11—p. 9472; Volume 12—p. 10412; Volume 13—p. 11084; Volume 15—p. 12215; Volume 16—p. 12864; Volume 17—p. 13563; Volume 18—p. 14502; Volume 19—p. 15771.

1. Construction and interpretation.—[Vols. 11-13, 15-19].—The commission's order under §210a(b) authorizing vendee to take temporary control of vendor, pending determination of their §5 application, is permissive only and in effect grants temporary exemption from prohibitions of §5. If vendee never assumes authorized temporary control, or if it controls vendor other than "upon the terms and conditions set forth in the agreement filed with the application," it has not violated any express command of the commission. While doubtless the commission expects a carrier to use such permission in accordance with its agreement, so as to enable controlled carrier to resume independent operation if approval under §5 is ultimately denied, the court does not read the bland language of the order so that such expectations become commands of the commission, especially when the commission was careful to make it clear that it did not consider private disagreements of the parties to be its concern.—McFaddin Exp., Inc., v. Adley Corp., 346 F. 2d 424 (426)*.

The commission's orders granting temporary authority to intervening defendant cannot be set aside by the court when a review of the entire record shows that (1) the orders are adequately sustained by findings which are amply supported by the evidence and (2) that the commission acted within the scope of its authority and without abuse of its discretion; sustained.—Cooper Transfer Co., Inc. v. United States, 281 F. Supp. 917 (918)*.

The statute empowers the commission, in its discretion and without hearings or other proceedings, to grant temporary authority where there is a showing of immediate and

urgent need for such service to destinations having no carrier service capable of meeting that need. The commission considered an application, supported by numerous letters from shippers and receivers of freight, which it concluded, in its discretion and without a hearing, sustained a finding that an immediate and urgent need for the service existed and there was no carrier service capable of meeting that need. The application and supporting letters constituted a "showing" upon which the commission could make a discretionary finding which it had legal authority to make; and there is no showing that the commission acted arbitrarily, capriciously, or abused its discretion. Complaint dismissed.—Merchants Delivery Co. v. United States, 265 F. Supp. 669 (672-3)*.

The statute makes the grant or denial of temporary authority to provide motor carrier service discretionary with the commission. The court has no power to issue such an operating authority. The commission's order denying plaintiff temporary authority, sustained.—Great Western Packers Exp., Inc. v. United States, 246 F. Supp. 151 (155)*.

In action to set aside the commission's orders, which vacated finance board's grant of temporary authority under §210a(b) for acquiring carrier in proposed control transaction to operate the properties of acquired carrier pending determination of their §5 application for permanent control authority, examination of the entire record does not disclose an absence of a rational basis for the conclusions reached by the commission, which is further fortified by use of statutory language in both orders in question; complaint dismissed.—Three "I" Truck Line, Inc. v. I. C. C., 246 F. Supp. 410 (412)*.

Test of the validity of the commission's action in granting temporary motor-carrier authority is not whether it is supported by substantial evidence of a formal nature, as is the case where an order granting or denying permanent authority is under review, but merely whether the commission had legal authority to act as it did. The statute expressly empowers the commission, in its discretion and without hearings or other proceedings, to grant temporary authority where there is a showing of immediate and urgent need for such service to destinations having no carrier service capable of meeting that need. Information submitted to the commission, and which it was free to consider and weigh in light of its specialized knowledge and experience, clearly establishes that it had statutory power to grant the temporary contract-carrier authority in question; and nothing indicates that the commission's action was arbitrary, capricious, or an abuse of its discretion. Complaint dismissed.—Union Cartage Co. v. United States, 244 F. Supp. 1005 (1007-8)*.

The purpose of §210a(b), as clearly expressed therein, is to preserve the usefulness of motor carrier properties in performance of service to the public. Mismanagement and financial difficulties could dissipate the equipment, resources, and business of a motor carrier before the §5 petition for its acquisition could be acted upon, and the statute must be construed in such a way as to effect that basic purpose. Although §210a(b) does not expressly authorize a grant of temporary control where the acquisition is through ownership of the acquired carrier's stock, it does not appear that a corporation whose stock is purchased is thereby in less need of interim protection than the carrier whose assets are purchased directly; nothing has been presented which would indicate such an understanding by Congress. Control of a floundering carrier's assets is transferred as effectively through sale of its stock as through sale of physical properties, and the choice of method is unrelated to the congressional purpose of §210a(b).—North American Van Lines, Inc. v. United States, 240 F. Supp. 464 (466-7).

In effecting the statutory purpose, the commission has treated stock and asset acquisition alike for many years, and while the construction placed on §210a(b) by such an independent administrative agency as the commission is not controlling, it deserves great weight. To hold that the commission is not authorized to grant temporary control where the proposed acquisition is by purchase of stock as distinguished from purchase of the physical assets would contravene the basic purpose of §210a(b), as declared therein.—Id., p. 467.

Temporary operation as evidence of need for permanent, see §207(a), n. 25 *Temporary*

authority.

A grant of temporary authority under §210a(a) is neither a certificate nor a permit. "Certificate" is defined in §203(a)(5) as "a certificate of public convenience and necessity issued under this part to common carriers by motor vehicle"; temporary authority cannot be considered as falling within that category, as it is granted, not on proof of public convenience and necessity, but on a showing in informal proceedings of an "immediate and urgent need" for a particular service, and §210a(a) specifically provides that grant of temporary authority creates no presumption that corresponding permanent authority will be granted.—Wright, 92 M.C.C. 403 (406).

Provisions of §210a(b) are clearly applicable to all transactions proposing some form of acquisition, unification, or control of motor carrier properties. The commission's authority to grant temporary authority with respect to interstate operations conducted solely within a State pending disposition of an application for permanent authority under §5 or §212(b) has been neither eliminated nor diminished by the amendments to §206(a). Had Congress intended to single out one-State carriers, and exclude them from the benefits of this section, or terminate their interstate operations under former second proviso if temporary authority were granted to, and exercised by, a multi-State carrier, there would be some evidence of such intention; but there is no such evidence.—T.I.M.E. Freight, Inc.—Merger, 97 M.C.C. 310 (320-1)*.

See also Mason & Dixon control case, §5(2), n. 110 *Temporary authority.*

A grant of temporary authority under §210a(b) does not require exercise or continuance of such authority, that being at the option of the parties within terms of their contractual relationship.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 93 M.C.C. 741 (745, Note)*.

A carrier which is temporarily leasing operating authority under §210a(b) may combine the leased rights with its existing permanent authority to provide a through service under the temporary unification, and may properly advertise the availability of the unified service.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (712).

Regulations of the Commission

30 FR 5836, Apr. 27, 1965, Part 240: Temporary Authority Applications Under Section 210a(a) of the Interstate Commerce Act, entire new Part 240 (§§240.1 - 240.6, inclusive) added, effective July 1, 1965.

31 FR 5474, April 6, 1966: General Temporary Order No. 1-§210a(a), on application to any Regional Director or District Supervisor, temporary authority for not more than 30 days, required because of railroad strikes, granted, effective on date of order.

31 FR 5800, Apr. 14, 1966, General Temporary Order No. 1-§210a(a), dated Apr. 1, 1966, vacated and set aside, normal rail transportation having been resumed, effective on date of order.

31 FR 9528, July 13, 1966, General Temporary Order No. 2, Motor Carrier Services Due To The Cessation Of Normal Air Transportation Occasioned By Work Stoppages, temporary authority granted, effective July 8, 1966, to expire first midnight after air service reinstituted.

31 FR 9528, July 13, 1966, General Temporary Order No. 2, Motor Carrier Service Due To The Cessation of Normal Air Transportation Occasioned By Work Stoppage, emergency 30-day temporary authority granted, effective July 8, 1966, to expire first midnight after air service reinstituted.

31 FR 12661, Sept. 27, 1966, General Temporary Order No. 2, Motor Carrier Service Due To The Cessation of Normal Air Transportation Occasioned By Work Stoppages, vacates and sets aside General Temporary Order No. 2, entered in FR July 8, 1966, effective on date of order.

32 FR 5956, April 13, 1967: General Temporary Order No. 3, Motor transportation of property; grant of temporary authority authorized because of trucking industry labor dispute, effective on date of order.

32 FR 8945, June 22, 1967: General Temporary Order No. 3 (32 FR 5956), vacated and set aside, normal motor transportation having resumed.

32 FR 10538, July 18, 1967: General Temporary Order No. 4, Motor transportation of passengers and property, grant of temporary authority authorized because of nationwide cessation of railroad service, due to strike, effective on date of order.

32 FR 11099, July 29, 1967: General Temporary Order No. 4 vacated and set aside, normal rail transportation having been resumed, effective on date of order.

Section 211. [*311(a) U.S.C.*] **Motor transportation brokers—(a) License required.** —[Unchanged. See vol. 10, p. 8067.]

Notes of Decisions

Volume 10—p. 8067; Volume 11—p. 9473.

5. Employment of carriers not authorized to operate.—[Vols. 10, 11].—See Greyhound Corp. v. Consolidated Term. & Travel Bureau, §212(a), n. 35.

Section 211. (b) [*§311 (b) U.S.C.*] **Issuance of license; brokers in operation prior to enactment of section.**—[Unchanged. See vol. 11, p. 9473.]

Amendments, see footnote, vol. 11, p. 9473, historical note, v. 14, p. 11605.

Historical Note

The commission recommends that part II be amended to authorize the commission, after opportunity for hearing, to deny certificates, permits, licenses, or other operating authority when, in application proceedings, perjury, or subornation of perjury, has been committed before the commission, and the commission finds that the director, officer, or person convicted of such crime has such an interest in the business that the conviction affects the fitness of the carrier or broker.—Annual Report, 1962, p. 207.

Notes of Decisions

Volume 10—p. 8068; Volume 11—p. 9474; Volume 12—p. 10413; Volume 13—p. 11084; Volume 14—p. 11605; Volume 15—p. 12215; Volume 16—p. 12865; Volume 17—p. 13564; Volume 18—p. 14503; Volume 19—p. 15772.

2. Construction and interpretation.—Legislative history of §211 reveals that the primary purpose of Congress in regulating brokers is to protect carriers and the public against dishonest and financially unstable middlemen in the industry; however, it does not follow that that is the sole objective. The statutory standard set forth in §211 requires a finding of fitness of applicant and, also, that proposed operation is consistent with the public interest. As "public interest" aspect of the statutory standard encompasses a broader range of deliberation than does the "fitness" aspect, it seems clear that Congress intended, by requiring consideration of the "public interest" in §211(b), that commission evaluation of broker applications not be limited to the issue of applicant's fitness.—Carla Ticket Service, Inc., 94 M.C.C. 579 (580-1)*.

While it is not clear from the legislative history whether the "public interest" aspect of the statutory standard requires consideration of relevant competitive factors in judging broker applications, Congress was cognizant of the fact that commission proceedings are usually adversary in nature, entailing development of evidence relating to competitive factors among others. Moreover, Congress has not seen fit to change this standard or otherwise suggest that the commission's prior interpretation of §211(b) is in error; and since the commission has interpreted the statute to include competition as a factor to be considered, with the continued acquiescence of Congress, it seems clear that Congress did not intend that the commission be precluded from giving any consideration to competition in broker application cases.—Id., p. 581.

3. Applications, generally; parties; notice.—[Vols. 11-15, 17, 18].—

Fitness of applicant: Joint board's finding that applicant for license as a broker of passenger service may not be found fit when he is the sole stockholder of an interstate motor common carrier of passengers is amply supported by the evidence; application denied, in absence of exceptions to the board's recommendation.—Anderson, 89 M.C.C. 786 (786, 787).

Applicant's past violations, consisting of arranging tours similar to proposed operations without obtaining authority from the commission, were not the result of a willful design on its part to evade regulatory jurisdiction, but appear to be the result of misapprehension of the applicable law and regulations; also, it filed instant application when informed that its operations were unlawful. Applicant has sufficiently demonstrated that it will operate lawfully in the future, and that it is fit financially and otherwise to perform proposed service.—Carla Ticket Service, Inc., 94 M.C.C. 579 (582)*; for similar reasons, applicant, a retired teacher, is found fit to perform proposed service. However, applicant is admonished that he must maintain strict broker relationship with the public and the carriers he deals with; that he cannot be employed in any capacity by a carrier; and that his operations should be conducted in conformity with requirements set forth in 54 MCC 291.—Ross, 94 M.C.C. 508 (510, 511-13)*.

Applicant is not unfit to operate as a passenger broker by reason of past operations of its officers; their organization of tours was undertaken openly, without intent to evade regulation, and without intention of profiting thereby; such operations did not require license and were not unlawful.—Millenburg Tours, Inc., 89 M.C.C. 703 (706-7).

4. Public interest, generally.—[Vols. 10-19].—Consistent with legislative history of §211, broker applicants must show that their service will contribute something of value or benefit to carriers or the public; and consideration of existing broker service is relevant, for creation of needless duplicative services would neither advance primary purpose of §211 nor benefit anyone. Past popular acceptance of, and participation in, excursions arranged by applicant indicate that the public will support proposed service in arranging round-trip tours from Buffalo, N.Y., area to Canadian ports of entry on Niagara River. Though protestants are establishing newly authorized services at Buffalo, there is no showing that persons supporting instant application would use their service; moreover, that populous area should provide sufficient business to justify an additional brokerage service. Proposed operation will serve a useful public purpose and benefit carriers by generating new traffic; granted.—Carla Ticket Service, Inc., 94 M.C.C. 579 (581-2)*.

While broker status has been rejected as effective opposition in a motor carrier application proceeding, a licensed broker is a valid protestant to a license application; existing broker services have consistently been considered in determination of such applications. Although brokers are licensed primarily for protection of the public against unscrupulous or dishonest purveyors of transportation, rather than from effects of ruinous competition between carriers, brokers in arranging all-expense tours perform a beneficial economic service. They also invest substantially in facilities and personnel, and if there were no protection of that investment the very conditions which Congress sought to avert by the regulation of brokers might arise.—Id., 91 M.C.C. 721 (722-3)*.

The board's conclusion that protestant Greyhound's allegations of unwarranted competition from proposed round-trip tour service are not entitled to consideration, in determining whether license should issue, was based on decision in 92 MCC 17; however, the commission recently determined in that proceeding on reconsideration, 94 MCC 644, that relevant operations of a motor carrier protestant are entitled to consideration and should be examined in determining whether or not a proposed brokerage service will be consistent with public interest and the national transportation policy. Reexamining the instant proceeding in light of the latter report, protestant has offered no specific evidence sustaining its allegation that proposed service will adversely affect its total operations. On the other hand, proposed service will serve a useful public purpose and will benefit both the traveling public and the car-

riers furnishing the transportation; it will be consistent with the public interest; granted.—Ross, 94 M.C.C. 508 (509-10)*.

An applicant need not establish inadequacy of existing broker service in order to obtain a license as a passenger broker. The essential requirements of proof are that the proposed operations will benefit the traveling public; that applicant has a reasonable prospect of generating traffic for authorized motor carriers of passengers; and that his character is such that he will not defraud the public or the carriers whose services he utilizes, or engage in discriminatory practices. Applicant has fully met this standard of proof; granted.—Weidner Travel Bureau, Inc., 92 M.C.C. 17 (19)*; however, as record indicates that applicant has served as an agent of protestant, Greyhound, it is admonished that its broker operations should be conducted in conformity with requirements set forth in the Tauk Tours case, 54 MCC 291.—Id., 94 M.C.C. 644 (648)*.

Need is shown for applicant's proposed brokerage of round-trip all-expense tours, restricted to youth groups; applicant's officials are experienced in operation of youth group tours, the public has shown good response to its promotional activities, and tour services offered by existing brokers are not tailored to meet specific requirements of youth groups. Proposed operations will serve a useful public purpose and be beneficial to carriers furnishing the transportation; services of protesting brokers are not shown to have so preempted the populous area involved as to be adversely affected by additional competition of character authorized. Granted.—All-American Excursions, Inc., 91 M.C.C. 67 (69,70).

Applicant is not disqualified to receive license as broker of passenger tours by fact that its officers would initially participate in proposed operations only on part-time basis; it is not unusual for authority to be granted applicants seeking to conduct such operations as part-time activity; tour operations tend to be seasonal and tours of type proposed lend themselves to weekends and other times outside customary working hours.—Millenburg Tours, Inc., 89 M.C.C. 703 (706).

While grant of authority to applicant may increase existing competition for tour business, promise inherent in ability of applicant's officers to organize new groups and bring additional charter business to passenger carriers in area outweighs such considerations; in addition, they have an established clientele which would probably not undertake tours with protestants or other passenger carriers.—Id., p. 705.

In contrast to the basic purpose underlying motor carrier regulation, i.e., protection of the public from effects of ruinous carrier competition, brokers, who have no comparable investment in property or equipment, are licensed primarily for purpose of protecting the traveling and shipping public against unscrupulous or dishonest purveyors of transportation.—Auch Inter-Borough Transit Co. Extension, 88 M.C.C. 455 (459).

5. License covering part of operations sought.—[Vols. 10, 12, 14, 18].—While applicant seeks general authority to arrange passenger tours, its evidence in respect to arranging transportation for persons other than youth groups is vague and indefinite. Authority granted, therefore, is restricted to youth groups.—All-American Excursions, Inc., 91 M.C.C. 67 (69, 70).

24. When license necessary, in general.—[Vols. 10-19].—Organization of tour groups does not require a license unless undertaken for compensation. Applicant's officers had no intention of profiting from tours they organized, and fact that they inadvertently profited from one tour and did not demonstrate validity of their nonprofit status by refunding any surplus to the passengers, or setting it aside to defray costs of tours resulting in loss, did not automatically change their status to that of a broker requiring a license; intent to obtain compensation would be manifest only if their operations were consistently and substantially profitable and they did nothing to change the situation.—Millenburg Tours, Inc., 89 M.C.C. 703 (707).

25. Utilizing holder of effective certificate, supplying authorized transportation.—[Vols. 15-18].—On reconsideration, in view of decision in 54 MCC 291, affirmed 143 F. Supp. 689 and 352 US 1020, approval of passenger brokerage application (which is supported by a carrier authorized only to engage in charter

operations) would place applicant in a position, when providing its services in conjunction with authorized charter services, to compete with protesting regular-route passenger carrier which may perform "special operations" over its various regular routes or segments thereof. In performing charter service a carrier may not sell individual tickets for a particular trip or tour, whereas rendering of special-operations service contemplates that carrier will assemble passengers through sale of individual tickets covering a trip or tour arranged by it; however, an authorized broker may sell tickets on an individual basis and then arrange with a charter operator to perform the actual transportation service; thus, intervention of a broker permits the charter carrier to enjoy certain traffic which it must otherwise forego.—Weidner Travel Bureau, Inc., 94 M.C.C. 644 (646, 647)*.

Although protestant is a special-operations carrier and applicant is a broker supported by a charter operator, the competitive situation is substantially similar to that in 88 MCC 455 wherein it was held that where a protestant broker was joined by a motor carrier authorized to engage in charter operations, their combined economic interest is entitled to consideration in application proceeding in which motor carrier special operations are proposed. Therefore, relevant operations of protestant are entitled to consideration and should be examined in determining whether proposed brokerage service will be consistent with the public interest and the national transportation policy.—Id., p. 647.

26. Transfer or sale of license.—[Vols. 10-12, 15, 17].—See Shamrock Van Lines purchase case, §5(2), n. 5.

30. Conditions imposed; scope of operations.—[Vols. 17-19].—Authority granted for operation at Baltimore, Md., as a broker of passenger transportation in charter operations from five Maryland counties to points in seven States and the District of Columbia; however, in view of its intention to sell individual tickets to tour groups, applicant is admonished to comply with requirements of 54 MCC 291, and 63 MCC 493, when it purchases charter transportation for groups.—Millenburg Tours, Inc., 89 M.C.C. 703 (707).

Although there is no evidence that applicant, as a former passenger solicitor for Greyhound Corp., intends to discriminate in its choice of carriers, it is admonished to retain strict broker relationship with public and carriers with which it deals; neither it nor its officers should be employed in any capacity by such carriers. License granted as broker of round trip all-expense charter tours beginning and ending at Philadelphia, restricted to youth groups (accompanied by supervisors) when engaged in educational and recreational pursuits, with further admonition that its operations be conducted in conformity with requirements of 54 MCC 291.—All-American Excursions, Inc., 91 M.C.C. 67 (70).

Section 211. (c) [*§311(c) U.S.C.*] Rules and regulations; bond or other security required.—[Unchanged. See vol. 10, p. 8072.]

Notes of Decisions

Volume 10—p. 8072.

Section 211. (d) [*§311(d) U.S.C.*] Inspection of accounts, records, etc.—[Unchanged. See vol. 10, p. 8073.]

Section 212. (a) [*§312(a) U.S.C.*] Suspension, change, revocation and transfer of certificates, permits, and licenses.—[Unchanged. See vol. 10, p. 8074, vol. 11, p. 9476.]

Amendments, see footnotes, vol 10, p. 8074, historical note, vol. 14, p. 11607.

Historical Note

The commission renews its recommendation that §212(a) be amended so as: (1) to make motor carrier operating authorities subject to suspension, change, or revocation for willful failure to comply with any commission rule or regulation lawfully promulgated; (2) to make the revocation procedure therein conform with procedure provided in §410(f) by eliminating "willfully" in first proviso thereof; and (3) to provide that the commission may, upon reasonable notice, suspend motor carrier operating authorities for failure to comply with insurance regulations issued pursuant to §215.—Annual Report, 1962, p. 205; renewed, Annual Report, 1963, p. 20; Annual Report, 1964, p. 77-8.

Also that part II be amended to authorize the commission, after opportunity for hearing, to revoke or suspend certificates, permits, licenses, or other operating authority, or to order divestiture of interest when such operating authority, or facility or instrumentality operated or employed in connection therewith, has been used to commit, or to aid and abet in commission of, a felony, and the commission finds that the director, officer, or person convicted of such crime has such an interest in the business that the conviction affects the fitness of the carrier or broker.—Id., p. 207; renewed, Annual Report, 1963, p. 21.

Notes of Decisions

Volume 10—p. 8074; Volume 11—p. 9477; Volume 12—p. 10416; Volume 13—p. 11085; Volume 14—p. 11607; Volume 15—p. 12218; Volume 16—p. 12866; Volume 17—p. 13566; Volume 18—p. 14505; Volume 19—p. 15775.

1. Construction and interpretation.—[Vols. 11-19].—Section 212(a) is a limitation on the commission's power, but constitutes no obstacle to the court and the statutory process of judicial review. The commission's administrative act of issuing a certificate does not preclude the court from inquiring into whether that act was lawfully done; thus, orders of the commission granting motor carrier authority, and denying petition for reconsideration, are reviewable by the court.—Whitfield Transp., Inc. v. United States, 254 F. Supp. 852 (854, 855)*.

Statute limiting the commission's power to revoke an outstanding certificate is not a limitation on the court's power of review; it was intended to limit the commission's power and nowhere includes the courts as subject to its provisions. While §212(a) makes issuance of a certificate or permit the final step in the administrative process, this does not mean it is the final step in the judicial process of review. There is a formal difference between an order authorizing issuance of a certificate and the certificate; and the court's power to review the commission's order and to take whatever action may be appropriate with respect to the certificate itself is not limited. While the court has no statutory power to set aside a certificate, the certificate would necessarily be of no effect if the order on which its issuance rested were invalid.—Asbury Transp. Co. v. United States, 236 F. Supp. 322 (324-5)*.

While it is not improper for the commission to rely on a prior order in interpreting a certificate so long as such prior ruling does not lack a rational basis, it may not ignore the record made in the case before it and place its sole reliance on its previous orders. In addition, the commission has no power to change or modify a certificate under the guise of interpretative action. Thus, having recognized but ignored undisputed testimony of record, the commission's reliance on three previous orders or decisions is "lacking in rational basis" for its finding that plaintiff's authority to transport buildings or prefabricated buildings, complete, knocked down, or in sections (without restriction) does not cover single unit mobile homes. Giving due weight to the prior orders, the commission's conclusion that commodity so described can only be transported in two or more units is not tenable; order requiring cancellation of rates on single unit homes, carriage thereof being beyond plaintiff's authority, is set aside, leaving any appropriate further action to the commission.—Pre-Fab Transit Co. v. United States, 262 F. Supp. 1009 (1010, 1013-16)*.

Interpretation of commodities authorized to be transported by a certificate is left largely to the commission's discretion, and its construction is controlling unless clearly erroneous, arbitrary, an abuse of discretion or in contravention of an established legal principle. The commission's findings that plaintiff's certificate authorizes transportation of commodities named therein only if intended for

use in, or in connection with, prefabricated houses or buildings cannot be said to be clearly erroneous. The Supreme Court has approved the commission's adoption of the intended use test and validity of that test is no longer open to question; furthermore, manner in which the commission applied the intended use test in the proceeding was not an abuse of discretion.—Whitehouse Trucking, Inc. v. United States, 261 F. Supp. 9 (10, 11)*.

And the fact that the commission construed the certificate differently than plaintiff's language expert, whose testimony supported its interpretation, is not controlling. The commission need not agree with language experts because it also has an expertise in interpreting the language contained in certificates of public convenience and necessity; that expertise is formidable and cannot be lightly regarded by the reviewing courts. The commission's order, requiring plaintiff to cease and desist from transporting commodities not authorized by its certificate as construed, sustained. —Id., p. 11.

The reviewing court must affirm the interpretation placed on carrier's operating authority by the commission unless it is clearly erroneous. The commission's determination that plaintiff's certificate authorizing transportation of the commodities listed in parts "A," "B," and "C" in appendix to the report in the Modification case, 46 MCC 23, permits it to transport commodities listed in parts A and B for any shipper without regard to the business of the manufacturer or distributor, but permits transportation of commodities listed in part C for any shipper if, and only if, such part C commodities have in fact been manufactured or initially distributed by meat packinghouses, is not clearly erroneous; sustained.—Argo Collier Truck Lines Corp. v. United States, 268 F. Supp. 942 (945-6)*.

Unless clearly erroneous, the commission's interpretation of a certificate of its own creation is binding on the courts. Since no criteria with which the commission must comply in interpreting its certificates are set forth in the statute, any reasonable standard may be used. In interpreting plaintiff's authority to transport aircraft and aircraft parts as not authorizing transportation of missiles and missile parts, the commission's decision to use ordinary, rather than industry, meaning of the words and its determination as to meaning of the terms in ordinary usage involved exercise of administrative judgment; and interpretation of intended meaning of those terms is not clearly erroneous, since the ultimate decision was based on an independent interpretation of the words and subsequent reference to intent was only to strengthen that conclusion. Nor was the commission's reliance upon its prior interpretive ruling in a similar case improper, since the the prior ruling does not lack rational basis and was rendered in a full and fair hearing; sustained.—U. S. A. C. Transport, Inc. v. United States, 235 F. Supp. 689 (692-3, 694)*.

The interpretation which the commission places upon a certificate issued by it must be upheld by the court unless it is clearly erroneous. Function of the reviewing court is not to determine de novo what is a proper construction of a certificate; the court is bound by the commission's interpretation unless it is capricious, arbitrary, constitutes an abuse of discretion, or does violence to some established principle of law. The commission's interpretation of restriction in one of plaintiff's certificates, and whether it prevented tacking of that authority with other of plaintiff's separately granted certificates to give it a route to Canada through Buffalo port of entry, was not erroneous; indeed, it was patently right; sustained.—Transamerican Freight Lines, Inc. v. United States, 258 F. Supp. 910 (919-22)*.

The commission has the primary responsibility for interpretation of certificates it issues and, while that authority is not limitless, if the proceedings conform to law, the commission's interpretation will be accepted unless it is clearly erroneous, or capricious, arbitrary or an abuse of discretion. And in a proceeding involving interpretation of a motor-carrier certificate, as in any case, the commission must consider all relevant evidence on the issues presented.—E. B. Law and Son, Inc. v. United States, 247 F. Supp. 846 (848)*.

Record in commission proceeding, wherein plaintiff sought a determination as to whether or not its authority to transport refined petroleum products, "except residuary petroleum products," authorized transportation of asphalt, clearly shows that due consideration

was given to all pertinent evidence on the questions involved. And the commission's findings and conclusion (that plaintiff's authority does not include asphalt) disposed of the issues before it, are supported by the record, are not arbitrary, and do not represent an abuse of discretion.—Id., pp. 848-51.

In action to set aside the commission's order approving purchase transaction, the reviewing court is bound by the commission's interpretation of considered certificate as authorizing the operations vendor had been conducting thereunder, on traffic interchanged with vendee, between the point of interchange and terminus of the purchase route.—Alabama Highway Exp., Inc. v. United States, 241 F. Supp. 290 (295-6)*.

In holding that sectionalized homes designed to be joined together to make a house permanently situated at point of destination lack the determinative characteristics of house trailers and therefore are not within plaintiff's authority to transport "trailers designed to be drawn by passenger automobiles," the commission has done no more than construe or interpret a certificate granted by it, and such an interpretation or construction will be overturned by the courts only if clearly erroneous. The commission's decision that the sectionalized home described, which is not built in single units and is not intended to retain any mobility, is not a trailer is reasonable and not clearly erroneous; sustained.—National Trailer Convoy, Inc. v. United States, 240 F. Supp. 286 (288, 289)*.

In action to set aside the commission's order interpreting scope of plaintiff's certificate, the reviewing court's function does not involve a de novo construction of the certificate or re-evaluation of undisputed facts as to services performed under pretended warrant thereof; scope of review is necessarily confined to interpretation placed by the commission upon a certificate of its own creation. Since the record is not persuasive that the commission's interpretation of "iron and steel articles" in plaintiff's certificate was capricious or arbitrary, that it constituted an abuse of discretion, or did violence to some established principle of law, the court is bound by that interpretation; sustained.—Eagle Motor Lines, Inc. v. United States, 236 F. Supp. 502 (504)*.

Even if the commission's present interpretation of plaintiff's certificate was adopted subsequent to issuance of the certificate, that interpretation must be allowed to stand unless it is irrational or clearly not in accordance with the plain meaning of the certificate. There is strong dictum in the commission's prior rulings which supports its interpretation of "parts thereof" in plaintiff's authority for "farm machinery and parts thereof" as precluding separate transportation of parts, and such interpretation is not irrational. It is not the court's duty to substitute its own reasoning for that of the commission; courts are not given carte blanche when reviewing the commission's interpretation of a certificate. The commission's order sustained.—Ace Lines, Inc. v. United States, 239 F. Supp. 804 (806)*.

The commission was merely interpreting the meaning of plaintiff's permit by applying well established definitions to "packinghouse products" and "canned goods" therein to determine lawfulness of its questioned operations; such interpretation, being simply a definitive declaration of rights existing under the permit from the beginning, cannot be equated with modification when it cannot be found clearly erroneous. And application of definitions developed many years after its permit was issued did not deprive plaintiff of rights without due process of law; nor is there merit to plaintiff's contention that the commission was estopped to question legality of its operations by virtue of letters from commision employees to its predecessor which plaintiff interprets as authorizing the questioned operations.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (463)*.

In action to set aside the commission's decision and order construing the restriction in plaintiff's authority to transport new trucks against combination thereof with authority of another carrier for performance of a through service, the common dictionary meaning of "combine" does not preclude interpretation reached that, as used in the tacking proviso, it comprehends any joinder of authority, directly or indirectly, in the performance of a through service. Direct, actual linkage in chain fashion of units sought to be combined is not required; an indirect linkage may also

serve to unite or join grants of authority necessary for a through service. Plaintiff's argument concerning proper construction of the right to combine grants of authority was presented to the commission; and it has not shown that consideration of that argument would have required a different conclusion than that reached. There being no showing of clear lack of rationality, arbitrariness, or error in law, the commission's construction of its certificates is controlling on the courts; sustained.—Kenosha Auto Transport Corp. v. United States, 236 F. Supp. 568 (570-2)*.

The interpretation of a certificate it issues is properly with the commission, not the courts; if that interpretation is supported by substantial evidence and is not arbitrary or capricious, the court will not substitute its view therefor. Conclusion of the commission in investigation proceeding that drop-frame trailers per se are not special equipment, and that use of such trailers by the respondent to transport certain commodities was not beyond the scope of its authority to transport general commodities with certain exceptions, including commodities requiring special equipment, is amply supported by the evidence; is not erroneous, arbitrary, or capricious; sustained.—Heavy-Specialized Carriers Conference v. United States, 231 F. Supp. 968 (970-1)*.

Primary responsibility for determining what items fall within commodity description in a certificate rests with the commission, which has an expertise of its own in interpreting certificates to determine scope of operations authorized thereby [citing 344 US 344]. Since plaintiff's authority for "oilfield equipment, machinery, and materials" is patently ambiguous as written and susceptible of varying interpretations, the court should not substitute another construction for that of the commission. Also, words may vary greatly in content according to the circumstances and the time in which used, and should be read in light of experience of those who framed them. In view of those principles, it cannot be said that the commission's interpretation of plaintiff's authority, arrived at through application of its cumulative expertise, as excluding machinery and materials unconnected with the oilfield industry is not a permissible one.—J. B. Acton, Inc. v. United States, 221 F. Supp. 174 (177-8)*.

The opinions of two professors of English that the adjective "oilfield" modifies and limits only "equipment" and in no wise modifies or limits "machinery" and "materials" were not binding on the commission, and no relief can be granted plaintiff because the commission failed to follow those opinions. Nor does the lack of continuity in underlining of the certificate description support plaintiff's claim of unrestricted right to transport "machinery" and "materials"; neither of its expert witnesses regarded the broken underlining as significant, and there is no general inflexible rule of construction which would make the nature of the underlining determinative, though it should be considered, as it has been, along with other indicia of construction. Further, plaintiff has not shown that the original holder of the "grandfather" authority interpreted it as allowing transportation of anything other than oilfield equipment, oilfield machinery, and oilfield materials. There is substantial basis for the commission's order; sustained.—Id., pp. 177, 178, 179.

In general, the scope of transportation permitted by a certificate is for the commission to determine, and its determination will not be overturned by the courts unless arbitrary or clearly erroneous. The proper interpretation and meaning of the authority under a given state of facts, and effect thereof under protection of the "grandfather" clause, is reserved for the commission, and its construction of a "grandfather" certificate is controlling on the courts. On the other hand, the commission has no power to change or modify a carrier's certificate under guise of interpretive action. The commission's finding that plaintiff's authority to transport building materials, heavy machinery, "and other commodities of similar nature" does not embrace such items as cable, veneers, transformers, and regulators is entirely consistent with logic and common sense; and its outline of circumstances under which plaintiff may accept shipments as building or construction materials without inquiry as to actual intended use of the articles was a valid exercise of its discretion; the commission's order sustained.—Mitchell Bros. Truck Lines v. Unit-

ed States, 225 F. Supp. 755 (758, 760)*.

Since the commission's determination that plaintiff's "grandfather" certificate was clear and unambiguous, and that it embraced the operating rights for which evidence was adduced in the "grandfather" proceeding, is not clearly erroneous, the court is bound by that interpretation. The language used in defining plaintiff's radial authority is not unusual or complex in that it does not conform to that generally used by the commission over many years to fix and identify radial base points "on the one hand" and radial destination points "on the other." While the authority may be complex because of extent and varied pattern of the operations authorized, it does not follow that the language used is neccessarily ambiguous, particularly when it is couched in phraseology which has come to have a commonly understood meaning for purposes of defining such grants of authority. Sustained. —Cardinale Trucking Co. v. United States, 232 F. Supp. 339 (345-6)*.

"Grandfather" certificate granted plaintiff's remote predecessor conferred authority for transportation of general commodities westbound from Charleston, W. Va., to Cincinnati and for transportation of gas cylinders and rubber tires eastbound from Cincinnati to Charleston, and language of certificate held by plaintiff as latest transferee carries the same authority, no more and no less. Changes in phraseology of the transferee certificates from time to time did not erode the "grandfather" rights or anywise reduce the authority originally conferred. Even assuming some ambiguity in language of either the "grandfather" certificate or the one presently held, the construction placed thereon by the commission would be controlling unless arbitrary or clearly erroneous; the commission's construction is consistent with its past holdings in similar cases, and its finding that plaintiff's eastbound authority does not permit transportation of general commodities from intermediate points was not arbitrary, discriminatory, or contrary to fact; sustained.—Keystone Motor Exp., Inc. v. United States, 228 F. Supp. 793 (796, 797-8)*.

The court's powers, in action to enjoin enforcement of the commission's order construing plaintiff's authority to transport canned goods as not including transportation of peanut butter, are clearly limited; it may inquire only to ascertain if there is a reasonable basis for the commission's construction of the certificate; it cannot by translation enlarge the authority. Though the court may disagree with the commission's conclusion, that conclusion cannot be disturbed if it is not contrary to law, is not capricious or arbitrary, and is premised on substantial evidence. The commission's construction of "canned goods" in plaintiff's certificate is accurate; it does not depart from common usage or understanding, nor is it an obsolete refinement. Complaint dismissed.—Archie's Motor Freight, Inc. v. I.C.C., 226 F. Supp. 487 (488-90)*.

The commission clearly has both jurisdiction and authority to determine scope of a carrier's lawful operations in the first instance (citing 355 US 554 and 114 F. Supp. 814); and in exercising authority to determine scope of unlawful operations of a carrier it invariably becomes necessary to construe or interpret the carrier's operating authority; in so doing the commission fulfills a function for which this expert body was created by Congress. However, the commission may not amend, modify, suspend, or revoke an outstanding certificate without compliance with provisions of §212, and limitations thereof may not be bypassed under guise of interpretative action; if the commission's interpretation of plaintiff's certificate in complaint proceeding were found to be a modification or revocation thereof in whole or part, it would be unlawful and should be set aside. The record shows that the commission merely attempted to determine plaintiff's rights under its certificates as they existed from the beginning; this cannot be equated with modification or revocation unless shown to be clearly erroneous.—DeCamp Bus Lines v. United States, 224 F. Supp. 196 (202-4)*.

See also W.J. Dillner Transfer Co. v. McAndrew, 28 USC §2201, n. 2.

Since certificates of public convenience and necessity speak for themselves, and extraneous or antecedent facts may not be looked to in absence of patent ambiguity or indefiniteness therein, considered certificate authorizing transportation of "mixed shipments" may not be considered as impliedly

limited to mixed truckload service by language of the commission's report.—Refrigerated Transport Co. v. United States, 214 F. Supp. 536 (540)*.

However, as restriction to transportation of "mixed loads," which the commission substituted for "mixed shipments" in motor carrier certificate in compliance with mandate of the court, is ambiguous and therefore subject to future construction in the light of extraneous and antecedent facts, language of the commission's decision (92 MCC 254) and the facts on which it is premised may be looked to in determining the meaning of a "mixed load." The report makes plain the transportation service which carrier may perform under the certificate and, in addition, the certificate granted is subject to imposition of such further terms, conditions, and limitations as the commission may hereafter attach; in light of those facts, construction of the term "mixed loads," should the question arise, is left to the commission. Petition to suspend, enjoin, or set aside the commission's report and order, denied.—Id., 227 F. Supp. 1021 (1022-3)*.

Delineation of the service authorized by a certificate of public convenience and necessity, as well as interpretation of such a certificate, is left to the commission and its construction thereof is controlling on the courts unless clearly erroneous, arbitrary or capricious, an abuse of discretion, or a violation of some established principle of law.—United Transports, Inc. v. United States, 214 F. Supp. 34 (39)*.

The law is clear that the commission's interpretation of a carrier's permit is binding on the courts unless clearly erroneous, arbitrary, or capricious; and the commission's interpretation of disputed portions of plaintiff's permit is not clearly erroneous or unreasonable; sustained.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (315)*.

Furthermore, the commission's failure to correct carrier in its mistaken belief regarding the scope of its authority does not estop the commission from asserting the proper interpretation of carrier's permit in an appropriate proceeding.—Id., p. 314.

In action to set aside the commission's decision that transportation of bulk commodities tendered by shipper in C & S containers is within authority of general-commodity carriers, but that when a C & S container is premounted on a flat-bed trailer and the commodity is loaded therein without any prior packaging by shipper the service is essentially a tank-truck service, plaintiff's claim that to treat the issue as one of analogy of such containers to packages or to tanks ignores the statutory command that operating rights shall not be "taken" except under §212(a) begs the question; if plaintiffs did not have the certificate authorization claimed, the commission's decision does not "take" any existing rights.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (874)*.

The commission's power to construe words, terms, or phrases used by it in its own certificates should be given considerable latitude, and should prevail unless its interpretation be a plain abuse of discretion, arbitrary, capricious, or violative of established law. This is especially applicable to the meaning to be given terms denoting generic classification of commercial products relating to industrial transportation under regulatory purposes of the act. Clashes between precise scientific definitions of component parts of products and the general understanding in the commercial world are to be expected with advance of knowledge; assuming this to be the case with crude tall oil or pulpmill liquid, the commission cannot be said to have acted arbitrarily, or abused its discretion, or violated §207 in deciding that, for purposes of its certificates, crude tall oil and pulpmill liquid should be considered vegetable oils.—McKenzie Tank Lines, Inc. v. United States, 211 F. Supp. 876 (877, 878)*.

The commission's interpretation of plaintiff's certificate for transportation of "general commodities," followed by specific exceptions, "in truckload lots," as restricting transportation of general commodities to single shipments in t.l. lots is not shown to have been capricious or arbitrary, to have constituted an abuse of discretion, or to have violated some established principle of law. However, this does not mean that the court agrees with the commission's definition of the nebulous phrase "in truckload lots" as meaning a quantity that "substantially fills the carrying capacity of a vehicle ordinarily used in interc-

ity transportation"; there is pointed disagreement among carrier witnesses as to the understanding within the industry of the meaning of that restriction; it is indefinite, vague, and incapable of being enforced from a practical standpoint.—Bowman Transp., Inc. v. United States, 211 F. Supp. 354 (356, 358)*.

A court may not substitute its judgment for that of the commission with respect to the scope or coverage of a certificate or permit issued by the commission, if that question is at all doubtful. The meaning of words may be a question of law or a question of fact, and words may have one meaning when used in common speech and another when used in industry or in regulation of industry; in interest of uniformity in regulation and policing of the motor carrier industry it is essential that the commission be subjected to as little judicial interference as the law will permit.—Ballentine Produce, Inc. v. United States, 209 F. Supp. 679 (683)*.

While, in view of remand of application for reconsideration on other grounds, the court is presently unwilling to disagree with the commission's interpretation of a certificate of its own creation, that authority for "explosives and blasting supplies" does not embrace nitro carbo nitrate, the record in that area is so confusing that the commission apparently felt compelled to resort to artificial semantics and inapposite analogies. NCN, by definition an oxidizing agent, accounts for about half the total sales of explosives and blasting agents in the United States; the commission concluded that it is a "blasting material," the examiner that it is both a "blasting supply" and a "blasting material," while the manufacturer advertises it as, and considers it to be, a "blasting agent." It is suggested that the par ties supplement the present record by evidence relating to the functional use of NCN and the construction which other shippers and carriers have historically placed on the term "blasting supplies."—Baggett Transp. Co., Inc. v. United States, 231 F. Supp. 905 (908-9)*.

Construction of the scope of transportation permitted by a certificate is for the commission and will not be overturned by the courts unless arbitrary or clearly erroneous; the court is bound by the commission's interpretation unless it constitutes an abuse of discretition or does violence to some established principle of law. In view of conflict of the commission's interpretation of plaintiff's authority to transport contractors' machinery and equipment with that of its expert examiner, as well as concession of its counsel in brief filed on its behalf, plaintiff's authority is uncertain, indefinite, and vague as to what type of transportation it may perform. The interpretations decision should be clarified and made certain: definite guide lines should be established that are not ambiguous, so that plaintiff may continue its operation without jeopardizing its certificate; order set aside, and interpretations case remanded for further action in accord with the court's opinion.—W.T. Mayfield Sons Trucking Co. v. United States, 211 F. Supp. 619 (624-6, 628)*.

While the commission's interpretation of plaintiff's authority to transport "contractors machinery and equipment" complies with the court's direction to establish definite, unambiguous guidelines delineating scope thereof, restrictions thereby imposed effectively preclude service where consignee is a branch of the Federal Government or a county or State highway department, unless shipment is intended for use by a private contractor. However, considered authority was sought for the stated purpose of continuing service previously rendered under like-worded temporary authorities issued on basis of affidavits by plaintiff and a representative of the Army as to need for service between military projects and establishments. Question therefore arises as to scope of plaintiff's authority under those temporary rights, and whether issuance of permanent certificate contemplated continuance of service performed thereunder; if the evidence were developed it could show inconsistency of those facts with the limitations imposed by the commission's later interpretation.—Id., 234 F. Supp. 655 (658-60)*.

Operating authority issued by the commission may be limited, canceled, or revoked only pursuant to provisions of §212(a), and the commission may not circumvent requirements thereof under the guise of interpreting operating authority issued by it. Since it is possible that the commission's interpretation would improperly narrow the scope of plain-

tiff's authority, it should have given consideration to testimony showing the actual services rendered prior to issuance of the permanent certificate, and its failure or refusal to do so deprived plaintiff of a full and fair hearing. While the court is without power to perform the functions of the commission, it is its duty to declare that the commission's order in the interpretation case is erroneous for the reason that it gave no consideration to plaintiff's actual operations prior to issuance of the considered certificate. Remanded to the commission for action in accordance with the opinion.—Id., pp. 660-1.

Having found that plaintiff's certificate authorizing transportation of (1) "Oilfield equipment and supplies" and (2) "Pipe, pipeline material, machinery and equipment incidental to and used in connection with the construction, repairing, or dismantling of pipelines" is ambiguous as to whether the limitation "oilfield" in the first paragraph applies to the authority in the second for hauling pipe, etc., the commission applied the rule for interpreting Mercer-type descriptions (though admitting that plaintiff's authority is not phrased in exact words thereof) and, relying on the ambiguity as justification for looking behind the face of the certificate, found upon examination of the underlying application proceedings that plaintiff is not authorized to transport pipeline commodities other than in oilfield service. The commission does not contend that its interpretation may be upheld without the finding of ambiguity, for unless a certificate is ambiguous on its face the commission may not look beyond its terms.—Parkhill Truck Co. v. United States, 240 F. Supp. 842 (843-4)*.

However, the certificate in question is a consolidation of two separate authorities issued plaintiff's predecessor, one granted on a showing of convenience and necessity for the pipeline commodities, and a "grandfather" certificate issued later for oilfield commodities; there is merit to plaintiff's contention that it was arbitrary to read those authorizations together Mercer-style. While the ambiguity that does exist on the face of the certificate justified the commission's exploration of the extent of authority contained therein, the undisputed evidence indicates that the ambiguity is merely superficial, resulting only from the routine administrative consolidation of two separately issued grants, neither of which is ambiguous when separately considered. The ambiguity present in a Mercer-type certificate is inherent in the original certificate; but the apparent ambiguity in plaintiff's certificate is completely dissipated by the fact of its creation through a subsequent consolidation of separate authorities.—Id., pp. 844-5.

Such an ambiguity justifies inquiry only to the point of source of original authority and does not allow, and cannot premise, an examination of what is then indicated to be a secondary source—the original proceedings. To make the latter inquiry is but a thinly veiled violation of the protection allowed existent and operating authority by §212(a). The commission's order is faulty in law and clearly erroneous; set aside and enjoined.—Id., p. 845.

Motor carrier certificates have been held to be property of value, and entitled to constitutional protection; therefore, rule 1 of the commission's regulations governing transportation of household goods, which defines "household goods" as used in certificates authorizing such operations, defines the scope of a certain "property right" which cannot be taken or diminished without regard to due process of law.—Movers Conference of America v. United States, 205 F. Supp. 82 (84)*.

While an order of the commission would not be upset unless shown to be clearly erroneous, since order in 86 MCC 293 amending rule 1 and redefining "household goods" is erroneous, it is annulled and set aside. Redefinition of household goods narrows that term in that it requires change of a householder's dwelling or relocation of a business establishment before household goods carriers may engage in the move and, since this is done by procedure other than that set forth in §212(a), the order constitutes a deprivation of rights without due process of law; enforcement of the order, insofar as it relates to rule 1(a)(1) or 1(a)(2), enjoined.—Id., pp. 85, 86.

Respondent's argument that the commission cannot lawfully interpret a carrier's operating authority in a suspension proceeding is without merit. The commission has jurisdic-

tion to consider all matters of record relating to the lawfulness under the act of schedules under investigation.—Plastics, Sirup & Washing Compounds, Del. to N.Y. & N.J., 315 I.C.C. 351 (352).

Doctrine of the last antecedent is merely a decisional aid in interpretation of language whose meaning is somewhat uncertain. Where a certificate is ambiguous, it is proper first to examine the record in the proceeding which gave rise to its issuance; then, if such examination does not clearly reveal the intent of the commission, it is proper to apply the doctrine of the last antecedent. Where, but for absence of a comma following "boats" in the commodity description, the authority recited and each of the classes of commodities listed therein are typical of those found in certificates issued heavy haulers, one conversant with motor carrier regulation is led to suspect a drafting error; language of the certificate is not clear and it must be examined in light of the proceeding leading to its issuance; such examination leaves little doubt that respondent sought authority only for commodities requiring use of special equipment because of size or weight, and that only authority to transport such commodities was intended.—Road Paving Materials between Points in New England, 319 I.C.C. 95 (97).

The Supreme Court in 359 US 171 removed any doubt that the commission has the authority and initial responsibility of interpreting its certificates; and the commission in 88 MCC 745 made clear that, although the concept of interstate commerce embraces a movement between points in one State through another, nevertheless, when such operations are conducted under a commission certificate solely for the purpose of evading State regulation of the traffic concerned, such operations are in bad faith and violative of provisions of the act, and an appropriate action may ensue under provisions of §204(c).—Service Trucking Co., Inc.—Declaratory Order, 94 M.C.C. 221 (225-6)*.

Upon review of underlying case precedents and other historical factors, certificates and permits of carriers of meats and packinghouse products phrased by reference to sub-parts in appendix to the Modification case, 46 MCC 23, or in appendix I to the Descriptions case, 61 MCC 209, are interpreted as authorizing: (1) by specific reference to parts A or B in either appendix, commodities listed therein may be transported without regard to manufactured or initially distributed such commodities; (2) by reference to part C in either appendix, carrier may transport the listed commodities when they have been manufactured or initially distributed by meat packinghouses; and (3) reference to part D in Descriptions case appendix I authorizes transportation of commodities used in the meatpacking business when destined to or for use by meat packer. However, authorities framed in generic terms such as "packinghouse products," whether or not reference is made to the appendixes, remain limited to carriage of commodities produced or initially distributed by meat packinghouses.—Argo-Collier Truck Lines Corp. Extension, 99 M.C.C. 591 (599-602)*.

Although testimony of respondent's language expert (which supports carrier's interpretation of its prefabricated-buildings from an academician's point of view) is considered, the commission is not bound to accept his point of view as controlling its interpretation. Respondent's contentions as to the transportation permitted by its certificate, being so at odds with a meaning in harmony with normal usage of commission terminology, must be rejected.—Whitehouse Trucking, Inc., Investigation and Revocation, 99 M.C.C. 621 (623-4, 628)*.

Defendant's transportation of a passenger from the intersection of Cooperstown Road and Laurel Terrace, Cherry Hill Township, N. J., to Philadelphia, Pa., found to be within scope of its passenger authority. While that intersection is in an incorporated township, the township is an "unincorporated area" as that term is defined in the Commercial Zone case, 46 MCC 665, referred to in 49 CFR 165a.12; that report specifies, in reference to 203(b8), that "municipality" refers only to cities, towns, villages, and boroughs, and does not include townships and counties; and also states that "unincorporated area" means any area, regardless of its urban development, not included within an incorporated city, town, village, or borough. Although Cherry Hill Township is incorporated, it is not

a municipality; thus, since considered intersection is located in an "unincorporated area," within 46 MCC 665 and 49 CFR 165a.12, defendant's service to that point is proper and lawful. Complaint dismissed.—Public Service Coordinated Transport v. Red Arrow, 98 M. C. C. 16 (17-8).

See also Asbury Park—N.Y. Transit v. New York, K.L.B. Bus Line, §203(b), n. 60 *Passenger carriers.*

The commission in its discretion may entertain a request for determination of service which may be rendered under any certificate that it has issued. Issue raised by petition for interpretation of effect of restriction in one of petitioner's certificates does not require submission of evidence or any further proceedings, nor does disposition of the issue require reopening any proceedings in which it obtained its other certificates; replicant's request for dismissal, overruled. Effect of restriction in petitioner's regular-route authority between points in southern New England—to transportation of shipments between points authorized therein, on one hand, and, on the other, Pittsburgh, Pa., and authorized points west of Ohio-Pennsylvania State line—is to confine petitioner's service thereunder to overhead traffic moving between points authorized in that certificate and Pittsburgh and points west of that State line authorized in its other certificates, including ports of entry and interchange points.—Transamerican Freight Lines, Inc.—Interpretation, 95 M.C.C. 121 (123-4)*.

Contract carrier authority to serve "points in" named Virginia counties includes service to politically independent cities located within the boundaries of said counties; to exclude independent cities from scope of petitioner's permit would result in wholesale atomization of its operating authority; and it is almost beyond belief that a carrier would seek authority to serve points in Roanoke County, for example, but not the city of Roanoke which is a political entity separate and distinct from the county. However, insofar as the petition for declaratory order seeks a ruling that would interpret the county-wide authority as embracing all cities "having a common corporate boundary with the authorized Virginia counties," it cannot be granted. Such a broad interpretation would confer a windfall of authority on petitioner which it apparently does not seek.—Carolina-Virginia Courier, Inc., Extension, 95 M.C.C. 612 (614-5).

Effective administration of the act dictates that, in absence of patent ambiguity, the commission look only to the language of a carrier's certificate or permit in determining whether a particular operation is within scope of its authority.—Consolidated Copperstate Lines, Inc. v. Navajo Freight, 92 M.C.C. 516 (519)*; and the intent of the framers may generally be considered in interpreting a certificate only when it is patently ambiguous. There being no patent ambiguity in the description "iron and steel articles," reliance on respondent's "grandfather" authority to justify transportation of some questioned commodities as iron and steel articles is not warranted.—Eagle Motor Lines, Inc., Investigation and Revocation, 94 M.C.C. 704 (709)*; however, where a certificate is ambiguous, the commission may interpret the language therein so as to give effect to its true impost and meaning. This may require a review of the certificate as it was conferred upon its original owner and as issued to all subsequent transferees thereof.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (128).

In interpreting motor carrier operating authorities, consideration may properly be given to circumstances surrounding grant thereof only if the authority itself is patently ambiguous; if not, operating rights must be construed according to their terms, regardless of what may have been intended at time of their issuance.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (393).

Where a certificate is ambiguous in that, on its face, it does not describe clearly and accurately the type of service authorized, the commission may properly search record of the proceeding which gave rise to the language so as to ascertain its meaning. Review of the proceeding in which applicant's predecessor was granted authority to transport refined petroleum products, except "residuary petroleum products," warrants conclusion that quoted language was intended to embrace all commodities which fall within that generic description. Since no common understanding

in the transportation industry of the meaning of "residuary petroleum products" is shown, that description should be construed in conformity with prevailing usage and practice in the petroleum industry; expert witness stated that "residuary" and "residual" are synonymous, but latter is more frequently used, in petroleum industry. Therefore, "except residuary petroleum products" in applicant's certificate is construed to denote "except residual petroleum products."—E.B. Law and Son, Inc., Extension, 94 M.C.C. 532 (537-8)*.

See also Truck Transport, Inc., Extension case, §207(a), n. 25 *Commodity description.*

In previous report interpreting the generic description "canned or preserved foodstuffs" in applicant's certificate as not including the commodities specified "or any other similar foodstuffs unless such commodities are in fact canned or preserved within the meaning of those terms as heretofore construed," the modifying phrase "unless such commodities are in fact canned or preserved..."cannot detract from application of the finding to the specified commodities; it modifies "or any other similar foodstuffs." It was added for purpose of establishing a guideline for unspecified commodities in accordance with previous interpretation of "preserved foods," and other cases were cited clearly setting forth what was meant to be covered thereby. The interpretation is not ambiguous, nor does it strain reason or logic.—Coldway Food Exp., Inc., Extension, 94 M.C.C. 479 (483)*.

It is frequently necessary, in determining whether grant of authority sought is required by public convenience and necessity or is consistent with public interest, to determine whether a particular carrier is already authorized to transport the pertinent traffic. It would be an intolerable burden on the parties, the public, and commission personnel, and would hamper effective administration of the act, if the commission had to delay each time in making necessary determinations of protestants' authority to provide proposed service, and await institution and final determination of formal investigations into the scope of their operating rights. On the other hand, fair treatment and due process dictate that a carrier whose authority has thus been interpreted should have access to judicial review.—C & H. Transp. Co., Inc., Extension, 94 M.C.C. 711 (714-5)*.

Petitioner's certificates authorizing transportation of "such commodities as are manufactured, processed, or dealt in by rubber or rubber products manufacturers" is interpreted to authorize transportation of the 25 commodities specified; however, that conclusion is premised on "dealt in" being defined as "bought for resale." It is clear that intent in issuance of the certificates was to permit petitioner to render a complete service, not limited to specified commodities; its authority must be deemed to be as broad as required to keep pace with the growth of its shippers' businesses; and, in fact, a finding that petitioner is not authorized to transport a commodity not ordinarily dealt in by several principal rubber manufacturers would appear to constitute partial revocation of its certificate. Moreover, record is clear that such manufacturers ordinarily deal in a great number of nonrubber products, and that such dealings are an integral and important part of their business.—Renner Motor Lines, Inc., 94 M.C.C. 605 (613-4).

Unless words used in a certificate are patently indefinite or ambiguous, the commission will not go back of the certificate in interpreting authority granted, and where language considered is not ambiguous, it must be given its common and natural meaning. In certificates and permits the commission has always used words descriptive of direction, such as "north" or "south," in their generally accepted sense rather than in terms of metes and bounds.—Pilot Freight Carriers, Inc. v. Malone Freight Lines, 91 M.C.C. 58 (60).

Where a certificate is patently ambiguous, the commission may properly search the record of the proceeding which gave rise to the language in order to ascertain its meaning. Though certain Kentucky points in applicant's certificate for routes between Louisville and Memphis are subject to a single restriction as to direction of authorized traffic, the same authority contains a confusing, dual directional restriction of certain Tennessee points, thus is clearly ambiguous; examination of record in applicant's "grandfather" proceeding is warranted.—Southern For-

warding Co. Extension, 91 M.C.C. 221 (225).

In absence of an ambiguity or a specialized trade usage, the language used in commission certificates must be construed according to the plain and ordinarily accepted meaning of the words used therein; and where the language of the certificate is unambiguous the commission will not violate the integrity thereof by looking to the record in the underlying proceeding which gave rise to the language.—Alabama Highway Exp., Inc. v. Terminal Transport Co., 91 M.C.C. 635 (639).

Because permanent operating authority issued by the commission should state clearly and unambiguously the service which may be performed, it is a longstanding general rule that where a certificate or permit is phrased in terms which are clear and unambiguous in meaning the commission will not go behind that authority to seek out what was actually intended to be granted in the preceding in which it was issued. But when the meaning of the authority description is doubtful on its face, it is proper to reexamine the facts of its origination. Although articles listed in petitioner's certificates under heading "Building, roofing, and insulating materials" include scrap asbestos and automobile body panels, only in a strained or unusual sense can those commodities be classified as intended for use as such materials; thus there is sufficient ambiguity to warrant going behind those authorizations to determine their intended meaning. —Ace Lines, Inc., Extension, 91 M.C.C. 559 (563).

The language "new trucks, in secondary movements (other than those performed as a connecting carrier)," in paragraph (A) of respondent's certificate was clearly intended to limit its transportation of new trucks to those movements performed wholly under its own authority without interchange with other carriers; the word "combined" in the restrictive paragraph is unqualified and should be read as preventing respondent from combining its authority, directly or indirectly, with that of any other carriers; and the restrictive paragraph specifically applies to paragraphs (B), (C), and (D) of the certificate.—Kenosha Auto Transport Corp., Investigation, 89 M.C.C. 550 (552-3)*.

See also Campbell Sixty-Six Exp., Inc. v. United States, §208(a), n. 31.

Of necessity, language used in commodity descriptions is frequently cumbersome, and in the more obvious situations the commission attempts to eliminate unnecessary verbiage; though, occasionally, ingenious carriers seize upon an inappropriate rule of grammatical construction to conduct flagrantly unlawful operations in reliance on an interpretation which defies the clear intent of the commission and the common understanding of the industry, in every case in which a certificate holder has adopted its own fanciful interpretation in preference to the meaning readily apparent to others in the regulated motor carrier industry, the commission has repudiated the tortured constructions even where language experts supported the offending carrier.—J. B. Acton, Inc.—Investigation and Revocation of Cert., 89 M.C.C. 59 (62-3)*.

In restricting authority to transport materials, supplies, etc., to the appropriate industry, the limiting adjective is repeated whenever it is deemed necessary or desirable to convey the thought intended without ambiguity; but where only one interpretation is consistent with common knowledge and common sense, it is frequently not repeated throughout. In respondent's authority for "oilfield equipment, machinery, and materials," failure to underline "and" has no interpretative significance; restriction of the "materials" which may be transported to those peculiar to or intended to be used by the oilfield industry is unambiguous, and it is unnecessary to look to the records in the underlying proceedings to ascertain what authority the commission intended to grant.—Id., pp. 62, 63.

One cardinal rule for construing terms of a certificate is that the certificate must speak for itself; in absence of patent ambiguity, the commission refuses to consider extraneous matters, including record which gave birth to the certificate in question; and this rule is followed regardless of whether the practical result is to confer upon the carrier more or less authority than may have been intended to be granted originally. Although the record in an application proceeding might be presumed to contain the best evidence of the commission's intention in issuing a certificate, the commis-

sion has chosen to make the clear language of a certificate conclusive in absence of some form of misrepresentation or clerical error connected with its issuance; any other rule would contribute an intolerable uncertainty to the finality of any right granted.—T. I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (9-10)*.

Section 212(a) prescribes the only method whereby a validly issued certificate may be "suspended, changed, or revoked, in whole or in part"; and the commission has consistently held that a validly issued certificate may authorize the transportation of commodities not contemplated at the time the certificate was granted, and service within a larger territory than was intended at the time of the grant; examiner erred in concluding that a certificate authorizing operations within a greater territory than was shown to be required by public convenience and necessity would be null and void.—Id., p. 9.

Canons of statutory construction are not so automatic in their application, nor rules of grammar so tyrannical, that the commission has no discretion in interpreting certificates issued under its authority. Although, according to doctrine of the last antecedent, which is a rule of statutory construction as well as of grammar, qualifying words, phrases, or clauses are to be applied to the word or phrase immediately preceding and should not be extended to those more remote unless clearly required by the context, most courts have recognized that doctrine to be only an aid to construction, rebuttable by a very slight indication of contrary intent. And while a comma separating a modifying clause from the word or clause immediately preceding indicates that it was intended to modify all the preceding clauses, it is accepted usage that no comma is necessary after the concluding word of a list when it is followed by a modifying word or phrase that unmistakably applies to the entire group.—Id., pp. 13, 14, 15.

In describing commodities by reference to their intended future use and in selection of generic or class terms, common industry or trade terms have been employed, and have generally been fairly construed by carriers according to their obvious intent; it is therefore unnecessary, save in unusual circumstances, to resort to extraneous matters, such as records of proceedings in which such authorities were granted, to construe such terms.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (92).

Though applicants in effect request the commission to tell them whether shipments set forth in an abstract of representative shipments were within their operating authorities, their abstracts show merely the names of the commodities, the consignor and consignee, and the date of shipment; an intelligent determination cannot be made in absence of reasonably complete factual data on which to base conclusions; the guidelines set forth in the general discussion of applicants' authorities (pp. 93-4) can be applied by them to the facts as to such shipments, which are within their knowledge.—Id., p. 95.

When evidence establishes that sheet steel and steel bars and tubing are generally handled by wholesale and retail hardware stores, respondent may not be deprived of his right to transport those commodities under authority for merchandise such as is dealt in by hardware business houses, merely because of a tendency of such establishments in recent years, particularly in metropolitan areas, to limit their activities to sales of over-the-counter items; to hold otherwise would run counter to the commission's intention when original "grandfather" certificate was granted respondent's predecessor over 20 years earlier, and would amount to partial revocation thereof without resort to procedures provided in §212(a).—Momsen—Investigation and Revocation of Certificates, 88 M.C.C. 343 (345, 350-1).

10. Remedy of abuse, in general.—[Vols. 10, 12, 17-19].—That inadequacy in service due to refusal of trunkline motor carriers, because of "hot cargo" clauses in their union contracts, to interchange traffic with shortline carriers controlling appellee was first brought to the commission's attention by appellee's filing of certificate application under §207(a) in no way limited the agency's power to invoke, as a means of correcting the deficiency, §204(c) which empowers it to order carriers to comply with the transportation laws, §212(a) which authorizes it to suspend a certificate for failure to comply with duties

under the act, or §222 which affords other sanctions to enforce its orders. Where deviations from an otherwise completely service consist solely of illegal or discriminatory refusals to accept or deliver traffic from or to particular carriers or shippers, the commission's powers under those sections bear heavily on the propriety of §207 relief.—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (162, 166)*.

The §212(a) complaint procedure would have provided a more adequate remedy than issuance of certificate to a new carrier at time the case was before the commission; there was every indication at that time that a cease-and-desist order would render the deficiencies purely temporary phenomena and would thus be effective in promoting adequate and efficient service and in fostering sound economic conditions among the carriers affected; moreover, 357 US 93 recognized the power of the commission to enter cease-and-desist orders against carriers' violating the transportation law and their tariffs.—Id., pp. 169, 170, 171 note.

However, in view of amendment to the Labor Management Relations Act which raised serious question as to legality of union-employer agreements to boycott another employer, the delinquent interlining carriers as well as the union would now be subject to injunctive and other processes of the National Labor Relations Board if their conduct violated the new statute, so that the pressures which generated the refusals to serve might well be effectively removed. Therefore, in choosing its remedy the commission must act with discriminating awareness of the possible consequences of its action on the functioning of the national labor relations policy; the policies of ICA and LMRA must necessarily be accommodated, one to the other.—Id., pp. 171-2.

While it is solely within the commission's province to determine that a carrier has abused its certificate, such abuse is not shown when a carrier makes an authorized use of its unrestricted certificates which the commission admits are validly tacked. Order directing plaintiff to discontinue transportation of traffic from one Pennsylvania area to another over a combination of its authorized routes through New Jersey really says that such use was unforeseen by the commission when it granted that authority. If the commission feels that this unforeseen use violates the law of Pennsylvania, Congress has provided the remedy in §212(a); the commission cannot by its order take away part of plaintiff's certificated authority without following the procedure outlined therein, whereby it may protect the State's interest by changing plaintiff's certificate; cease-and-desist order reversed.—Jones Motor Co. v. United States, 218 F. Supp. 133 (138)*.

Defendants' arguments that imposition of percentage restriction on authority granted in application proceeding premised on need for mixed truckload service would put an undue enforcement burden on the commission, and that a restriction is unnecessary because the commission can revise or cancel existing certificates if applicant engages in subterfuge, under §212(a), or impose such reasonable conditions or limitations as public convenience and necessity may from time to time require, under §208(a), are without force. A restriction can be formulated that will not add to the enforcement problem; and answer to the reserved statutory power argument is that record does not support grant of authority not restricted to mixed truckloads, and authority granted could be construed otherwise.—Refrigerated Transport Co. v. United States, 214 F. Supp. 536 (540)*.

Though protestants express fear that in granting motor-carrier authority to Railway Exp. Agency the commission is creating a nationwide railroad-controlled carrier fully competitive with general freight carriers, express service, in providing expedited movement at premium rates of all types of commodities capable of handling in van-type vehicles, is largely policed by fact that express carriers' rates must be naturally encouraging to movement of small shipments. The commission is aware that the transportation industry is an ever-changing one, and will continue to scrutinize REA's operations with a view to forestalling any developments which threaten to change the character of its services to serious detriment of other carriers. To this end, various procedural devices are available: character of express service is closely related

to REA's tariffs, which are subject to the commission's review; the commission may from time to time investigate REA's practices; and carriers having evidence of specific irregularities may file complaint. Moreover, if authority now granted REA is misused so as to restrain competition, the proceeding can be reopened to impose any necessary corrective restrictions or conditions.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 62 (76-7).

See also Evans purchase case, §5(2), n. 110 *Routing practices*.

It is the commission's duty to investigate any operation which may be so conducted as to circumvent and evade, and thus violate, the provisions of the act. Record in application proceeding does not permit positive determination of whether certain practices of, or permitted by, Greyhound Corp., which allegedly prevented use of its service by some prospective patrons, are lawful or unlawful; to aid Greyhound in determining propriety of the questioned practice, the matter is referred to Bureau of Motor Carriers' field representative in the area.—Kirk, 89 M.C.C. 587 (588).

15. Change of status.—[Vols. 10-15, 19].—See also Tar Asphalt Trucking Co. v. United States, 28 USC §2325, n. 45.

Facts that almost all defendant's traffic moving between Twin Cities and Minot, N. Dak., via Bismarck is less-than-truckload, that there is only one available highway between latter points, that Minot is the largest point in its radial area served from Bismarck, and that its terminal operation at Minot is part of its intrastate service, afford no basis for finding that in operating daily through service it has deliberately sought to destroy the irregular-route nature of its operations or that it could arrest the conversion process otherwise than by curtailing its legitimate business activities. Volume of its traffic and consolidation of l.t.l. shipments account for its daily movements, and though it advertises daily direct service to Minot from Twin Cities, it does not hold out to provide it at specified times or on prearranged schedules. Situation is a borderline one where dividing line between regular- and irregular-route operations is indistinct; it would be difficult under the circumstances for defendant to operate its service in any other manner, and it has properly sought to convert its authority.—Hart Motor Exp., Inc. v. Midwest Motor Exp., Inc., 92 M.C.C. 558 (562-3)*.

20. Abandonment, generally.—[Vols. 10-15, 17-19].—Part I, §1(18), n. 56-68.

In dealing with fictitious equipment-leasing arrangements, the commission has invariably found that the lessor was engaged in unlawful operations over lessee's routes and that latter's operations were therefore dormant. Operations from St. Louis to Tulsa are those of connecting carrier and not of respondent holding the authority therefor; though they were conducted under unauthorized lease of latter's operating rights, such lease is without legal force or effect as a conveyance; respondent is not now performing and never has performed a motor common-carrier service under its certificate since coming under control of its present owner; order entered requiring it to institute and maintain reasonably continuous and adequate service under its certificate, failing which consideration will be given to revocation thereof.—Stewart—Investigation of Operations, 87 M.C.C. 681 (697-8).

25. Revocation of authority.—[Vols. 10-19].—The commission's determination that plaintiff was not entitled to transport chemicals derived from petroleum under its authority to transport general commodities, except liquid petroleum products, in bulk, in tank trucks, did not in any way constitute partial revocation thereof and was not arbitrary or capricious; since commodity description in its certificate specifically excepted petroleum products, plaintiff never had any authority to transport petrochemicals.—Consolidated Freightways Corp. of Del. v. United States, 237 F. Supp. 391 (392)*.

While §212(a) purports to make issuance of a certificate the final step in administrative process for obtaining operating authority, the courts have held that the commission has power to revoke wholly or partially certificates issued as result of inadvertance or mistake; however, as pointed out in 358 US 133, such power may not be used as a guise for changing prior decisions because the wisdom thereof appears doubtful in light of changing policies. Since it is not reasonable to assume that the commission intended to grant authority to transport dump-truck commodities

throughout Illinois and Indiana when the only evidence of need therefor concerned the northern area and not over 50 miles across the line from point of pickup, the court finds that the contested unrestricted certificate was issued as result of inadvertance or mistake; therefore, the commission has the power to revoke or modify the certificate. Case remanded for further consideration in light of that determination.—Willey v. United States, 245 F. Supp. 669 (676-7)*.

Plaintiffs' contention that unless the commission is restrained by preliminary injunction from issuing certificate to intervenor (pending determination of their complaint on the merits) the court would have no jurisdiction to determine the case and recall the certificate, if it is unlawfully issued, is without merit. Though the court has no express statutory authority to set aside a certificate, and the commission may not revoke a certificate except as provided in §212(a), there is no limitation on the court's jurisdiction to review orders of the commission which result in issuance of a certificate. The court would neither issue nor revoke the certificate; but however its judgment affects the commission's order that a certificate issue, the certificate is commensurately affected and the court's power over the certificate is implicit in the power granted it by Congress to review the order. Preliminary injunction denied.—Asbury Transp. Co. v. United States, 236 F. Supp. 322 (324-6)*.

Plaintiff's argument that the commission's determination of scope of its operating authority, in a proceeding on applications of another carrier which plaintiff protested rather than in one especially for the purpose of interpreting its authority, amounted to an unlawful partial revocation of its operating rights, is without merit. The scope of a protestant's authority is necessarily subject to interpretation when it protests an application pending before the commission; since the commission must determine whether public convenience and necessity require the proposed service, an important factor for its consideration is whether the authority applied for is already covered by protestant's certificates. —Worster Motor Lines, Inc. v. United States, 226 F. Supp. 603 (606-7)*.

The commission's approval of proposed purchase of motor carrier operating rights on condition that those rights could not be tacked with rights already held by the vendee did not constitute an unlawful partial revocation of operating authority; vendee was deprived of nothing it had previously had or to which it had been entitled. Nothing was taken from vendee that required §212 action; a condition was simply attached to its acquiring more.—Cope v. United States, 222 F. Supp. 596 (602)*.

On further hearing in "grandfather" application proceeding, the examiner recommended a grant of certain additional authority, but also disallowed certain other authority heretofore authorized in applicant's previously issued certificate; however, such revocation of certificated authority is not proper except as in accordance with provisions of §212. Accordingly, the entire record is considered and the additional authority warranted is granted. —Querner Truck Lines, Inc., 102 M.C.C. 616 (617, 619-20)*.

The holder of a dormant certificate may reactivate operations thereunder at any time unless and until the certificate is revoked under §212(a). Though complainant alleges that reactivation of corresponding interstate operations by carrier whose intrastate rights it had purchased and used as basis for interstate proviso operations was depriving it of traffic, that purchase was apparently not related to the issue of competition in interstate commerce, and interstate operations by vendor over their common route after complainant acquired the intrastate certificate could reasonably have been expected. Neither §212(a) nor any other section of the act confers jurisdiction to summarily and finally revoke vendor's interstate certificate on basis of complaint alleging unlawful common control of vendor with another carrier and reactivation of its operations in connection therewith.—Jimmy Stein Motor Freight Lines, Inc. v. Mercury Frt., 93 M.C.C. 635 (640-1).

While evidence of respondent's numerous infractions of the commission's leasing, safety, and other regulations (as well as of its unauthorized operations) fully supports a finding that the actions of respondent and its president bordered on a willful and deliberate

disregard for those regulations, the violations found do not warrant such drastic action as suspension or revocation of the carrier's rights at the present time; however, respondents are admonished that willful failure to comply with the cease-and-desist order entered may result in such action, since any future violations, especially of the nature shown, will weigh heavily in favor of imposition of drastic penalties.—C&R Trucking Co. —Investigation of Control, 93 M.C.C. 669 (681).

Contention that conditioning of purchase approval on certain restrictions of vendor's retained rights would wipe out portions of its service rights without recourse to §212(a) procedures, in violation of the act, misconstrues the nature both of the conditions imposed and of the purchase proceeding. Although terms of the order of authorization contemplate cancellation of certain rights, they can in no sense be characterized as a prescriptive revocation of rights by the commission; on the contrary, the order is a grant of authority, purely permissive in nature, setting out terms under which the transaction can be found consistent with public interest, in fulfillment of the commission's statutory obligation under §5. Any cancellation of rights would be of those which vendor, under the purchase contract submitted, has agreed to convey, not of those stipulated for retention, and would result entirely from applicants' voluntary action in consummating the transaction on the modified terms approved; proceeding on that basis is consistent with all pertinent provisions of the act.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (32-3).

Commission interpretation of the authority involved does not take from defendant any right which existed from the beginning under the pertinent certificate; a reasonable construction of the certificate does not support defendant's position as to scope thereof; and gratuitous consideration of underlying proceedings indicates an intention contrary to defendant's argument. Under such circumstances, interpretation of the authority cannot be equated with modification or partial revocation under procedure which results in deprivation of a valuable property right without due process.—Alabama Highway Exp., Inc. v. Terminal Transport Co., 91 M.C.C. 635 (642).

As a certificated carrier, respondent is obliged to comply with all provisions of Part II and any requirements established by the commission pursuant thereto, and failure to do so is sufficient ground for suspension or revocation of its certificates. However, the commission's power to take such action is circumscribed by §212(a), under provisions of which revocation of a certificate may be effected only after notice and hearing, and then only for willful failure to comply with an order issued after a notice and hearing under §204(c), which expressly confers the power to investigate that is only implied in §212(a). Thus, unless expressly or impliedly waived by the holder, a second notice and hearing is required before a certificate may finally be revoked.—Safeway Trails, Inc.—Investigation and Revocation, 91 M.C.C. 936 (948-9)*.

See also Brunswick Transp. Co. case, §216(a), n. 10

If operating rights serve no public need for a substantial period of time, they should be revoked in an appropriate proceeding.—E. & L. Transport Co.—Purchase—Dealers Transport Co., 87 M.C.C. 785 (789).

27. Suspension of authority.—[Vols. 15, 16, 18, 19].—Although respondent's willful and flagrant violations of the act in conducting operations beyond scope of its commodity authority must be discontinued, immediate suspension of its certificate would work hardship on those shippers which it is authorized to serve. However, continuance of the unauthorized operations after entry of cease-and-desist order will be met by prompt action to suspend or revoke its certificate.—J. B. Acton, Inc.—Investigation and Revocation of Cert., 89 M.C.C. 59 (64)*.

30. Amendment of certificate or permit.—[Vols. 12-19].—See also Movers Conference of America v. United States, n. 1, above.

When the reviewing court has set aside that part of the commission's order and of plaintiff's certificate, authorizing a new service between certain points which the court found not supported by the evidence, the commission is without power to act except in accord with the court's mandate. Therefore, by inad-

vertently fashioning the certificate so that it was not consistent with the mandate, the commission became bound to amend it to conform thereto whether it took two or two dozen later efforts to properly effectuate the court's order; furthermore, a tribunal has an inherent right to correct mistakes resulting from oversight or inadvertence. Accordingly, considering the commission's expressed desire to conform to the court's opinion and in view of its failure at first to accomplish this, the commission had the power to further amend plaintiff's previously issued certificate to conform to terms of the court's remand without having to comply with hearing requirements of §212(a); report and order, on further consideration, sustained.—Strickland Transp. Co. v. United States, 274 F. Supp. 921 (924-6)*.

Although the commission's power to revoke wholly or partially certificates issued as a result of inadvertence or mistake may not be used as a guise for changing previous decisions because wisdom thereof appears doubtful in light of changing policy, it cannot be said that to modify the considered unrestricted certificate (which is found to have been issued as result of inadvertence or mistake) to comply with proofs submitted in the application proceedings would be a change in policy. On the facts of record in the case, the commission has the power to modify or revoke the certificate in issue, but whether it should be modified or revoked is for the commission's decision; case remanded for further consideration in light of the court's determination.—Willey v. United States, 245 F. Supp. 669 (676-7)*.

The commission had authority to grant petition of carrier holding initial-movement authority to transport automobiles from place of manufacture in Michigan to destinations in Florida and Georgia, and performing all services thereunder, for modification of its certificate to permit rail TOFC or MLRC movement from Michigan to Atlanta, Ga., and Jacksonville, Fla., and motor carrier movement therefrom. In accordance with procedure established in 91 MCC 395, the commission properly took cognizance of fact that TOFC and MLRC methods of movement had caused substantial trend from motor to rail transportation and accepted petitioner's affidavit that that trend had caused it substantial loss in income; and truthfulness of the affidavit was not controverted. While there was no hearing as to need for proposed movement from Atlanta and Jacksonville, need for transportation by petitioner had previously been shown, it was already supplying that need, and its petition for modification only sought the right to permit railroads to do part of its hauling. Sustained.—Motor Convoy, Inc. v. United States, 235 F. Supp. 250 (251, 253)*.

Petitions for modification of a "grandfather" certificate present an example of the gray area wherein it is not easily determined whether a certain factor or attitude will or will not vitiate a claim of bona fide operation, and where factors must be weighed and conclusions reached with specificity and automatic conclusions eschewed. The gist of a successful petitioner's case must be to establish that he is entitled to enlargement of his certificate precisely because he has, in effect, exceeded the authority of that certificate continuously from and before date of issuance; and the mere fact of such consistent violation is not enough to vitiate bona fide operation.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (651)*.

Restrictions placed on modification of operating authority may not be bypassed under guise of interpretation; however, since the commission's interpretation of the commodity description in plaintiff's certificate is not clearly erroneous, that interpretation is but a definitive declaration of what rights plaintiff had from the beginning and in no way constitutes modification.—U. S. A. C. Transport, Inc. v. United States, 235 F. Supp. 689 (692, 694)*.

The commission has no power to change or modify a motor carrier's certificate under the guise of interpretative action. Language used in plaintiff's certificates authorizing transportation of "prefabricated buildings, complete, knocked down, or in sections" and of "buildings, complete, knocked down, or in sections" is not ambiguous and plainly describes the commodity authorized; and rationale of the commission's conclusion, in decision requiring cancellation of proposed rates on portable buildings (single unit homes), that

those commodity descriptions did not authorize transportation of single unit mobile homes would require elimination of word "complete" therefrom. This in effect, and in fact, constitutes a modification of plaintiff's authorities that is not permissible under the guise of interpretation.—Pre-Fab Transit Co. v. United States, 262 F. Supp. 1009 (1011-13)*.

The commission itself has held that it has no power to change, modify, revise, or enlarge certificates except in keeping with standards of §§ 206 and 207; and the court accepts that determination as controlling law in holding that the "15,000-pound rule" prescribed in 79 MCC 285, as applied by the commission in finding that heavy-hauler's authority entitles it to transport Army trucks weighing over 15,000 pounds each, even though no special equipment is required or used, served to enlarge the carrier's authority in a manner not prescribed by law. The commission's finding set aside and declared a nullity.—United Transports, Inc. v. United States, 214 F. Supp. 34 (43-4)*.

Although the commission has no right to incorporate authority for general commodities, in lieu of upwards of 30 specific commodities in plaintiff's permit, in certificate issued in conversion proceeding under §212(c), plaintiff is not left without a remedy; if, as it contends, operations on which its original authority was based would entitle it to general-commodity authority as a common carrier, the remedy is to petition the commission to reopen the "grandfather" proceedings.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (315)*.

The commission, having found in defendant's application proceeding that it was entitled to ordinary regular-route passenger authority for its airport limousine service, has no authority in subsequent complaint proceeding to modify defendant's certificate, under guise of interpretation, by confining its regular-route operations between fixed termini to those classified as "special." Even if such power existed, its exercise would not be warranted, since the regular, frequent, and expeditious service defendant has been rendering at designated stops under published schedules could not be performed under special-operations authority.—Arrow Lines, Inc. v. Connecticut Limousine Service, Inc., 96 M.C.C. 1 (6).

If applicant desires to modify the language of its outstanding certificate so as to reflect more fully the extent of its heavy-hauling authority and have it conform with the commodity description approved in 61 MCC 209, it should file a properly prepared petition requesting modification for that purpose.—Leroy L. Wade & Son, Inc., Extension, 92 M.C.C. 451 (454).

Although the Southern Tank Lines case (88 MCC 127) provided that carriers holding authority to transport liquid chemicals as defined in the Maxwell case (63 MCC 677) might seek modification thereof to conform to the revised definition eliminating the intended use test, by filing petition in each proceeding in which such authority was originally granted, that procedure was devised in interest of administrative simplicity, and there is no reason why the same result may not be accomplished by filing extension applications, particularly where applicant considers that it has reasonable cause for seeking broader authority than might be obtained throug modification of outstanding certificates.—Bell Extension, 92 M.C.C. 276 (281).

Although the commission modified defendant's authority without prior publication of notice in the Federal Register, defendant's petition for correction was essentially a part of the proceeding on purchase of the rights and order of correction was served on all listed parties-in-interest in that proceeding. Modification was made as a matter of form, since the certificate was incorrectly phrased; such procedural matters require no notice in the Federal Register, and the order allowed ample time for any aggrieved party to show cause why such change should not be made. The essential portion of the certificate remained the same, and the commission's action cannot affect ultimate determination in instant complaint proceeding as to extent of the service authorized at intermediate points.—Consolidated Copperstate Lines, Inc. v. Navajo Freight, 91 M.C.C. 597 (600, 601)*.

See also Curtis Keal Transport Co. case, §206(b), n. 15.

Depressive economic effect on established motor carriers of automobiles of the development of rail TOFC and multilevel-car service is due, not to any shift in origin of the traffic, but to a shift in methods of distributing the traffic from the same origins. Carriers formerly enjoying initial movement traffic seek to continue participating therein by substituting the new rail service for part of the movement to same destinations, but only the prerail or post-rail portion of the haul remains, and appropriate secondary authority is required of the motor carrier completing the movement, unless it is the one which originated it; and similar situations confront holders of secondary authority. The public interest is the commission's primary concern; and, under existing law, it may grant such relief as considerations of public interest and the national transportation policy indicate to be needed.—National Auto Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (413, 416).

Since filing of new individual applications for modification of automobile haulers' initial- or secondary-movement authority to enable them to continue utilizing substituted rail service where ther authorities, as now interpreted, do not cover such movements would place a great burden on all parties, they are authorized to file petitions for such modification, in the manner outlined, in the same docket in which their present authority was granted. If existing authority is modified, the petitioner will not be required to relinquish its present authority, but any modification will be appropriately restricted so as not to place it in position to infringe on rights of existing carriers. And no motor carrier will be barred from seeking such relief merely because of denial of a previously filed application for authority needed for its continued participation in traffic previously enjoyed.—Id., pp. 415-6.

In view of duration of Railway Exp. Agency's practice of tacking its certificates containing rail-haul restrictions to perform an unauthorized all-motor service, and extent to which the public interest as a whole is affected thereby, equitable opportunity should be afforded to resolve the situation openly. Therefore, in instances where REA is now conducting or proposes to conduct a wholly motor service under certificates containing rail-haul or similar restrictions, it should file petitions for modification of such certificates, setting forth fully the complete motor service it desires to perform, within 90 days from service of report or within such further time as the commission may authorize.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (333-4)*.

While under some circumstances an application filed under §207 is a proper vehicle for seeking modification of a carrier's operating authority, a more appropriate remedy is a petition for modification in each proceeding in which the authority was granted. Whatever procedural device is used, the burden rests on the one seeking modification to establish by clear, concise, and unequivocal evidence that the relief sought is warranted.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (95).

When petitioner applied for and was granted authority to transport aircraft parts not requiring special equipment or handling, supporting witnesses made no mention of missile parts requiring special handling, because of security restrictions then in force and because of the prevailing albeit mistaken belief, based on an informal opinion of Bureau of Motor Carriers, that airplane or aircraft parts included missile parts and that applicant could transport the latter under its existing heavy-hauling authority for airplane parts. And though the Air Force's exceptions filed some 6 months after original hearing revealed that missile parts were involved, there was no reason for petitioner, upon receipt of those exceptions or the report and order granting airplane parts authority, to seek modification thereof at that time; its reasonable reliance on the Bureau's interpretation justified its belief that under that authority it could transport missile parts. These unusual circumstances require reexamination of all pertinent underlying facts leading to issuance of the considered authorities.—Leonard Bros. Transfer, Inc., Petition for Clarification, 96 M.C.C. 246 (252-3, 254)*.

The record as a whole clearly reveals intention at time the certificate in question was granted to authorize petitioner to provide its supporting shippers a complete service. It is

undisputed that it has transported missile parts and related commodities continuously since initial movements thereof; that at time of original hearing it was transporting missile parts, including those requiring special handling, for supporting shippers; and that, had it been able under the security regulations to seek authority for missile parts as a separate commodity, it would have shown that it was already providing a heavy-hauler service thereon under color of right. On basis of the evidence of shipper need adduced both at original hearing and at hearing on instant petition for modification, petitioner should be authorized to continue to transport missile parts and related commodities used in the supply, service, repair, operation, or maintenance thereof, without restriction.—Id., pp. 252-3, 254, 255-6.

Testimony of disinterested witnesses appearing on petitioner's behalf, also copies of freight receipts and shipping orders submitted at his predecessor's "grandfather" proceeding, show that the predecessor in fact transported numerous steel products other than those embraced in the description "structural steel" from and to the considered points to a substantial degree on and prior to the "grandfather" date, and that she and her successors have continued to do so except for interruptions beyond their control. Though records of the predecessor's service have long been destroyed, the oral testimony presented, together with some documentary proof in the "grandfather" proceeding, is sufficient to warrant modification of petitioner's certificate to authorize transportation of the items named, in addition to structural steel. The predecessor's truckdriver was able to recall pertinent facts concerning her operations with relative definiteness, and shipper witnesses, some of whom used her service both before and after the critical date, were likewise able to describe the operations with some particularity; those witnesses were qualified to testify to the facts concerning extent of the involved "grandfather" operations.—Simpson—Modification of Certificate, 94 M.C.C. 120 (128).

While petitioner could have filed petition for modification of his certificate shortly after the determination in 62 MCC 348 of the scope of authority to transport "structural steel," he apparently relied on the outcome of his own investigation proceeding instituted some 14 months later; and his purchase of additional rights for transportation of iron and steel articles over 2 years after commencement of the investigation and during its pendency could at most be considered merely hedging against an adverse decision therein and does not dilute his sincerity in filing the instant petition. In the circumstances, his request for modification of the "grandfather" rights should be granted as set forth in the findings.—Id., pp. 128-9.

Although division 1, following decision in 81 MCC 201 that "service" at a point includes interchange and tacking, correctly found that defendant's performance of through service between Phoenix, Ariz., and Los Angeles by tacking its preexisting rights with pruchased rights between Phoenix and Kingman, Ariz., at intermediate points restricted to traffic to or from points north and west of Kingman was unlawful, had that case been decided prior to decision in the purchase proceeding, it appears certain that approval would have provided for removal of such restriction, since record and report in that proceeding indicate understanding of former division 4 and all parties involved that defendant would acquire rights permitting through service to and from all major points on its then existing routes. In the circumstances, the commission is not required to leave the situation as found and thus reach an inequitable result that might work severe hardship on defendant. To avoid unnecessary further proceedings, the purchase case is reopened and certificate issued therein modified to authorize service at intermediate points without restriction.—Consolidated Copperstate Lines, Inc. v. Navajo Freight, 92 M.C.C. 516 (518-9)*.

When in authorizing purchase of unrestricted rights between Indianapolis, Ind., and Louisville, Ky., including intermediate points of Franklin and Columbus, Ind., which petitioner could not serve under its own authority, division 4 did not intend to restrict any service permissible under the separate rights, but restriction in unified certificate against movement of traffic between Franklin, Columbus, or Louisville and points south of

Louisville can be interpreted more narrowly than was intended, the unified certificate was incorrectly drawn and petitioner is entitled to modification. Certificate should be amended by inserting after each reference to intermediate points of Franklin, Columbus, and Louisville a restriction against direct movements between those three points and points south of Louisville, which will not prevent any other routings between those points or prohibit tender of traffic there to interchange carriers for their own direct movement.—Terminal Transport Co., Inc., Petition for Modification, 94 M.C.C. 770 (774).

And while restriction in petitioner's prior certificate of service at the off-route point of Speedway, Ind., to traffic moving to or from Birmingham, Ala., or points beyond was not vitiated by acquisition of vendor's nonradial rights for Marion County (including Speedway), no reason appears why petitioner should not be able, as was vendor, to serve Speedway in connection with its authority between Chicago and the now intermediate point of Louisville. Certificate will therefore be further amended to provide that restrictions at Speedway apply only to the authority therein for service between Indianapolis, on one hand, and on the other, Birmingham and Atlanta, thus giving petitioner the same rights at that point as were enjoyed by vendor.—Id., p. 775.

However, since certain off-route authority appurtenant to a route between Indianapolis and Birmingham has been carried in petitioner's certificate since June, 1947, if it was erroneously preserved in the unified certificate, as contended, the error is not in the drafting of that certificate, but rather in the circumstances surrounding its original issuance, and modification thereof need not be considered. —Id., p. 775.

When applicant's authority for frozen vegetables was issued it was intended that it should be able to offer supporting shipper a complete service in transportation of its commodities, and evidence shows that shipper was then producing frozen cooked potatoes. Thus, owing to subsequent interpretation of frozen vegetables authority as not embracing frozen cooked products, including potato products, that authority does not include the full range of commodities which applicant and shipper had reason to believe could be handled thereunder; certificate modified to authorize transportation of frozen vegetables and frozen vegetable products.—Refrigerated Food Exp., Inc., Extension, 91 M.C.C. 779 (782).

Examination of supporting evidence in proceedings wherein petitioner or its predecessors were granted authority for numerous articles, including cement pipe, listed in petitioner's certificates under heading "Building, roofing, and insulating materials," reveals that applicants proposed and shippers required trench site deliveries of pipe of type now considered. Supporting shipper has produced that type of pipe for use in water and sewer systems for some 30 years and has used services of petitioner and its predecessors extensively in transporation thereof, and it is sufficiently clear that transportation of cement pipe and the other commodities so listed was meant to be authorized without regard to their intended future use. Petitioner is entitled to modification of its authority by deletion of the controversial heading.—Ace Lines, Inc., Extension, 91 M.C.C. 559 (563-5).

Directional restrictions on service at intermediate Kentucky and Tennessee points in applicant's "grandfather" authority between Louisville and Memphis are so ambiguously worded as to render unclear the otherwise precise words "northbound" and "southbound." Examination of record in the "grandfather" proceeding reveals that no restriction was intended at any Tennessee point except Nashville, which was intended to be restricted to northbound traffic only, and that service at all intermediate Kentucky points was intended to be restricted to northbound traffic, except Camp Knox, which is restricted to southbound. Clarified certificate will be issued upon applicant's written request for cancellation of the existing restrictions.—Southern Forwarding Co. Extension, 91 M.C.C. 221 (225-6, 228).

Though original shipper's use of description "wrapping paper" for considered commodity was reasonable, since it has all transportation and visible characteristics of wrapping paper, shipper's successor reclassified it as "wood pulpboard," which it markets

under name "Kraft saturating," and declined to use petitioner's service under its "wrapping paper" authority. Since that authority was granted on a specific showing of need for transportation of that shipper's product, which is manufactured for sole use of consignee which uses it as a filler in laminated plastic board, such a broad description authorized more service than need was shown for; as petitioner seeks modification thereof, certificate description is amended to read "Kraft paper, saturating," which appears to be the most apt for that traffic.—Herndon Extension, 89 M.C.C. 278 (279-80).

Reformation of all outstanding authorities for liquid chemicals to conform with broadened commodity description now adopted, in interest of uniformity and to enable chemical carriers to provide a complete service, is long overdue; though some expansion of operating rights may ensue, the overall result would clearly be in public interest and to advantage of both carriers and chemical producers. Cooperation of the chemical carriers and other interested parties is essential: therefore, procedure for those desiring to substitute the revised description for their present authorities is outlined and instant report transmitted to National Tank Truck Carriers with request that it be called to attention of its members; if desirable, informal conferences between commission's staff and the carriers or other interested persons, for purpose of implementing the matter, can be arranged.—Southern Tank Lines, Inc., Extension, 88 M.C.C. 127 (143-4)*.

Although fact that 9 of 13 shippers supporting application in which considered certificate was granted were not meat packinghouses is not alone conclusive of applicant's right to transport commodities embraced in "packinghouse products" for nonpackinghouses, since the certificate also authorizes transportation of "canned and preserved foodstuffs," reexamination of record therein is convincing that authority granted does not adequately encompass all commodities for which need for service was shown by such shippers; "canned or preserved foodstuffs" would not embrace dairy products such as oleomargarine, butter, cheese, and eggs unless they had undergone some process of preservation; that certificate should accordingly be modified to include dairy products and shortening as set forth in instant findings.—Argo-Collier Truck Lines Corp. Extension, 88 M.C.C. 253 (257)*.

Separate authorities (1) from New York City to Miami area and (2) from Connecticut-New York-New Jersey area to New York City, both restricted to traffic having immediately subsequent movement by air from airports in the Miami area, may not be tacked for rendition of through service, since the movement under (1) vitiates the restriction on (2); moreover, latter authority, as worded, appears to be a nullity. Since application for authority (2) was unopposed, supporting shippers clearly showed need for service from that origin area to Miami area, and examiner obviously intended to authorize a through operation, that proceeding is reopened and certificate amended to authorize service restricted to traffic having immediately subsequent movement by motor vehicle to commercial airports in the Miami area, followed by an air movement therefrom.—Armellini Exp. Lines Extension, 88 M.C.C. 539 (541-2).

Although certain operations conducted by petitioner since 1935 under color of "grandfather" rights have not been conducted in willful defiance of the law, but under a misapprehension of the true scope of its certificate, and in the circumstances cannot be considered other than bona fide, the commission has no power to enlarge any operating authority except in accordance with the standards established by the act. To warrant the proposed modification of petitioner's certificate it must be shown that it is necessary to eliminate a patent ambiguity or to correct a manifest injustice. At the least, it must reasonably appear that the broader authority sought would more accurately reflect what should have been issued on basis of the evidence adduced in the original "grandfather" proceeding. Petitioner's certificate is clear and unambiguous, and modification is not warranted on basis of evidence presented either originally or on instant petition, which is therefore denied.—Nashua Motor Exp., Inc.—Petition for Modification, 96 M.C.C. 583 (584-5)*.

In seeking modification of its "grandfather" certificate to authorize transportation of heavy and cumbersome commodities instead

of machinery, equipment, and supplies used in operation and maintenance of industrial plants, the burden of proof is on petitioner. But while there is evidence that it held out to transport such commodities before issuance of its certificate, there is little or none that such interstate shipments were actually handled, and a mere holding out without performing substantial service is inadequate to establish a bona fide "grandfather" operation; nor do photographs of loaded heavy commodities, advertisements, or the self-serving and vague recollections of its employees suffice to do so. Petitioner had counsel and knowledgeable consultants in preparing its "grandfather" application, and it may reasonably be inferred that such application adequately described the authority sought and the operations on which it relied. Such was the authority granted, which has remained unchallenged for over 20 years, and in absence of probative evidence to the contrary the prior determination must be presumed sound. There is nothing to indicate any intent to authorize a complete heavy-hauling service or that the commodity description in the "grandfather" certificate was erroneous; petition denied.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (184).

Carriers seeking modification of their certificates must establish by clear, concise, and unequivocal evidence that the relief sought is warranted. Evidence submitted is not persuasive that restriction of petitioner's general-commodity authority against transportation of petroleum products means less than the ordinary meaning of that term, which includes petrochemicals. Contention that at time of its "grandfather" proceeding it was handling some petrochemicals is uncorroborated by evidence warranting reopening thereof; documentary evidence shows pertinent movements of those commodities only after 1957. While testimony, based only on personal knowledge of shipper witnesses, that some of that traffic was handled during and after 1946 may be the best evidentiary source now available, it cannot be inferred therefrom that petrochemicals were being transported on and since the critical time in 1935; nor can probative matter be constructed from evidence rejected in extension proceeding. No convincing evidentiary basis is presented for modification of petitioner's authority to include petrochemicals.—Consolidated Freightways Corp. of Del. Extension, 92 M.C.C. 443 (449)*.

Though simplification and restatement of applicant's operating rights may be desirable, extension proceeding is not the proper forum for modifying its authorities as proposed. Requested changes would (1) incorporate deviation and alternate routes as part of applicant's service routes, (2) redesignate routes without showing that they have been changed, (3) extend deviation routes to include points on routes purchased, without showing that the changes are within purview of §211.1(c)(8)(i) of the deviation rules, and without publication in Federal Register, and (4) grant authority for which need has been shown in the past but for which no certificate has been issued. Authority to operate deviation or alternate routes as service routes may be granted only on appropriate findings in a §207 proceeding; extension of authority or correction of erroneously described routes should be made in original docket before request is made to consolidate such certificate with others; and where applicant seeks issuance of certificate in a pending proceeding, relief should be sought in that docket. Such modifications are outside scope of instant extension proceeding and may not be considered.—Trailways of New England, Inc., Extension, 92 M.C.C. 434 (439-40).

While "grandfather" certificates have been modified on a showing that authority granted a predecessor was not responsive to its traffic pattern, or that more comprehensive service was conducted than its authority might now allow, applicant claiming right to perform heavy-hauling service is required to show that commodities transported by its predecessor do not fit description in "grandfather" certificate of "heavy machinery" or "contractors' machinery, tools, and equipment." It has not done so. While all items handled cannot be classified with certainty, that authority is broad enough to embrace the bulk of them, and those not readily assignable to either description do not go to make up a heavy-hauling service. Modification to embrace all commodities which because of size or weight re-

quire special equipment, not justified.—Jetco, Inc., Extension, 91 M.C.C. 673 (677, 678-9).

No sufficient cause has been demonstrated for reopening of applicant's "grandfather" proceeding for purpose of broadening its commodity authority for "equipment used in the manufacture of" specified articles to authorize transportation of equipment used "or useful" in manufacture of wearing apparel, so as to legitimize applicant's transportation of sewing machines without regard to their use for commercial purposes. Grant therein was predicated on a showing of service for a manufacturer of women's foundation garments, and no probative evidence is tendered which would justify broader authority, or which indicates that authority granted was not fully responsive to the proof adduced in the "grandfather" proceeding. Petition denied.—I.L. & C. Corp. Modification of "Grandfather" Authority, 89 M.C.C. 161 (164).

"Grandfather" rights, determined many years ago, should not be modified except where there is a definite and positive showing that a miscarriage of justice has occurred. "Grandfather" applicants expressly sought eastbound authority over considered route only for gas in cylinders and rubber tires, which was granted, and neither they nor any of four successive transferees prior to petitioner sought any reconsideration or extension of that grant; analysis of abstract of shipments submitted in the "grandfather" proceeding indicates that no enlargement of those rights would be justified upon reconsideration and that there has been no miscarriage of justice; reopening of the "grandfather" proceeding would serve no useful purpose.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (574)*.

Petitioner seeks modification of the "grandfather" authority, as described in its present certificate which differs somewhat in wording from those held by its predecessors, for general commodities from Charleston, W. Va., to Cincinnati to read "between" Charleston and Cincinnati, to permit it to handle eastbound shipments of general commodities, including service in both directions at authorized intermediate points. However, the grant of authority to serve the named intermediate points, as originally described at the foot of the two basic commodity grants, was not intended to and did not enlarge those grants so as to authorize transportation of general commodities eastbound from the intermediate points; conclusion is warranted that petitioner has at no time acquired any greater operating rights in that respect than those held by its predecessors, and that its present certificate adequately describes the rights originally granted in the "grandfather" proceeding; petition for modification of the certificate, denied.—Id., pp. 575, 576.

Although modification of railroad subsidiary's certificate to eliminate 33 present key points and authorize substituted highway service within each of 12 defined key-point zones, but not between zones, will bar transportation of certain interzone traffic it can handle under present key-point restrictions, denial of its request for a 150-mile highway exception to continue such transportation is not inconsistent with refusal to allow any alteration requested by protestants of present commodity descriptions and exceptions in its certificate; latter modifications would work an absolute diminution of its present authority, whereas net effect of the zone modification is a substantial gain in territorial scope of its substituted service.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (412).

See also Northern Pacific Transport Co. case, NTP, n. 10 *Restrictions*.

Petition for amendment of permit for "groceries" to authorize transportation of commodities dealt in by grocery stores was filed 7 years after "groceries" was defined (53 MCC 703, 61 MCC 311, sustained 159 F. Supp. 717) as articles customarily served as food or used in preparation thereof; during those years petitioner continuously transported many articles not within that definition; claim that it was entitled to do so on strength of its predecessor's operations is not tenable, since every carrier subject to the act is charged with knowledge of the commission's pertinent interpretative decisions, and those cited should have put petitioner on notice that such transportation was on its face unauthorized. It should have taken steps to clarify its authority within a reasonable time after those decisions; no justification appears for its contin-

ued operations in ignorance or disregard of transportation which it should have known its permit authorized.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (394).

To acquiesce in petitioner's position would condone a practice which is not responsive to a carrier's duty under the act and which would be both administratively unsound and unfair to other carriers who operate within scope of their authorities; it is of no significance that petition was filed shortly after petitioner was notified that it was conducting operations in excess of its authority; circumstances compel conclusion that petitioner's "groceries" authority is definite, unambiguous, and not justifiably susceptible to the modification sought at this time.—Id., p. 394. [But see partial dissent.]

Even if resort to extraneous matter were warranted, no different result is justified. Had petitioner acted at an earlier date, documentary evidence of predecessor's actual operations might have been available. However, record is far from convincing that the predecessor's transportation of certain items was of commodities to be sold in grocery stores, rather than supplies to be used in a meat and grocery business; such meager evidence does not justify authorizing petitioner, whose authority was recently converted, to operate as a common carrier of any commodity dealt in by wholesale or retail grocery stores.—Id., pp. 394-5.

35. Cessation of operations exceeding authority.—[Vols. 15-19].—See also Jones Motor Co. v. United States, 28 USC §2325, n. 57.

In corporation's action seeking review of the commission's order requiring plaintiff and its predecessor (the individual who is now its president and major stockholder) to cease and desist from engaging in unlawful for-hire motor carriage, there is no substantial evidence of record to show that the corporation conducted any illegal activities after it was organized when virtually all the evidence of unlawful transactions related to operations conducted by its predecessor prior to the date of its incorporation. Though predecessor engaged in unlawful for-hire transportation, this does not show that plaintiff conducted illegal activities; mere fact that a person is the major stockholder of a corporation does not of itself make him the alter ego of that corporation. A one man corporation can be valid; and, since record does not show plaintiff corporation to be a sham, or mere shell, its corporate entity may not be disregarded. Record fails to disclose a rational basis for the commission's opinion that a cease and desist order should issue against the corporation; order reversed and set aside.—Farmers Feed & Supply Co. v. United States, 267 F. Supp. 72 (75-6)*.

Plaintiff engaged in operations not within scope of its permit authorizing transportation of "packinghouse products" and "canned goods" when considered commodities were either transported for shippers not engaged in the business of operating meat packinghouses or do not come within the accepted meaning of canned goods. Accordingly, the commission properly entered the cease and desist order in issue when, after thorough consideration of all evidence in plaintiff's reopened "grandfather" proceeding, and application of proper statutory standards therein, it determined that plaintiff's permit reflected all the "grandfather" rights to which it was entitled; sustained.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (463, 466)*.

Order requiring respondent air carrier to cease and desist from all unlawful motor-carrier operations until proper authority is obtained therefor was stayed because of court action to set aside the prior decision; and it being found, on reconsideration, that respondent's motor transportation of property, having a prior or subsequent movement by air, between Greater Wilmington (Del.) Airport and Baltimore, Md., 65 miles, does not fall within the partial exemption of §203(b)(7a), an appropriate order will be entered at the conclusion of the court proceedings.—Zantop Air Transport, Inc.—Investigation of Operations, 102 M.C.C. 457 (458, 463)*.

Motor carrier respondent's transportation, without appropriate authority, of property having a prior or subsequent movement by air and moving on air freight forwarder bills of lading between Memphis, Tenn., airport, on one hand, and points in that and adjoining States which are not named in air carrier tariffs on file with the C. A. B., on the other, is not within the §203(b7a) exemption; respondent has been, and is, engaged in unlawful

motor carrier operations. And record is convincing that air freight forwarder respondent knew, or had reason to know, that activities of the motor carrier constituted a for-hire transportation service requiring interstate operating authority and, to some extent, benefited by its participation therein. Cease and desist order, directed to both respondents, entered.—Film Transit, Inc., and Air Dispatch, Inc.—Investigation, 98 M. C. C. 145 (152).

Though defendant authorized to conduct regular-route airport limousine service, restricted to transportation of not over 11 passengers in any one vehicle, has incidental charter rights under §208(c), the type-of-service restriction in its certificate applies to any charter operations conducted under those rights. Defendant admits that it has performed at least one charter trip with a vehicle larger than the 11-passenger vehicles used on its certificated routes, and the commission takes official notice of its charter tariff naming charges, rules, and regulations for chartered vehicles "having a seating capacity of more than 11 passengers." Moreover, defendant asserts that it is entitled to engage in charter operations of type found to be beyond scope of its incidental authority; it is therefore ordered to cease and desist from such unauthorized operations.—Arrow Lines, Inc. v. Connecticut Limousine Service, Inc., 96 M.C.C. 1 (9).

Since defendant's transportation of passengers in charter operations originating at Portland, South Portland, Gorham, and Lewiston, Maine, and extending to out-of-State points is beyond scope of its incidental charter rights under §208(c) and without certificated authority, in violation of §206(a), cease-and-desist order is entered.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (905).

Inasmuch as Storrs, Conn., is found not to be embraced within defendant's regular-route territory for purpose of §208(c) and the commission's regulations thereunder, defendant is ordered to cease and desist from transportation of passengers in charter service from the University of Connecticut at Storrs to points beyond that State.—Blue Line, Inc. v. Short Line of Connecticut, Inc., 88 M.C.C. 201 (204-5); similarly, Plainfield, N.J., being found not to be within the origin territory appurtenant to defendant's regular routes, as contemplated by the incidental charter rights provisions of §208(c), defendant is ordered to cease and desist from originating charter parties at that point unless and until appropriate authority is obtained.—Somerset Bus Co., Inc. v. Suburban Transit Corp., 88 M.C.C. 13 (16).

Problems posed as to extent of terminal areas based on Beaumont and other Texas towns in Jefferson County, resulting from annexation by the City of Orange of a circular strip bringing its municipal limits within radial distances of such adjacent municipalities conforming to mileage-population formula prescribed for determining commercial zones and terminal areas, are unusual. Defendants' unauthorized transportation to and from those portions of the unannexed, unincorporated area enclosed by the strip which are found not to be within the commercial zones of their authorized base municipalities therefore does not reflect unfavorably on their bona fides. However, in view of the finding of unlawfulness of transportation to and from such encircled unincorporated areas exceeding the prescribed radii from the base municipalities, entry of a cease-and-desist order is deemed appropriate.—Central Freight Lines, Inc. v. East Texas Motor Freight, 96 M.C.C. 150 (158)*.

Since respondents are found to be providing, jointly and in concert, an unauthorized for-hire freight forwarding service in violation of §410(a), it follows that motor-carrier operations conducted in their behalf by respondent cartage company within terminal areas of Miami and Fort Lauderdale, Fla., are also unlawful in violation of §§ 203(c) and 206(a) or 209(a); cease-and-desist order entered.—Federal Shippers Assn., Inc.—Investigation, 316 I.C.C. 523 (527)*.

Respondents holding general-commodity authority which excepts commodities requiring use of special equipment are not authorized to transport new automobiles with either standard carryall type trailers or convertible "Durabilt" trailers, and performance of such transportation in substituted motor-for-rail service violates §206(a); cease-and-desist

order entered.—Motor Vehicles—Idaho, Nevada, and Utah Origins, 318 I.C.C. 859 (866-7, 868).

Record is conclusive that principal respondents, a vehicle leasing company, a company purporting to furnish drivers to shippers, and a meatpacker which transports its own goods, are jointly providing for-hire motor carrier service to shippers without appropriate authority; and that secondary respondent-shippers were interested in and affected by operations of the principal respondents within meaning of §2 of the Elkins Act. Cease-and-desist order issued against all respondents.—Transport Rental Systems, Inc., Investigation, 94 M.C.C. 402 (412-3).

In dealing with fictitious equipment-leasing arrangements the commission has invariably found that lessor was engaged in unlawful operations over lessee's routes; operations from St. Louis to Tulsa under purported lease-and-interchange arrangement are those of respondent connecting carrier and not of carrier holding the authority therefor; even though they were conducted under unauthorized lease of latter's operating rights, such lease is without legal force or effect; as respondent has no certificated authority for such operations it is in violation of §206(a); order entered requiring it to cease and desist from such unauthorized operations.—Stewart—Investigation of Control, 87 M.C.C. 681 (697-8).

The fact that applicant did not agree with commission interpretation of the extent of its authority, in earlier Interpretations case, and fact that it was unable to obtain review of that decision because of lack of finality of the order affords no reason for applicant to engage in unlawful operations in defiance of the commission's orders, and warrants issuance of a cease and desist order in embraced complaint proceeding.—Coldway Food Exp., Inc., Extension, 94 M.C.C. 479 (483-4)*.

However, since applicant is found fit to receive authority sought—which covers operations found to be unlawful in embraced complaint case—on reconsideration, a cease and desist order will be entered unless it complies with the insurance, tariff, and reporting requirements within the time specified.—Id., 95 M.C.C. 780 (785, 787-8)*.

Since the commission by DANDO adopted examiner's finding in another proceeding that respondent's permit for transportation of petroleum products in containers did not authorize transportation of bulk asphalt between points in same territory, and also adopted his recommended denial of extension authority for that service, respondent's continuance of such bulk operations would violate §209(a), and it should immediately cease and desist therefrom if it has not already done so.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (672); and as respondent's purchase of additional rights to transport petroleum products was consummated in violation of §5(4), it follows that, with exception of a 30-day period during which it performed the service under temporary authority granted pursuant to §210a(a), its performance thereof under color of vendor's permits has also been unlawful in violation of §209(a); cease-and-desist order entered.—Id., p. 681.

Since respondent's "prefabricated houses and buildings" certificate authorizes transportation of commodities named therein only if they are intended for use in, or in connection with, a prefabricated house or building, its transportation under that authority of commodities classified as "building materials" which are not intended for such use constitutes a clear and continuing violation of the act. Cease and desist order entered.—Whitehouse Trucking, Inc., Investigation and Revocation, 99 M.C.C. 621 (623-4, 629-30)*.

Inasmuch as transportation of binder and baler twine is found not to be authorized by commodity description "farm machinery and parts thereof," and such authority does not permit independent transportation of parts, respondent's transportation of twine and of separate shipments of rake teeth and harrow teeth has been unlawful; cease-and-desist order entered.—Ace Lines, Inc., Investigation and Revocation, 94 M.C.C. 96 (98, 100)*; similarly, insofar as respondent's transportation of electric cable, dry glue, glue stock, furfural residue, wood veneers, transformers, and regulators is found not to be within scope of its authority for building and construction materials, cement, forest products, lumber, or heavy machinery, it is ordered to cease and desist from such unlawful operations.—

Mitchell Bros. Truck Lines—Investigation, 91 M.C.C. 267 (274)*.

Carrier's authority for transportation of "supplies" intended for use in mines or oilfields, or in discovery, development, and production of natural gas and petroleum, does not authorize transportation or stringing of pipe used in a pipeline right-of-way; and though such unlawful operations have been discontinued, entry of a cease-and-desist order is still deemed necessary.—Great Western Motor Lines, Inc.—Investigation, 96 M.C.C. 522 (525, 527).

Since "oils" listed under heading "Meats, Meat Products, and Meat Byproducts" in section A of appendix I to the Descriptions case embraces only those oils derived solely from animal matter, defendant's authority to transport commodities in that list does not authorize it to transport vegetable oils, vegetable oil shortenings, or oils and shortenings blended from vegetable oils and animal oil or fat; and the fact that defendant has performed such unauthorized transportation for the past 10 years under an honest misinterpretation of its certificate is not a mitigating circumstance. Cease-and-desist order entered.—Modern Truck Line, Inc. v. Colonial Refrigerated, 94 M.C.C. 149 (152).

Though the evidence does not support a conclusion that unlawful transportation respondent performed was a willful violation of the act, but indicates it was performed under a mistaken assumption that its existing certificate authorized the service, a cease and desist order is entered respecting those operations. —North American Van Lines, Inc., Investigation, 94 M.C.C. 663 (669); respondent has sincerely construed its certificate in good faith and its unauthorized operations were the result of an honest misinterpretation of its operating authority. Therefore, entry of cease-and-desist order should not be construed as a conclusion that respondent is unfit to receive a grant of authority in any pending proceeding in which it is an applicant.—Eagle Motor Lines, Inc., Investigation and Revocation, 94 M.C.C. 704 (710)*.

Transportation by defendant carrier, under contract of lease between it and complainant's predecessor, was performed without having in force a certificate authorizing such operation; cease-and-desist order is entered requiring defendant to abstain from such illegal operations.—Ayres v. Northern Tank Line, 95 M.C.C. 468 (470-1); likewise, since respondent is found to have been transporting new trucks as a connecting carrier without appropriate authority in violation of §206(a), a cease and desist order is entered.—Kenosha Auto Transport Corp., Investigation, 89 M.C.C. 550 (553)*.

Respondent ordered to cease and desist from transportation of commodities found to be beyond scope of his authority.—Momsen—Investigation and Revocation of Certificate, 88 M.C.C. 343 (347); of 50 shipments alleged to be unauthorized, only 2 were within respondent's authority to transport "heavy machinery, contractors' equipment, and parts and accessories, in special equipment, in quantities of not less than 10,000 pounds." Other shipments are not shown to have been moved in, or to have required, special equipment. Respondent ordered to cease and desist from unauthorized transportation.—Ray Carter, Inc.—Investigation and Revocation, 91 M.C.C. 653 (656-8); similarly, since respondent's interstate transportation of self-propelled streetsweepers and road rollers was not within either its heavy-hauler or tractor authority, cease-and-desist order is entered enjoining such operation until proper authority is obtained.—Daily Exp., Inc.—Investigation of Operations, 98 M.C.C. 661 (672, 674-5).

Both carrier respondent and affiliated corporation, jointly and severally, have been, and are, engaging in unauthorized interstate transportation of fuel oil and diesel oil to shipper's plant facility, and shipper participates in the unauthorized operations; cease and desist order entered against all three.—Schirmer Transp. Co., Inc.—Investigation, 91 M.C.C. 869 (875-7)*.

Respondent carrier's buy-and-sell operations in the direct transportation of sugar from refinery to customer-consignees, found to be unlawful for-hire transportation; and record is clear that refiner respondents and broker respondents are interested in and affected by the carrier's unlawful operations within §2 of the Elkins Act. While some of the respondents have ceased dealing with the car-

rier, their ability to reinstate similar unlawful operations remains and poses a continuing threat. Cease and desist order, directed against all respondents, entered.—Utley Lumber Co., Inc., Investigation of Operations, 94 M.C.C. 458 (463-5); also, while record is not sufficient to provide a basis for cease and desist order against refiner and broker respondents broad enough to prevent them from future participation in similar arrangements with other such carriers, they are admonished to examine their operations and take steps to insure against participation in similar transactions in the future.—Id., p. 466.

Carrier respondent has cooperated with individual respondent holding no authority in an overall plan for providing their complementary services as one in performance under purported equipment-leasing arrangements of transportation beyond scope of the carrier's commodity authority. Cease-and-desist order entered.—Zirbel Transport, Inc., Investigation and Revocation, 91 M.C.C. 705 (709).

Carrier holding certificate for operations between St. Louis and certain Illinois points and affiliate holding only Illinois intrastate certificate have jointly and severally been operating in interstate commerce between points in Illinois, Missouri, and Indiana beyond scope of their authorities, in violation of either §206(a) or §209(a); cease-and-desist order entered.—State Transport Co., 91 M.C.C. 373 (375).

Plant site located some 4 miles from highway is found not to be an authorized point of service in respondent's operations between Philadelphia and New Brunswick, N.J., and although respondent had discontinued service to the plant pending outcome of investigation, cease-and-desist order is appropriate when its unlawful activity extended over a period of 10 years.—Cross Transp., Inc., Interpretation of Certificate, 91 M.C.C. 51 (57).

Since defendant's authority to serve points in Philadelphia commercial zone stems from its authority for a route between Philadelphia and Newtown Square, Pa., it may not do so as an incident to line-haul service over its Trenton, N.J.-Holyoke, Mass., route merely because commercial zone of an off-route point appurtenant to latter route overlaps the Philadelphia zone; thus its transportation of traffic between Philadelphia and points on the Trenton-Holyoke route violates §206(a)(1); cease-and-desist order entered.—Joint Northeastern Motor Carrier Assn., Inc. v. Creger, 91 M.C.C. 494 (496).

Restrictions in defendant's certificate preclude any service at Louisville and Buckner, Ky., and Franklin and Columbus, Ind., whether direct or indirect or by interline, on traffic moving to and from points south of Louisville; defendant's various described methods of operation between such restricted points and the prohibited area are therefore unlawful; cease-and-desist order entered.—Alabama Highway Exp., Inc. v. Terminal Transport Co., 91 M.C.C. 635 (639, 640, 642).

Based on the most reliable method of measurement used by the parties' witnesses, air line distance from Grant Park, Chicago, to shipping docks of plant at Woodstock, Ill., is shown to exceed defendant's authorized radial distance of 50 miles from Grant Park; transportation performed for that shipper is thus beyond scope of defendant's authority; cease-and-desist order entered.—Peet Frate Lines, Inc. v. W.O.D., Inc., 89 M.C.C. 206 (208).

Respondent's authority to serve points "in Connecticut, Pennsylvania, New Jersey, and New York within 100 miles of Columbus Circle, N.Y.," is found not to authorize service to or from points in Connecticut, Pennsylvania, or New Jersey that are over 100 miles distant from Columbus Circle; therefore, respondent is ordered to cease and desist from any such unauthorized operations.—T. I. McCormack Trucking Co., Inc.—Investigation, 89 M.C.C. 5 (16, 18)*.

When unrefuted evidence shows that Lincolnton, Ga., is beyond defendant carrier's authorized radial territory within 100 miles of corporate limits of Atlanta, and that transportation of shipments from Lincolnton is therefore unlawful, it is unnecessary to determine whether destination point at Cleveland, Ohio, is within its authorized 25-mile radius of Akron; and though defendant shipper is admonished to discontinue use of carrier's unauthorized service, in view of cease-and-desist order entered against latter entry of similar order against shipper is unnecessary.—Hennis

Freight Lines, Inc. v. Ohio Southern Exp., Inc., 88 M.C.C. 168 (172).

Operation as a motor carrier under authority from the commission involves compliance not only with the act but also with many regulations and requirements, and successful regulation requires the cooperation of the carriers. Although applicant has consistently asserted a right to perform the challenged operations ever since it acquired the certificate involved, has conducted them allegedly on advice of counsel, and may be assumed to have acted in good faith prior to being advised, first by the commission's district supervisor, and second, by the Director of the Bureau of Operating Rights, that they were unauthorized, it took no action thereafter to clarify its authority until after institution of investigation proceeding some 18 months later. This does not reflect a commendable attitude on part of respondent or its counsel; neither was diligent in seeking a formal ruling by the commission when they became aware that responsible officials of the commission questioned the legality of the operations.—Keystone Motor Exp., Inc.—Investigation of Operations, 89 M.C.C. 567 (578, 579)*.

While admittedly a carrier may rely on advice of its counsel, albeit misadvice, both carrier and counsel have a clear duty to seek resolution of any question raised by a responsible official of the commission as to operations under its authority with which they take issue; dilatory tactics disclosed should not be condoned on part of either respondent or its counsel, upon whose advice it claims it has been and is relying in support of its continued unauthorized operations. However, considering changes in wording of the involved authority in course of five successive transfers since issuance of original "grandfather" certificate, and fact that for over 5 years respondent has conducted considered operations openly, under color of right, and on advice of counsel, it cannot be found to have acted willfully in violation of §206(a). Cease-and-desist order entered.—Id., pp. 579, 580.

Though respondent's certificate limits it to transportation of equipment, machinery, and materials peculiar to or intended for use by the oilfield industry, it has for years engaged in what amounts to a general-commodity operation under color or its claimed authority for "materials," its traffic having been restricted only by its ability to attract business. Its self-serving interpretation of its certificate is too tortured for conclusion that such flagrantly unlawful operations were not willfully conducted; and the violations are not mitigated by fact that unauthorized traffic was solicited openly, continuously, and vigorously over a long period. Also, the commission's failure to reject a tariff listing rates for unauthorized commodities operates neither to convey new authority nor to condone the unlawful conduct. Effect of the willful violations has been to deprive authorized carriers of revenues to which they, not respondent, were entitled; cease-and-desist order entered.—J. B. Acton, Inc.—Investigation and Revocation of Cert., 89 M.C.C. 59 (64)*.

Defendant passenger carrier's eastbound transportation of part of all-expense tour group assembled in New York City, which had traveled to Pacific northwest points by air service, was unlawful when it holds no specific charter-operations authority between considered points and, under its regular-route authority between certain New Jersey points and New York City, it may perform such service only under the incidental charter authority of §208(c); and defendant passenger broker's use of such unauthorized transportation is in violation of §211. While the commission does not condone defendants' engaging in such unlawful operations, since they have voluntarily discontinued them and desire to comply with the commission's regulations in the future, entry of a cease and desist order is unnecessary; defendants should be afforded an opportunity to manifest their good faith without a compliance order; however, they are admonished to so conduct their operations as to avoid future violations.—Greyhound Corp. v. Consolidated Term. & Travel Bureau, 94 M.C.C. 283 (285).

Passenger carrier's transportation of express in its buses when no passengers are transported therein is unlawful if it is being conducted for purpose of transporting express alone and is not incidental to transportation of passengers. Any such operations should be immediately discontinued and not resumed until appropriate authority therefor

is obtained.—Armored Carrier Corp. Extension, 92 M.C.C. 336 (363).

As order entered in 91 MCC 936, directing applicant to cease and desist from violations therein found, though held not to bar approval of purchase of additional operating rights in 93 MCC 217, was made applicable to any certificate issued as result of that purchase, it should also apply to authority granted for such portions of proposed operation between Boston and Berlin, N.H., as may not be performed under the purchased rights, and acceptance of certificate issued in instant proceeding will be deemed agreement by applicant to application of that order.—Trailways of New England, Inc., Extension, 92 M.C.C. 434 (439).

Petitioner's transportation of l.t.l. freight originating at and destined to points in Maryland, in consolidated truckloads with l.t.l. shipments to or from points beyond that State, over circuitous routes via Bridgeville, Del., is not authorized by its certificate, and such operations are conducted as a subterfuge to evade the laws of Maryland. Petitioner is admonished to discontinue such unlawful operations.—Service Trucking Co., Inc.—Declaratory Order, 94 M.C.C. 221 (225, 226)*.

See also Jones Public Utility Comm. case, §204(c), n. 251.

Though respondent's permit authorizes transportation only of merchandise dealt in by wholesale, retail and chain grocery and food business houses, it has admittedly been serving under contract shippers or receivers who do not operate retail chain grocery stores, the business of which is selling food, and apparently much of the traffic transported in such operations is commoditywise beyond the scope of its permit. If its operations were confined to authorized shippers or receivers there would be little likelihood that it would be tendered unauthorized traffic.—Estate of E.L. Northcutt, Deceased, petition Proceeding, 94 M.C.C. 585(600-1)*.

Protestant's argument that regulated carriers' certificates do not authorize a pool-truck distribution service to and from points beyond the New York and Philadelphia commercial zones is devoid of any support in the record. If there are any such unauthorized operations, procedures are available whereby protestant may bring the facts to the commission's attention for appropriate action.—Distribution Rates in Eastern Central Terr. Cities, 319 I.C.C. 410 (416).

Although petitioner has clearly been operating beyond scope of its commodity authority, cease-and-desist order may not be entered in proceedings on petition for modification of its permit or extension application seeking authority to transport the commodities involved; however, petitioner is admonished to discontinue the unauthorized transportation.—C & E Trucking Corp.—Modification of Permit, 88 M.C.C. 391 (396); nor is an application proceeding an appropriate place for applicant to request issuance of a cease-and-desist order against protestant for allegedly exceeding scope of its authority.—Alterman Transport Lines, Inc., Extension, 91 M.C.C. 43 (45).

Although applicant bases its claim of right to handle traffic to or from Vincennes, Ind., through its Terre Haute, Ind., terminal on theory that because Vincennes is an authorized service point on its east-west routes it must necessarily be an authorized point on its northsouth route between Terre Haute and Evansville, which passes through Vincennes, the northsouth route is unequivocally restricted against service at intermediate points, and applicant has advanced nothing to warrant finding that its Terre Haute-Vincennes operation is conducted under even the barest color of right. It should immediately discontinue such operations until it obtains proper authority.—Eastern Exp., Inc., Extension, 92 M.C.C. 696 (698-9).

Although there is some question as to propriety of respondent's use of plan III TOFC service under its initial-movement authority as a contract carrier of automobiles when at shipper's direction and under terms of its contract it handled shipments in through motor-rail-motor movements under its sole responsibility, in its trailers, and on its billing, and was shown as consignor-consignee on railroad billing for the substituted rail movement, in view of the confusion generated in the automobile industry by the new rail transportation methods no cease-and-desist order is entered, and its use of the TOFC service at shipper's

specific direction is found lawful. However, respondent is admonished to conform to the commission's present rules barring its participation in TOFC transportation in its own right.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (402, 414, 417).

Applicant's transportation of palletized bags of bonding mortar and ferro alloys in palletized boxes is clearly beyond scope of its heavy-hauling authority and should be discontinued.—W. J. Dillner Transfer Co. Extension, 91 M.C.C. 667 (671); similarly, since applicant's authority for "heavy machinery" does not embrace all commodities whose transportation requires the use of special equipment, it is admonished to discontinue such operations as are beyond the scope of its certificate.—Jetco, Inc., Extension, 91 M.C.C. 673 (678-9).

Even though applicant stipulated that a cease-and-desist order might be entered against him respecting any transportation of regulated commodities other than those for which authority is granted, no such action is necessary in view of the cooperative attitude displayed by him in voluntarily discontinuing transportation of certain commodities on advice of counsel, plus absence of any intent willfully to violate the act.—Hughes, 89 M.C.C. 471 (484)*

While applicant's and protestants' unauthorized past transportation of certain commodities is not condoned, such operations were conducted under a mistaken interpretation of their authorities; however, they are admonished to refrain from such transportation in future unless appropriate authority is acquired.—Case Driveaway, Inc., Extension, 89 M.C.C. 633 (635)*.

Though applicant is admonished to refrain from operations found to be beyond scope of its commodity authority until certificate granted in extension proceeding is issued, those operations were performed under some color of right and application was filed as soon as its authority was questioned; issuance of a cease-and-desist order is therefore unnecessary.—Melton Truck Lines, Inc., Extension, 88 M.C.C. 723 (734).

Applicants' past participation in any traffic beyond scope of their commodity authorities does not warrant continuance thereof; rather, the circumstances dictate that they should be, and they are, admonished to comply strictly with terms of their certificates and to apprise themselves of and be guided by the decisions of the commission in the conduct of their operations.—C & H Transp. Co., Inc., Clarification of Authority, 88 M.C.C. 87 (96); and, since it is now found that applicant may not transport butter and meat, fresh or frozen, under its authority for "agricultural products," it is admonished to discontinue such unlawful practices.—Yeary Transfer Co., Inc., Extension, 88 M.C.C. 473 (478).

Although, following decision in 86 MCC 327 that missiles are not aircraft, defendants' transportation of jet thrust units for interceptor missiles was beyond scope of their authority for aircraft parts, since such units are parts of commodities which are not aircraft, and are not shown to be interchangeable with any similar components of aircraft, that decision was a recent one and prior thereto it was at least arguable that authority for aircraft parts included missile parts; hence defendants cannot be held accountable for their good-faith performance of transportation later held to be beyond their authority. Entry of cease-and-desist order is not warranted, but defendants are cautioned not to continue such transportation until appropriate authority is obtained.—Baggett Transp. Co. Extension, 88 M.C.C. 3 (8, 11)*.

Applicant's unauthorized transportation of airfreight between Salt Lake City Airport and points on its authorized routes beyond air carriers' terminal areas has deprived authorized carriers of traffic they are qualified to transport; it is admonished to discontinue such operations.—Wycoff Co., Inc., Extension, 89 M.C.C. 369 (374)*.

Since applicant's joinder of its regular- and irregular-route authorities for performance of through service between points and in manner described is found to be unlawful, it is admonished to discontinue such transportation.—Lattavo Bros. Inc., Extension, 89 M.C.C. 600 (604)*.

Past operations of railroad subsidiary authorized to provide service auxiliary to and supplemental of rail service, in providing joint rail-motor service on interstate shipments

moving to off-rail destinations, constitute a willful and deliberate avoidance of the requirements of the act; applicant admonished not to engage in such unauthorized operations in the future.—Milwaukee Motor Transp. Co., Extension, 89 M.C.C. 41 (45-6).

Since applicant's certificate limits it to transportation of interstate traffic from Brooklyn, transportation of shipments from its terminal facility in Queens County to Westbury in Nassau County, N.Y., is beyond scope of its authority; and since continuity of the interstate movement is not broken by applicant's storage of shipments prior to delivery, and Westbury is not within the New York City commercial zone, such transportation is not exempt from regulation; applicant is admonished to bring its operations within the provisions of the act.—Paul Marckesano & Sons Co., Inc., Extension, 86 M.C.C. 727 (732).

Even though vendor's authority to transport cement is restricted to movement thereof in dump trucks, it freely admits that it has been performing such transportation for some time in hopper and tank-type vehicles; such transportation, except to three points to which it is specifically authorized to haul bulk cement in tank trucks, is clearly unlawful; and its transportation of cement to any point in other than dump trucks or tank-type vehicles is also unlawful. Vendor is admonished to cease such unlawful activity immediately in the absence of appropriate authority.—Mitchell Transport, Inc.—Purchase—John Schutt, Jr., Inc., 97 M.C.C. 10 (19).

Although St. Paul is the sole origin from which contract carrier is authorized to transport paper products, its abstract of shipments indicates that it has performed such transportation from numerous other origins; and while under another commodity description incidental to paper products its territorial scope is broad enough to embrace those movements, that description does not include paper products. It is therefore admonished, if in fact those movements were beyond scope of its authority, to discontinue all such unlawful operations immediately and advise the commission promptly that it has taken steps to do so.—La Casse—Control—Interstate Exp., Inc., 97 M.C.C. 230 (237)*.

See also Nigro Freight Lines case, §206(a)(1), n. 26.

Following lease of vendee's tank vehicles by vendor general-commodity carrier, which had previously conducted no bulk-liquid operations, all of vendor's bulk-liquid traffic was handled under the control and influence of vendee, which retained 85 percent or more of the revenues therefrom. Such arrangement constituted an unauthorized lease of a portion of vendor's operating rights in violation of §5(4), and an unauthorized for-hire common-carrier operation by vendee in violation of §206(a); purchase authority being denied, the parties are admonished to terminate such unlawful activities.—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (385, 386, 387)*.

Section 212. (b) [*§ 312(b) U.S.C.*] Transfer of operating rights.— [Unchanged. See vol. 11, p. 9479.]

Amendments, see footnote, p. 9479.

Historical Note

In view of creation of the Department of Transportation by Public Law 89-670, effective April 1, 1967 (32 FR 5453), the Commission and the Department of Transportation entered into a Memorandum of Agreement on April 3, 1967 (32 FR 5744, Apr. 8, 1967) for the purpose of accomplishing continuity, liaison, coordination, and support with respect to transferring from ICC to DOT personnel and functions concerned with (1) motor carrier safety matters; (2) certain pending ICC proceedings; (3) pending court cases transferred to DOT; (4) housekeeping operations for ICC personnel transferred; (5) access to, and provision of, reports and other documents, and (6) liaison and coordination between ICC and DOT.

Notes of Decisions

Volume 10—p. 8077; Volume 11—p. 9479; Volume 12—p. 10418; Volume 13—p. 11087; Volume 14—p. 11608; Volume 15—p. 12222; Volume 16—p. 12872; Volume 17—p. 13573; Volume 18—p. 14523; Volume 19—p. 15790.

10. Transfer of operating rights, including "grandfather" rights.—[Vols. 10-19].—See also §5(2), n. 110 *Transfer of operating rights.*

The intent of Congress in exempting transfers of operating rights of small motor carriers from the stringent requirements of §5(2) was to provide a means whereby such transfers could be effected easily and without delay under such rules as the commission deemed appropriate. Neither the statute nor the commission's transfer rules requires a hearing on an initial transfer application and the transfer may be approved ex parte; however, after notice of order approving the transfer, an interested party may file a petition for reconsideration and if a request for oral hearing is contained in the petition, it must be supported by an explanation as to why evidence to be presented cannot be submitted in affidavit form. The commission's rules and regulations governing approval of small transfers and petitions for reconsideration thereof are reasonable.—A. L. Root Transportation, Inc. v. United States, 280 F. Supp. 152 (155-6)*.

In action to set aside the commission's order denying plaintiffs' petition for reconsideration of order approving §212(b) transfer and for oral hearing thereon, neither the statute nor due process requires a hearing on plaintiffs' petition, or any oral presentation thereon; moreover, since the APA provides for hearing only in cases where a hearing is "required by statute," that act does not apply. Prior notice of, and participation in, a small transfer proceeding need be accorded only to the immediate parties and, if other persons are not entitled to take part originally, they would not logically be entitled as a matter of right to subsequent participation; therefore, the commission's denial of plaintiffs' request for oral hearing did not deprive them of due process of law. In addition, mere fact that plaintiffs might suffer some pecuniary loss as result of approval of the transfer is not sufficient to show deprivation of property in violation of the Constitution; plaintiffs have no right to exclusive use of highways over which they operate and, while they may face increased competition from transferee, freedom from competition is not constitutionally protected. Commission order sustained.—Id., pp. 155, 157.

The commission acted reasonably and within scope of its authority in finding that application for approval of proposed transfer of operating rights was subject to §212(b) and not §5, and denying plaintiffs' petition for reconsideration and request for hearing. Plaintiffs submitted no affidavits and no concrete evidence to support their allegation that the aggregate number of vehicles used by transferor and transferee in interstate commerce exceeded 20, except transferee's annual report which listed a total of 26 vehicles without a breakdown showing those used in interstate and intrastate commerce; however, only those units used in interstate commerce are counted for jurisdictional purposes under §212(b), and affidavits of presidents of both transferor and transferee certified that aggregate number of units used by both in interstate commerce did not exceed 20.—Chemical Leaman Tank Lines, Inc. v. United States, 251 F. Supp. 269 (273-4)*.

As to plaintiffs' contention that transferor's authority to transport chemicals in bulk was dormant, and therefore could not be transferred under §212(b) and rules and regulations thereunder, transferor's certificate granted an unrestricted right to transport chemicals between certain points but did not require it to transport chemicals in bulk; such a certificate permits any type of equipment to be used. Furthermore, a motor carrier's authority is not automatically considered dormant under an unrestricted certificate if it fails to use every possible means of transportation. In view of transferor's certificate and its affidavit that it made frequent and diversified movements in transporting chemicals, and plaintiffs' fail-

ure to present concrete evidence to the contrary, the commission did not abuse its discretion or wilfully violate its own regulations in not finding dormancy and in denying a hearing on that question. Orders authorizing the transfer and denying requested hearing are sustained.—Id., pp. 274-5.

The language of §212(b) and that of §5(10) are equally explicit; read together, the two sections can only mean that a transfer involving not more than 20 vehicles is governed by §212(b) and the regulations prescribed pursuant thereto. The commission's distinction between §5 and §212(b) in 52 MCC 97 is an administrative interpretation of the statute by the agency charged with its application and enforcement, which, though not binding on the courts, is entitled to great weight.—Ship-By-Truck Co. v. United States, 208 F. Supp. 847 (851)*.

The commission acted within its statutory authority in permitting separate transfers of operating rights of two transferors to same transferee under separately filed applications when, at time of consummation of the first transfer, transferee was a noncarrier, thus the transaction was not subject to §5; and though at time of the second transfer both parties were carriers subject to the act, that transaction did not involve more than 20 vehicles and therefore was exempted from §5 by provisions of §5(10). As there is no evidence that either transferor knew of the other's proposed sale or that they were in any way affiliated with each other or with transferee, the commission's rejection of contention that the two transfers constituted a single transaction involving over 20 vehicles, and thus was subject to §5, was not error.—Id., p. 852.

Jurisdiction under §212(b) or §5; see §5(2), n. 2 *Vehicles operated.*

Before the merits of carriers' application under §212(b) may be considered under the transfer regulations, it must first be determined whether the purchase was exempted from §5 by provisions of §5(10) respecting the number of vehicles owned, leased, controlled, or operated by the parties, in light of the facts existing at time of actual consummation 2 years before filing of transfer application. As the evidence sufficiently establishes that during the period centering on date of the transfer agreement the parties normally operated an average of over 20 vehicles in interstate commerce, even if they did not do so at any one time or on any one day, the transaction was subject to §5, and the application, having been improperly filed under §212(b), must be dismissed.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (674-5, 677-8).

Order reopening transfer proceeding for purpose of determining whether the transaction was subject to §5 recited that there was reason to believe that the application contained false and fraudulent information concealing transferee's relationship with a third carrier, resulting in their operation together of over 20 vehicles, and the parties concerned were further notified by letter that evidence would be introduced in the reopened proceeding and related §5(7) investigation to show an intent to conceal the real party in interest and the purchase price. Adequate advance notice having thus been given, the commission has inherent power to determine whether the transfer order was properly entered, and evidence of happenings prior to and at time of the transfer was properly admissible.—Kowalsky's Exp. Service—Control and Merger, 93 M.C.C. 272 (273-4, 277-8).

Respondents' contention that their actions in the transfer proceeding (as detailed in appendix) were mere variations of representations made in the transfer application and not contrary to established precedent is completely without merit. The case is even stronger than that considered in 329 US 223, wherein the Court held that denial of license because of insufficiency or deliberate falsity of information lawfully required to be furnished is not a penal measure and, though it may hurt or cause loss, is not thereby made illegal, arbitrary, or capricious, even though the commission [FCC] failed to find that the concealment was of material facts or had influenced it in any decision. Instant application misrepresented and concealed material matter on which the commission relied in approving the transfer, and the transfer order, having been procured through fraud and misrepresentation, is void and must be set aside.—Id., pp. 278-9.

And as issuance of certificate to transferee

was merely ministerial in carrying out the intent of the transfer order, the certificate was void ab initio and must be considered a nullity upon vacation of that order. Transferor should comply with provisions of §§ 215, 217, and 221(c) to retain its right to the operating authority tendered for transfer.—Id., p. 278.

See also United States v. Polin, §5(2), n. 45 *Violation of §5(4)*, and the T.I.M.E. Freight, Inc. case, §210a, n. 1.

Transferee cannot be found fit to conduct operations he seeks to acquire, when within 2 years after his conviction on 27 counts of unauthorized operation it was discovered, through three separate compliance surveys by a staff member of Bureau of Motor Carriers, that he was again performing interstate transportation beyond scope of his authority, in violation of §206(a)(1), which continued until the last survey. After each of the first two compliance surveys, a letter was addressed to him directing his attention to those violations and other irregularities in his practices, and requesting that duplicate copy furnished therewith be executed and returned to the Bureau as certification that steps were being taken to correct those conditions, but such certifications were never returned. Transferee never denied the unlawfulness of such transportation, and the hollow excuses offered at hearing cannot be accepted as mitigation for a carrier of over 14 years' experience, who during that period has had numerous requests for expansion of his operations considered by the commission.—Burns Motor Freight, Marlington, W. Va., Transferee, 93 M.C.C. 629 (631-2).

Nor may the violations be condoned because they occurred while the operations were under supervision of transferee's son. The law provides for regulation of the carrier, not of its individual employees, and clearly places responsibility for compliance on the carrier. Transferee cannot escape this responsibility by attributing such shortcomings as are found to his employees or agents. The duty Congress has placed on the commission to regulate motor carriers under the act can be effectively performed only by holding the carriers accountable.—Id., p. 632.

The situation as to 77 shipments shown in a documented abstract as examples of unauthorized transportation services performed by transferee is further aggravated by disclosure that as to 21 movements there were discrepancies between billing documents of the shippers served and those of the carrier. While honest error may have accounted for a few of those discrepancies, there is no conceivable reason for the repeated misbilling other than to hide evidence of transportation performed beyond scope of the carrier's authority. Moreover, of 41 movements of fertilizer performed after transferee had filed application for the appropriate authority, 31 were performed after his request for temporary authority was denied, and 21 were performed after elimination of the involved origin from that extension application.—Id., p. 633.

Additionally, though the matter is not controlling, transferor's operations following execution of the purchase agreement were almost entirely conducted by purported trip leases of transferee's equipment with drivers, and though the parties maintained paper compliance with the commission's lease-and-interchange regulations, the vehicle arrangement was in fact used as a means of leasing transferor's operating rights to transferee in violation of §§ 206(a)(1) and 212(b). Transferee, which has never established his fitness to operate under transferor's rights, has performed the physical operations, and it would be improper in the circumstances to find a bona fide agency relation between transferor and those conducting the actual operations.—Id., pp. 633-4.

It is transferee's burden to prove that he is fit to perform the involved operations, and while he has taken certain corrective steps which he urges will ensure full compliance in future, his argument that his past violations are not determinative of what he may do hereafter fails when those violations have persisted despite penalty and admonitions. Transfer application denied, and transferee directed to refrain from all unauthorized operations in future and to take immediate steps to correct any and all irregularities that may now exist.—Id., p. 634.

Transferee partnership, a Pennsylvania intrastate carrier, for a period of about 6 months commencing some 2 months after execution of purchase contract transported

steel between Philadelphia and Baltimore under transferor's heavy hauling rights, with its consent and under its trade name, and thereby conducted operations in interstate commerce in transportation of traffic which transferor had not previously handled, under what was in effect an unlawful lease of a portion of transferor's operating rights; and in absence of a lawfully effective lease such operations were those of a motor common carrier for compensation, without a certificate, in violation of §206(a).—White's Delivery Service, Transferee, 93 M.C.C. 312 (313, 315).

However, the question thereby raised as to transferee's fitness may properly be resolved in its favor and the transfer approved in view of facts that it has not previously been a participant in proceedings before the commission; the application, having been filed before the illegal operations began, was not designed to validate an existing unlawful situation; and the unlawful operations were discontinued immediately upon the managing partner's being personally advised of their improper nature. That transferor had initially agreed to assign his trade name to transferee also tends to reduce the taint of subterfuge arising from its use of that name in connection with filing of tariffs, billing of customers, and maintenance of a bank account. Nevertheless, the illegal action of the parties is not condoned, and transferee should bear in mind that its conduct in the matter is now a matter of record, and that any repetition of such "poor judgment" will take on the appearance of an intentional or careless disregard for regulation inimical to a finding of fitness.—Id., pp. 316-7.

Transfer authorized to same transferee of household goods rights of two transferors, subject to cancellation of both transferors' duplicative rights for emigrant movables between same points. Although interline between transferee and one transferor was for all practical purposes an unlawful lease of latter's operating rights, the arrangement was undertaken on advice of counsel and appears to have been due primarily to ignorance of the commission's regulations; and that transferee appears also to have occasionally trip-leased owner-operated equipment without benefit of a long-term lease, in violation of the leasing regulations, such violations are not shown to be deliberate and do not bar approval of transfer. However, transferee is cautioned to familiarize itself with the commission's regulations and bring its leasing operations into conformity therewith.—Cartwright—Purchase—El Reno Transfer & Storage Co., 93 M.C.C. 72 (77-8, 79)*.

Certain of transferee's exhibits, prepared by a certified public accountant who testified to contents thereof and was extensively cross-examined by protestants, were properly admitted although witness had been in transferee's employ for less than 4 months prior to hearing. That the exhibits were compiled from records not maintained by the witness is insufficient to warrant their rejection; considering the witness's professional standing and fact that no serious question as to authenticity of the underlying data was raised at the hearing, it may be assumed that the exhibits were compiled from records kept in normal course of business.—Id., p. 78.

Proposed transfer of transferor's remaining assets to noncarrier transferee, following latter's acquisition of its stock and distribution of its cash and physical assets to transferee and latter's 13 noncarrier affiliates under described liquidation plan, requires the commission's approval, since its remaining assets include its interstate operating rights. However, transfer of transferor's majority stock to transferee by latter's stockholders, the original purchasers, was subject to its assumption of their debt to the bank which financed the purchase, and a transaction resulting in control of a carrier wherein the carrier itself would be obligated to pay part of the purchase price is generally contrary to sound financial practice and not in best interest of the industry and the public.—Limestone Corp., Dallas, Tex., Transferee, 90 M.C.C. 553 (555, 556, 558)*.

Though use of a carrier's credit to finance in part the acquisition of the carrier's business is not favored, tax benefits were a principal factor in formulating transferee's capital structure in manner described in prior report, 90 MCC 553, and tax considerations cannot wisely be ignored in such matters. Additional information presented, particularly concern-

ing transferee's increased earnings and more favorable debt-to-equity ratio, supports finding that upon consummation its financial condition will be sufficiently improved to meet objections stated in that report and that, subject to condition imposed as to nonpayment of dividends or other distribution of property or assets, authority for proposed transfer and issuance of a note for $3,000,000 for purposes described in prior report should be granted.—Limestone Corp., Dallas, Tex., Transferee, 93 M.C.C. 58*.

Regulations of the Commission

28 FR 867, Jan. 30, 1963, Part 179: Transfers of Operating Rights, §179.1(b) amended, and §§179.10 through 179.14 added; rules added govern transfers of certificates of registration issued or to be issued pursuant to §206(a)(6) and (7) of the act, effective on date of publication.

30 FR 12467, Sept. 30, 1965, Parts 7, 179, and 180: Following enactment of Public Law 89-93 (79 Stat. 284) which makes gross operating revenues the basis for determining whether proposed unification or acquisition of control comes within §5(10) exemption, Forms BMC-44 (Rev.), BMC-45 (Rev.), BF-200, and BF-201 are revised; footnote 1 of §179.1(a) is revised; §§180.2 Definitions, and 180.3 Computation of vehicles involved in unifications, are deleted; and new §180.3 Computation of gross operating revenues of carriers involved in unifications, substituted in lieu of deleted §180.3, effective Sept. 25, 1965.

Section 212. (c) [*§ 312(c) U.S.C.*] Conversion of authority.—[Unchanged. See vol. 18, p. 14523.]

Notes of Decisions

Volume 18—p. 14524; Volume 19—p. 15791.

2. Construction and interpretation.—[Vol. 19].—In enacting §212(c), in order to protect existing contract carriers when statutory definition in §203(a)(15) was amended, Congress intended to leave the contract carrier whose permit is converted to common carrier certificate in as good a position as it formerly enjoyed; moreover, that the "Keystone restriction" in permits received Congress' attention is shown by legislative history of §212(c). Thus, in conversion of appellee's permit which contained a "Keystone restriction," but was otherwise unlimited, the commission had no statutory authority to impose the restriction in question on the authority granted, in order to assure "substantial parity" between its permit and certificate operations.—United States v. Montgomery, Inc., 376 U.S. 389 (393-5)*.

When plaintiff's "grandfather" permit authorized it to transport certain commodities in described areas for the limited class of persons specified therein, but was otherwise unrestricted, the commission had no statutory authority to impose considered territorial restrictions in certificate issued in lieu thereof pursuant to §212(c), in conversion proceeding which was reopened following remand. Although the Supreme Court, in affirming lower court's previous remand, held that the commission would be free to contest carrier's factual claims as to service it performed under the permit and to limit certificate issued in lieu thereof to such activity, no action to contest plaintiff's claims, or determine scope of its service under the permit, was taken; to the contrary, the commission elected not to contest plaintiff's factual claims.—J. B. Montgomery, Inc. v. United States, 257 F. Supp. 188 (189, 191)*.

The commission's only action, on further consideration, was to add "warehouses or other facilities" to restrictions in the original certificate; that addition does not alter substance of the restrictions or their purpose. Present restrictions in issue are territorial limitations which were not contained in plaintiff's permit; this is contrary to specific Congressional mandate that plaintiff is entitled to common carrier authority to transport the same commodities between the same points and within the same territory as authorized by the permit. Moreover, legislative history of §212(c) recognized that the change from a

permit authorizing service for a limited class of persons to an operation as a common carrier serving the general public would probably result in an expanded scope of operations. The commission's order set aside and case remanded for further action in accordance with the court's opinion.—Id., pp. 189-90, 191.

Section 212(c) neither authorizes the commission to specify territory nor determine bona fides of prior operations. Provision therein that the certificate shall authorize transportation "of the same commodities between the same points * * * as authorized in the permit" is tantamount to saying that the commission shall not impose territorial restrictions beyond those in the permit. Although, in absence of restrictions to assure "substantial parity," scope of operations of plaintiff and other converted carriers may be greatly expanded as contrasted with their past contract-carrier operations, that possibility was recognized in legislative history of §212(c); there is no indication that Congress intended to restrict such enlargement of operations by "substantial parity" test or otherwise. The commission had no statutory authority to impose territorial restrictions on certificate issued plaintiff in its conversion proceeding, when such restrictions did not appear in its permit; order set aside, and matter remanded for further action in accordance with holding.—J.B. Montgomery, Inc. v. United States, 206 F. Supp. 455 (460-1)*.

Under §212(c), a converted carrier is entitled to receive a certificate that maintains parity with the operating authority contained in its permit; the controlling factor is the operating rights authorized by carrier's present permit. However, in accordance with the language of the statute, the commission does not have authority to issue such carrier a certificate for transportation of commodities not authorized in its permit, or to otherwise enlarge its operations beyond what was authorized therein. Thus, the commission did not exceed its statutory authority by imposing in certificate to be issued plaintiff, in lieu of its permit authorizing transportation of packinghouse products and canned goods, a restriction against tacking separate grants of authority for purpose of performing through service and also a restriction permitting it to transport packinghouse products only when moving "to or from" packinghouses. Sustained.—Zuzich Truck Line, Inc. v. United States, 224 F. Supp. 457 (469-70)*.

That the commission's interpretation of §212(c), in finding that plaintiff which entered into transportation contracts with any shipper requesting its service within the limited scope of its authority was a common carrier, accords with the congressional intent is evinced by the legislative history of enactment of that section in 1957, which overruled the Supreme Court's holdings in 350 US 409 by enunciating different criteria for determining whether a motor carrier is operating as a contract, as distinguished from a common, carrier.—Tar Asphalt Trucking Co. v. United States, 208 F. Supp. 611 (613)*.

There is no merit to contention, in suit to set aside the commission's order in conversion proceeding instituted on its own motion, that an attempt to convert plaintiff's status against its will amounts to a taking of private property for public use without just compensation or due process of law, in violation of the Federal Constitution; the act does not authorize, or the commission's order effect, a conversion of plaintiff from a private carier to a public utility. The statute does not require that plaintiff operate as a common carrier, but merely affords it opportunity to continue to operate, as a common carrier, to the same extent formerly authorized by its permits; it merely embodies a new definition of contract carrier and empowers the commission to determine whether the holder of a permit comes within that definition.—Id., p. 615.

And imposition of tacking restriction in certificate granted plaintiff, in order to maintain substantial parity with the operating authority contained in its permits, is in accord with the legislative intent implicit in §212(c), which provides for the transportation, as a common carrier, of the same commodity "between the same points and within the same territory" as authorized in the permit. The commission's contemporaneous construction in this regard, as set forth in the Brooks case, 81 MCC 561, is entitled to great weight.—Id., p. 614.

Section 212(c) does not authorize the commission to consider a carrier's "grandfather"

operations, but limits consideration to operations conducted under its permits held as of August 22, 1957, the effective date of §212(c). —P. Saldutti & Son, Inc., Conversion, 89 M.C.C. 338 (342)*.

5. Conversion of authority.—[Vols. 18, 19]. —In conversion of carrier's permit, authorizing transportation of commodities usually dealt in or used by businesses specified, to a common carrier certificate, the commission had no authority to limit the certificate "to shipments moving from, to, or between wholesale and retail outlets" when the permit was not so restricted. The record does not show whether appellee exercised claimed privileges to serve businesses other than wholesale and retail outlets and stores under its permit; however, if it did enjoy them, then it is entitled to have the same freedom in its certificate; Congress intended that operations conducted under the permit be continued under the certificate. Remand by lower court affirmed; on remand the commission will be free to contest appellee's factual claims as to what service it performed under its permit and to limit the certificate to such activity.—United States v. Montgomery, Inc., 376 U.S. 389 (393-5)*.

Under §212(c) a converted carrier is entitled to receive a certificate that maintains parity with its operating authority as a contract carrier; the controling factor is the operating rights granted by its present permit. The commission's findings that plaintiff's permit to transport general commodities to or from "port facilities, or places of storage before or after a movement by water" is clear and unambiguous, that the restrictive phrase applies to port facilities as well as places of storage (notwithstanding omission of a comma after "storage"), and that certificate for general commodities "having a prior or subsequent movement by water" would ensure substantial parity between its past and future operations, are buttressed by admission of plaintiff's own witness that all shipments transported by it had a prior or subsequent movement by water.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (313-4)*; and failure to correct plaintiff's mistaken belief that it had authority to serve port facilities regardless of whether a water movement was involved does not estop the commission from asserting the proper interpretation of its permit in an appropriate proceeding.—Id., p. 314.

There is no authority under §212(c) to issue a certificate for transportation of commodities not authorized in the carrier's permit; since paragraph 2 of plaintiff's permit does not authorize general commodities, but specifically names upwards of 30 commodities or groups, the commission would have no right to incorporate general-commodity authority in lieu thereof, or otherwise enlarge plaintiff's operations, in certificate to be issued in the conversion proceeding.—Id., pp. 314-5.

In affirming lower court's remand of instant proceeding, the Supreme Court held, in effect, that while applicant's authority upon conversion should not have been cut down under the "substantial parity" doctrine, the certificate granted in lieu of its permit may be limited to the scope of the actual operations performed under the prior permit. Thus, the commission is empowered to require proof of actual operations conducted under applicant's permit which cannot be conducted under restrictions incorporated in the certificate, but, significantly, it is not required to do so. Question of whether, and to what extent, to require proof of actual operations, rather than merely a showing of a type of operation authorized by the permit and not the certificate, is a matter properly to be determined by the commission in its administration of the act.—J. B. Montgomery, Inc., Conversion Application, 98 M.C.C. 262 (266-7)*.

However, §212(c) concerns solely the operating rights of carriers, not the actual operations conducted thereunder and, moreover, it does not require a showing of prior operations under a permit as a prerequisite to conversion. Therefore, the commission does not consider the scope and extent of transportation a converted carrier should be authorized to perform as dependent upon actual physical operations.—Id., pp. 266-7.

On the critical date applicant had effective contracts with 8 shippers, but held out to serve all willing to enter into contracts for service within scope of its permit; in general, it serves building contractors in movement of their materials from one jobsite to another,

and though it is frequently required to supply equipment on short notice, it neither dedicates equipment to shipper's use nor provides any other distinctive type of service; its operations are therefore common carriage and issuance of certificate for service corresponding to that authorized by its outstanding permit, but restricted against tacking of the separate territorial grants therein, is warranted.—Holwick, Inc., Conversion, 92 M.C.C. 724 (725-6).

Some restriction must be imposed on common carrier authority granted in conversion proceeding when the contract carrier authority it replaces contains "Keystone" restrictions, in order to ensure substantial parity between such certificate and the existing permits. However, recommended restriction of applicant's authority for commodities manufactured, processed, or dealt in by manufacturers and processors of asbestos products would limit it to something less than the service it may now perform as a contract carrier; such restriction is therefore rephrased to provide more liberal authority comparable to that it now holds. And since certain of applicant's authority which is subject to a "Keystone" restriction is duplicated substantially by other unrestricted authority, the two authorities are combined, with the "Keystone" restriction omitted.—Fischbach Trucking Co. Conversion, 89 M.C.C. 329 (330-1).

Since respondent's contract-carrier authority to transport general commodities to or from port facilities or places of storage "before or after a movement by water" is unambiguous, restriction of common-carrier authority granted in conversion proceeding to "general commodities having a prior or subsequent movement by water" will ensure substantial parity between past and future operation; similarly, substantial parity will be assured by authority to transport described commodities "used in the construction or repair of bulkheads, canal lock gates, dry docks, piers, water tanks and towers, and pipelines" regardless of where they are destined in respondent's authorized area.—P. Saldutti & Son, Inc., Conversion, 89 M.C.C. 338 (341-2)*.

Affidavits submitted in reopened conversion proceeding by transferor, made by representatives of two shippers formerly served by him and now served by transferee, and by an officer of transferee, establish that on the critical date transferor's service was offered to any shipper of his authorized commodities willing to enter into a transportation contract; that services rendered did not differ from those of common carriers of similar commodities in same area and were not designed to meet distinct needs of each individual customer; that he did not dedicate equipment to each shipper's exclusive use, and that operations of transferee as successor in interest have been conducted in like manner. Therefore, transferor's operations on the critical date were those of a common carrier, and transferee is entitled to a certificate therefor, thus eliminating dual operation found objectionable in prior report.—Highway Transp. Corp. Conversion, 88 M.C.C. 323 (325)*.

Among factors to be considered in §212(c) proceedings in conjunction with the number of outstanding contracts are the different types of commodities transported, the territory in which operations are conducted, the degree of specialization required by the nature of the business of shippers involved, and degree of similarity in services the carrier performs under its effective and continuing contracts. Weighing all these factors, respondent's services are not intrinsically different from those of common carriers; conversion certificate granted.—Tar Asphalt Trucking Co., Inc., Conversion, 88 M.C.C. 443 (445)*. The commission's order sustained, Tar Asphalt Trucking Co. v. United States, 208 F. Supp. 611 (614)*.

15. Parties; procedure.—[Vol. 19].—In seeking conversion of contract-carrier authority acquired from transferror Whittaker subsequent to grant of its own conversion application, applicant requests that the Whittaker conversion proceeding, if reopened, be handled under modified procedure, and with its petition submitted a number of affidavits; in absence of opposition, the verified statements submitted will be received in evidence and the matter disposed of on the record as made. Furthermore, since the decision to discontinue the Whittaker conversion proceeding was reached primarily on the basis of a questionnaire filled out by him without advice of coun-

sel, and he now states in his affidavit that he was then unfamiliar with the amended contract-carrier definition in §203(a)(15), that proceeding is accordingly reopened for reconsideration.—Highway Transp. Corp. Conversion, 88 M.C.C. 323 (325)*.

20. Evidence.—[Vol. 19].—Although carrier produced no evidence in conversion proceeding to show any past contract-carrier services which could not be continued under territorial limitations imposed on its certificate, since a certificate to be issued under §212(c) is not subject to test of "substantial parity," and there was no other issue to which such evidence would be material, carrier was under no compulsion to offer evidence of its previous operations.—J.B. Montgomery, Inc. v. United States, 206 F. Supp. 455 (461)*.

A regulatory agency has the right to take official notice of reports filed with it by a regulated company; there was no error in the commission's taking official notice, in conversion proceeding initiated by it, of information contained in reports filed with it by plaintiff as a contract carrier.—P. Saldutti & Son, Inc. v. United States, 210 F. Supp. 307 (313)*.

Plaintiff's argument, in suit to set aside the commission's order in conversion proceeding instituted on its own motion, that the burden of proving plaintiff was not a contract carrier was cast upon the commission, indicates a misconception of the meaning and effect of §212(c); assuming, without deciding, that plaintiff has preserved its right to contend that the burden of proof rested on the commission, the commission's statutory powers under §205(d) would have enabled it to reach the same conclusion if plaintiff had not presented its witness and exhibits before the examiner. —Tar Asphalt Trucking Co. v. United States, 208 F. Supp. 611 (615)*.

Whether conversion applicant is affiliated with, or unlawfully under common control with, another carrier is not relevant to disposition of a proceeding under §212(c).—Holwick, Inc., Conversion, 92 M.C.C. 724 (726).

Section 213. [*§313 U.S.C.*] **Validity and Perfection of Certain Security Interests in Motor Vehicles.**—[Unchanged. See vol. 18, p. 14525.]

Section 214. [*§314 U.S.C.*] **Issuance of securities.**—[Unchanged. except that by act of July 24, 1965, §2, 79 Stat. 263, the section was amended by striking the period at the end, inserting in lieu thereof a colon, and adding the following: "*And provided further*, That the provisions of this section shall not apply to the United States or any instrumentality thereof, the District of Columbia, or any instrumentality thereof, any State of the United States or political subdivision or municipal corporation thereof, or any instrumentality of one or more States, political subdivisions thereof, or municipal corporations." See vol. 18, p. 14526.]

Historical Note

The commission recommends that §214 be amended so as expressly to exempt from the commission's jurisdiction thereunder, securities issued by States, municipalities, or other governmental bodies which are carriers as defined in part I or part II of the act.—Annual Report, 1964, p. 60.

Notes of Decisions

Volume 10—p. 8122; Volume 11—p. 9480; Volume 12—p. 10419; Volume 13—p. 11088; Volume 14—p. 11609; Volume 15—p. 12223; Volume 16—p. 12874; Volume 17—p. 13574; Volume 18—p. 14527; Volume 19—p. 15798.

2. Construction and interpretation.—[Vols. 10-14, 16-19].—The commission is granted broad jurisdiction over issuance of securities, and its jurisdiction is exclusive and plenary; it must determine whether issuance will be compatible with public interest and whether it is necessary or appropriate for, or consistent with, proper performance by the carrier of service to the public. Necessity and type of hearings are left broadly to the commission's discretion; and the statute expressly recognizes that its action may be complete or partial, final or conditional, and that as conditions change it may from time to time, for good cause shown, make such supplemental orders as it deems necessary or appropriate.—Walker v. United States, 208 F. Supp. 388 (394)*.

Application to issue a $250,000 note in payment for liquidating carrier's stock and to assume liability on its outstanding obligations, dismissed when upon consummation of merger on those terms as of giving-effect balance-sheet date survivor's outstanding securities subject to §214 would have aggregated less than $1,000,000. However, should the circumstances so change by actual consummation date that survivor's total outstanding securities plus those it would issue and assume as result of the transaction would exceed that statutory exemption, merger approval should not be construed as authorizing any issuance of securities or assumption of obligation on those of others without the commission's prior approval.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (330-1).

The prime objective of §§ 20a and 214 is establishment of a soundly capitalized transportation industry, capable of adequate service at reasonable rates, and as a general rule a carrier's issuance of securities or use of proceeds thereof should be authorized only where it would be of benefit to its transportation business; it has generally been found incompatible with public interest for a carrier to issue securities whose proceeds are to be invested in property not held for or used in the service of transportation; see discussion in the New Haven case, 220 ICC 505. A carrier's major endeavors should be confined to matters related to transportation, and in no event should issuance of securities or use of proceeds, or assumption of obligation or liability on securities of any other person, be authorized where it is not for some lawful object within the carrier's corporate powers or would in any way impair its ability to perform its service to the public.—Greyhound Corp. Stock, 90 M.C.C. 215 (220-1, 222-3).

However, reserves and surplus funds should be available for production of income, including investments such as are permissible for savings banks or trustees. Any investment in noncarrier enterprises should be consistent with proper performance by the carrier of service to the public, and public interest would not be adversely affected provided issuance of securities for such a purpose is limited and constitutes a proper use of funds. Judicious and limited common carrier investment in stable noncarrier business enterprises would contribute to provision of a soundly financed common carrier system and would not do violence to principle that corporations endowed with a public interest should direct their primary activities to the public service nature of their operations.—Id., pp. 221, 223.

Proposed stock issue is not within exemption of §214 when applicant represents the fair market value thereof to be in excess of $1,000,000.—Southwest Freight Lines, Inc., Stock, 90 M.C.C. 375 (378).

Although obligations shown in survivor's and liquidating carrier's financial statements that are clearly securities within meaning of §214 aggregate only $701,700, the commission takes official notice of survivor's notification of its exercise of authority granted in another proceeding to issue promissory notes and assume obligations in aggregate amount not exceeding $759,628; in the circumstances, survivor's application to assume obligation and liability on liquidating carrier's notes in amount of $52,850 is subject to the commission's jurisdiction under §214.—Quinn Freight Lines, Inc.—Control and Merger, 90 M.C.C. 60 (62)*.

The commission's jurisdiction to determine applications for authority to issue securities is exclusive and plenary and independent of all other State or Federal authority, and it is not divested of authority to hear new applications merely because related proceedings are pending on appeal. Public interest would not be

served by delaying decision on application, by carrier authorized in a §5 proceeding to acquire control of another carrier and to issue promissory notes in partial payment of the consideration, for authority to issue an additional note in payment for stock of a noncarrier affiliate of acquired carrier, pending decision of the court on the merits of the control proceeding.—Central Freight Lines, Inc., Note, 90 M.C.C. 246 (247)*.

8. Securities defined.—[Vols. 10-19].—While it may be conceded that conditional sales contracts and chattel mortgages are in the broadest sense evidences of indebtedness, such contracts and mortgages do not constitute "stocks, bonds, notes, or other evidence of indebtedness" within provisions of §§ 20a and 214.—In re Independent Truckers, Inc., 212 F. Supp. 402 (405-6)*.

Equipment obligations evidenced solely by conditional-sale contracts are not securities within meaning of §214.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (330).

9. Carriers, corporations, individuals subject to section.—[Vols. 10, 11, 13, 15, 16, 18, 19].—State agencies, see Bi-State Development Agency of Mo.—Ill. Met. Dist., Bonds, §20a(1), n. 1, and §20a(7), n. 2.

Sale of shares of stock by carrier's stockholders is a matter over which the commission has no jurisdiction, and approval of carrier's issuance of additional stock for sale to the public should not be construed as either approval or disapproval of proposal of two of its principal stockholders to offer 76,000 shares of stock presently owned by them as part of the public offering.—Carolina Freight Carriers Corp. Stock, 93 M.C.C. 300 (301).

Though applicant's principal stockholder proposes to make a public offering of new stock he will receive in recapitalization of the carrier, his sale thereof is a matter over which the commission has no jurisdiction, and approval of the stock issue should not be construed as either approval or disapproval of that phase of the transaction.—Southwest Freight Lines, Inc., Stock, 90 M.C.C. 375 (376); Eazor Exp., Inc., Stock, 90 M.C.C. 388 (389)*.

Since noncarrier affiliate of carrier authorized to acquire control of another carrier desires not to be subjected to the securities provisions of the act and has indicated that it would not consummate its proposal to acquire control of acquiring carrier if as a consequence (and as is found necessary) it would be subjected to §5(3), the transaction is approved without authorizing the noncarrier to acquire control of any carrier and the requirements of §5(3) will not be applicable. In the circumstances the commission would have no jurisdiction over the noncarrier's proposed issuance of promissory notes to finance its acquisition of control of acquired carrier's noncarrier affiliates, and its §214 application is therefore dismissed.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (849).

Noncarrier holding company which would become a carrier upon merger into it of two carriers is a proper applicant for authority under §§ 20a and 214 to issue securities and assume obligations respecting securities of others.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (461)*.

Since transfer of transferor's remaining assets to its stock owner would include its interstate operating rights, transferee would thereby become a carrier, and its proposal to issue concurrently a promissory note in face amount of $3,000,000 to repay loans which financed the stock acquisition requires approval under §214.—Limestone Corp., Dallas, Tex., Transferee, 90 M.C.C. 553 (556)*.

10. Corporate powers considered; subsidiaries; corporate control.—[Vols. 10-13, 16, 19].—Greyhound Corp.'s proposed issuance of stock for purpose of acquiring sole control of a company engaged in leasing heavy industrial machinery and equipment to manufacturers and others is an investment that constitutes proper use of funds, is in public interest in that the added earnings from the noncarrier business would enhance Greyhound's ability to provide an improved motorbus service to the public, and is consistent with proper performance of service to the public as a common carrier. Resulting increase in Greyhound's capital stock would be but a small fraction of the total outstanding.—Greyhound Corp. Stock, 90 M.C.C. 215 (223). [But see dissent.]

See also Yale Exp. System case, §20a(2), n. 45.

11. Securities issued without authorization.—[Vols. 10, 11, 13-19].—See also TTC Corp.—Purchase—Terminal Transport Co., Inc., §5(2), n. 48 *Conditions*.

Merger of an existing carrier into a new sucessor corporation is approved with express understanding that the new company's outstanding capital stock, all owned by liquidating carrier, will be canceled, since such shares were issued without the commission's approval and are therefore void.—All States Freight, Inc.—Merger, 90 M.C.C. 51 (54).

Original issuance of stock by corporation organized for purpose of becoming a carrier through the merger was an integral part of the control-and-merger transaction and required prior approval under §214; therefore, its issuance without such approval was in violation of that section and renders such stock void.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (777, Note).

12. Orders of the commission.—[Vols. 10, 12, 16, 19].—See Walker v. United States, §5(9), n. 10.

13. Assets capitalizable, generally.—[Vols. 10-19].—When a carrier's current liabilities substantially exceed its current assets, no amount may properly be included in capitalizable assets as working capital. But since, under the commission's accounting rules, vendee's accounts payable due its stockholders for substantial advances are not a current liability, they are properly an item of capitalization.—West Shore Transfer, Inc.—Purchase—Frear Motor Transfer, 93 M.C.C. 786 (789).

Although on basis of giving-effect balance sheet acquiring carrier would be overcapitalized by $523,856 after proposed stock issue to finance §5 transaction, the deficiency in capitalizable assets is due mainly to failure to include leasehold improvements and would be eliminated if title to the property were acquired; the overcapitalization therefore does not warrant disapproval of either application.—R. E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (84)*.

The statutory findings prerequisite to authorization of issuance of securities by a carrier relate to the continuing ability of the carrier adequately to perform its service to the public as a common or a contract carrier; requirement of those findings precludes the commission from considering as capitalizable those assets which may be employed by carriers in businesses unrelated to their carrier functions. And in proceedings involving issuance of stock as a stock dividend, the commission has consistently adhered to the view that carriers must have assets intended for continuing productive use in the service of transportation sufficient to support the proposed capitalization. In absence of other arguments or evidence warranting a departure from long-established commission precedent, the fact that applicant's noncarrier assets exceed its carrier assets does not warrant inclusion of the former in capitalizable assets for §214 purposes.—K. W. McKee Inc. Stock, 93 M.C.C. 1 (3)*.

And though in the Greyhound case (90 MCC 215) the commission found that issuance of stock by a carrier to obtain funds to invest in nontransportation activities may be approved where the investment is judicious and will enhance rather than impair the carrier's ability to serve the public as a carrier, Greyhound had an excess of carrier assets properly capitalizable for the purpose. Proposed stock issue is not for investment of any kind, but is an effort to capitalize cash expenditures previously made for noncarrier purposes, and no basis is shown for departing from principles of that case or 76 ICC 718 and 254 ICC 653.—Id., 93 M.C.C. 643 (646-8)*.

The commission has generally found issuance of securities in payment for intangibles to be inconsistent with public interest and with sound financial practices where it would result in substantial overcapitalization of the issuing carrier. Issuance of promissory note in face amount of $2,100,000 for acquired carrier's operating rights would be incompatible with public interest when it would result in overcapitalization of acquiring carrier by $1,227,623, and such overcapitalization would continue for some time.—Red Ball Motor Freight, Inc.—Control—Couch Motor, 87 M.C.C. 627 (629, 631, 634).

Applicant's capitalizable assets, consisting of working capital, tangible property exclusive of leasehold improvements, and investments in subsidiaries, are exceeded by its cap-

italization, consisting of preferred and common stock and advances and notes payable, by $786,982; its present ratio of long-term debt to combined long-term debt and stockholders' equity is already an unfavorable 66.7 percent and would be increased to 70.9 percent by issuance of proposed note. Though its overcapitalized condition was called to applicant's attention by Director of Bureau of Finance, it has furnished no evidence of correction of that condition or justification for proposed increase in its overcapitalization; authority denied.—American Transport Corp. Note & Assumption of Obligation, 90 M.C.C. 297 (299, 300).

14. Interest.—[Vols. 10, 12, 15, 19].—Proposed interest rate of 6-1/2 percent for a long-term note exceeds that for any motor carrier financing considered in last 6 months, and applicant's only explanation is that it is in line with prevailing rates; however, insofar as prevailing rates are reflected in bank acceptances, Federal Reserve Bulletin for April 1962 indicates that rate on prime 90-day acceptances increased from an average of 2.81 percent in 1961 to 3.00 percent in March 1962; such slight increase in the money market rate does not support the increased interest rate proposed.—American Transport Corp. Note & Assumption of Obligation, 90 M.C.C. 297 (301).

18. Cost of issue and sale of securities.—[Vols. 15, 18, 19].—Based on market value of stock of noncarrier company to be exchanged for stock to be issued by applicant holding company, the estimated costs of issuance totaling $172,200, including a $135,000 fee for financial consultants, amount to approximately 1.8 percent of the transaction's monetary value; applicant's proposed stock issue is consistent with each of its subsidiary carrier's proper performance of service to the public, will not impair ability of any such carrier to provide such service, and is otherwise consistent with public interest.—Greyhound Corp. Stock, 97 M.C.C. 27 (31, 32); in concurrently considered proceeding, estimated costs of issuance of additional stock to be exchanged for stock of another noncarrier company, totaling $410,000, including financial consultant's fee of $340,000, would amount to 1.5 percent of total value of the issue, based on monetary value in terms of market price of applicant's stock. Proposed stock is also found consistent with the public interest.—Id., 97 M.C.C. 34 (36-7).

While the commission has no jurisdiction over proposal of two of applicant's principal stockholders to offer 76,000 shares of stock presently owned by them as part of proposed offering to the public of additional shares to be issued by applicant, expense incident to sale of their stock is not a proper charge against the carrier, and approval of the stock issue is subject to condition that applicant shall pay, or assume obligation to pay, only that portion of the expense properly applicable to the shares to be issued and sold by it.—Caroline Freight Carriers Corp. Stock, 93 M.C.C. 300 (301, 305).

Stock

24. In general.—[Vols. 10-14, 16-19].—Authority to issue 350,000 shares of common stock, 250,000 shares to be exchanged for carrier's outstanding stock and the remainder to be sold to the public, denied. Primary purpose of proposed recapitalization, to comply with commission divestiture order, would not be achieved since plan whereby applicant's present sole stockholder would dispose of his stock over a period of about 15 years envisions his continued participation in applicant's management during that time, while the commission's order called for immediate complete divestiture.—U. S. A. C. Transport, Inc., Stock, 90 M.C.C. 445 (448).

Applicant's principal stockholders, who together own about 90.16 percent of its outstanding shares and are also officers and directors, propose to sell a portion of their own stock as part of a public offering of additional stock to be made by applicant, and agreed to waive dividends for a stated period on about 75 percent of the stock retained by them; thus the selling stockholders, who after consummation would own some 73.89 percent of applicant's stock, would be offering a dividend advantage as an inducement to the public to buy shares, but declaration and payment of dividends would be entirely within their control. This introduces an unnecessary and undesirable speculative element incompatible

with public interest or the best interests of the motor carrier industry; confidence of public investors in motor carrier securities generally is not fostered, and may be impaired, by such unconventional provisions. Approval of the stock issue is therefore conditioned to require that any dividends declared on the common stock be payable on all outstanding shares thereof, that waivers executed by the stockholders be canceled, and the prospectus amended accordingly.—Carolina Freight Carriers Corp. Stock, 93 M.C.C. 300 (302, 304).

In authorizing issuance of securities by a motor carrier, the commission is obligated to give due regard to the public interest, assuming possibility that they may be sold to the public by stockholders not subject to its jurisdiction, and to resulting effect on securities of other motor carriers dealing with the public in securing equity financing. Confidence of investors in motor carrier securities will not be fostered, and is likely to be impaired, if securities subject to unusual and speculative features are distributed among the public.—Eazor Exp., Inc., Stock, 90 M.C.C. 388 (389-90)*.

Provisions of proposed recapitalization which would be used to induce investment in common stock by offering a dividend advantage, which might or might not materialize since declaration of dividends would be indirectly subject to control of applicant's principal stockholder, are speculative. Also, under provisions for conversion of new class A no-dividend stock into common, advantage offered common stockholders would be of limited duration and could be diminished within about a year, or sooner upon death or complete disability of the principal stockholder. Creation of such an unconventional stock structure would not be compatible with public interest or in best interest of the motor carrier industry. Application denied.—Id., p. 390.

Stock market evaluation of securities is largely dependent on earning power thereof, but although dividends would be payable only on the common stock (which carrier's principal stockholder would offer to the public), there is no requirement that any dividends be paid before conversion of the class A stock. Moreover, the common stock would be only 25 percent of the total stock outstanding; assignment of all dividends to such a percentage of common stock invites investment of a speculative character. The 100-percent dividend provision is highly unstable and could be avoided by carrying all earned income in carrier's surplus account until all class A stock had been converted to common, and control of applicant's dividend policy would remain in hands of its principal stockholder before and after any such conversion, since the two classes would have equal voting rights.—Id., 90 M.C.C. 391 (394, 395-6)*.

Another objectionable feature is provision which would give holders of class A stock preemptive rights to subscribe to any future issue of common stock or any security convertible into or carrying options or rights to acquire common stock, since carrier's principal stockholder could exercise those rights in further dilution of the dividend and voting rights of purchasers of the common stock. Issuance of securities with such characteristics would not further the stated objective of improving carrier's ability to accomplish any necessary equity financing in future; on the contrary, its ability to do so might be impaired by issuance and public marketing of the stock as intended; such action would not enhance the public's confidence in motor carrier securities in general. Denial affirmed.—Id., p. 396.

Revised proposal eliminates the objectionable provisions relating to preemptive rights and limits exercise of the conversion privilege to a period of 2 years during each of which 125,000 shares of class A common stock would be convertible provided certain dividends on the common stock had been paid or set aside, and thereafter the conversion privilege would be exercisable without restriction as to prior or subsequent dividend payments. While the controlling stockholder would still hold power to withhold dividends for the entire period, denial on that ground is not warranted, following 85 MCC 592; however, in conformity with the period of exclusive rights to cash dividends approved in that case, in order to enhance probability that such dividends will be paid, the term of conversion restriction should be extended for an additional 2 years.—Id., 90 M.C.C. 235 (238).

Although applicant proposes payment of 10 cents a share per quarter on the common

stock as a prerequisite to class A stockholders' exercise of their conversion rights, its 1961 earnings would cover 10 times that amount, and under a conservative dividend relationship (reinvestment of $1 for every $1 of dividends) its earnings would still provide 5 times the minimum proposed. As the public offering price of the common stock to be sold by applicant's principal stockholder is represented to be at least $10.20 a share, and even the modest dividend proposed could be avoided by carrying all earned income in carrier's surplus account until all the class A stock had been converted, equitable treatment of the investing public requires that the amount of cash dividends required as a prerequisite to conversion during the restricted period be increased to 20 cents.—Id., p. 239.

Under the revised proposal, holders of class A stock, while not entitled to dividends in cash, would be entitled to dividends in class A stock, and though issuance of a stock dividend would require prior approval under §214, such a provision would make it possible for applicant's controlling stockholder to dilute the outstanding stock; hence, requirement is imposed that in event any dividends are declared and paid on the class A stock, in shares of that stock, dividends in equal amount shall be paid on the common stock in shares of common.—Id., p. 239.

The proposal also includes the granting of an option to applicant's president to purchase 6,250 shares of common stock at an option price equal to 110 percent of the initial public offering price of like stock to be sold by its principal stockholder. Since applicant advises that such public offering will probably be at $10.20 to $14.58 per share, it should receive not less than $11.22 per share for the optioned shares; and approval is further conditioned to require that exercise of the stock option be limited to a period no longer than 10 years from date of order of approval, and that the proceeds from sale of such stock be used by applicant only for investment in carrier operating property.—Id., pp. 237, 240.

Under proposed recapitalization, right of conversion of class B common stock to be issued into class A common is restricted only until June 1, 1963, and thereafter is not dependent on payment of dividends. Following views expressed in 90 MCC 235, approval is conditioned to require that none of the class B stock may be converted before June 1, 1966, unless total cash dividends on the class A stock, computed as indicated, paid or set aside during the period from June 1, 1962, to end of calendar quarter next preceding date of conversion, equal at least 12 cents a share. Further, proposed mandatory requirement for payment of a dividend of 48 cents on the class A stock, provided the corporation earns 96 cents a share on the issued class A stock, should in public interest terminate no later than June 1, 1966, in order not to burden applicant with an inflexible dividend requirement which may affect its ability to render service to the public in future.—Southwest Freight Lines, Inc., Stock, 90 M.C.C. 375 (379).

Proposed stock issue will strengthen applicant's financial structure and credit by improving its debt-equity ratio, and stock issued will be held by its controlling stockholder rather than the general public. However, considering price at which proposed preferred stock will be sold and its dividend rate (equal to 50 percent per annum of its proposed $1 par value), it should have par value equal to the sale price, or $10 a share. Also, since the preferred stock is entitled only to noncumulative dividends as declared by the board and will represent about 80 percent of carrier's total equity, it would be incompatible with public interest for holders thereof to have no voting rights unless dividends are passed for 12 quarters; they should have equal voting rights per share with holders of the common stock. Approval conditioned accordingly.—R. E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (84)*.

25. Exchange for other stock.—[Vols. 10-14, 16-19].—Authority granted Greyhound Corp., a holding company, to issue not over 203,824 shares of its $3-par-value common stock, to be exchanged for all shares of a corporation operating various tourist accomodations at a rate of 0.3667 share of applicant's stock for each share of acquired stock, or, in lieu thereof, to issue not over 407,648 shares of its $1.50-par-value reclassified common stock, if exchange is effected after a 2-for-1 split of applicant's stock as previously author-

ized. Proposed transaction is consistent with proper performance of service to the public by each carrier controlled by applicant; affiliation with applicant would contribute to acquired company's earnings through additonal sales to passengers of applicant's subsidiary, Greyhound Lines; and coordinated operation with applicant's restaurant subsidiary, Greyhound Post Houses, should effect operating economies.—Greyhound Corp., Stock, 97 M.C.C. 27 (28-9, 32).

Authority also granted Greyhound Corp. to issue not over 582,964 shares of its $3-par-value stock, to be exchanged for outstanding common stock of a company operating a contract catering, restaurant, and food vending business at a rate of 7 shares of applicant's stock for 12 shares of acquired company's, or, in lieu thereof, to issue 1,165,892 shares of its reclassified $1.50-par-value stock, to be exchanged at a rate of 14 for 12 shares. Proposed coordination of that company's operations with those of company acquired through transaction approved in 97 MCC 27 and applicant's subsidiary Post Houses to form a new Greyhound food division is expected to result in operating economies and improved service to the traveling public, and will not impair services of applicant's carrier subsidiaries.—Id., 97 M.C.C. 34 (35-6).

Issuance of 24,738 shares of applicant's common stock of $5 par value and book value of approximately $10.25 each, in exchange for 12,369 shares of stock, book value $25.18 a share, of a Texas carrier which it already controls through majority stock ownership, for purpose of acquiring sole stock control and facilitating accomplishment of operational, financial, and management transactions under Texas law, approved when resulting ratio of applicant's capitalizable assets to its capitalization will not be adversely affected.—Bekins Van & Storage Co. (Calif.)—Control—Bekins (Tex.), 93 M.C.C. 335 (338, 340).

Subject to conditions imposed, authority granted for recapitalization of applicant by issuance of (1) 125,000 shares of common stock and 375,000 shares of class A common stock of $1 par value each, in exchange for all its presently outstanding capital stock, (2) 375,000 shares of common stock upon conversion of the class A stock on a share-for-share basis, and (3) 6,250 shares of common stock pursuant to an incentive stock option.—Eazor Exp., Inc., Stock, 90 M.C.C. 235; similarly, authority granted for recapitalization of applicant by issuance of 75,000 shares of class A common stock and 225,000 shares of class B common stock of 25 cents par value each, in exchange for 666-2/3 shares of no-par-value common stock outstanding, and 225,000 shares of class A stock to be reserved for conversion of the class B stock.—Southwest Freight Lines Stock, 90 M.C.C. 375.

Survivor in approved merger authorized to issue not exceeding 7,570 shares of its prior preferred capital stock, par value $33 a share, 1,569 shares of its second preferred capital stock, par value $100 a share, and 150,000 shares of its reclassified common capital stock, par value $3 a share, in exchange share-for-share for its presently outstanding preferred and common capital stock.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (471)*.

Issuance by survivor in approved merger of 300,000 shares of common capital stock of $1 par value to replace void stock issued without prior approval, authorized.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (779, 784).

28. Stock dividends.—[Vols. 10-13, 15-19].—Authority to issue 7,128 shares of $100-par-value preferred stock in exchange for shares void because unauthorized, which were issued as a stock dividend to holders of applicant's common stock, denied. Though applicant is a closely held corporation whose stock is unlisted and rarely traded, and purpose of proposed issue—which would have effect of permanently capitalizing a portion of its earned surplus—is to enable its principal stockholders to preserve their voting rights and provide a means of paying taxes in event of their deaths, resulting capitalization would exceed applicant's capitalizable carrier assets by $633,021.—K. W. McKee Inc. Stock, 93 M.C.C. 1 (2-3)*.

Although declaration of a stock dividend is ordinarily an entirely legitimate corporate purpose, the commission's duties under §§ 20a and 214 must be administered so as to place uppermost the preservation of the financial soundness of the carriers to ensure

their continued ability to render essential and efficient service to the public. Without adequate carrier assets to be capitalized through proposed stock dividend, the proposal cannot be found to be provident, nor can it be found that the resulting capitalization may not impair carrier's ability to render transportation service to the public, or that the stock dividend would be judicious and likely to improve carrier's financial condition or service to shippers.—Id., 93 M.C.C. 643 (648)*.

While the commission should not substitute its judgment for that of management as to whether fractional interests in proposed stock dividend may be paid in cash or stock, in finding that stockholders entitled to fractional interests are being fairly and justly treated it must determine whether the price to be paid therefor is reasonable and commensurate with fair market value of applicant's stock immediately or within a reasonable time prior to declaration of the proposed stock dividend. —Yosemite Park & Curry Co. Stock Dividend, 90 M.C.C. 211 (213).

Authority granted to issue not over 76,300 shares of common stock of $5 par value as a 10-percent stock dividend, stockholders entitled to fractional shares to be paid in cash at rate of $5.50 a share; latter amount is reasonable for fractional interests when, based on unrefuted evidence of high and low bid and asked prices in over-the-counter market during a period of approximately 8 months, the average bid and offered prices before declaration of the dividend were $5.04 and $5.50, and such prices have since increased owing to ethusiasm created by the proposed dividend. —Id., p. 213.

30. To finance acquisitions.—[Vols. 10-19].—Issuance by applicant vendee of 100 shares of no-par-value common capital stock having a stated value of $1,500,000, to be exchanged for operating rights and certain property of three vendors, authorized.—Anchor Motor Freight, Inc.—Purchase—Anchor Motor Freight, 93 M.C.C. 778 (781).

Authority granted a new corporation, organized by a subsidiary of New York, N.H. & H. R., to issue 20,000 shares of class A and 11,250 shares of class B capital stock, both of $100 par value each, in exchange for the parent subsidiary's right to engage in special and charter passenger operations, plus certain assets, that company's capital stock having been pledged as collateral for a loan guaranty granted the New Haven under part V and having been delivered to the Secretary of the Treasury upon the New Haven's defaulting on the guaranteed loans.—Connecticut Bus Co. Stock, 93 M.C.C. 763 (765, 766).

Issuance by acquiring carrier, subject to filing of certified copies of amendments to its articles of association in conformity with conditions imposed on acquisition of control, of (1) 260,000 shares of common capital stock of $10 par value, of which 210,000 shares are to be reserved for conversion of its preferred stock, and (2) 210,000 shares of noncumulative convertible preferred stock of $10 par value, to finance purchase of acquired carrier's stock, authorized.—R.E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (82,86)*.

Issuance by Greyhound Corp. of not over 294,137 shares of its $50-par-value 4-1/2-percent cumulative preference stock in exchange for all outstanding capital stock of a noncarrier corporation, as part of a diversification program designed to stabilize and increase its earnings and thereby improve its ability to serve the public as a common carrier, also issuance of not over 534,794 shares of its $3-par-value common stock for conversion of such preference stock, authorized as a proper use of carrier funds and compatible with public interest. Though Greyhound's funds are adequate to effect the transaction for cash, such a transaction would be taxable to acquired company's stockholders and is therefore unacceptable to them; resulting increase in aggregate par value of Greyhound's capital stock will be but a small fraction of the total outstanding.—Greyhound Corp. Stock, 90 M.C.C. 215 (218, 223).

In payment for vendor's operating rights and properties, vendee would issue shares of its fully paid and nonassessable stock in sufficient number and total assigned value equal to vendor's adjusted net worth as disclosed by audit, the assigned value to be determined by described formula; on that basis, 9,359 shares would have been issued as of assumed consummation date. As it would be undesirable in the public interest to authorize issuance of an

indefinite number of shares of stock, vendee is authorized to issue not exceeding 10,000 shares of its common capital stock of $1 par value, the actual number to be determined by the formula described.—Overnite Transp. Co.—Purchase—Hill City Transfer, Inc., 90 M.C.C. 749 (751, 752, 756).

Issuance by acquiring carrier of a sufficient number of shares of its common capital stock, par value $10, to equal a book value not exceeding $500,000 at close of last accounting period preceding consummation of authorized control transaction, in exchange for 20,000 shares, par value $1, of outstanding capital stock of acquired carrier, approved when it has sufficient capitalizable assets to support the issuance of such additional stock.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (852, 853).

Survivor in approved merger authorized to issue not over 2,100 shares of its 5-percent cumulative preferred stock, par value $100, and not over 38,500 shares of its common capital stock, par value $2, in part payment for all stock of liquidating carrier.—Jones Motor Co., Inc.—Control—Mundy Motor Lines, 90 M.C.C. 899 (901, 909-10).

Issuance by a new corporate subsidiary of noncarrier previously designated a carrier under §5(3), of not over 9,990 $100-par-value shares of common capital stock, in payment for operating rights and properties authorized to be acquired by the parent noncarrier through merger of an existing subsidiary, and for certain operating rights to be transferred to it by another subsidiary, authorized.—Pittston—Control—Brink's Armored, Inc., 87 M.C.C. 637 (640, 651).

34. To provide working capital.—[Vols. 12, 13, 18, 19].—Issuance of 24,000 shares of applicant's common stock of $1 par value, to be sold at a public offering price of not less than $11.25 a share, the proceeds to be used for working capital necessary to sustain its expanded operations, for renovation of its home office and terminal, and as part payment for additional equipment, authorized, subject to condition that the underwriters' commission shall not exceed 9 percent of the offering price of the stock, and to other conditions imposed respecting payment of dividends and expenses incident to sale of the stock.—Carolina Freight Carriers Corp. Stock, 93 M.C.C. 300 (302, 304-5).

Issuance by vendee of not exceeding 6,000 shares of 5-percent, noncumulative, convertible preferred capital stock of $100 par value, also 6,000 shares of common capital stock of like par value to be reserved for conversion of the preferred, to be purchased by vendee's controlling stockholder at aggregate par value, for purpose of improving its working capital position and debt-equity ratio upon consummation of approved purchase, authorized.—Oregon-Nevada California Fast Frt.—Purchase—Coast-Lee, 90 M.C.C. 45 (46, 49)*.

Notes

76. To retire; refund, or exchange for other notes; bonds.— [Vols. 10-14, 16, 19].—Though use of a carrier's credit to finance in part the acquisition of the carrier's business is not favored, tax benefits were a principal factor in formulating transferee's capital structure in manner described in prior report, 90 MCC 553, and tax considerations cannot wisely be ignored in such matters. Additional information presented, particularly concerning transferee's increased earnings and more favorable debt-to-equity ratios, supports finding that its financial condition upon consumation of transfer will be sufficiently improved to meet objections stated in that report, and that is issuance of proposed 10-year, 6-percent installment promissory note in principal amount no exceeding $3 million, for purposes stated in the prior report, should be authorized.—Limestone Corp., Dallas, Tex., Transferee, 93 M.C.C. 58 (60)*.

However, though the loan agreement between transferee and the bank restricts payment of dividends or other cash distributions, such restriction may be waived by the bank; therefore, to afford additional assurance that transferee will continue to improve its ratio of equity to debt, condition is imposed that for a 5-year period beginning from date of consummation of the transaction or until the note is paid in full there shall be no declaration or payment of cash dividends or other distributions of property or assets on or in respect of any shares of any class of transferee's stock, whether pursuant to or in connection with a

reduction of capital or otherwise.—Id., p. 61.

Authority for issuance by applicant management company of a long-term promissory note not exceeding $451,430 principal amount to Greyhound Corp. to complete purchase of a note issued to Greyhound by applicant's subsidiary in payment for a local bus operation acquired from Greyhound, denied; no justification is offered for resulting increase in applicant's overcapitalization, or for excessive interest rate of 6-1/2 percent. Moreover, proposed note would be payable over a period of approximately 48 months, whereas balance due on the present note will be repaid to applicant by its subsidiary in about 36 months, and no justification is shown for applicant's not using all the payments received from its subsidiary to pay for its note.—American Transport Corp. Note & Assumption of Obligation, 90 M.C.C. 297 (300, 301-2).

77. Payment for carrier property.—[Vols. 10-12, 14-19].—See also Walker v. United States and Central Freight Lines cases, §5(2), n. 110 *Securities*.

Issuance by acquiring carrier of secured promissory notes in aggregate principal amount not exceeding $690,000 for the balance of purchase price of acquired carrier's stock, payable in 10 annual installments of $69,000 each and bearing interest at 5 percent per annum on the unpaid balance, approved.—Tamiami Trail Tours, Inc.—Control and Merger, 90 M.C.C. 449 (450, 455)*.

Issuance of secured promissory note in principal amount not exceeding $2,100,000, with interest at not over 5-1/2 percent per annum, to finance authorized merger, approved.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (778-9, 784).

Survivor in approved merger authorized to issue promissory notes in aggregate principal amount not exceeding $300,234.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (471)*.

See also Red Ball Motor Freight, Inc., case, n. 13, above.

Miscellaneous Securities

115. In general; authorization; terms, conditions.—[Vols. 17, 19].—Issuance by surviving noncarrier of not exceeding $142,947 principal amount of 5-percent debentures maturing 15 years from date of issue, in exchange for not over 4,538 shares of outstanding 6-percent convertible $25-par-value preferred stock of subsidiary terminal company (liquidating company in approved merger), on basis of $31.50 principal amount of debentures for each share of preferred stock, authorized as consistent with proper performance of service by each carrier under control of survivor and otherwise consistent with public interest.—Ryder System, Inc.—Control—Southern-Plaza Exp., Inc., 90 M.C.C. 87 (95)*.

Assumption of Obligation or Liability

125. Subsidiaries' or affiliated companies' obligations.—[Vols. 10-19].—Assumption by vendee, a wholly owned subsidiary of Greyhound Corp. and purchaser of its operating rights, of liability on secured interest-bearing obligations of Greyhound in aggregate amount of $33,779,600 may properly be approved when assets transferred under terms of the purchase will greatly exceed the liabilities assumed.—California Parlor Car Tours Co.—Purchase—Greyhound, 93 M.C.C. 392 (395).

Vendee's assumption of obligation and liability on an outstanding promissory note of its subsidiary terminal company in remaining principal balance not exceeding $341,054, authorized.—Oregon-Nevada California Fast Frt.—Purchase—Coast-Lee, 90 M.C.C. 45 (46, 49)*.

Authority granted survivor to assume obligation and liability on outstanding securities of liquidating carrier in remaining aggregate amount not exceeding $52,850, plus interest thereon.—Quinn Freight Lines, Inc.—Control and Merger, 90 M.C.C. 60 (63)*.

Assumption by acquiring carrier of obligation and liability as primary obligor on a note of acquired carrier in principal amount not exceeding $33,826, and as guarantor in lieu of acquired carrier of balance not exceeding $245,801 aggregate principal amount due on conditional-sales contracts of latter's subsidiary, authorized.—R. E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (82, 86)*.

Survivor in approved merger authorized to assume obligation as guarantor of promissory notes to be issued by its existing noncarrier subsidiary in aggregate principal amount not exceeding $17,476.—Roush—Control—Southern California Freight Lines, 90 M.C.C. 459 (471)*.

Assumption by surviving noncarrier of obligation and liability on outstanding notes of subsidiary terminal company (liquidating company in approved merger) in aggregate principal amount not exceeding $399,548, authorized as consistent with proper performance of service by each carrier under survivor's control and otherwise consistent with public interest.—Ryder System, Inc.—Control—Southern-Plaza Exp., Inc., 90 M.C.C. 87 (95)*.

Approval of assumption, by three affiliated carriers authorized to acquire control of survivor in approved merger, of obligation, jointly and severally, as guarantors of promissory note for not over $2,100,000 to be issued by survivor to finance merger, is justified by its value to them as a connecting link between their operations and by fact that each is a financially stable company, able to bear its share of obligation assumed.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (782-3, 784).

Authority for applicant management company's assumption of obligation and liability as guarantor of two secured promissory notes aggregating $400,000 principal amount, proposed to be issued by its subsidiary, a local bus company, to evidence a bank loan to be used to repay applicant the principal amount of a note to be issued to Greyhound Corp. to complete purchase of a note issued by the subsidiary to Greyhound, denied. Not only is no justification offered for increase in applicant's overcapitalization resulting from issuance of the proposed new note, but any benefit to the subsidiary from the proposed financing is doubtful, as it would be required to continue payments to applicant under the present note while also making installment payments on its notes in the bank at increased interest rate.—American Transport Corp. Note & Assumption of Obligation, 90 M.C.C. 297 (298, 300, 301).

126. Vendor's obligations.—[Vol. 19].—Survivor in approved merger authorized to assume liability on liquidating carrier's obligations which qualify as securities under the act, in aggregate amount not exceeding $408,070.—Jones Motor Co., Inc.—Control—Mundy Motor Lines, 90 M.C.C. 899 (901, 910).

Regulations of the Commission

29 FR 11127, July 31, 1964, Part 56: Issuance of Securities, Assumption of Obligations, and Filing of Certificates and Reports, entire 49 CFR Part 56 revised, effective Oct. 1, 1964.

30 FR 11210, Sept. 1, 1965, Parts 51 and 56: General Instructions and Issuance of Securities, Assumption of Obligations, and Filing of Certificates and Reports, §51.8 revoked, and §56.3 Procedure and §56.6 Reports amended, effective Oct. 15, 1965.

Section 215. [§*315 U.S.C.*] Security for protection of public.—[Unchanged. See vol. 10, p. 8134, vol. 17, p. 13577.]

Historical notes, see vol. 10, p. 8134, vol. 11, p. 9483, vol. 12 p. 10422.

Notes of Decisions

Volume 10—p. 8134; Volume 11—p. 9483; Volume 12—p. 10423; Volume 13—p. 11091; Volume 14—p. 11612; Volume 15—p. 12225; Volume 16—p. 12878; Volume 17—p. 13577; Volume 18—p. 14533; Volume 19—p. 15811.

2. Construction and interpretation.—[Vols. 10-18].—In suit concerned with obligations of two insurance companies, one for carrier lessee and one for lessor of truck (leased with driver) involved in highway accident, lessee's insurer has primary coverage and is liable for

entire amount of joint and several judgments obtained by plaintiffs against lessee, lessor, and driver of the truck. Lessee's status as a certificated carrier made it liable as a matter of law for negligence of the driver, which jury in the damage suit found to be the proximate cause of the accident; and it was definitely intended that policy issued by carrier's insurer would provide coverage for it in a situation such as that in question. In addition, since the truck was being operated "exclusively in the business of" the carrier, and under its certificate, when the accident occurred, the lessor and driver thereof are "insureds" as defined in the policy issued by carrier's insurer.—Walters v. Dunlap, 250 F. Supp. 76 (78-80).

50. Cargo insurance.—[Vols. 10-17].—Both the insurance company and insured carrier (who was undergoing reorganization) were obligated to shippers under cargo insurance policy which contained a $5,000 deductible clause and also an endorsement, as required by §215 and the commission's regulations thereunder, that obligated the company to pay any shipper or consignee for all loss or damage to property coming into carrier's possession for which carrier might be held legally liable and that was to apply irrespective of carrier's financial responsibility or lack thereof or insolvency or bankruptcy. Carrier's promise to reimburse the company for any payments made solely by virtue of the endorsement showed that it, rather than the company, was the principal who "should perform"; and the company stood as surety for carrier with respect to claims under the endorsement. Shipper-claimant's power to satisfy their damage claims in whole or in part by deducting their liability for unpaid freight charges was security for the principal's performance to which the surety is subrogated.—In re Yale Express System, Inc., 362 F. 2d 111 (114)*.

No authority is cited to support intimation by carrier to claimants that the act forbids offsetting damage claims against freight charges; the contrary seems to be established. In settling shippers' damage claims against debtor carrier, the insurance company, as surety, was equitably entitled to deduct any outstanding unpaid freight charges; and, since such equitable right would be recognized in an ordinary bankruptcy proceeding, it could be enforced in a reorganization proceeding if it would not unduly interfere with the rehabilitation objective of the reorganization. Lower court's order denying company's right to set off amounts owed to debtor for freight charges vacated; cause remanded for determination of whether even a limited setoff would be compatible with the reorganization or what limits would be appropriate.—Id., pp. 114, 115-7.

Regulations of the Commission

27 FR 6674, July 13, 1962, Part 174: Surety Bonds and Policies of Insurance, §174.8 Insurance and surety companies; authorized—(a) State authority and designation of agent, revised, effective July 15, 1962.

NOTE: For recodification, see 49 CFR, Editorial Note, 32 FR 5606, April 5, 1967.

32 FR 14557, Oct. 19, 1967, Part 274 [formerly Part 174]: Surety Bonds and Policies of Insurance, §274.8 Insurance and surety companies; authorized—(b) Financial resources, amended, effective Dec. 31, 1967.

Section 216. [§316 U.S.C.] Rates, fares and charges—(a) Duty to establish reasonable rates, etc.; service and equipment; rules and regulations; reasonable divisions of joint fares.—[Unchanged. See vol. 10, p. 8142.]

Historical note, see vol. 11, p. 9487.

Notes of Decisions

Volume 10—p. 8142; Volume 11—p. 9487; Volume 12—p. 10425; Volume 13—p. 11092; Volume 14—p. 11614; Volume 15—p. 12227; Volume 16—p. 12880; Volume 17—p. 13579.; Volume 19—p. 15811.

10. Duty to furnish service.—In action against bus line for personal injuries suffered while plaintiff was riding on bus of connecting carrier, initial carrier was not liable for the injuries when, although it sold plaintiff a through round-trip ticket, its ticket stated that it was acting only as agent and was not responsible beyond its own line and it had filed a tariff to protect itself from liability for torts committed on lines of connecting carriers, without fault on its part. Absent a finding of fault on part of initial carrier, it may not be held liable for torts of a connecting carrier which occur on line of the connecting carrier. —Ephraim v. Safeway Trails, Inc., 341 F. 2d 815 (818-20). [Not arising hereunder.]

Although respondent apparently conducted no interstate passenger operations for a period of years prior to August 1960, it subsequently undertook various measures to bring itself into compliance with terms of its certificate and the commission's regulations, including retaining counsel, publishing tariffs, issuing powers of atorney, joining a national bus association, and keeping records of its operations. It now operates 2 to 3 daily round trips between its authorized Maine points, which are coordinated with Greyhound schedules, transporting over 100 passengers traveling between points on its routes and Boston or New York during year preceding hearing, and its drivers sell through interstate travel tickets. Thus it has brought its operations into reasonable compliance with the commission's regulations and requirement of its certificate to render reasonably adequate and continuous service, and revocation of its certificate is not justified, notwithstanding its prior record of noncompliance.—Brunswick Transp. Co., Inc.—Revocation of Certificate, 91 M.C.C. 899 (902).

However, its past failure to perform its authorized regular-route services for a number of years, while yet performing substantial charter operations under claim of §208(c) incidental rights, raises doubt as to bona fides of its present efforts and its intent to remain in compliance with the act and the commission's regulations thereunder. Order is therefore issued specifically requiring it hereafter to maintain reasonably adequate and continuous service, failing which its certificate will be subject to cancellation.—Id., p. 902.

19. [Cost of service]—Wages; prices; taxes. —[Vols. 16, 17, 19].—See Whitehouse Sightseeing Corp. v. United States, §217(a), n. 16.

By act of June 28, 1962, § 5, provisions of statute imposing 10-percent tax on amounts paid for transportation of persons, 26 USC §4261, were amended so as to apply to such transportation beginning before Nov. 16, 1962. Public Law 87-508, 87th Congress, H. R. 11879.

75. Tickets; reasonable practices.—[Vols. 11, 12].—Nonsegregation notice on tickets, see Discrimination—Interstate M. Carriers of Passengers, §216(d), n. 30.

Section 216. (b) [*§316(b) U.S.C.*] Rates, facilities for carriers of property.—

[Unchanged. See vol. 10, p. 8145.]

Notes of Decisions

Volume 10—p. 8145; Volume 11—p. 9489; Volume 12—p. 10427; Volume 13—p. 11092; Volume 14—p. 11614; Volume 15—p. 1228; Volume 16—p. 12882; Volume 17—p. 13581; Volume 18—p. 14534; Volume 19—p. 15813.

5. Rates initiated by carriers.—[Vols. 10-18].—Part I, §1(5), n. 2.

A carrier has the right to initiate rate adjustments calculated to obtain desired traffic, provided the resulting charges are compensatory for the service performed and are not otherwise unlawful. Proposed proportional charges on all-freight in shippers' trailers, the same as those charged for performing similar service for a railroad under contract in

connection with plan II TOFC service, which are designed to afford like service to shippers using plan III TOFC service, meet criteria of §216(i) when they are compensatory and not shown to threaten existing rate structures.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429 (430, 434).

6. Reasonable rate construed.—[Vols. 10-14, 16-19].—Whenever a motor carrier files a new rate, §216(d) requires that it be "just and reasonable," and declares that every "unjust and unreasonable charge" is unlawful; and §216(g) places on the carrier seeking a change in rates the burden of proving proposed changed rate is just and reasonable. These laws are very plain and their application is not difficult, in action to set aside that portion of the commission's decision which holds that intra- and inter-territorial general rate increases, to extent they result in a higher charge for hauling goods to a border point than for hauling the same goods to a point beyond the border point, over the same route, were unjust and unreasonable. Rates higher for short hauls than for longer hauls, via same carrier over same route, are so significant an element affecting reasonableness as to make such rates unreasonable on their face. To extent that such maladjustments occur, the increased rates are unjust and unreasonable; the commission's report and order are amply supported by the statute and the evidence; sustained.—Accelerated Transport-Pony Exp., Inc. v. United States, 227 F. Supp. 815 (818-9, 821)*.

A carrier may not make ownership of the property moved the criterion by which its charges for carriage are measured.—John F. Ivory Storage Co., Inc. v. Atlas Van Lines, Inc., 316 I.C.C. 224 (226)*.

Profit to the Carrier

10. Earnings on all services to be reasonable.—[Vols. 10-15, 18, 19].—Increased charges may be approved even though they do not entirely eliminate losses incurred in performing the service involved.—L.T.L. Pickup & Delivery Charges—from or to New York, 319 I.C.C. 230 (233).

To obtain needed additional revenues, eastern central carriers propose flat general increases in t.l. or volume commodity rates and in l.t.l. or any-quantity class or commodity rates on shipments under 2,000 pounds, a 10-percent increase in accessorial charges, and establishment of constant charges, graduated according to weight and distance, which will cover total cost of handling shipments under 300 pounds; based on evidence presented, and considering highly competitive nature of most of the traffic, proposed rates are just and reasonable when they will result in an operating ratio on all traffic somewhere between 93 and 95 percent. However, though an operating ratio of 93 percent has been found reasonable in the past, it is not an immutable standard; in view of numerous changes in the motor carrier industry, the matter should be explored in light of a more complete record; approval is therefore without prejudice to reopening, after a reasonable test period, either on petition of parties or on commission's own motion.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (481-2, 486).

12. —Right of carrier to fair profit.—[Vols. 13, 15, 17].—Although in numerous motor carrier general-increase cases an operating ratio of 93 percent has been found reasonable, for the reasons discussed in 316 ICC 467 composite operating ratios are not an acceptable standard for measuring revenue needs; mere showing of present operating ratios above 93 percent, without a showing of factors that make up such a ratio, is not enough for that purpose. Carriers are admonished in future to supply the commission with all pertinent information, including transactions between involved carriers and their subsidiaries or affiliates, and to conform to instructions in annual report form in reporting details of arrangements between themselves and such affiliates.—General Increase—Middle Atlantic & New England Terr., 319 I.C.C. 168 (176-7)*.

Tests of Reasonableness

25. Competition considered.—[Vols. 10-13, 16-19].—See also Distribution Rates in Eastern Central Terr. Cities, n. 185, below.

Reduced rates on meats from midwestern to mountain-Pacific States are necessary to meet competition of private carriers and oth-

ers operating buy-and-sell or under guise of exempt agricultural cooperatives. When fresh meat is sold f.o.b. plant, purchaser arranges for the transportation, and substantial tonnage is moving by nonregulated carriers who change their rates at will and without notice, making it difficult for midwestern packers using only authorized carriers to sell on the west coast. Respondents and their shippers should not be denied opportunity to meet their major competition because of possibility of retaliatory reductions by the nonregulated truckers; where traffic has been lost to private and illegal transportation, regulated carriers must be allowed considerable leeway in meeting that competition, and disapproval of proposed rates would subject respondents to risk of further diversion of their traffic.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (671, 675).

As the proposed rates are higher than rail TOFC rates established to meet the same competition, they should not affect the volume of TOFC traffic. That service will continue to be used where practical, but it is difficult for smaller midwestern slaughterhouses to assemble the rail minimum of 66,000 pounds in one day, shipping time is inflexible, time in transit is longer than by truck, there are no stopoff privileges, and it is difficult for some purchasers to handle such large shipments.—Id., p. 672.

Reduced joint rates proposed on tobacco products to meet competition of rail plan III TOFC service are necessary for respondents to continue participating in movement of shipper's interplant traffic between the points involved. Establishment of reduced rates reflecting shipper's costs on plan III shipments will not alter its competitive relations with shippers at other origins, since the bulk of the traffic is now moving in the plan III service.—Cigarettes and Tobacco between Greensboro and Louisville, 319 I.C.C. 679 (684).

When most of involved traffic is moving by rail and respondent's service is used only when expedition is required, reduced t.l. rate 17 cents higher than the rail rate, which is necessary for respondent to continue participating in the traffic, is not competitively destructive.—Brushware & Cleaning Articles, Easthampton to Atlanta, 319 I.C.C. 164 (166)*; reduced rate on wrapping paper, which is shown to be compensatory, is necessary to enable respondent to share in the movement when at its present rates all the traffic has been diverted to rail carriage.—Wrapping Paper from Rhinelander, Wis., to Toledo, Ohio, 316 I.C.C. 455 (456, 459).

If the proposed rate on ribbon bows is not approved, it is likely that the traffic will move via rail rather than by the respondent. Since the facts and circumstances attending movement of the traffic by the respondent must be considered, proposed rate, which is shown to be compensatory, is just and reasonable.—Dry Goods and Telephone Housings within Central Ter., 318 I.C.C. 175 (177).

Carriers should not be required to forego rates which are fully compensatory solely to protect competing carriers; moreover, purpose of proposed new and reduced rates is not to meet rail or other carrier competition, but to establish rates to additional points and to increase respondent's per-truck revenues. Proposed rates are compensatory, will result in substantially increased revenues, and do not constitute an unfair and destructive competitive practice; approved.—Petroleum Products from Kansas City, Kans., to Texas, 316 I.C.C. 307 (309-10).

See also Alcoholic Liquors case, §15a(3), n. 2.

Where evidence is convincing that disapproval of proposed rates would probably result in diversion of the traffic to private carriage, such action by the commission should be based on a clear conviction either that respondent has failed to show that the rates would cover out-of-pocket costs, or that the rates would be in some other manner unlawful. Feasibility of private carriage for considered traffic is established by sworn testimony, and proposed rates would cover at least out-of-pocket costs; approved.—Bakery Goods, Chattanooga, Tenn., to Southern Points, 316 I.C.C. 573 (574, 576).

Reduced rates on artificial rubber from Sarnia, Ont., to New England points are necessary to enable shipper to meet competition from other origins; though distances from Sarnia and from Akron, Ohio, are approximately the same to most destinations, shipper's costs even at the reduced rates are

greater per hundredweight-mile than those at rail rates available to Akron competitors, and this competitive disadvantage would be aggravated if the reduced rates were disapproved. —Rubber, Sarnia, Ontario, to Conn., Mass., Mo., and R.I., 315 I.C.C. 707 (708, 709)*; the reduced rates are also necessary to forestall substantial diversion to private carriage, since shipper testified that unless rates on the reduced level are continued it will be compelled, in order to remain competitive, to enlarge its present private-carrier operations.—Id., pp. 708, 709.

Where respondent relies on rail competition to justify reduced rates, actual existence of such competition should be shown with particularity; respondent failed to establish competitive justification when it did not show competitive rates under which the traffic is purportedly moving.—Phosphoric Acid and Fertilizer Solution—Utah and Idaho, 316 I.C.C. 683 (686); while the necessity to meet competition is a strong and compelling factor and is entitled to consideration, the statute places the burden of proving reasonableness in a suspension proceeding on proponent of the rate. Minimum showing to meet that burden is convincing evidence that the changed rate would be compensatory; and a desire to meet competitive rates, standing alone, is not adequate.—Dog or Cat Food from Boston to Middle Atlantic Points, 318 I.C.C. 59 (64).

Proposed reduced alternative rate on iron and steel and other articles, the same as rail rate and minimum on iron and steel articles, is lower than competitive motor rates and would apply on many articles not named in competitive rail list, thus would undercut all competition on at least some articles; not approved.—Iron and Steel Articles from St. Louis to Kansas City, 318 I.C.C. 45 (48).

No competitive necessity for absorption of pier loading and unloading charges on class-rated traffic at Virginia ports is shown where no evidence was submitted as to extent, if any, that like traffic now moving through other Atlantic ports might move through Virginia ports if proposed rule became effective; protestant's exhibit indicates that from many Virginia points class rates to Norfolk-Newport News would in every instance be lower than corresponding rates to north Atlantic ports.—Absorption Pier Loading and Unloading Charges, 316 I.C.C. 577 (579).

Though proposed reduced stopoff charge for partial loading or unloading of t.l. shipments is purportedly to meet competition of lower charge of another motor carrier, protestant's testimony that latter charge applies in connection with only a few rates competitive with respondent is not rebutted; and other motor carriers said to maintain charges as low as or lower than that proposed are not shown to be competitors of respondent; moreover, respondent did not attempt to show that the proposed charge would be compensatory; not approved.—Stopoff Charges between Points in Central Territory, 315 I.C.C. 301 (302).

Where threatened private competition is relied on to justify reduced rates, evidence must show that such competition is impending, and the potential competition must consist of something more tangible than a mere intention expressed by a shipper to engage in transportation of his own products. Manner in which considered traffic has moved in the past, approximate cost of private carriage to shipper, or other convincing evidence that threat of private competition is real, has not been shown; proposed rates not approved.—Wallpaper, Paint between Mechanicville, N.Y., and N.Y., 316 I.C.C. 11 (13); similarly, where shipper is presently moving in private carriage only 30,000 pounds a month, compared to 1,900,000 pounds per month of its traffic moving in for-hire carriage, proposed rate reduction is not justified by its mere statement that its private-carrier operation "could be expanded" to carry that tonnage.—Iron & Steel from or to Pennsylvania Points and Ind., 316 I.C.C. 705 (707).

Competitive need for reduced rates on sugar is not established when there is no substantial evidence that motor carrier named participates in the traffic or is a serious competitor of respondent; there is no convincing showing of private carriage to the destination; there is little evidence of competition at rail rates subject to 40,000-pound minimum, and respondent admittedly cannot compete with railroads at higher minima.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (29-30).

Proposed reduced rates are not shown to be

necessary to meet competition of similar forwarder rates when respondent presented no evidence as to amount of tonnage diverted from it and no shipper support for the proposal.—Drugs & Toilet Preparations, N.J. to Baltimore & Wash., 316 I.C.C. 252 (254).

Reduced rates named from two New Jersey origins are designed to meet a competitive situation encountered at only one, on shipments made by one shipper; no evidence was adduced as to the other origin, nor any cost evidence; approval would ignore the uneconomic effect of those rates on other common carriers and from other origins; proposed rates are not shown to be competitively necessary and thus not to constitute a destructive competitive practice; not approved.—Foodstuffs from N.J. to Conn., Mass., & R.I., 315 I.C.C. 179 (180).

35. Back-haul traffic; empty movement.—[Vols. 11, 12, 14, 16-19].—Showing that proposed reduced rates would attract badly needed backhaul tonnage in direction of respondent's light flow of traffic is not decisive; rates which would be compensatory only on the added-traffic theory may not be approved.—Iron and Steel Articles from St. Louis to Kansas City, 318 I.C.C. 45 (48); similarly, reduced brick rates proposed to meet rail TOFC competition are not justified by respondent's contention that a loss of 50 percent of its present brick traffic would increase its empty return movement and result in a higher operating ratio.—Brick and Related Articles, St. Louis, Mo., to Chicago, 316 I.C.C. 227 (229).

Rates which can be defended only on added-traffic theory may not be approved as just and reasonable. While respondents claim that reduced rate proposed for joint-line movements would provide traffic for what would otherwise be empty backhauls and contribute to cost of return hauls, cost data submitted by one respondent are deficient and the other, which would perform a substantial part of the through haul, submitted none; not approved.—Coolers from Fort Smith to Louisville, 318 I.C.C. 336 (338).

Respondent's need for traffic to balance its operations is insufficient justification for rates which may be below a compensatory level.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (30); reduced rates may not be approved solely to supply backhaul tonnage for equipment which otherwise would be operated empty. Carriers may not establish noncompensatory rates which can be defended only on the added-traffic theory.—Hides and Pelts from Texas to Ill., Mo., and Wis., 316 I.C.C. 243 (245); Titanium Dioxide from Baltimore, Md., to Cleveland, Ohio, 316 I.C.C. 655 (657).

While respondent's temporary authority would allow its vehicles to travel empty for a considerable portion of any return trip, sound business practice requires an irregular-route carrier, with its inherent flexibility, to coordinate movements to achieve maximum utilization of vehicles, with consequent increase in revenue, for entire round trip over whatever route or routes it selects. Respondent claims to have practically eliminated such empty mileage by hauling exempt commodities or leasing vehicles to authorized common carriers; though no examples are given, it cannot be assumed that return movements would necessarily be without revenue, especially as proposed rates would alleviate an existing backhaul problem; proposed initial rates are not shown to be noncompensatory or otherwise unlawful.—Meats & Related Articles, Wis. to Chicago & Twin Cities, 315 I.C.C. 588 (589-90).

40. Distance considered in determining reasonableness.—[Vols. 10-14, 16-19].—Though carriers' manipulation of distances in order to cut rates charged, which was one of primary reasons for investigation of iron-and-steel scales of eastern motor carriers, is still a cause for concern, there is merit to contentions of irregular-route carriers that requirement for specific rates could not be complied with because deliveries are often made to construction sites off the beaten path; that, since intermediate rules for irregular-route movements have been condemned, publication of a specific rate prior to a movement would ordinarily result in a 30-days delay, to great inconvenience of carrier and shipper; and that mileage guides used in determining rates for other commodities would be appropriate for the same purpose in connection with rates on iron and steel articles. Moreover, prior findings have provided a standard of minimum rates with which to compare any

reductions; investigation discontinued.—Iron and Steel Articles—Eastern Common Carriers, 314 I.C.C. 755 (757-8)*.

45. Disruption of rate adjustment.—[Vols. 10-12, 16-19].—While proposed joint rates on tobacco products between Greensboro, N.C., and Louisville, Ky., which reflect shipper's costs for interplant movements in rail plan III TOFC service, represent a departure from an established rate structure, they are shown to be necessary for respondents to continue participating in movement of the traffic, and respondents cannot be expected to adhere to the existing rate structure when as a result they would be excluded from such participation.—Cigarettes and Tobacco between Greensboro and Louisville, 319 I.C.C. 679 (684).

Respondents' reduced minimum charges per shipment when five or more minimum-charge shipments are picked up at one time at West Roxbury, Mass., are not shown to have had disruptive effect on other movements in the territory when there is no evidence that any member of protestant conference has lost traffic through diversion by reason of such charges, or that private-carrier competition at other points is similar to that at West Roxbury.—Reduced Minimum Charges—West Roxbury to Mid. Atl. Ter., 315 I.C.C. 675 (679).

Possibility that proposed reduced rate may precipitate other reductions in rates and disrupt existing rate structure from Miami Valley area of Ohio would not alone warrant a finding of unlawfulness when proposed rate is compensatory and no lower than necessary to meet existing carrier competition; moreover, present rate structure is not of long standing nor has it been approved or prescribed by the commission.—Printing, Wrapping Paper, Pulpboard—Ohio to New York, 318 I.C.C. 49 (51-2).

Where respondent proposes to establish reduced class rates from Greenville, Miss., only to some 20 Arkansas points, nonapplication of proposed bases to other Arkansas points served by it would without adequate justification disturb existing relationships and precipitate widespread changes in its present class rates and those of common carriers generally in territory involved; not approved.—Class Rates between Greenville, Miss., and Arkansas, 316 I.C.C. 629 (631).

Value; Grade or Condition of Commodity

48. In general.— [Vols. 17-19].—Rates on high-grade commodities, such as cigarettes, should not be allowed to gravitate to the lower segment of the rate scale, without a convincing showing of competitive need; proposed commodity rate on cigarettes lower than minimum level prescribed in 293 ICC 133 on manufactured tobacco in the same area, not approved.—Cigarettes from Richmond, Va., to Baltimore, Md., 316 I.C.C. 68 (70).

49. High vs. low-grade commodities.—[Vol. 15].—Evaluation of cost evidence must be made in light of facts and circumstances attending movement of the traffic by the carrier to which the rate is applicable. Charges at assailed scrap-iron rates represent a substantial portion of the delivered price, and respondent's contention that those rates are necessary to prevent diversion of the traffic to private or illegal transportation is not seriously contested. Authorized motor carriers generally are not interested in handling scrap iron because it is oily and tends to contaminate trailers, and because its low value tends to preclude any substantial profit; and shippers served by respondent are not located on rail sidings and generally would not ship by rail; thus there is no occasion to consider inherent advantages of competing carriers or modes.—Iron or Steel Scrap from Conn., Mass., and R.I. to Pa., 318 I.C.C. 567 (569).

Weight as Factor

60. Weight basis.—[Vols. 10-12, 14, 16, 18, 19].—Rates and the minimum weight applicable thereto are inseparable and must be considered together.—Hardware, LTL, New Britain, Conn., to Mid. Atlantic Terr., 322 I.C.C. 249 (252).

Contention that reduced rate on meats, minimum 30,000 pounds, from Colorado points to Chicago will result in increased traffic and heavier loadings is not supported by the record; fact that one respondent handled nearly 18 million pounds of such traffic

during first half of 1962 at former 13-cent higher rate on 25,000-pound minimum indicates that decline in bureau respondents' traffic during same period is not attributable to the higher rate. That minimum revenue under the reduced rate compares favorably with that under the higher rate does not overcome cost evidence showing the reduced rate to be noncompensatory; average shipments are below 30,000 pounds, and though the reduced rate has been in effect for a year, no attempt was made at further hearing to show that traffic had increased or that the bureau respondents' estimate of 33,000-pound loads was correct; thus there is no warrant for use of that weight in determining compensativeness of the reduced rate. Moreover, the record would not support a finding that the reduced rate is compensatory even at the heavier loading; not approved.—Fresh or Fresh Salted Meats from Colorado to Chicago, 322 I.C.C. 174 (178).

Defendants' continued use of l.t.l. weight breakdowns and t.l. minimum weights in effect prior to revision thereof by complainant rate bureau as result of permissive general increases is not shown to be unlawful; the lower weight scales or minima maintained by defendants on involved traffic are not shown to be in themselves unlawfully disruptive of the rate structure.—New England Motor Rate Bureau, Inc. v. Stone's Exp., 321 I.C.C. 767 (769, 774).

Although reduced rate on alcoholic liquors from Peoria, Ill., to Pittsfield, Mass., fails to cover respondent's out-of-pocket costs on proposed 30,000-pound minimum, it is shown to be compensatory on shipments of 35,000 pounds and is approved for latter minimum.—Alcoholic Liquors from Peoria, Ill., to Eastern Points, 321 I.C.C. 142 (149)*.

While respondents concede that proposed rail-competitive rate on soap and related articles would not be compensatory for proposed 20,000-pound minimum, the traffic actually moves in loads averaging over 30,000 pounds; costs computed for single-line service on that weight indicate that on a 30,000-pound minimum proposed rates would be compensatory; so approved.—Soap and Related Art. between Kansas City and Jeffersonville, 316 I.C.C. 421 (422-3).

Proposed minimum weight of 34,000 pounds is just and reasonable on considered movements; although average loadings do not normally exceed 32,000 pounds, evidence discloses that intervening shipper is capable of loading 34,000 pounds or more per trailer.—Printing, Wrapping Paper, Pulpboard—Ohio to New York, 318 I.C.C. 49 (50, 52).

See also Drugs and Related Articles from N.J. and N.Y. to Tex., §216(c), n. 10.

Provision that minimum weight governing proposed rate on sodium hydroxide solution shall be shell capacity of tank, but not less than 40,000 pounds unless a smaller tank is furnished for carrier's convenience, in which case charges apply on actual weight, is not indefinite; phraseology is clear and rule is similar to rules frequently appearing in both rail and motor tariffs covering transportation of liquids in bulk.—Phosphoric Acid and Fertilizer Solution—Utah and Idaho, 316 I.C.C. 683 (684, 685).

Although respondent claims it is experiencing average loadings of 44,000 pounds on considered traffic, since it holds out to accept a shipment of 35,000-pound minimum, compensativeness of proposed rate should be determined by use of latter weight.—Paper Articles between Ohio & Ill., Ind., N.J., N.Y., Ohio, Pa., 316 I.C.C. 390 (391); likewise, while respondent claims its average load slightly exceeds proposed minimum of 38,000 pounds, proposed reduced rate would be offered on that minimum and compensativeness thereof must be determined on that weight.—Silica Flour from Millville and Newport, N.J., 316 I.C.C. 645 (647).

To eliminate continuing losses from handling of shipments weighing less than 300 pounds, respondent eastern central carriers propose to establish scales of constant or flat charges on 6 weight brackets, progressing by 50 pounds each from column 1 on 1-to-49 pounds to column 6 on 250-to-299 pounds, such charges increasing with distance and from column to column for same distances to reflect the greater weights. Although the constant charges disregard classification ratings and will result in substantial increases on lower-rated shipments while reducing charges on those rated class 100 or higher, the disproportionately high cost of handling such small

shipments justifies treating them as a separate classification. Proposed charges are not inherently unlawful, appear sound in theory, and in the aggregate are not excessive since they would do no more than return total costs.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (468-9, 474, 484-5).

While the sharp increases on low-rated traffic may have severe impact on some shippers, those shipping commodities rated class 50 by reason of high density and low value can obtain a relatively low rate by shipping in larger quantities. Disruption of commercial practices and hardship to individual shippers is unlikely to be as great as shipper protestants fear, and both carriers and shippers should benefit from having to ascertain only weight of shipment and corresponding rate basis number. Proposed constant charges are an experiment in ratemaking and a step toward tariff simplification, and should not be condemned merely because they are a departure from traditional practices. However, in view of their admitted imperfections, approval is without prejudice to reopening of the proceeding for further hearing, if it appears warranted, after a reasonable test period.—Id., pp. 485, 486. [But see dissent.]

See also Alcoholic Liquors, Detroit, Mich., to Long Island City, §202(b), n. 6.

61. —Alternative minima.—[Vols. 10, 17].—Although proposed alternative rates on paint, minima 28,000 and 32,000 pounds, are not shown to be compensatory, the higher rate proposed for the lower minimum, if made subject to the higher minimum, would exceed the out-of-pocket costs shown by slightly over 2 cents, and would be compensatory; as a competitor of respondent is actually transporting some of the traffic at same rate on a lower minimum, it may be approved for the 32,000-pound minimum as reasonable and necessary to meet existing competition.—Paint & Paint Materials, Chicago to Kansas City, Kans., 318 I.C.C. 331 (334).

Comparison of Rates

72. Comparison of rates; with rates of other motor carriers, common and contract.—[Vols. 10-14, 16, 18].—Absent probative cost evidence, comparison of respondent's initial cement rates with those found compensatory for another carrier between points in same general territory is adequate to support finding that respondent's rates are likewise compensatory when they are on equal or higher level than the approved rates for comparable distances.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (249).

76. —In the same territory; in different territories.—[Vols. 10-13, 15, 17-19].—Respondent's operating ratio of 92.9 percent, together with fact that its rates on cement from New York and Pennsylvania points to destinations in New England and middle Atlantic States exceed cement scales approved for middle Atlantic territory in 313 ICC 103 and for New England in 314 ICC 459, as extended for distances up to 660 miles, are convincing that its rates are compensatory. And fact that rates of another respondent from Pennsylvania points to same destinations, as recently increased, also exceed those scales indicates that they are now on a reasonable basis.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (242, 248, 249).

Agreed compromise scale of l.t.l. rates on envelopes is on higher level than rates in central territory on numerous other paper articles which appear to have similar transportation characteristics; fact that level of rates may be lower than that in other territories does not warrant finding that considered scale is unlawful. Considering competitive and other circumstances which affect this traffic in central territory, and requirements of previous orders in 68 MCC 429, 301 ICC 156, 306 ICC 573, agreed scale is lawful.—American Envelope Co. v. A. & H. Truck Line, Inc., 316 I.C.C. 563 (568)*.

78. —Value dependent upon similarity of circumstances.—[Vols. 12, 14, 17-19].—Part I, §1(5), n. 222.—In absence of definite showing of similarity of transportation characteristics and conditions, comparisons of rates on fertilizing compounds with rates on animal or poultry feed are entitled to little weight.—Fertilizers and Feed, Central & Middlewest Territories, 318 I.C.C. 298 (300).

Inasmuch as load restrictions imposed by other northwestern States for varying periods during early spring of each year are not shown to have an impact on defendants' operations

substantially similar to that of South Dakota restrictions imposed during March and April, compared rates and charges on class- or exceptions-rated traffic moving in interstate or foreign commerce to and from those States, which do not include "frost law charges," are not a proper standard for measuring reasonableness of assailed rates and charges on like traffic to and from South Dakota during March and April, which are 10 or 11 cents higher than normal class rates because of application of frost law charges.—Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (330, 335-7).

79. —With rates on like commodities, like transport characteristics.—[Vols. 13, 15, 18, 19].—Although respondent's l.t.l. rate on paperboard is substantially lower than l.t.l. class rates of conference carriers on same commodity between same points, latter are not shown to be moving any of the traffic, due apparently to private-carrier competition; they are therefore not a proper standard for measuring minimum reasonableness of respondent's rate.—Paperboard between New Jersey and New York, N.Y., 315 I.C.C. 187 (189).

80. —With divisions of through rates.—[Vol. 18].—Although proposed assembling rates from points in the Carolinas to Charlotte and Greensboro, N.C., are higher than average divisions of through transcontinental motor carrier rates, those divisions are of slight probative value in determining reasonableness of proposed rates.—Assembling Rates at Charlotte and Greensboro, N.C., 318 I.C.C. 429 (436).

Presumptions, Evidence, Admissions as to Reasonableness

92. Rates higher at intermediate than at more distant points.—[Vols. 14, 15, 17-19].—See also §216(c), n. 12.

Rates higher for shorter than for longer hauls via same carrier and over same route are so significant an element affecting reasonableness as to make such rates unreasonable on their face; and principle that, apart from statutory enactment, it is prima facie unreasonable to charge more for a shorter than for a longer haul has been applied by the commission since the earliest days of its administration of the Motor Carrier Act. Plaintiffs do not contend that principle is inapplicable to territorial rate increases resulting in higher rates to border points than to points beyond, merely because the longer haul terminates in a different territory, or that the border-point rates are unremunerative without the increases; and their contention that rates resulting in such maladjustments may not be condemned because they have no control over rates beyond the border was specifically rejected by the commission. To extent that such maladjustments occur, the increased rates are unjust and unreasonable; order requiring cancellation of such unlawful rates, sustained.—Accelerated Transport-Pony Exp., Inc. v. United States, 227 F. Supp. 815 (819, 820, 821)*.

Although flat increases in class and commodity rates in middle Atlantic territory and between that territory and New England do not exceed reasonable maxima, where they result in rates to border points higher than to points beyond over same routes such rates are obviously unlawful and must be canceled. If a carrier chooses to participate in the lower rates for the longer hauls it should arrange to maintain rates no higher at intermediate border points.—General Increase—Middle Atlantic & New England Ter., 319 I.C.C. 168 (177)*.

In absence of sound reason therefor, maintenance of class rates to intermediate points higher than to more distant points on same route is prima facie unreasonable.—Class Rates between Greenville, Miss., and Arkansas, 316 I.C.C. 629 (632).

Cost of Service

100. Costs considered; truck capacity.—[Vols. 10, 11, 19].—Rates below out-of-pocket costs may not be justified on theory of "top loading." Respondents' reduced rates on syrup, starch, and corn oil that are less than out-of-pocket costs are not just and reasonable; cancellation required.—Syrup between Kansas City, Mo., and Chicago, Ill., 321 I.C.C. 214 (217, 218).

In absence of any competitive need or other special circumstances, common carrier rates should return at least the full cost of the serv-

ice, so as to avoid placing an undue burden on other traffic.—Foodstuffs, Candy, Feed from Chicago to Sharon, Pa., 318 I.C.C. 422 (423, 424).

Though "frost law charges" assessed on certain traffic to or from South Dakota during March and April of each year were established to compensate defendants for increased operating costs due to imposition of special State load restrictions during those months, where increased costs are incurred they are attributable to all traffic transported, not only that in issue; traffic subject to such charges is transported in same vehicle with like traffic not subject thereto, the only difference in circumstances being that the one shipment may be destined to a point in South Dakota and the other to a point in another State; moreover, frost law charges of same amount apply on like shipments regardless of differences in distance; application of such charges only on the traffic in issue and irrespective of length of haul does not place the burden of increased costs solely and fairly on that traffic which directly causes the expense. —Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (339-40, 346).

For the same reasons as those stated in 62 MCC 117 in condemning surcharges designed to offset additional costs due to State truck-mile taxes, any increases incurred by defendants as result of imposition of the load restrictions in March and April should be treated as a normal operating expense and should be reflected in defendants' class-rate structure rather than in frost law charges.—Id., p. 347.

101. Terminal services.—[Vols. 10-19].—Cost of interchanging over-the-road for local tractors in terminal areas would be negligible, and failure to include such cost is of no material consequence.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (407).

Move to strike cost data for pickup and delivery service at points in area just north of New York City and on Long Island, based on experience of one respondent's Newark terminal, on ground of irrelevancy, denied. Although the Long Island traffic appears to be actually routed via New York Port Authority terminal rather than the Newark terminal, both are in same general area and operations would be conducted under similar conditions; thus it is reasonable to assume that costs incurred at the Newark terminal are representative of those incurred at the New York terminal.—L.T.L. Pickup & Delivery Charges—from or to New York, 319 I.C.C. 230 (232).

Since under ordinary line-haul rates shipper is entitled to one delivery at no extra charge, cost of one of deliveries under respondents' distribution rates on all-freight at Chicago and St. Louis is properly chargeable to the line-haul movement.—Distribution Rates at Chicago, Ill., and St. Louis, Mo., 318 I.C.C. 145 (148).

Amount of physical terminal service required on l.t.l. shipments, including pickup and delivery, transfer at interchange points, platform handling, and billing and collecting, is proportionately greater than on t.l. shipments; tendency is to bypass platform handling as weight of shipment increases, so that t.l. traffic is only occasionally platformed and terminal handling of larger l.t.l. shipments is reduced to a minimum. Relative costs of terminal and line-haul services on t.l. shipments are approximately 20 and 80 percent, respectively, 45 and 55 percent on l.t.l. shipments generally, and approximately 80 and 20 percent on small shipments. Labor constitutes about 41 percent of direct expenses in line-haul service, and in terminal service about 62 percent of total pickup and delivery cost and 77 percent of platform and billing-and-collecting costs, the composite figure being about 68 percent. Proposed general increases under which about 20 percent of needed additional revenue would be received from t.l. or volume shipments and 80 percent from shipments under 2,000 pounds therefore appear just and reasonable.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (471, 477-8, 482).

While order bill of lading shipments may well be more costly to handle than other types, record does not establish a meaningful cost comparison for the different types; respondents' cost study based on a test month for one carrier does not establish that cost of terminal handling of order shipments exceeded that for straight-bill-of-lading shipments; showing of additional expense incurred for services peculiar to order shipments is re-

quired before separate charge theron can be approved.—Terminal Charge on Order Bills of Lading Shipments, 315 I.C.C. 327 (332)*.

102. Operating costs; system average costs.—[Vols. 10-19].—Part I, §1(5), n. 95.—See also §216(g), n. 66.

Where individual carrier costs are not available or are found inadequate, data from the commission's cost statement No. 2-60 may be used as representative of average costs in the territory. As those studies cover all representative carriers of general commodities and are conducted under exacting and refined studies, the results are reflective of the most reliable costs available. However, there is no reason for use of short highway miles adjusted for circuity where the carrier involved operates over irregular routes.—Fresh or Fresh Salted Meats from Colorado to Chicago, 322 I.C.C. 174 (181-2).

Though cost of service is an important element in measuring rates, it cannot be made the sole consideration. While unit costs of one respondent's cement traffic are not shown specifically, and it admits that on minimum weight shipments for short distances its rates are below cost, the relatively small movement of cement during the short time since effective date of the rates precludes refinement of costs to the degree possible over a longer period. Its average truck-mile revenue for the 17 round trips shown exceeds per-mile cost of all its operations during preceding year by a substantial margin, and other factors, such as extent to which its needs are met by other traffic, are persuasive that its cement rates are just and reasonable.—Cement and Mortar—Ill. & Mo. to Ill., Ind., Iowa, & Ky., 321 I.C.C. 166 (169-70).

Protestants' cost study, using Highway Form F and reflecting general average costs for transportation of petroleum in bulk, with adjustments made in attempt to show costs of transporting bulk cement, lacks the evidentiary value of another respondent's study based on its actual experience, even though for a relatively short period. Respondent's cost data sufficiently indicate compensativeness of its rates when ratios of rates to cost show that they are clearly compensatory for average loads and approximate compensativeness on minimum weight loads.—Id., pp. 171-2.

On basis of restated costs, cement rates of two respondents for their respective operations out of Davenport (Linwood), Iowa, and St. Louis approximate total costs for distances up to about 150 miles, which distance generally exceeds the average haul for those carriers. Costs shown for the Davenport operation are representative of movements by that carrier from other origins, and because of the brief experience of that carrier and its affiliates on other movements it is doubtful if cost evidence of any greater value could be developed from individual studies of the various operations. As a whole, those respondents' rates cover their full costs and are compensatory.—Id., p. 181.

Rail protestants' cost evidence is entitled to little weight to show cost of considered transportation of meats and packinghouse products when commission's cost statement 7-60, on which it is based, reflects average costs of 8 regular-route, general-commodity carriers in same general territory, whereas respondents are essentially irregular-route operators who specialize in transportation of the commodities involved, use owner-operators almost exclusively, interline very little freight, normally transport shipments weighing over 30,000 pounds, and have directionally balanced traffic movements. Respondents' studies based on data from their annual reports are the more reliable in the circumstances.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (673-4).

Although ordinarily a comparison with respondent's system average expense per vehicle-mile is of little value in determining whether or not a rate is compensatory, as it falsely assumes that all expenses are caused by miles operated, two exceptions have been recognized: (1) where the margin of revenue per vehicle-mile greatly exceeds the system average expense, the wide spread indicates probability that the rate is compensatory; (2) where a carrier specializes in transportation of single commodity or group of commodities in a particular area, system average expense is a fairly reliable measure of cost in that area in absence of contrary evidence.—Canned

Goods—Md., Pa., Va., & . Va. to Iowa, Mich. & Mo., 318 I.C.C. 171 (174).

Therefore, since respondent specializes in transportation of involved canned goods, proposed rates to points in Michigan which yield revenue exceeding its system average expense by substantial amounts are compensatory; but proposed rates to Iowa and Kansas City which fall below its system average expense are not.—Id., p. 174.

Though comparison of system average expense per vehicle-mile with revenue per vehicle-mile is ordinarily of little value in determining whether or not a rate is compensatory, as it falsely assumes that all expenses are caused by miles operated, a margin of revenue greatly exceeding system average expense indicates probability that the rate is compensatory in absence of precise costs or evidence to the contrary; however, the precise spread acceptable as showing compensativeness depends on facts and circumstances of each case.—Alcoholic Liquors from Eastern points to South Dakota, 318 I.C.C. 195 (197-8).

Although protestants' cost data based on operations of motor common carriers of general commodities in central territory are not determinative of actual costs of respondents in transporting traffic under considered all-commodity distance rates, they are the best evidence available to protestants and may not be ignored in absence of effective rebuttal by respondents.—All Freight between points in Ohio, 318 I.C.C. 731 (735).

System-average expenses are of little value in determining whether or not a rate is compensatory, since they falsely assume that all expenses are caused by miles operated.—Candy and Confectionery, Hoboken & New York to Chicago, 316 I.C.C. 671 (672); however, where a carrier specializes in transportation of a single commodity or group of related commodities in a particular area, its system-average expense may be regarded as a fairly reliable measure of its costs on such traffic, in absence of evidence to the contrary.—Soap & Related Art. between Kansas City and Jeffersonville, 316 I.C.C. 421 (424); Iron & Steel from or to Pennsylvania Points and Ind., 316 I.C.C. 705 (706-7); and since carrier specializes in transportation of bulk liquids, its system-average expenses may be regarded as a fairly reliable measure of approximate costs of handling involved acids between considered points.—Liquid Commodities between Va. and N.J., N.Y. and Pa., 316 I.C.C. 609 (614).

While ordinarily average costs are of limited value in determining lawfulness of rates on particular movements, they are entitled to full consideration when they have been adjusted to meet the particular situation and show that the assailed rates are substantially below a compensatory level; such a showing, if not overcome, justifies a finding of unreasonableness. While motor carrier bureau's more representative cost studies show that costs computed by Bureau of Inquiry and Compliance are somewhat overstated as to motor respondents, its studies confirm its admission that considered rate on petroleum and products is noncompensatory. Cancellation required.—Petroleum and Products from Oklahoma to Illinois, 318 I.C.C. 425 (428).

Average costs on all types of commodities, high as well as low grade, have substantial probative value to show whether rates are compensatory where comparisons show a wide spread between such costs and the rates; the wide spread between proposed rates 80 to 87 cents and costs ranging from 102 to 123 cents indicates that such rates are not compensatory.—Clay from Points in the South to Ohio, Pa., and W. Va., 316 I.C.C. 1 (3).

While a comparison of system-average expenses per vehicle-mile with truck-mile earnings ordinarily is of little value in determining rate compensativeness, where such expense is well in excess of minimum revenues under considered rates, considerable doubt is cast on their compensativeness.—Hides and Pelts from Texas to Ill., Mo., and Wis., 316 I.C.C. 243 (245).

Protestants' use of system-average load of respondent to develop average load factor in computing line-haul cost for that carrier's portion of the movement was proper in absence of any evidence of average return load from considered points; out-of-pocket cost thus determined exceeds proposed rate; not approved.—Aluminum from The Dalles, Oreg., to Adrian, Mich., 316 I.C.C. 625 (627-8).

Where line-haul costs are determined in the going direction only, and the jointness inherent in line-haul costs thus ignored, the resulting cost computations are unacceptable for ratemaking purposes. However, respondent's costs, adjusted to reflect roundtrip load factors computed by averaging the respective minimum weights for proposed rates with its system-average load for the year, may be accepted, in absence of more specific costs, as a general approximation of its costs of performing the considered service.—Wrapping Paper from Rhinelander, Wis., to Toledo, Ohio, 316 I.C.C. 455 (458).

Since truck-mile costs developed by rail respondents are average costs for handling all traffic between all points within area served by each protestant, they may not be accepted as representative of motor costs for handling considered traffic; moreover, it is impracticable to compare unit costs for the respective modes when rail costs are stated per 100 pounds and motor costs per truck-mile; this, as well as absence of other factors, does not permit determination of the low-cost mode.—Exceptions Ratings on Agric., Roadmaking, Other Articles, 315 I.C.C. 9 (16)*.

Composite costs of carrying general commodities, based on operating data of a number of carriers, cannot be accepted as costs incurred by a respondent in transporting a specific commodity in specialized service from and to particular points. Protestant's regional cost evidence does not show noncompensativeness of assailed l.t.l. rate on paperboard between three New Jersey origins and New York City.—Paperboard between New Jersey and New York, N.Y., 315 I.C.C. 187 (189).

Cost data based on respondent's system average for all hauls on all commodities handled over a period of a year may not be accepted as indicative of cost of transporting a single commodity from one origin to one destination.—Oleomargarine from Columbus, Ohio, to Twin Cities, Minn., 315 I.C.C. 504 (506).

When preponderance of respondents' traffic is peddle traffic in no way related to movement of iron and steel fasteners under proposed l.t.l. commodity rates, protestants' cost analysis based on premise that system average unit costs would apply to such movements has little probative value.—Iron or Steel, LTL, Rockford, Ill., to Anderson, Ind., 315 I.C.C. 683 (687).

See also Glass Bottles from Muskogee, Okla., to Chicago, and Aggregate Weight Provisions on Paper, Mass. to N.Y., N. J., cases §216(g), n. 10.

104. Ascertaining cost.—[Vols. 12, 14, 18, 19].—The commission's basic criticism of plaintiff's cost study purporting to show compensativeness of reduced rates on beer, which was prepared with use of Highway Form B (published, though not formally adopted, by the commission), is that that formula was designed primarily for determining costs of general-comodity carriers and would require "considerable adjustment" for application to plaintiff, a special-commodity carrier. However, nothing on cover page of Highway Form B suggests such a limitation, and the commission stated in a recent case that, with information specialized carriers are required to furnish in annual reports, Highway Form B can be applied to develop cost of a particular movement; no reason appears why considerations stressed therein should not apply to plaintiff's rates, unless specific criticisms of its study discredit it so substantially as to warrant its rejection without a hearing.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (680-1)*.

Since application of the Highway Form B formula for computing empty return mileage would charge the beer movement with a greater percentage of empty mileage than plaintiff's system average for the preceding year, plaintiff's cost analyst increased the line-haul costs as developed under the formula by the prior-year ratio—the method used in the commission's rail cost formula, and conservative in that an empty mile actually costs less than a loaded mile. As applied to plaintiff's operation, the commission's method is not shown to be more accurate than the analyst's; and whether outbound movements are more productive of empty return mileage than inbound, whether this applies to plaintiff's operations generally and the proposed beer movement in particular, and if so how much the analyst's figures should be increased on that account, are inquiries that should have been made at a hearing.—Id., p. 681.

Though ascertainment of owner-operator costs may be difficult, the need for production of such evidence to show compensativeness of rates covering service provided with owner-operators, in order to meet standards of the national transportation policy and requirements of §216(b), (d), and (g), outweighs the burden placed on the carrier and owner-operator. Prior to decision in 318 ICC 567, a carrier using owner-operators had to furnish the same proof of compensativeness as self-sustaining carriers; now it has only to show that its retained revenue substantially exceeds its costs, and that amount paid the owner-operators is enough to acquire and retain their services. Thus, carrier can attract an owner-operator willing to be employed when his income will not defray his expenses; this makes a rate noncompensatory, and therefore unjust and unreasonable, contrary to §216(b) and (d). In absence of sufficient reasons, full production of evidence is required for both a self-sustaining carrier and a carrier using owner-operators, when costs are used to prove compensativeness. Remanded for further consideration.—Eastern Central Motor Carriers Ass'n v. United States, 239 F. Supp. 591 (599-600, 601)*.

Determination of overhead expenses on a percentage-of-gross-revenue basis rather than by a specific study is improper because it erroneously assumes that such expenses will vary with the amount of revenue received.—Aluminum Sheets & Scrap, Oswego, N.Y., and Warren, Ohio, 322 I.C.C. 788 (791).

Respondents' use of density-adjustment table in public statement No. 1-62 to construct an average for northbound movements is in conformity therewith and with their use of Highway Form B to compute out-of-pocket cost of representative carrier. While carrier's line-haul operations are conducted on a relay system, and considered movement includes two intermediate relay points, average return loads are properly computed when weight moving from one relay point to another is included for each loaded trip and wholly empty trips are included in total number of trips. Though resultant figures differ from the system average load reported in carrier's annual report, respondents gave full weight to traffic moving on each relay segment in computing the average thereof, and it should not be duplicated when average load over several segments is computed. What is desired is the average load on one vehicle for entire distance which then is combined with a vehicle load of considered traffic moving in opposite direction to produce a round trip average; a system-average load estimate is not pertinent when a point-to-point average load is available.—Jams, Jellies, or Preserves, Oklahoma City to Chicago, 325 I.C.C. 95 (96, 97-9)*.

Respondents' adjustment for density is not erroneous because based on a computed density for the return load instead of actual density for commodities transported; combined density of entire load of return-haul freight (not average densities of individual commodities) is significant, as equivalent load weight is desired rather than equivalent weight of particular shipments; thus, density as computed is a constructive figure which does not, and need not, represent actual average density of separate shipments carried. Nor is the computation erroneous because carrier's largest vehicle, instead of average of all its vehicles, was used therefor; since traffic in issue has a density greater than the 20.4-pound density at which the vehicle would be loaded to both weight and space capacity, its density is limited to that figure in the adjustment table; and when vehicle is loaded to either weight or space capacity in a given direction, the equivalent weight is weight capacity of the vehicle. In view of the capacity round trip vehicle utilization, the computation of average density, and application of the density adjustment to representative carrier's line-haul cost, are correct.—Id., pp. 99-101.

Respondent's use of density-adjustment table in public statement No. 1-62 to construct an average weight for southbound movements is in conformity therewith and with its use of Highway Form B; such adjustment is for purpose of taking into consideration both space and weight capacity of a vehicle, and was used by respondent to give effect to light-loading traffic moving in one direction and heavy-loading in the other. And though respondent included mileage expense of empty northbound haul of 32 miles from Texarkana to Hope (origin of involved traffic) in pickup cost, its failure to include corresponding

southbound movement in round-trip line-haul cost was not improper, since it is not shown that southbound trailers move empty from Hope to Texarkana, and southbound mileage expense is borne by shipper or consignee. Even including that cost and vehicle-mile 'cost of 8-mile off-route movement to serve shipper's plant, proposed rate exceeds out-of-pocket cost and is compensatory.—Boards or Sheets from Hope, Ark., to Chicago, 319 I.C.C. 399 (401-2).

Upward adjustments of unit costs for density—on a light and bulky commodity—may properly be applied only where transportation characteristics of the entire region are under consideration, and may not be applied to a specific carrier or specific movement costs when evidence does not show whether the commodity involved has a density less than the carrier's average traffic. Also, use of density adjustment factors pertaining to truckload movements is improper in competing pickup and delivery and terminal platform expenses on l.t.l. movements.—Boots or Shoes from Columbus, Ohio, to Chicago, Ill., 316 I.C.C. 239 (241)9

Method of computing line-haul costs contained in cost finding section's public statement No. 2-60 is an arbitrary procedure to give equal cost effect to both space occupied by shipments and weight thereof when a vehicle is not loaded to either space or weight capacity, and was intended to be applied only when traffic moving at proposed rates is of light density. Space-weight adjustments based thereon are inappropriate for such heavy-density traffic as ground-wood boards, especially when certain vehicles embraced in traffic study moving in reverse direction were loaded to weight capacity, and vehicles hauling the heavy-density commodity involved would be loaded to weight capacity.—Ground Wood Boards, Sheets—Bemidji, Minn., to Chicago, 314 I.C.C. 774 (777).

The only accurate way to obtain the density of traffic for cost purposes is to divide the weight load by the volume of the particular shipment.—Salt from Williston, N. Dak., to South Dakota, 314 I.C.C. 787 (789).

Complainant's cost study based on 1961 expenses of 61 allegedly typical motor common carriers in middlewest territory, applied to Highway Form B, does not afford a reliable indication that defendant's tariff rates are noncompensatory, since there is no showing that expenses of the 61 carriers are representative of defendant's expenses for that year and, also, complainant has not added the carriers' system average load (as a return load factor) to the outbound minimum weights and divided by two to obtain appropriate round-trip load factors. Likewise, complainant's cost study based on defendant's 1961 annual report is unreliable because defendant is a carrier of special commodities and its reports do not contain sufficient detailed data to permit development of costs on Highway Form B.—Middlewest Motor Freight Bureau v. Beaver Transport, 325 I.C.C. 175 (179-80).

Intervener's study of both out-of-pocket and fully distributed costs, grounded on public statement No. 1-61 of the commission's cost-finding section, which is based on 1959 expenses of 151 motor common carriers operating in central region, is also unacceptable due to lack of details concerning method of computing percentage increases (which appear to be considerable) applied to adjust the carriers' 1959 pickup and delivery, platform, billing and collecting, and line-haul costs to 1962 levels. These studies do not show the assailed rates to be noncompensatory.—Id., p. 180.

In computing cost of transporting meats and related commodities from Colorado points to Chicago, no justification is shown for departure from the commission's usual practice of including an amount for interest or return on investment.—Fresh or Fresh Salted Meats from Colorado to Chicago, 322 I.C.C. 174 (177).

Cost estimates based on one-way operation, which assumes the same load for return as for outbound movements, and which make no allowance for circuity, are understated; but platform costs should be omitted when no such service would be performed. "Pay mileages" (fixed distances for which driver is paid regardless of actual distance traveled) used by one respondent are unacceptable for cost purposes; also, as that carrier uses double-bottom service between key points, use of average cost of single- and double-bottom operations for its overall vehicle-mile costs

overstates cost for single-trailer operation and understates that for double-bottom service, which entails added cost per tractor-mile and additional cost for the second trailer. Restatement of costs by application of Highway Form B to that respondent's 1960 operating data, giving consideration to circuitous miles, round-trip average load, and elimination of platform expense, approximates out-of-pocket costs for the contemplated operation and is acceptable as the best cost evidence of record.—Alcoholic Liquors from Peoria, Ill., to Eastern Points, 321 I.C.C. 142 (146-9)*.

In computing line-haul costs, where actual mileages are not available, short-line miles should be increased by 6 percent to allow for circuity.—Paper Bags from Chicago to Kansas City, 321 I.C.C. 732 (736); however, since respondent is an irregular-route carrier, presumably free to use the shortest route available, protestant's use of a 6-percent distance allowance for circuity in computing out-of-pocket cost for considered movement is not justified.—Foodstuffs from Hudson, N.Y., to Chicago, Ill., 315 I.C.C. 184 (185).

Cost computations based on short-line mileages are understated when there is no indication that the operations would be conducted over the short-line route; to extent that respondent's operation would not be over the most direct route, allowance should be made for circuity. Also, even though shipper does the loading, other costs such as running costs are associated with pickup and delivery service, and should be included in cost thereof. In addition, respondent's cost estimates are deficient when the movement involved is joint-line and the connecting carrier's costs are not taken into consideration.—Candy and Related Articles, New York to Detroit, Mich., 314 I.C.C. 759 (761).

Although complainant rate bureau's evidence of cost of transporting considered traffic is based on regional averages, defendants are same type of carrier as complainant's members and operate in same general area, transporting involved commodities between same points, and their operations appear to be in all material respects comparable to those of complainant's members. Overstatements and understatements in complainant's study largely cancel out, and in the circumstances, especially as defendants presented no cost evidence of their own in refutation, complainant's cost showing, as set out in appendix D, may be considered reasonably accurate and representative of defendants' costs.—New England Motor Rate Bureau, Inc. v. Stone's Exp., 321 I.C.C. 767 (772).

Because of the brief period of its actual experience as a common carrier of cement, and as a more representative showing of revenue and expense, one respondent submitted a pro forma cost study for a 4-week period, increasing actual revenues and appropriate costs by 50 percent. As the period selected covers one of the more lucrative and busier periods of the year, volume of traffic reflected in the pro forma study is possibly somewhat speculative; however, effect of the seasonal nature of the cement business on a new operation makes difficult the refinement of cost data to a greater degree.—Cement and Mortar—Ill. & Mo. to Ill., Ind., Iowa, & Ky., 321 I.C.C. 166 (177, 178).

Since seasonal fluctuation in volume of cement traffic is among the most extreme of all commodities, cost study reflecting operations during 1 of every 6 weeks would have been more representative than respondent's data for a 4-week period in August when cement traffic normally is at its peak; further, respondent's costs were based on movement other than that involved adjusted to reflect the subject movement at 70-percent utilization of capacity of dedicated equipment; while these costs give some indication of the general level, the many adjustments made indicate that they do not represent costs of involved traffic.—Cement—Memphis and Fredonia, Kans., to Ark., Mo. & Okla., 318 I.C.C. 273 (276).

While respondent's cost evidence does not take into account any operations during winter months when cement traffic is lighter, 5-month period used is the latest and only available period reflecting present plant loading conditions.—Cement from Dewey, Okla., to Points in Kansas, 318 I.C.C. 281 (283).

Respondents' cost data, constituting an updating of 1955 costs developed in commission's cost statement No. 7-56, may be considered fair approximations of 1960 costs for motor common carriers operating in and between involved territories. Insofar as per-

formance factors relate to current traffic distribution or method of operation, the partial effect of the load factor based on change in system average load for the various periods studied is considered in application of formulas for adjustment of the costs to a current level; for such adjustment traffic studies are not conducted to obtain all new performance factors, as past studies have shown that factor changes did not change costs in any degree. Exception thereto would be radical changes in carriers' operations or excessive lapse of time; however, record does not indicate any revolutionary changes in carrier operations, and the matter of time is not unreasonable.—General Increase—Middle Atlantic & New England Ter., 319 I.C.C. 168 (174)*.

Although respondent assigned office, administration, and supervision expenses to terminal cost, on theory that they are not related to distance, they are not direct terminal allocations, being generally considered departmental or general overhead expenses assignable to terminal or line-haul cost on basis of those expenses which are capable of assignment.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (243).

Respondent's system average cost data have little probative value when they include items not properly includible in computing cost of his carrier operations: in his figures for gross income from exempt transportation he included his profit from buying and selling grain, a nontransportation operation, and number of those transactions suggests that such profit may have been substantial, so that the revenue from exempt transportation cannot be found to have been stated with reasonable accuracy; also, in gross revenue earned in his carrier operations he included revenue from leasing equipment for operations conducted under authority of other carriers.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257 (260)*.

It would be virtually impossible to collect reliable cost data for purchased transportation when hundreds of owner-operators or contractors are involved, some of whom drive their own tractors while others supply drivers for leased equipment. Owner-operators do not keep accounts on any uniform basis, and the commission cannot require them to do so; nor, under existing law and regulations, may it audit the books of those whose costs might be cited as representative. Moreover, since many of these small business men appear to make a profit while others do not, any costs shown could not be considered representative. In disregarding the "true economic cost" of the movements involved, in 318 ICC 567, and considering actual costs borne by the authorized carrier rather than fictitious costs not reflected in its expense accounts, the commission acted wisely; that line-haul carriers employing local carriers for pickup and delivery under §202(c) do not base their costs for that service on the local carrier's cost of performance shows illusory nature of "true economic costs" in carrier accounting.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (677-8).

Protestants' allocation of all respondent's management expenses to company-owned equipment by dividing total out-of-pocket cost (less payments to owner-operators) solely by the company-operated miles was improper when mileage of company-owned equipment was only about one-fourth of respondent's total mileage.—Sugar from Ovid, Colo., to Iowa Points, 318 I.C.C. 636 (640).

Since respondent provides its line-haul service through owner-operators and states that 80 percent of its total expense is for vehicle rents, including services of drivers, protestants' assignment of total expense for owner-operator service directly to line-haul service, with no adjustment for pickup and delivery service included in total expense, results in overstatement of the line-haul costs. In addition, such expense items as insurance for cargo loss and damage, public liability and property damage, and for fire, theft, and collision should be assigned to general overhead, not to line-haul expense; but the profit to owner-operators should be included as an expense item, since it is a real expense to respondent. Morever, as respondent is an irregular-route carrier which can, and presumably would, operate over the shortest available routes, there is no justification for adding a factor of 6 percent for circuity.—Clay from Greybull, Wyo., to Points in the Middle West, 314 I.C.C. 705 (708).

Use of proposed minimum weights in com-

puting a round-trip load factor ignores the jointness inherent in line-haul movements. While respondent's actual average return load in connection with considered traffic would be the best evidence, since it is not shown respondent's system average load normally would be more appropriate for that purpose than regional average loads. However, since respondent's operations have been previously part common and part contract carriage but are now entirely common carriage, and it must serve the public indiscriminately, there is no assurance that its average return load will remain the same. As it also failed to allow for circuity in computing its costs, its data do not establish compensativeness of proposed rates.—Paint & Paint Materials, Chicago to Kansas City, Kans., 318 I.C.C. 331 (333-4).

Round-trip load factor obtained from actual studies of carriers moving the traffic and arrived at by combining the minimum proposed for rate from Oklahoma points to Chicago with average loads from Chicago to Oklahoma is more accurate than load factor based on system average loads.—Petroleum and Products from Oklahoma to Illinois, 318 I.C.C. 425 (426).

Respondent's cost study based on company records and short highway distances is defective in that it reflects one-way movement and fails to account for nonproductive costs. Use of minimum weight which respondent is obliged to accept if offered affords a better comparison between revenues and costs than average weight used. And though respondent is an irregular-route carrier, there is no evidence that it uses the shortest routes; rather, the record indicates that it uses toll roads instead of short highway routes for some of the heavier loads, which requires additional travel before getting on the toll ways and after leaving them.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (29).

Joint costs for the round trip should be distributed over total units hauled on the round trip; all of respondents' mileage in traveling to origin of considered film traffic cannot be assumed to consist of loaded miles; but any understatement of costs resulting from omission of terminal platform expense would appear nominal.—Cellulose Film, Not Printed, Marcus Hook, Pa., to Chicago, 316 I.C.C. 322 (323).

By its very nature cost of round-trip operation of a vehicle in motor carrier service is a joint cost; the round-trip movement constitutes an indivisible unit of production, and cost thereof must be distributed over total revenue units of traffic hauled in both directions. Where line-haul costs are determined in the going direction only, resulting cost computations are unacceptable for ratemaking purposes.—Candy and Confectionery, Hoboken & New York to Chicago, 316 I.C.C. 671 (674); costs submitted on the basis of a one-way movement are therefore not considered.—Sodium Silicate from N.J. & Pa. to Ill., Mich., Mo., & Ohio, 316 I.C.C. 699 (702); similarly, since respondent's cost statement reflects costs for one-way movement only, it may not be accepted as indicative of probable costs of considered movement of canned goods.—Foodstuffs from Hudson, N.Y., to Chicago, Ill., 315 I.C.C. 184 (185).

Protestants' restatement of respondent's costs has little probative value; as respondent had already distributed 100 percent of operating expenses, computing general-overhead expense as 11.26 percent of total expenses excluding overhead, protestants' use of a 13.73 percent overhead ratio would overstate the operating expense; also, instead of dividing only line-haul costs by the average round-trip load factor, they erroneously divided the total costs of the trip, including overhead, by that factor.—Wrapping Paper from Rhinelander, Wis., to Toledo, Ohio, 316 I.C.C. 455 (457-8).

Cost study based on all l.t.l. shipments billed by 27 respondents in a single day, and on all t.l. shipments in a given 5-day workweek, may be accepted as representative of the consist of respondents' total traffic. It is clear that respondents did not choose a particular day or period with a view to obtaining the result most favorable to their contentions; the sample embraced almost 80 percent of those carriers in considered territory; and checks against their actual experience show substantial reconciliation of the study with their reported data for same year.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (471).

In adjusting out-of-pocket costs to total expense level, protestant assigned constant expenses to various service elements on same proportional basis as each bore to sum of out-of-pocket costs. Assignment of constant costs on any basis is arbitrary, but for shipments under 10,000 pounds resulting costs are greater when constant expenses are distributed on out-of-pocket basis than on alternative basis.—American Envelope Co. v. A. & H. Truck Line, Inc., 316 I.C.C. 563 (567)*.

Complainant's cost study is inconsistent with proper cost-finding procedures in treating every expense item (including terminal) as related to distance, thus increasing cost for long hauls and decreasing it for short hauls; cost should have been calculated on round-trip rather than one-way basis, with appropriate allowance for empty return mileage; each expense item is treated as either directly or not directly related to the traffic, though over a long period such items become only partially variable or partially constant; this long-period concept of variable and constant costs is appropriate for computing costs for rate-making purposes. Defendant's cost study embodies a number of same defects; neither study affords a reliable indication of expense of transporting a tank truckload of considered commodities between points involved; assailed rates are thus not shown to be unlawful.—Ryder Tank Line, Inc. v. Mason & Dixon Tank Lines, 315 I.C.C. 7 (8).

Respondent's cost computation is deficient in being based on aggregated loads rather than on 2,000-pound minimum governing considered l.t.l. rate; details from which to determine validity of amounts stated are not shown; nor is any mention made of cost of the several deliveries per movement or for unloading, or whether management expenses and other overhead costs are adequately covered. While respondent submits, as supporting the low cost shown, that it has a 20-year lease with a shipper under which latter stores carrier's 25 trailers for a nominal fee of $1 a year, that amount is not shown to be a reasonable charge for such storage; considered rate is not shown to be just and reasonable.—Paperboard between New Jersey and New York, N.Y., 315 I.C.C. 187 (189).

Protestants' cost study, based on public statement No. 1-59 of commission's cost-finding section, reflecting operating expenses of 54 class I and II oilfield carriers including respondent, is defective in using the outbound load of 32,000 pounds assumed therein instead of proposed minimum of 30,000 pounds, and in increasing short highway distances by 6 percent to allow for circuity, although that statement indicates that those carriers' circuity of operation does not exceed 2 percent.—Drilling Mud or Clay—Greybull and Gascoyne to Texas, 315 I.C.C. 191 (192-3).

Protestants' use of the first quarter of 1961 over data in respondent's 1960 annual report, to reflect a current cost period, does not recognize tonnage, load, or haul changes which may have occurred between those periods; nor is comparison of expense per vehicle-mile for the year with the first quarter of 1961 an acceptable method of adjusting costs to current levels; moreover, in stating costs on a total expense basis, protestants failed to recognize that not all expenses are variable with traffic volume; thus, rates are not shown to be noncompensatory merely because they fail to cover fully distributed expenses.—Salt and Related Articles, Kansas to Southern States, 315 I.C.C. 637 (638).

105. Expedited service.—[Vols. 14, 15].—See Freight, All Kinds—Expedited Service, §216(g), n. 66.

111. Wages; prices; taxes.—[Vols. 10-12, 14-19].—Federal income taxes are not ordinarily considered an item of expense in determining motor carriers' costs.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429 (433).

Wage expense should include allowance for nonproductive time, social security taxes, workmen's compensation, welfare expense, and other costs related to a driver's wages.—Sugar, Beet or Cane, New Orleans, La., to Columbus, Ga., 316 I.C.C. 230 (232).

112. Out-of-pocket costs, with margin over, as basis.—[Vols. 10-12, 16, 18, 19].—The commission may in some circumstances permit a carrier to establish a rate not proved to cover out-of-pocket costs, but it is not required to do so.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (677)*.

To be compensatory, a rate must equal out-of-pocket costs, which have been defined as

the added costs necessary to carry a particular class of traffic over a particular route; and though the commission under some circumstances may permit a carrier to establish a rate not proved to cover out-of-pocket costs, it is not required to do so.—Middlewest Motor Freight Bureau v. United States, 234 F. Supp. 151 (153-4, 155)*.

Even with adjustments to reflect backhaul weight and terminal-to-terminal distance claimed by respondents, also adjustment of pickup and delivery costs to reflect instances where full services are not performed, cost evidence shows that total out-of-pocket costs would exceed proposed reduced rate on meats from Denver and other Colorado points to Chicago by 2.37 cents; the reduced rate is therefore noncompensatory and not shown to be just and reasonable.—Fresh or Fresh Salted Meats from Colorado to Chicago, 322 I.C.C. 174 (177).

And respondent whose transportation of the traffic would be almost exclusively with owner-operated equipment has not met the first criterion announced in 318 ICC 567, that its retained portion of the gross revenue from the reduced rate covers all its costs. Total operating expenses shown in its study do not embrace all those shown in its annual report, and basis of the total out-of-pocket level is not explained in detail; also, its separation of expenses between fixed and variable is valueless when each was related to the same total overall intercity mileage. Out-of-pocket costs for that respondent, computed on data from cost statement No. 2-60 adjusted to reflect actual mileage, would exceed the reduced rate.—Id., p. 181.

Though in almost all instances assailed rates on cleaning and washing compounds, drugs and drugstore supplies, and foodstuffs between points in Massachusetts, Rhode Island, New York, and New Jersey are shown to be less than fully distributed costs, complainant's cost evidence, while a reasonably accurate estimate of defendants' costs, contains certain defects and thus is not so precise as to warrant condemning rates that equal or slightly exceed out-of-pocket costs, and such rates are therefore reasonably compensatory. In view of imperfections in the cost evidence, and in light of decision in 315 ICC 327, doubts should be resolved in favor of defendants; revenue from assailed rates generally exceeds cost of performing the service, and those that at least equal out-of-pocket costs are not shown to be unjust or unreasonable. But numerous rates in issue which are below out-of-pocket costs are clearly noncompensatory, and as no justification is shown for so severe a rate depression those rates are found unjust and unreasonable and ordered canceled.—New England Motor Rate Bureau, Inc. v. Stone's Exp., 321 I.C.C. 767 (773-4).

Though a rate should produce sufficient revenue to cover combined costs of carriers and owner-operators irrespective of how the revenue is divided, and data respecting actual costs of owner-operators would be helpful in obtaining an adequate cost picture, it is virtually impossible for carriers to collect and submit reliable cost data for representative owner-operator movements. While detailed information as to all operating expenses of authorized carriers is available from their annual reports, so that Highway Form B can be applied to develop cost of a particular movement, owner-operators are not subject to direct regulation by the commission and are not required to keep accounts and records in any particular form or to file annual reports; even if they were willing to supply cost data to carriers they serve, the commission would be unable to verify such information.—Iron or Steel Scrap from Conn., Mass., and R.I. to Pa., 318 I.C.C. 567 (574).

But though, under the present state of the law and the commission's regulations, it cannot be determined whether an owner-operator's division of revenue covers his costs, it is possible, under accepted cost finding principles, to determine whether the division retained by the carrier covers all its costs; and when such division fully compensates the carrier for providing the service in question, the rate producing that revenue must be considered reasonably compensatory. This does not mean that any particular revenue split calls for automatic approval of the challenged rate: the commission must be satisfied that the rate and the division thereof are sufficient to purchase the transportation service, i.e., to acquire and retain services of owner-operators in movement of the traffic to which the rate

applies.—Id., pp. 574-5.

Respondent has overcome the prima facie showing of unreasonableness of its rates on iron and steel scrap made by Bureau of Inquiry and Compliance's cost study. Although it submitted no traffic study data, it submitted detailed costs; its comparison of the rates with its out-of-pocket costs appears substantially correct and shows that the 30 percent of revenue retained by it is ample to cover all overhead expenses. Though it introduced no evidence of actual operating costs of owner-operators who perform all the transportation service, it has been able to attract and retain them for over 7 years by compensating them on basis of 70 percent of revenue from the assailed rates, and there is no reason to believe that it will be unable to purchase transportation on that basis in future. Thus, assailed rates appear to be compensatory to respondent and are not shown to be unlawful. —Id., pp. 570-2, 575, 576. [But see dissent.]

Out-of-pocket costs are the normal minimum level below which rates should not be permitted to fall. Although rates under agreed compromise scale on envelopes slightly exceed out-of-pocket costs on average weighted shipment of 590 pounds for shorter distances, on shipments of 2,000 pounds or more they exceed full costs, and proposed rates in general meet the minimum requirements of compensativeness; approved.—American Envelope Co. v. A. & H. Truck Line, Inc., 316 I.C.C. 563 (565, 568)*.

Proposed reduced rate will more than cover out-of-pocket cost of performing service; rates yielding more than out-of-pocket costs have been consistently approved as compensatory although below fully distributed cost where rates at that level are required by special circumstances. Respondent is in jeopardy of losing substantial traffic unless it meets competitive TOFC rate at level proposed; approved.—Chemicals and Related Articles from St. Louis to Chicago, 318 I.C.C. 369 (370).

Though respondents submitted no cost data in support of reduced minimum charges applicable when five or more minimum-charge shipments are picked up at one time, and protestant's cost data indicate that out-of-pocket costs exceed both considered charges and those for single shipments, protestant's costs gave no consideration to the lower cost per shipment when multiple pickups are made at one time, and did not separate costs for single-line and two-line traffic; as restated in acceptable manner, protestant's cost data show that for local hauls the reduced charges exceed out-of-pocket costs and are therefore compensatory.—Reduced Minimum Charges —West Roxbury to Mid. Atl. Terr., 315 I.C.C. 675 (678, 679).

A rate which fails to return something above out-of-pocket costs of transporting the traffic may not be approved even though it is proposed to meet rail competition.—Sugar, Beet or Cane, New Orleans, La., to Columbus, Ga., 316 I.C.C. 230 (232); even in competitive situations, a proposed rate must return something above out-of-pocket costs in order to be approved.—Brick and Related Articles, St. Louis, Mo., to Chicago, 316 I.C.C. 227 (229); and, in computing out-of-pocket costs, portions of such expenses as employee welfare expenses, office and related expenses, traffic expenses, fire, theft and collision expenses, and administrative and general expenses are properly includible.—Petroleum Products, Friendship to Bland and Rocky Gap, Va., 316 I.C.C. 114 (114-6).

For specialized carriers, 95 percent of total line-haul and terminal costs is deemed to be in the out-of-pocket category; operations of such carriers are less diversified than those of general-commodity carriers and plant capacity may be trimmed more nearly to the requirement actually experienced, with a tendency to a higher out-of-pocket percentage than the 90 percent generally applied.—Clay from Greybull, Wyo., to Points in the Middle West, 314 I.C.C. 705 (707, 708).

Rates by Commodities

125. Commodities; rates prescribed or approved.—[Vols. 10-19].—Part I, §1(5), n. 350; Part III §305(a), n. 125; Part IV, §404(a), n. 125.

Alcoholic beverages: [Vols. 10-13, 16-18].—New rates per truckload on wine, in bulk in tank vehicles, maximum 3,500 gallons, from Canandaigua, N.Y., respectively $560.50, $550.50, $726.50, and $641.50 to Montgom-

ery, Ala., and Jacksonville, Miami, and Tampa, Fla., found not shown to be unjust or unreasonable.—Wine from Canandaigua, N.Y., to Florida and Alabama, 316 I.C.C. 246.

Reduced rate of $2.26, minimum 30,000 pounds, on wines from Hammondsport, N.Y., to Aberdeen, S. Dak., approved as reasonable and necessary for respondent to attract the traffic.—Alcoholic Liquors from Eastern Points to South Dakota, 318 I.C.C. 195.

Reduced rate 92 cents, minimum 96,000 pounds when loaded and transported in not more than two trailers, on alcoholic liquors, n.o.i., in glass in cases, Detroit, Mich., to Long Island City, N.Y., found just and reasonable.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404.

Reduced rates on alcoholic liquors, n.o.i., from Peoria, Ill., and points grouped therewith, 145 cents, minimum 70,000 pounds, to New York City and 162 cents, minimum 35,000 pounds, to Pittsfield, Mass., approved as just and reasonable.—Alcoholic Liquors from Peoria, Ill., to Eastern Points 321 I.C.C. 142*.

Aluminum; articles, scrap: [Vols. 10, 11, 14, 16-19].—Reduced rate 61.5 cents, minimum 34,000 pounds, on unfinished aluminum materials from Kansas City, Mo., to Chicago, Ill., approved as reasonably compensatory and no lower than necessary to meet rail competition.—Aluminum from Kansas City to Illinois and Wisconsin, 321 I.C.C. 432*.

Bakery goods, bakers' supplies: [Vols. 10, 11, 13, 14, 17-19].—Reduced l.t.l. commodity rates on marshmallow sandwiches ("moon pies"), Chattanooga, Tenn., to points in the Carolinas, effect of which is to apply class 65F rating and rates and eliminate small-shipments charge under present rates based on higher class 65C rating, found just and reasonable and necessary to prevent diversion to private carraige.—Bakery Goods, Chattanooga, Tenn., to Southern Points, 316 I.C.C. 573.

Bananas: [Vol. 16].—Rates from Charleston, S.C., to Chicago, Ill., Atlanta, Ga., Indianapolis Ind., Richmond, Roanoke, Norfolk, and Newport News, Va., and Greenville, Raleigh, and Elizabeth City, N.C., ranging from 75 to 170 cents on 20,000-pound minimum and 75 to 140 cents on 24,000-pound minimum, reflecting both increases and reductions, are compensatory and necessary to meet competition of other motor carriers.—Bananas, Charleston, S.C., to Ga., Ill., Ind., N.C., & Va., 315 I.C.C. 213.

Specific commodity rates on bananas, minimum 30,000 pounds, Tampa, Fla., to 76 destinations in 8 midwestern or southwestern States, and distance scale of commodity rates to unnamed destinations therein, ranging from 148 to 227 cents including 8-cent refrigeration charge, found just and reasonable, without prejudice to any different conclusion in pending general investigation of motor rates on formerly exempt commodities.—Bananas, South to the Midwest and Southwest, 319 I.C.C. 51.

Increased or reduced rates 125 to 200 cents on minimum 28,000 pounds and 200 to 315 cents on minimum 31,000 pounds, from Gulfport, Miss., to destinations in northern and northwestern States, except Washington, found just and reasonable; and initial mileage scale 149 to 204 cents, minimum 30,000 pounds, for distances 900 to 1,500 miles, found not shown to be unlawful.—Bananas from Gulfport to the East, South, and West, 321 I.C.C. 274.

Boots, shoes: [Vols. 10-13, 15, 17].—Commodity l.t.l. rate of 277 cents on boots or shoes, n.o.i., also boots or shoes, plastic or rubber and canvas, felt or wool combined, Columbus, Ohio, to Chicago and grouped points, approved as just and reasonable.—Boots or Shoes from Columbus, Ohio, to Chicago, 319 I.C.C. 92.

Reduced l.t.l. commodity rates, 286 to 333 cents, on boots and shoes, n.o.i., and on plastic or rubber, plastic or rubber and canvas, and felt or wool boots and shoes, Columbus, Ohio, to St. Louis, Mo., and seven Illinois points, approved as just, reasonable, and otherwise lawful.—Boots or Shoes, Columbus, Ohio, to Illinois and Missouri, 322 I.C.C. 687.

Brushware, cleaning articles: Reduced rate 120 cents, minimum 35,000 pounds, to alternate with present rate 127 cents, minimum 30,000 pounds, from Easthampton, Mass., to Atlanta, Ga., approved as just, reasonable, and otherwise lawful.—Brushware & Clean-

ing Articles, Easthampton to Atlanta, 319 I.C.C. 164*.

Canned goods: [Vols. 10-12, 14, 16, 19].—Rate of 53 cents, minimum 30,000 pounds, on canned goods and canning factory supplies, Chicago to Minneapolis and St. Paul, not shown to be unlawful.—Canned Goods from Chicago, Ill. to Twin Cities, 316 I.C.C. 221.

Commodity rates on canned goods and related articles, minimum 30,000 pounds, from origins in Pennsylvania, Maryland, Virginia, and West Virginia, to points in upper peninsula and other named Michigan points, and increased or unchanged rates from same origins to Clinton, Dubuque, Keokuk, and Laurens, Iowa, approved as compensatory.—Canned Goods—Md., Pa., & W. Va. to Iowa, Mich. & Mo., 318 I.C.C. 171.

Cement: [Vols. 10, 17-19].—Reduced rates on cement from Dewey, Okla., to points in Kansas, 32 to 138 cents on portland cement, minima 46,000 pounds in bulk and 47,000 pounds in bags, and 24 to 105 cents on masonry cement in bags, minimum 47,000 pounds, (as shown in appendix), found lawful.—Cement from Dewey, Okla., to Points in Kansas, 318 I.C.C. 281.

Point-to-point rates ranging from 156 to 306 cents per barrel, and mileage rates 34 to 537 cents, on portland cement in bulk and in bags minimum 100 barrels, from New York and Pennsylvania origins to destinations in New England and middle Atlantic States, also corresponding rates on mortar cement generally one-third lower and generally on 133-barrel minimum, found just and reasonable, or, where they are initial common-carrier rates of former contract carriers, not shown to be unlawful. Rates 54 and 57 cents per barrel of one respondent on natural cement from Rosendale, N.Y., to Danbury and Brookfield, Conn., found just and reasonable.—Cement from Hudson, N.Y., to New England and Pennsylvania, 319 I.C.C. 235.

Cloth, dry goods, fabrics: [Vols. 17-19, vol. 10 fabrics].—Reduced rate of 311 cents on ribbon bows or rosettes, minimum 6,000 pounds, from Louisville, Ky., to Chicago, approved as compensatory.—Dry Goods and Telephone Housings within Central Ter., 318 I.C.C. 175.

Commodity l.t.l. rates on rubber-coated cotton cloth, n.o.i.b.n., Canton and Rockland, Mass., to points in New York metropolitan area, $1.12 for less than 1,000 pounds, 97 cents for 1,000 to 5,999 pounds, 85 cents for 6,000 to 11,999 pounds, and 70 cents for 12,000 to 19,999 pounds, prescribed as minimum reasonable rates.—Miscellaneous Commodities from Mass. to N.J. and N.Y., 318 I.C.C. 226.

Reduced l.t.l. assembling rates on dry goods, flat goods, and finished and unfinished piece goods, ranging from 54 cents to $1.14, and reduced minimum charge of $2.50, from mills throughout the Carolinas to Charlotte and Greensboro, N.C., found just and reasonable.—Assembling Rates at Charlotte and Greensboro, N.C., 318 I.C.C. 429.

Containers, cores, etc.: [Vols. 10, 11, 13-15, 17].—Commodity l.t.l. rates on empty returned aluminum tote tanks of not over 400 gallons capacity, from Springfield, Ill., to Fort Madison, Iowa, 173 cents on shipments weighing less than 2,000 pounds, 152 cents on 2,000 to 4,999 pounds, and 118 cents on 5,000 pounds or more, found just and reasonable.—Aluminum Tote Tanks, Springfield, Ill., to Fort Madison, 315 I.C.C. 567.

Coffee: [Vols. 10-12, 17-19].—Reduced t.l. commodity rate of 95 cents, minimum 41,000 pounds, on tea extract from New Orleans to Chicago is necessary to meet rail competition and would be compensatory on straight shipments thereof, or on mixed shipments of tea and coffee extract if subject to a revised mixing rule which would not render the proposal noncompensatory.—Tea Extract, New Orleans to Chicago, 325 I.C.C. 103 (104-5)*.

Dairy products; dressed poultry: [Vols. 10, 11, 13-15, 18, 19].—Reduced rate of 190 cents, minimum 22,000 pounds, on dairy products from Chicago to Miami would be on a level with existing competitive rates, would be compensatory, and is not opposed; approved.—Dairy Products, Chicago, Ill., to Miami, Fla., 315 I.C.C. 441.

Drugs, medicines, toilet preparations: [Vols. 10-12, 15-19].—Reduced rate of 53 cents, minimum 25,000 pounds, on chemicals, acids, drugs and deodorants from St. Louis, Mo., to Chicago, Ill., approved as compensatory and necessary to meet competitive TOFC rate.—Chemicals and Related Articles from

St. Louis to Chicago, 318 I.C.C. 369.

Electrical equipment, appliances: [Vols. 11, 14, 16-18].—Initial rate of 6 cents per ton-mile on electrical cable, minimum 40,000 pounds, subject to minimum charge of $40, between North and South Dakota railheads and missile bases in South Dakota approved.—Cable, Iron & Steel, Lumber between S. Dak. and Missile Sites, 316 I.C.C. 427 (430).

Feeds, animal, poultry: [Vols. 10, 11, 13, 14, 18, 19].—Mileage rates of one respondent on dog or cat food from New York, N.Y., Long Branch, N.J., and New England points to points in 9 eastern or southern States, from 47 cents for distances up to 60 miles to 115 cents for 420-460 miles on shipments not over 5,000 pounds, from 40 cents to 236 cents for 1400-1500 miles on 5,001 to 14,000 pounds, from 32 to 209 cents on 14,001 to 20,000 pounds, and 23 to 181 cents on heavier shipments; also specific rates, minimum 36,000 pounds, 49.5 and 79 cents from Boston to Wilkes-Barre, Pa., and Pittsburgh, restricted to shipper loading and unloading, are not shown to be unlawful. Rates of a second respondent on same commodity from Boston to Baltimore and Washington, D.C., respectively 62 and 70 cents, would be lawful if made subject to a minimum of 36,000 pounds.—Dog or Cat Food from Boston to Middle Atlantic Points, 318 I.C.C. 59.

Distance commodity rates on animal or poultry feed, minima 20,000 and 30,000 pounds, the same as class rates on feed for comparable distances, are not shown to be unlawful.—Fertilizers and Feed, Central & Middlewest Territories, 318 I.C.C. 298.

Initial commodity rates $10.57 to $18.25 per net ton, minimum 40,000 pounds, on animal feed ingredients (except salt) in bulk or bags, other than in tank vehicles, from Tupelo, Miss., and Wales, Tenn., to destinations in 9 midwestern or southwestern States, found not shown to be unlawful.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257*.

Foodstuffs: [Vols. 17-19].—Reduced rates 41 and 35 cents, minima 20,000 and 30,000 pounds, on foodstuffs (not including nuts, tea, and yeast) in mixed truckloads, Chicago to Cincinnati, Indianapolis, and Louisville, found lawful.—Various Commodities, Chicago to Cincinnati, Ind., Louisv., 314 I.C.C. 749.

Commodity rates ranging from 93 to 156 cents, minimum 30,000 pounds, on extensive list of canned or preserved foodstuffs and on cocoa powder, specified New York origins to Milwaukee, Wis., and Minneapolis and St. Paul, Minn., approved, without prejudice to determination with respect thereto in pending investigation into respondent's rates. Proposed rates either reflect existing combination rates, are related thereto, or are no lower than competitive rates on which the traffic is moving; moreover, they are higher than minimum rates prescribed in 294 ICC 371.—Foodstuffs, New York Points to Milwaukee & Twin Cities, 315 I.C.C. 725 (726, 728).

Reduced t.l. commodity of 71 cents, minimum 45,000 pounds, on edible jam, jellies, or preserves, n.o.i., from Oklahoma City, Okla., to Chicago, Ill., subject to shipper loading and consignee unloading, found to be just and reasonable; approved.—Jams, Jellies, or Preserves, Oklahoma City to Chicago, 325 I.C.C. 95 (102)*.

Gasoline: [Vols. 10, 12].—Reduced rates ranging from 0.293 to 2.276 cents per gallon, minimum 8,100 gallons, from Clear Lake, Iowa, to Minn. and Wis. points and from Spring Valley, Minn. to Iowa and Wis. points, approved as just and reasonable.—Gasoline and Fuel Oil within Middlewest Territory, 316 I.C.C. 435.

Grain products: [Vols. 10, 11, 14].—Reduced rates on starch, 104 cents, minimum 10,000 pounds, from Chicago, Ill., to Kansas City and St. Joseph, Mo., and 66 cents, minimum 30,000 pounds, from Chicago to Kansas City; and reduced rates on corn oil, 104 cents, minimum 10,000 pounds, and 66 cents, minimum 30,000 pounds, from Chicago to Kansas City, and 64 cents, minimum 30,000 pounds, from Kansas City to Chicago, approved as just and reasonable.—Syrup between Kansas City, Mo., and Chicago, Ill., 321 I.C.C. 214.

Groceries: [Vols. 10-14, 17, 18].—Initial commodity rates on additional articles proposed to be added to grocery list in respondent's tariff, the same as present rates on other articles in that list, appear compensatory except on popped corn, potato chips, and pretzels, and with those exceptions may be

approved subject to publication of more specific commodity descriptions.—Bakery Goods, Foodstuffs & Groceries from N.J. & N.Y., 316 I.C.C. 639.

Iron and steel; articles: [Vols. 10-12, 14, 16-19].—Commodity l.t.l. rate 124 cents on iron and steel fasteners (bolts, nuts, rivets, screws, clips, washers, etc.), Rockford, Ill., to Anderson, Ind., found compensatory and otherwise just and reasonable.—Iron or Steel, LTL, Rockford, Ill., to Anderson, Ind., 315 I.C.C. 683 (687, 688).

15 cents, minimum 40,000 pounds, on certain iron or steel articles in straight or mixed shipments, Portage, Ind., to Chicago, Ill., approved as just and reasonable.—Iron or Steel Articles from Portage, Ind., to Chicago, 316 I.C.C. 255 (258).

Reduced rate of 45 cents, minimum 32,000 pounds, Bethlehem and Fairless, Pa., to Richmond, Va., approved on iron and steel articles, except angles, beams, and channels.—Iron or Steel from Pennsylvania to Richmond, Va., 316 I.C.C. 402 (404).

Initial rate of 6 cents per ton-mile on iron and steel articles, minimum 40,000 pounds, subject to minimum charge of $40, between North Dakota and South Dakota railheads and missile bases in South Dakota approved. —Cable, Iron & Steel, Lumber between S. Dak. and Missile Sites, 316 I.C.C. 427 (430).

Rates shown in appendix A on iron or steel scrap, having value for remelting only, minima 20,000 and 32,000 pounds, from origins in Connecticut, Massachusetts, and Rhode Island to western Pennsylvania destinations, found not shown to be unlawful.—Iron or Steel Scrap from Conn., Mass., and R.I. to Pa., 318 I.C.C. 567.

Lead: [Vols. 10, 17-19].—Reduced rates $7.61 and $6.93 per ton on lead and zinc concentrates, respectively, minimum 22 tons, from Salmo and Nelway, B.C., Canada, to Kellogg, Idaho, approved as compensatory. —Lead or Zinc Concentrates—British Columbia to Idaho, 318 I.C.C. 85.

Lumber, timber, logs; products: [Vols. 10-12, 17-19].—Initial rate of 6 cents per ton-mile on lumber, minimum 40,000 pounds, subject to minimum charge of $40, between North Dakota and South Dakota railheads and missile bases in South Dakota approved. —Cable, Iron & Steel, Lumber between S. Dak. and Missile Sites, 316 I.C.C. 427 (430).

Reduced rate 70 cents, minimum 36,000 pounds, on boards or sheets (not wallboard or insulating board), Hope, Ark., to Chicago, found just and reasonable.—Boards or Sheets from Hope, Ark., to Chicago, 319 I.C.C. 399.

Meats, packinghouse products: [Vols. 11, 13, 14, 17-19].—Commodity point-to-point and distance rates on fresh or frozen meats and packinghouse products, minima 21,000, 25,000, or 30,000 pounds, from Muncie, Ind., to points in middle Atlantic, New England, southeastern, and southwestern territories are just and reasonable when they are generally as high or higher than present rates maintained by respondent under intermediate rule and compare favorably with numerous rates maintained by other motor carriers on same commodities for comparable hauls.—Meats, Muncie, Ind., to New England, Middle Atlantic, South, & Southwest, 314 I.C.C. 799.

Initial rates 56 and 51 cents, minima 25,000 and 30,000 pounds, on meat products and byproducts and fresh meats (not suspended in vehicle), and 61, 56, and 52 cents, minima 25,000, 29,000, and 33,000 pounds, on fresh carcass meat (suspended in vehicle), from La Crosse and Whitehall, Wis., to Chicago; and 50 and 32 cents, minimum 32,000 pounds, on inedible packinghouse products from same origins to Chicago and Twin Cities, respectively, are not shown to be unlawful.—Meats & Related Articles, Wis. to Chicago & Twin Cities, 315 I.C.C. 588.

Reduced rates, 38,000 pounds, on meats and packinghouse products from origins in 10 midwestern States and Louisville, Ky., to destinations in mountain-Pacific territory, 30 cents under Cudahy scale approved in 309 ICC 551 on boxed or loose meats, minimum 33,000 pounds, and 20 cents under approved 11-percent-higher scale on hanging meats, minimum 30,000 pounds, to alternate with existing rates on the Cudahy scales, approved as just, reasonable, and otherwise lawful.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667.

Malt beverages: [Vol. 19].—Reduced rates on malt beverages, minimum 34,000 pounds, to Chattanooga, Tenn., 54 cents from Chicago, 35 cents from Cincinnati, and 33 cents

from Evansville, Ind., and Louisville, approved as compensatory and necessary to meet rail competition.—Malt Beverages—Ill., Ind., Ky., & Ohio to Chattanooga, 319 I.C.C. 787.

Miscellaneous: [Vols. 10, 11, 14, 15, 17-19].—Rate of 110 cents, minimum 36,000 pounds, on cellulose film, not printed, Marcus Hook, Pa., to Chicago, Ill., found compensatory and necessary to meet rail competition; approved.—Cellulose Film, Not Printed, Marcus Hook, Pa., to Chicago, 316 I.C.C. 322 (324).

Oleomargarine: [Vols. 12, 18, 19].—Joint through commodity rate 108 cents, minimum 32,000 pounds, Columbus, Ohio, to Twin Cities, approved as compensatory and not competitively destructive.—Oleomargarine from Columbus, Ohio, to Twin Cities, Minn., 315 I.C.C. 504.

Paint, varnish, etc.: [Vols. 10, 12-14, 16-19].—L.t.l. commodity rates ranging from $1.19 to $1.62 on paints, paint materials, and related articles between Chicago, on one hand, and Cincinnati, Ohio, and Louisville, Ky., on the other, found compensatory and justified.—Paints & Related Art. between Chicago & Cincinnati; Louisville, 315 I.C.C. 729 (732).

Initial rate of 78 cents on paint, paint materials, or putty from Chicago, to Kansas City, Kansas, would be reasonable if subject to a 32,000-pound minimum.—Paint & Paint Materials, Chicago to Kansas City, Kans., 318 I.C.C. 331.

Paper, paper products: [Vols. 10-14, 16-19].—Commodity rates on paper articles, Springfield, Mo., to 23 points in central territory, ranging from 167 to 236 cents on 7,000-pound minimum, 158 to 225 cents on 10,000 pounds, and 149 to 214 cents on 15,000 pounds, and generally reflecting approximately 52, 49, and 47 percent of first class, respectively, to alternate with lower existing rates on 18,000- and 24,000-pound minima, and with stoppage in transit for partial unloading and split deliveries at destination limited to rates on the 15,000-pound minimum, approved as compensatory and not competitively destructive.—Paper Articles, Springfield, Mo., to Ind., Ky., Mich., Ohio, 315 I.C.C. 579.

Initial rate 37.5 cents, minimum 40,000 pounds, on kraft paper, kraft paper bags and other paper articles between Chagrin Falls, Ohio, and Goshen, Ind., found compensatory and not shown to be otherwise unlawful.—Paper Articles between Chagrin Falls, Ohio & Goshen, Ind., 316 I.C.C. 393 (396).

Reduced rate 97 cents, minimum 25,000 pounds, on wrapping paper from Rhinelander, Wis. to Toledo, Ohio, approved as compensatory and necessary to enable respondent to share in the traffic.—Wrapping Paper from Rhinelander, Wis., to Toledo, Ohio, 316 I.C.C. 455 (459).

Initial t.l. rates 32 to 42 cents on wastepaper and other articles, minimum 20,000 pounds, from named Wisconsin points to Wabash, Ind., not shown to be unlawful.—Wastepaper and Other Articles, Wis. to Wabash, Ind., 316 I.C.C. 464 (466).

Agreed compromise scale of l.t.l. rates on envelopes, n.o.i.b.n., within central territory, based on class 55 for rate basis 1 through 200 and on class 70-A exceptions rates published pursuant to 68 MCC 429 and 301 ICC 156 for rate basis 401 through 500, is compensatory and otherwise lawful.—American Envelope Co. v. A. & H. Truck Line, Inc., 316 I.C.C. 563*.

Reduced rate, 104 cents, on printing and wrapping paper and pulpboard or fiberboard from Cincinnati and Hamilton, Ohio, to New York City, minimum 34,000 pounds, approved as compensatory and no lower than necessary to meet existing carrier competition.—Printing, Wrapping Paper, Pulpboard—Ohio to New York, 318 I.C.C. 49.

Rates 83 and 84 cents, minimum 20,000 pounds, on paper bags from Chicago, Ill., to Kansas City, Mo., approved as compensatory and otherwise lawful.—Paper Bags from Chicago to Kansas City, Mo., 321 I.C.C. 732.

Petroleum, petroleum products: [Vols. 10-12, 14, 16-19].—New or reduced rates ranging from 68 to 106 cents, minimum 30,000 pounds, and 64 to 104 cents, minimum 38,000 pounds, Kansas City to 96 points in Texas, approved as compensatory and otherwise lawful.—Petroleum Products from Kansas City, Kans., to Texas, 316 I.C.C. 307 (310).

Reduced rates on distillate fuel oil, ranging from 0.342 to 2.988 cents per gallon, minimum

7,000 gallons, from Clear Lake, Iowa, to Minnesota and Wisconsin and from Spring Valley, Minn., to Iowa and Wisconsin, found just and reasonable.—Gasoline and Fuel Oil within Middlewest Territory, 316 I.C.C. 435.

Plastic materials, products: [Vols. 18, 19].—51 cents, minimum 30,000 pounds, on synthetic plastic powder, Midland, Mich., to Chicago, Ill., approved as compensatory.—Plastics and Chemicals from Midland, Mich., to Chicago, 318 I.C.C. 105.

Reduced rate of 92 cents, minimum 78,000 pounds, applicable only when shipper loads and consignee unloads, and subject to minimum charge based on 39,000 pounds for each vehicle, found just and reasonable on plastic materials from Longview, Tex., to Chicago, Ill., for one respondent.—Plastic Materials, Longview, Tex., to Chicago, 325 I.C.C. 691.

Radios; cabinets; parts: [Vols. 11, 12, 16, 18].—Rate 261 cents, minimum 10,000 pounds, on radio, talking-machine, or television cabinets or parts named, separate or combined, metal or wooden, without mechanism; box type, n.o.i., s.u. or k.d., and console type, in cartons, Jackson, Miss., to Chicago, the same as present rate but without provision that each vehicle used to transport a shipment be charged for at the minimum weight, or actual weight if greater, found just and reasonable; as it is 23 cents higher than corresponding rail rate, it is not competitively destructive.—Radio & Television Cabinets, Jackson, Miss., to Chicago, 315 I.C.C. 171.

Salt: [Vols. 11, 12, 16, 18].—Initial commodity rates on salt and pepper, minimum 34,000 pounds, from Winnfield, La., and Hutchinson, Kans., to named counties in Alabama, Florida, and Georgia, the pepper shipped thereunder not to exceed 10 percent of total weight of the shipments, found not shown to be unlawful.—Salt and Pepper from Kans. and La. to Ala., Fla., and Ga., 315 I.C.C. 695 (698).

Initial commodity rates on salt and salt products, minimum 30,000 pounds, from Hutchinson, Kans., to points in 6 southeastern States, ranging from 110 to 162 cents to typical destinations, are not shown to be unlawful.—Salt and Related Articles, Kansas to Southern States, 315 I.C.C. 637.

Sirups: [Vols. 10, 11, 13, 18].—Reduced rates on syrup, 64 cents, minimum 30,000 pounds, from Kansas City, Mo., to Chicago, Ill., approved as just and reasonable.—Syrup between Kansas City, Mo., and Chicago, Ill., 321 I.C.C. 214.

Soap; powders, bluing, etc.: [Vols. 10, 11, 14, 16-18].—Multiple-truck rate of 72 cents, minimum 66,000 pounds, on soap and related articles between Kansas City and Jeffersonville, Ind., found not unlawful and necessary to meet rail competition; competitive 87-cent rate of other motor carriers between same points would be just and reasonable if made subject to a minimum of 30,000 pounds.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421.

Sugar: [Vols. 10-12, 17-19].—Commodity rate 79 cents, subject to shipper loading, on sugar in packages, cartons, or bags, minimum 32,000 pounds, from Houma, Mathews, and Supreme, La., to Granite Falls, Hickory, Lenoir, and Valdese, N.C., approved as just and reasonable, subject to cancellation of stopping-in-transit rule which is not shown to be lawful.—Sugar from Louisiana to North Carolina, 319 I.C.C. 107.

Talc: [Vol. 17].—Rates 56 to 80 cents on minimum 34,000 pounds in bags or sacks, Emeryville, N.Y., to points in Ohio, found not shown to be unlawful.—Talc from Emeryville. N.Y., to Ohio, 316 I.C.C. 197 (201).

Tea: See *Coffee*, above.

Tile; related articles: [Vols. 18, 19].—Rate of 49 cents, minimum 30,000 pounds, on tile and related articles other than asphalt-composition tile, Kearney and Secaucus, N.J., and New York City to Boston, approved; revenue from proposed rate compares favorably with that under rates for like hauls to other Massachusetts destinations; grouping of considered articles under tariff heading "Tile and Related Articles" is in accord with commodity grouping of other carriers in the area.—Commodities from N.J. and N.Y. to Conn., Mass., and R.I., 315 I.C.C. 733 (734).

Tobacco; products: [Vols. 10-12, 14-19].—Joint commodity rates on cigarettes and manufactured tobacco, minimum 30,000 pounds, $1.02 from Greensboro, N.C., to Louisville, Ky., and 90 cents in reverse direction, or 86 cents from Louisville to Greensboro when shipment is tendered by consignor

within 24 hours of an inbound shipment which moved from Greensboro at the $1.02 rate, found just and reasonable for considered interplant movement.—Cigarettes and Tobacco between Greensboro and Louisville, 319 I.C.C. 679.

Particular Descriptions of Freight Rates

160. Loading and Unloading.—[Vols. 10-12, 14, 15, 19].—Prescribed tariff rule providing that helper service for loading or unloading of t.l. freight in Pittsburgh-Wheeling area will be furnished only upon request of consignor or consignee does not impair validity of collective bargaining agreements between motor carrier employers and plaintiff labor unions. Prescribed rule provides that the t.l. rates will include loading and unloading service of one man per vehicle, whether he be driver, helper, or any other carrier employee; thus the rule does not prohibit a helper from doing the loading or unloading free of charge so long as the driver does not do it. Plaintiff carrier association does not claim that the order requiring publication of the prescribed rule is in any way illegal or beyond the commission's power to promulgate, and the claimed interference with the unions' right to bargain collectively on use of helpers is too remote and tenuous to give them standing to set aside the commission's order. Complaint dismissed.—Teamsters Joint Council 40 (J.C.) v. United States, 238 F. Supp. 301 (302, 306)*.

Pier loading and unloading charges assessed by pier operators at various ports are not for services which are normally included in motor carrier rates; under proposed rule respondents would absorb such charges for pier traffic at Virginia ports and not for traffic moving to other delivery points; not approved.—Absorption Pier Loading and Unloading Charges, 316 I.C.C. 577 (579-80).

Although complainant has not sustained its allegation that defendant's rates do not cover services of a helper and are unreasonably low when cost of that service is absorbed, defendant's rule providing that its rates include loading and unloading when the service can be performed by not more than two men is ambiguous, conducive to discrimination, and impossible to police when it fails to specify how many men will be furnished for loading or unloading, particularly when more than one vehicle is required to move a shipment, or who shall decide when the shipment "can" be loaded or unloaded by not more than two men. Assailed rule ordered canceled, and defendant admonished promptly to establish an appropriate rule in compliance with Tariff Circular MF No. 3.—Middle Atlantic Conference v. Transport Corp., 321 I.C.C. 308 (311, 312).

Carriers' obligation of loading into and out of trailers to and from the tailgate under line-haul rates is not universal: various rules have been established making consignor or consignee responsible for loading or unloading when nature of the freight or shipper's or consignee's facilities are such that one man cannot perform that service; also, numerous motor carrier trariffs require consignor or consignees to load or unload ordinary freight. When a carrier offers to perform a lesser service for a lower rate, it is not obligated to do more than it has offered to do at the lower rate where such offer at the lower rate is accepted by the shipper.—Middle Atlantic Conference v. A.A.A. Trucking Corp., 321 I.C.C. 406 (408)*.

When carrier furnishes helper service for loading or unloading, the published rates must include tariff authority or charge therefor, in order that carrier may render such services without acting unlawfully. Though rule 90 governing furnishing of helper service is applicable, under tariffs published by complainant conference and participated in by defendants, at all points in middle Atlantic and New England territories, it is not in effect between points in middle Atlantic territory and Pittsburgh-Wheeling area described in complaint. Evidence establishes that defendants have been and are unlawfully engaging in furnishing of helper service for loading and unloading of traffic moving between those areas, without tariff authority or charge, and that such practice has resulted in unjust discrimination and undue preference and prejudice as between various consignors and consignees.—Id., pp. 408, 409-10.

The record warrants prescription of a rule for future application by defendants concerning furnishing of helper service to load and

unload t.l. traffic moving between middle Atlantic territory and the Pittsburgh-Wheeling area. Suggested revised rule 90, which would provide a flat charge of $15.75 per man per day or fraction thereof, and would require carriers' records to show only the number of helpers used and number of days on which they were used, has attributes of simplicity, better enforceability, elimination of potential areas of dispute between shippers and carriers, and substantial reduction in carrier procedures and bookkeeping. The flat charge, which is equivalent to present minimum charge under rule 90, as recently increased by 5 percent, would be less onerous to shippers, and as present rule 90 has caused substantial curtailment of use of helper service with consequent decrease in operating expenses, it may be assumed that the flat charge will be equally effective.—Id., pp. 410-11.

However, since in practice a helper cannot normally be used on more than one loading or unloading per day, and under existing contracts a helper must be paid for a full day, it appears that defendants may incur expenses exceeding $15.75, and they will be free to increase the flat charge if it fails to meet their particular costs directly involved in providing the service. Also, to avoid any conflict between the rule and carriers' present commodity rates that are higher when services of two men for loading and unloading are specifically provided for, the phrase "Unless otherwise provided in individual rate items" or similar language should be inserted at beginning of the revised rule as set out in appendix B. The revised rule, as thus modified, prescribed.—Id., pp. 411, 412.

See also Nonapplication of Helper Service Rule, §216(g), n. 26.

165. Truckload and less-than-truckload rates.—[Vols. 10-19].—Exclusive use of vehicle: see also Campbell "66" Express, Inc. v. United States, Gov't. traffic, §66, n. 1.

Only exceptional conditions warrant establishment of l.t.l. commodity rates, and such rates require special justification. Cost data covering only shipments moving in truckloads of not less than 26,000 pounds, although the holding out in respondents' tariffs is for l.t.l. service, are clearly inadequate justification; moreover, as respondents also publish t.l. rates between same points with minimum weights lower than 26,000 pounds, publication of l.t.l. rates and acceptance of loads thereunder of the same or greater weights than the t.l. minima is an anomaly.—Cigarettes and Tobacco between North Carolina and Pa., 315 I.C.C. 297 (299).

General flat increases in class and commodity rates within middle Atlantic territory (except portions specified) and between middle Atlantic and New England territories, of 1 to 3 cents on t.l. shipments; of 30, 10, and 3 cents, respectively, on l.t.l. quantities under 2,000 pounds, 2,000-5,999 pounds, and 6,000 pounds or over, for distances upwards of 100 miles; and a 10-percent increase in rates or charges (except minimum charges) stated in units other than per 100 pounds, found just and reasonable except where resulting rates to intermediate border points exceed those to more distant points. While t.l. rates generally have exceeded costs, addition of the small increases thereon, and on shipments of 6,000 pounds or more, does not result in rates exceeding reasonable maximum levels. Terminal costs have increased disproportionately on smaller shipments and, in accord with 316 ICC 467, application of the flat increases to l.t.l. shipments is not inherently unlawful; considering respondents' cost estimates, the increases on shipments under 6,000 pounds do not result in rates which exceed reasonable maxima.—General Increases—Middle Atlantic & New England Ter., 319 I.C.C. 168 (169, 177)*.

175. All-commodity rates.—Vols. 10-12, 14-19.—Part I, § 1 (5), n. 495.—Expedited-service rates on freight, all kinds (except articles rated higher than class 150), in straight or mixed shipments, any quantity, between Atlanta and Chicago, $8.60 door-to-door and $5 terminal-to-terminal, found justified to meet air-freight competition, subject to elimination of $5.57 minimum charge and substitution of the rate on a 100-pound shipment as minimum in lieu thereof.—Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663.

In determining reasonableness of all-freight rates, such rates, while properly reflecting savings of handling compared with the ordinary vehicle full of separate l.t.l. shipments,

must also reflect transportation characteristics of the preponderant volume of freight carried thereunder; a general declaration by respondent is insufficient in this respect when the record is devoid of evidence as to volume of traffic which can be anticipated under proposed rates or the nature or classification of freight which would be transported.—Freight, All Kinds, Chicago, Ill., to Dayton, Ohio, 316 I.C.C. 405 (407).

Respondents' all-commodity distance rates, applicable on straight as well as mixed shipments, are unreasonable because they could break down existing reasonable rate structures unless restricted to reasonable mixtures. However, record shows that the rates are intended to be used as proportionals in conjunction with rail plan III TOFC service and, since they are restricted not to apply where there are specific commodity rates between same points, and respondents' local traffic moves on class rates, if they were further restricted to such TOFC service, respondents would be required to meet railroads' mixing provisions and there would be no opportunity to break down existing rate structures. Respondents will be expected to so restrict such rates published in the future.—All Freight between Points in Ohio, 318 I.C.C. 731 (735-6).

See also Proportional Rates between Harrisburg & Points in Pa., n. 180, below.

Reduced all-freight interterritorial and intraterritorial rates, maximum 30,000 pounds in one trailer, with overage rates on excess weight, on forwarder traffic between points in eastern, central, and middlewestern territories, to alternate with existing rates on 20,000-pound maximum weight between same points, also similar initial rates, subject to 20,000-pound maximum, between North Adams, Mass., and Chicago and St. Louis, and between Glens Falls, N.Y., and St. Louis, all subject to optional substitution of rail for motor line-haul movement, are compensatory and justified to encourage heavier loading and compete for forwarder traffic moving in rail plan III TOFC service.—General Commodities, Eastern, Central & Middlewest Ter., 321 I.C.C. 504.

See also n. 180, below.

176. Through, joint, local rates.—[Vols. 18, 19].—Part I, §1(5), n. 400.—See Great Western Packers Exp., Inc. v. United States, §216(c), n. 10.

180. Proportional rates.—[Vols. 10-12, 16-19]. Part I, §1(5), n. 402.—Initial proportional volume rates and charges on specified commodities moving in trailers furnished by shipper or consignee between railroad ramps in New Jersey and points in New Jersey, New York, and Pennsylvania, in connection with prior or subsequent rail movement, are not shown to be unlawful merely because they are lower or different from conference rates on like traffic between points in same general area; moreover, while the proportional rates are to be used in conjunction with plan III TOFC service, comparison of through charges is not relevant to determination of their reasonableness; the proposed rates are not shown to be unlawful.—Various Commodities—N.J. Railroad Yards, N.J., N.Y., Pa., 315 I.C.C. 704 (706).

Proportional all-commodity rates published as flat charges per trailer, loaded or empty as the case may be, for various mileage blocks, to apply in conjunction with rail plan III TOFC service where no commodity rates (other than distance rates) are published for movements in shippers' trailers between same points over same routes, are not shown to be unlawful.—Proportional Rates between Harrisburg & Points in Pa., 315 I.C.C. 499 (500, 503); Freight, All Kinds, between Harrisburg and Pa. Points, 316 I.C.C. 41 (44).

All-commodity distance rates intended to apply as proportionals in conjunction with rail plan III TOFC service would present no threat to existing rate structures, even though not restricted to mixed shipments, if they were restricted to apply only in connection with the TOFC service, since respondents would then be required to meet railroads' mixing rules for that service.—All Freight between Points in Ohio, 318 I.C.C. 731 (736).

There is nothing inherently unlawful in respondent's publication, within its managerial discretion, of proportional rates to apply in connection with a prior or subsequent movement in rail TOFC service. Proposed reduced rates on t.l. shipments of freight, all kinds, minima 20,000, 25,000, 30,000, and 35,000 pounds, ranging from 85 percent of class 35

on the 20,000-pound minimum to 75 percent thereof on the 35,000-pound minimum, when moving in trailers furnished by shipper or consignee, between rail terminals in Chicago group and specified points in Indiana, Michigan, and Ohio are shown to be reasonably compensatory and otherwise lawful; approved.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (424, 427, 428).

Proposed proportional charges per trailer on freight, all kinds, in trailers furnished by shipper or consignee, including loading, unloading, and return of empty trailers, ranging from $57.50 to $126.50 for movement between rail yards at northern New Jersey points and points on Long Island, in connection with prior or subsequent rail plan III TOFC service, are reasonably compensatory when they exceed respondent's cost estimates, based on reasonable mileage factors and time factors reflecting its actual experience, by $5.16 to $21.52 per truckload. Respondent has been experiencing a profit in performing substantially similar service, except for ownership of trailers, at like charges for Long Island, R. in connection with latter's plan II service, and there is no evidence that proposed charges would threaten existing rate structures or be competitively destructive; approved.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429.

See also Butter from Mandan and Bismarck, N. Dak., §216(g), n. 66.

185. Pool-truck rates.—[Vols. 10-12, 14, 15, 17-19].—Assembly and distribution rates published for New York and Philadelphia areas in "S" tariffs apply to movement by line-haul carriers, generally within the commercial zone, of small shipments having a prior or subsequent line-haul by the same carrier as part of a pool truckload which usually consists of articles of the same class, whereas rates in "A & D" tariffs apply to service beyond commercial zones for forwarders and consolidators, whose traffic is varied, frequently light and bulky, and entails more paperwork. Moreover, service performed within the commercial zone under the "S" tariffs is in direct competition with unregulated local cartage operators whose rates are not published or subject to any statutory criterion of justness and reasonableness, whereas traffic subject to "A & D" tariffs moves beyond the commercial zones and may not be handled by exempt carriers. These substantial differences in nature of the traffic and services involved justify maintenance of a lower level of rates in the "S" than in the "A & D" tariffs.—Distribution Rates in Eastern Central Terr. Cities, 319 I.C.C. 410 (413-4).

The record clearly shows that the unpublished charges of the exempt local cartage companies control the level of regulated motor common carrier rates published in the "S" tariffs, not only within the New York and Philadelphia commercial zones but also to and from points beyond those zones where their maintenance is forced by competition with other regulated carriers whose rates are compelled by unregulated competition. Since the exempt local operators may negotiate rates, no meaningful comparisons with the rates under investigation can be drawn; those rates are necessary for respondents to meet the unregulated competition, and it would be manifestly unreasonable to require them to show that their rates precisely meet the unpublished and unknown charges of exempt operators. Though some of the rates involved appear noncompensatory, it does not follow that they are unreasonable or otherwise unlawful; in the exceptional circumstances, the considered rates may be found just and reasonable. —Id., pp. 414, 415, 416.

200. Class rates, in general.—[Vols. 10-19].—Part I, §1(5), n. 544.—Unless there are exceptional transportation conditions, l.t.l. shipments should move at class rates. Shipper's statement as to high cost of distributing considered commodities from its Atlanta warehouse and its interest in distribution from Jacksonville, Fla., is too vague and indefinite to support conclusion that exceptional and compelling circumstances justify establishment of proposed l.t.l. commodity rates. —Fluorescent Lamp Ballasts, LTL, Atlanta to Florida, 315 I.C.C. 412 (413-4).

Less-than-truckload traffic is essentially class-rate traffic, and establishment of rates on such traffic at a level lower than class rates is an anomaly which can be justified only by a showing of compelling circumstances.—Magazines, Old Saybrook, Conn., to New

Engl., N.Y. & N.J., 315 I.C.C. 281 (284); and despite shipper's and respondents' emphasis on desirability of magazine traffic and efficiency with which l.t.l. shipments would be handled and savings which would result under proposed commodity rates, present class-rate basis is not shown to be inappropriate for that traffic. Carriers' lowering of the rate level from class 85 to class 55 over the years reflects their recognition of the favorable transportation characteristics claimed for such traffic in l.t.l. quantities.—Magazines, Old Saybrook, Conn., to Middle Atlantic Ter., 315 I.C.C. 273 (275-6).

Since under ordinary circumstances l.t.l. traffic should move at class rates, a commodity rate on such traffic can be justified only by a showing of compelling circumstances; such circumstances do not exist where the traffic concerned appears to be moving freely within the area under l.t.l. class rates; moreover, establishment of proposed commodity rate might undermine an existing just and reasonable rate structure.—Boots or Shoes from Columbus, Ohio, to Chicago, Ill., 316 I.C.C. 239 (241-2).

Although present class rates between Greenville, Miss., and some 20 Arkansas points were established on basis of rail rate-making distances via other Mississippi River crossings, proposed reduced class-rate bases reflecting short highway mileages via highway bridge at Greenville are not just and reasonable when resulting rates would in some instances be higher than respondent's rates to more distant points over same routes, would be unduly prejudicial to excluded points served by same carrier or carriers, and would tend to disrupt existing class-rate adjustment in territory involved.—Class Rates between Greenville, Miss., and Arkansas, 316 I.C.C. 629.

Although addition of flat amounts to existing rates, regardless of classification ratings, further distorts percentage relation between classes, particularly in rates on l.t.l. shipments, as terminal costs have increased disproportionately on smaller shipments the flat general increases considered are not inherently unlawful. See 316 ICC 467.—General Increase—Middle Atlantic & New England Ter., 319 I.C.C. 168 (170, 177)*.

As a result of State law providing for imposition of special gross weight limits on vehicles operated over South Dakota highways during March and April of each year, defendants established assailed "frost law charges" for application on class- or exceptions-rated traffic between South Dakota and points in various States and Canada, in form of either arbitraries of 10 or 11 cents to be added to normal class rates, or increased rates reflecting like amounts, to apply only between March 1 and April 30, inclusive. Contention that it is anomalous to assess such charges on that traffic and not on commodity-rated traffic, because latter is subject generally to higher minimum weights and would be the more affected, does not warrant finding assailed rates unreasonable when record shows that defendants encounter severe competition from other motor carriers on commodity-rated traffic but do not encounter the same type of competition on class-rated traffic.—Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (330-1, 338).

And fact that the frost law charges were not applied on all class- or exceptions-rated traffic between all points in South Dakota and all points in the various States and Canada does not alone establish that their application to the traffic in issue was unreasonable per se, since defendants have attempted to broaden their application to embrace movements between South Dakota and various other States, but have held such efforts in abeyance pending disposition of instant proceeding.—Id., pp. 338, 345.

However, the maximum load restrictions have not been imposed on all highways or for uniform periods; transportation circumstances and conditions attending movement of the traffic in issue within South Dakota over unrestricted highways in March and April are substantially the same as those attending movement of like traffic during remainder of the year, and in such instances application of frost law charges on theory of increased costs of operation is unwarranted. —Id., p. 345-6.

In other instances the traffic in issue, which is subject to frost law charges, has been transported with like traffic not subject thereto in same vehicle over same restricted highway,

the only difference in circumstances being that the one shipment may be destined to a point in South Dakota and the other to a point in another State; any additional cost incurred on such movements is attributable in part to both shipments. Moreover, frost law charges of same amount apply on like shipments regardless of differences in distance; application of such charges only on the traffic in issue and irrespective of length of haul does not place the burden of increased costs solely and fairly on that traffic which directly causes the expense.—Id., p. 346.

Maintenance of the frost law charges as a permanent fixture of the rate structure, to recoup increases incurred in operating expenses during March and April, is subject to same criticism as surcharges designed to offset State truck-mile taxes, which were condemned in 62 MCC 117; for the same reasons, any increases in defendants' operating costs due to imposition of the load restrictions should be treated as a normal operating expense and should be reflected in their class rate structure rather than in frost law charges, either as additions to the prevailing rate structure in March and April, or in a separate rate structure which includes those charges and applies only during those months. Assailed charges are unjust and unreasonable; reasonable future charges will be the class rates and charges maintained by defendants on like traffic between the points involved just prior to March 1 of each year, unless otherwise authorized.—Id., pp. 347, 349.

See also General Increases—Eastern Central Territory, n. 694, below.

225 Commodity rates.—[Vols. 10-19].—Part I, §1(5), n. 566a-574.—Maintenance of l.t.l. commodity rates is an anomaly which must be specifically justified; except under extraordinary circumstances class rates should apply on such traffic.—Electrical Appliances, Milwaukee, Wis., to Chicago, Ill., 315 I.C.C. 286 (288); Magazines, Old Saybrook, Conn., to Middle Atlantic Ter., 315 I.C.C. 273 (276); however, considered l.t.l. traffic is extraordinary in volume and thus may move at a somewhat lower rate level than that provided by the classification basis. Proposed l.t.l. commodity rates are compensatory; approved.—Paints & Related Art. Between Chicago & Cincinnati; Louisville, 315 I.C.C. 729 (731-2).

Desirability of magazine traffic because it loads heavily, incurs little pickup expense, requires minimum handling at destination, and has incurred only negligible damage claims, does not justify commodity rates on less than truckloads; lowering of the class-rate basis over the years reflects carriers' recognition of favorable transportation characteristics of such traffic in l.t.l. quantities. Nor are l.t.l. commodity rates justified by alleged market competition with Philadelphia when there is no proof that the magazine distributed from that point is sharply competitive with that to be transported under proposed rates, or that freight rates are an important factor in any such existing competition. Existence of an anomalous rate basis from Philadelphia is no justification for extending the same basis to another origin, especially when l.t.l. commodity rates from that origin apply only to some of considered destinations, while class rates apply to the remainder. Moreover, it is not shown that proposed rates would be compensatory, nor that they would not constitute a destructive competitive practice.—Magazines, Old Saybrook, Conn., to Middle Atlantic Ter., 315 I.C.C. 273 (275, 276-7).

Class 200 rates currently applicable on empty returned aluminum tote tanks between considered points appear inappropriate for new type shipping container, which has capacity equal to 8 50-gallon steel drums but occupies space of only 6, thus conserving vehicle space and expediting loading and unloading; shipper has filed no loss or damage claims since using such tanks; proposed l.t.l. commodity rates are on class 70 level applicable on used barrels, drums, and kegs. Protestant's apprehension that the reduced rates will be used as a wedge to obtain further reductions appears groundless, since they are limited to apply only when loaded tanks are moved inbound by same carrier; approved.—Aluminum Tote Tanks, Springfield, Ill., to Fort Madison, 315 I.C.C. 567 (568-9, 570).

Establishment of l.t.l. commodity rates on iron and steel fasteners from Rockford, Ill., to Anderson, Ind., is justified when such traffic has been moving in substantial volume,

is desirable for respondents, and has favorable transportation characteristics; a lower level of rates has been established from competing origins, notwithstanding shippers at those points produce the same class of products, sell in same manner, and are no more advantageously located; in the past, rates from Rockford were on level comparable with those from the competing points, and as result of present spreads Rockford shippers can no longer maintain their sales position at Anderson. However, no justification appears for proposed l.t.l. rates on weight brackets upwards of 2,000 pounds; since most of the Rockford traffic moves in quantities less than 2,000 pounds, rate on that weight bracket, which is shown to be compensatory, will be reasonable for all l.t.l. shipments.—Iron or Steel, LTL, Rockford, Ill., to Anderson, Ind., 315 I.C.C. 683 (687-8).

While l.t.l. traffic should move at class rates and l.t.l. commodity rates should be permitted only where compelling circumstances and conditions are shown to exist, evidence indicating that otherwise the traffic would be diverted to private carriage is sufficient justification for l.t.l. commodity rates, particularly where all other producers of the particular commodity are moving such traffic in their own equipment or by contract carrier.—Bakery Goods, Chattanooga, Tenn., to Southern Points, 316 I.C.C. 573 (574-5).

Maintenance of l.t.l. commodity rates on rubber-coated cotton cloth from two Massachusetts points to New York metropolitan area is justified when volume of traffic averaged over 32,500 pounds daily during a representative period, and simultaneous tender of aggregate volume of at least 20,000 pounds is required before commodity rates apply. However, although the present rates were approved in 310 ICC 675, they are now below a compensatory level owing to increased costs of service. Cancellation required and minimum reasonable rates prescribed.—Miscellaneous Commodities from Mass. to N.J. and N.Y., 318 I.C.C. 226 (227-8).

Proposed l.t.l. commodity rate on boots or shoes from Columbus, Ohio, to Chicago, the same as existing class rate on 2000-4, 999-pound category, appears compensatory and is justified by respondent's increased average daily tonnage of 2,856 pounds and by fact that shipper's outbound traffic from Columbus is tied in with its inbound t.l. movements from Rock Island, Ill. Respondent's prima facie showing of reasonableness is not rebutted; approved.—Boots or Shoes from Columbus, Ohio, to Chicago, 319 I.C.C. 92.

Less-than-truckload shipments normally should move on class rates; commodity rates on such traffic should be established only under compelling circumstances such as movement in substantial volume and simultaneous tenders of a large number of shipments; handling of involved traffic by forwarders for several years cannot be considered a compelling circumstance when volume of the traffic is not shown.—Air Cleaners, Blowers, Fans—Buffalo to Ill., Ohio, Mo., 314 I.C.C. 779 (780).

Less-than-truckload rates below the class-rate basis require special justification; proposed l.t.l. commodity rates may not be approved when no competitive reason therefor, nor any examples of such rates claimed to be maintained in other territories, are shown.—Various Commodities, Chicago to Cincinnati, Ind., Louisv., 314 I.C.C. 749 (750).

Less-than-truckload commodity rates are anomalous; unless special circumstances affect the transportation, class rates should apply on l.t.l. traffic. Proposed l.t.l. commodity rates are not justified when volume of the traffic concerned is not shown, nor any competition by other carriers which would indicate that they are necessary for respondent to participate in the traffic.—Flavoring Sirup—Bonner Springs, Kans., to Southwest, 314 I.C.C. 781 (783).

Proposed joint l.t.l. commodity rates not only are not shown to be compensatory, but, since respondent's present rates and rates generally on involved l.t.l. traffic are class rates, would threaten existing class-rate structure on that traffic in southern territory; not approved.—Candy—Montgomery, Ala., to Points in South Carolina, 315 I.C.C. 96 (97, 98).

Though evidence indicates that proposed l.t.l. commodity rates were published primarily to meet competition by express, fact that under respondent's present rates a typical small shipment could have moved at lower

total cost, including distribution charges, by motor carrier than by express casts doubt on claim that the reduced rates would attract any more traffic; there are thus no exceptional circumstances which would justify commodity rates on considered traffic.—Electrical Appliances, Milwaukee, Wis., to Chicago, Ill., 315 I.C.C. 286 (288).

Considered l.t.l. commodity rates on cigarettes and manufactured tobacco are not justified by cost data covering only shipments in truckloads of not less than 26,000 pounds; moreover, rates on considered level, while returning substantially more than cost of service for shipments of record, are not shown to be necessary to place respondents on competitive basis with rail carriers, and are out of harmony with prescribed adjustment on like traffic moving under similar conditions between many of same points. Rates under investigation ordered canceled.—Cigarettes and Tobacco between North Carolina and Pa., 315 I.C.C. 297 (299-300).

Unless there are exceptional transportation conditions, l.t.l. shipments should move at class rates; proposed l.t.l. commodity rates on machinery and other articles not approved where evidence is not persuasive of exceptional transportation conditions pertaining to this traffic.—Machinery and Related Articles—Hampstead, Md., to New England Points, 316 I.C.C. 71 (74).

Generally a considerable volume of movement is required before establishment of l.t.l. commodity rates is warranted; a daily average of 2,368 pounds is in ordinary circumstances insufficient alone to justify special rates. While respondent claims that Columbus shipper is seriously disadvantaged by market competition at intrastate rates from Rock Island, there is no showing of extent of such competition or that shipper is compelled to absorb any difference in transportation costs. General declarations of fear that rising level of l.t.l. class rates may force shipper to divert its traffic from respondent's daily service to pool-truck movement do not justify a commodity rate.—Boots or Shoes from Columbus, Ohio, to Chicago, Ill., 316 I.C.C. 239 (242).

Less-than-truckload traffic is essentially class-rated traffic, and commodity rates should be established thereon only under special compelling circumstances; although for competitive reasons l.t.l. commodity rates have previously been approved on candy and confectionery between considered points, proposed further reduction is not warranted when the traffic is moving freely in respondents' service at present rates, competitive need is not compelling, and no evidence of compensativeness of proposed rate is presented.—Candy and Related Articles, Mass. Points to Camden, N. J., 316 I.C.C. 596 (598).

Commodity l.t.l. rates require special justification and should be established only under compelling circumstances, such as movement in substantial volume and simultaneous tenders of large numbers of shipments. Proponent's movement of only 30,000 pounds per month of involved traffic constitutes neither a substantial volume nor simultaneous tender of large number of shipments, and no evidence was offered to support claim of expected increase in volume. The traffic appears to be moving freely at present class rates, and there is no showing of any competitive necessity for proposed reduced rates which cost evidence indicates would be noncompensatory on lower weight brackets; not approved.—Glue from New York and Plainfield to Ransom, Pa., 318 I.C.C. 164 (166).

Ordinarily, commodity rates on l.t.l. traffic can be justified only by a showing of exceptional circumstances. Such circumstances exist where commodities for which respondent proposes to establish l.t.l. commodity rates on mixed shipments in carrier-furnished sealed containers now move regularly, almost daily, in 50 to 200 separate packages at one time from one origin to one destination. Such large volume offers considerable incentive for respondent to seek ways of reducing its costs for separate handling, checking, loading, rating, and billing of so many small individual shipments. However, proposed rates are disapproved because not shown to be reasonably compensatory.—Freight, All Kinds, Chicago to Cedar Rapids, Des Moines, 321 I.C.C. 380 (381, 384).

Less-than-truckload shipments normally should move at class rates; commodity rates on such traffic should be established only under compelling circumstances such as

movement in substantial volume and simultaneous tender of a large number of shipments. Proposed removal of restriction on existing l.t.l. commodity rates on hardware and other articles, requiring an aggregate of 12,000 pounds and five or more shipments, may not be approved when the rates without the aggregate are not shown to be compensatory.—Hardware, LTL, New Britain, Conn., to Mid. Atlantic Terr., 322 I.C.C. 249 (252).

Less-than-truckload traffic should normally move on class rates. Commodity rates on l.t.l. traffic are established only under compelling circumstances such as a substantial volume of movement, simultaneous tender of a large number of shipments, or competitive necessity. While respondent has lost considerable traffic due to tariff aggregate tender provision in effect, it failed to show that l.t.l. commodity rates which would result from removal of that provision would be just and reasonable.—Aggregate Weight Provisions on Paper, Mass. to N.Y., N.J. 323 I.C.C. 525 (531-1).

Commodity rates on l.t.l. traffic should be established only under special circumstances, and a considerable volume of movement is generally required to justify such rates. When shipper daily tenders applicant at one time an average aggregate of 5,562 pounds of shipments averaging 364 pounds each, of which 2,582 pounds move to the destinations involved, the special circumstances of regularity and substantial volume of movement, tender of multiple shipments at one time, and less-than-customary terminal services are present. As to competitive need, no reason appears for doubting respondent's statement that if the reduced rates are not approved the business will be lost; moreover, since all the rates substantially exceed fully distributed costs, the requirement to show competitive necessity is less significant. The proposed rates approved.—Boots or Shoes, Columbus, Ohio, to Illinois and Missouri, 322 I.C.C. 687 (690).

In absence of a positive showing of competitive need for departing from the class-rate basis, or a showing that aggregate volume of traffic is large enough to warrant l.t.l. rates on a lower level, proposed l.t.l. commodity rates on magazines to destinations other than New York may not be approved, particularly as it does not appear that savings to carrier as result of favorable characteristics of that traffic at origin would justify such a departure in light of the exacting delivery requirements. And even though shipments to New York are tendered in aggregates which constitute truckloads, this is not shown to justify a rate reduction on l.t.l. shipments which must be separately delivered.—Magazines, Old Saybrook, Conn., to New Eng., N.Y. & N.J., 315 I.C.C. 281 (284, 285).

Though it is respondents' intent to give shipper a reduced rate in consideration of a tender of 20,000 pounds or more, and 42,000 pounds is expected to move weekly to New York, it is not clear whether that volume consists of a single truckload, an aggregate of l.t.l. shipments, or both; assuming that the movement is in t.l. quantities, publication of a compensatory t.l. rate, minimum 20,000 pounds, with provision for separate charges to cover expense of additional deliveries at destination, would not be objectionable.—Id., p. 284.

230. Any-quantity rates.—[Vols. 11-13, 18, 19].—See Freight, All Kinds—Expedited Service, n. 175, above; See General Increases—Eastern Central Territory, §216(g), n. 5, *Justification for increases*.

250. Group rates.—[Vols. 14, 18, 19].—Part I, §1(5), n. 420-472.—The practice of grouping points for purpose of establishing rates is of long standing, and is generally an acceptable method of publishing lawful rates, since it precludes necessity of specifically publishing rates from and to numerous points, with resulting savings in tariff costs; rate groupings should not be changed to correct minor inequities without giving full consideration to the overall effect of such change on all carriers and shippers concerned.—Huntingdon Valley, Pa.—Rate Group Amendment, 314 I.C.C. 680 (682).

Proposed grouping of Huntingdon Valley, Pa., with Philadelphia instead of with Trenton, N.J., is not justified when no competitive necessity is shown therefor and resulting reductions from many points are not shown to be just and reasonable. As present grouping follows that employed by railroads in establishing the uniform class rates, proposed change would substantially alter the competi-

tive situation between the railroads and the motor carriers as a group, and earnings of a number of latter who do not favor the change, as well as earnings of respondents, would be affected.—Id., pp. 681-2.

Moreover, though Huntingdon Valley is about 18 miles south of Trenton city limits and only about 1.5 miles west of Philadelphia limits, it is some 14 miles from downtown Philadelphia; respondents' claim that the Huntingdon Valley station has been abandoned is not supported by the evidence, and it and all points north of it on same rail branch line take the Trenton rates.—Id., p. 681.

275. Minimum rates; minimum charges.—[Vols. 10-15, 18, 19].—Part I, §1(5), n. 14.—While the commission's minimum-rate power may concededly be used when proposed reduced rates are not objected to by other carriers, in a case where issue of compensativeness is close some weight ought to be given to management decision.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (683)*.

Although present l.t.l. commodity rates on rubber-coated cotton cloth from two Massachusetts points to New York metropolitan area were approved in 310 ICC 675, they have fallen below a reasonable minimum level when some of them fail to cover increased out-of-pocket costs and others do so by only 0.2 cent. Reasonable minimum rates suggested by carrier actually transporting the traffic, approximately 6.11-percent higher than the present rates and 3 to 16.1 cents above out-of-pocket costs, prescribed on four weight brackets under 20,000 pounds.—Miscellaneous Commodities from Mass. to N.J. and N.Y., 318 I.C.C. 226 (227, 228).

A strong showing must be made to support a finding that compensatory rates, not fixed on a class-rate level resulting from permissive general increases, are unreasonably low. Complainant rate bureau has made no such showing as to assailed rates that equal or exceed out-of-pocket costs, nor has it shown that defendants' weight scales or minima, lower than those maintained by the bureau for its members, are in themselves unlawfully disruptive of the rate structure. Exercise of the commission's minimum-rate powers to freeze defendants' rates and weight limits at complainant's levels is therefore not warranted.—New England Motor Rate Bureau, Inc. v. Stone's Exp., 321 I.C.C. 767 (774).

Proposed any-quantity rates on all-freight in expedited service between Chicago and Atlanta, $8.60 door-to-door and $5 terminal-to-terminal, found lawful, except that proposed $5.57 minimum charge should be eliminated and the minimum charge be made the rate on a 100-pound shipment; approved on that basis.—Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663 (665, 667).

Respondents' reduced minimum charges per shipment, when five or more minimum-charge shipments are picked up at one time, would be reasonable for local hauls, provided the governing rules are amended as indicated, when protestant conference's cost data, as restated, indicate that for such hauls they would exceed out-of-pocket costs and may thus be considered compensatory; however, as considered charges are not shown to exceed out-of-pocket costs for joint hauls, they may not be approved for application thereto.—Reduced Minimum Charges—West Roxbury to Mid. Atl. Ter., 315 I.C.C. 675 (679).

To minimize losses from handling small shipments, respondents propose establishment in eastern central territory of scales of constant or flat charges on six weight brackets progressing by 50 pounds each from column 1 on 1-to-49 pounds to column 6 on 250-to-299 pounds, the column 6 charges to be the minimum for shipments of 300 pounds or over, to apply in lieu of present minimum charge per shipment, per-hundredweight charges on shipments under 300 pounds, and $1 surcharge on shipments of less than 1,000 pounds not subject to a minimum charge. Such constant charges, proposed as an experiment in ratemaking, are not inherently unlawful, and both carriers and shippers should benefit from having to ascertain only weight of shipment and corresponding rate basis, rather than having to analyze and rate such small shipments. —General Increases—Eastern Central Territory, 316 I.C.C. 467 (468-9, 485-6).

Although the constant charges will result in reductions on small shipments rated class 100 or higher, thus enabling shippers of

high-grade commodities to reduce total transportation charges by splitting shipments into multiples of 299 pounds, respondents' alternative suggestion that such charges be approved as minima for shipments under 300 pounds, which would make them applicable only when higher than the classification basis, is rejected; only experience can determine whether multiplication of shipment units would be so extensive as to require modification of the plan. Proposed charges approved, without prejudice to right of the parties to petition for further hearing after a reasonable period for testing their effect.—Id., pp. 480, 485, 486.

See also Clothing, in Multiple Shipments, from Nanticoke, §217(a), n. 10.

285. Express rates.—[Vols. 15, 16].—Such attributes of express service as transportation of small shipments at premium rates are descriptive rather than limiting in nature; most shipments attracted to express service weigh less than 500 pounds and cost of moving them expeditiously is greater than if they were held for aggregation into truckloads, so that cost of providing express service for all shipments tendered must necessarily be recovered by a level of rates generally higher than that of carriers whose service is influenced by economies to be derived from volume movement. However, Railway Exp. Agency has historically handled shipments exceeding 500 pounds, and traffic to which considered all-commodity l.c.l. container rates apply is moved just as expeditiously as its other traffic, often in same trucks; considering economic advantages of containerization, those rates are compensatory and are not shown to be competitively destructive.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (472, 475, 479-80)*.

While there is no specific evidence of extent of intercity line-haul highway movements performed by REA under the container rates, its motor-carrier authority is broad enough to permit some of such movements, and limitation in its certificates to commodities "moving in express service" does not preclude it from publishing compensatory nonpremium rates on containerized shipments. A highway express carrier is not required to publish any particular level of rates so long as it moves all the traffic it handles in express service; but neither REA nor any other express carrier may publish rates for delayed service (e.g., for aggregation of small shipments) that does not conform to the established criteria of bona fide express service, as economies to be gained from such a delayed transportation service are available only to ordinary freight carriers.—Id., pp. 477, 481.

300. Truck-water rates.—[Vols. 10-13].—See Drugs and Related Articles from N.J. and N.Y. to Tex., §216(c), n. 10.

310. Rates reduced under §22 (§217(b)) authority.—[Vols. 16, 17].—See Middle Atlantic Conference Nat. Frt. Traffic Ass'n. v. United States, §22(1), n. 5.

313. Rates, leased-equipment utilized.—[Vols. 18, 19].—Although, to establish compensativeness of proposed rates on urethane forms, the transportation being performed with owner-operators, respondent cites revenues accruing to owner-operators at same percentage division of revenue for transportation of such commodities as asbestos shingles, siding and wallboard, latter are not shown to have transportation characteristics similar to those of urethane; moreover, only 5 percent of respondent's past operations consisted of transportation of building materials. Such comparisons therefore have little probative value to meet the second test announced in 318 ICC 567, that the division of revenue to the owner-operators shall be sufficient to acquire or retain their services for movement of the traffic at the rates thereon. That "most" of the owner-operators have been with respondent for 5 to 10 years in no way establishes that they are willing to haul the involved commodity at the proposed rates; thus there is no meaningful record of employment to relate to the considered transportation; proposed rates not approved.—Building Materials, Middle Atlantic and New England, 322 I.C.C. 710 (714-5).

Bureau of Inquiry and Compliance's study of cost to respondent of transporting scrap iron from New England origins to western Pennsylvania, using owner-operators exclusively, based on data from its annual report and computed on Highway Form B formula as modified to reflect respondent's specialized type of operation, is a substantially accurate

reflection of the best available information and, because it shows great disparity between assailed rates and respondent's costs, makes a prima facie showing of unreasonableness. However, respondent's rate-cost comparison being accepted as adequate to show compensativeness of assailed rates in the circumstances, and in view of its showing that under its established practices regarding owner-operators it is able to attract purchased transportation as needed, conclusion is warranted that it has overcome the Bureau's prima facie presentation.—Iron or Steel Scrap from Conn., Mass., and R.I. to Pa., 318 I.C.C. 567 (570, 576). [But see dissent.]

Respondent whose transportation of meats from Denver to Chicago would be performed almost exclusively with owner-operators has not met the criteria of compensativeness announced in 318 ICC 567; it has not established that its share of the gross revenue from proposed reduced rate covers all its costs, or that the agreed division of 72 percent to owner-operators is sufficient to acquire and retain their services for movement of the traffic involved. Its mere statement that the operations would be conducted by owner-operators which allegedly have been associated with it for numerous years is inadequate proof; there is no showing of the percentage of revenue paid by it to owner-operators in the past, or any meaningful record of their employment. The reduced rate is thus not shown to be just and reasonable for that respondent.—Fresh or Fresh Salted Meats from Colorado to Chicago, 322 I.C.C. 174 (179, 181).

See also Eastern Central Motor Carriers Ass'n v. U.S., n. 104, above.

Rates for Special Classes of Services; Practices

400. Pickup and delivery; split pickup, delivery service.—[Vols. 10-19].—Increased pickup and delivery charges of 35 cents to $1.65 per 100 pounds, to be added to New York City line-haul rates on l.t.l. shipments moved through the city from or to points in area just north thereof and in six Long Island zones, are reasonable and justified by high cost of operations through the city due to extreme traffic congestion and tolls for use of tunnels, bridges, and ferries, also by divisions required to be paid local delivering carriers on Long Island, and by fact that Long Island traffic is predominantly eastbound, with consequent deadheading of equipment. Though resulting maximum charges of $3.50 to $16.50 do not completely cover costs of performing the service, they serve to reduce the burden formerly placed on respondents' entire operations.—L.T.L. Pickup & Delivery Charges—from or to New York, 319 I.C.C. 230.

Under proposed l.t.l. commodity rates on magazines, restricted to multiple shipments aggregating 20,000 pounds or more tendered by one shipper at one time, a shipper tendering 10 l.t.l. shipments aggregating 19,990 pounds would be charged the class rates, whereas shipper tendering 10 shipments aggregating only 10 pounds more would be charged rates approximately 10 percent lower, notwithstanding that services required would be practically identical. Thus, tender of shipments in aggregate t.l. quantities would not justify a rate reduction on less than truckloads which must be separately delivered, where no separate charge is made for multiple deliveries.—Magazines, Old Saybrook, Conn., to New Eng., N.Y. & N.J., 315 I.C.C. 281 (285).

Line-haul motor-carrier rates normally include one stop for pickup of lading and one for delivery; additional stops entail additional expense for which carrier should be compensated. Respondent's service in movement of paperboard from three New Jersey origins to New York City includes 1 to 5 deliveries, but evidence does not permit determination of cost of making such stops or of a compensatory charge per stop; considered l.t.l. rate found unreasonable, without prejudice to establishment of a reasonable line-haul charge subject to an aggregate t.l. minimum, with charges to be paid by consignor, and to establishment of a separately stated charge per stop for deliveries in addition to final delivery.—Paperboard between New Jersey and New York, N.Y., 315 I.C.C. 187 (190). [But see dissent.]

Pickup and delivery is the service of a carrier in calling for and collecting freight, receipting therefor from a dock, platform, doorway, or other facility directly accessible to highway vehicles, and includes transportation

therefrom by the highway vehicle to the motor carrier's terminal premises; a motor carrier may perform its own pickup and delivery, and loading and unloading service, or arrange to have it performed by another.—Investigation of Practices, United Warehouse Co., 316 I.C.C. 5(9).

Arrangement whereby respondent warehouse company performs such service under written contracts with respondent motor carriers has advantage of at least partly eliminating congestion resulting when several carriers attempt to pick up shipments at its dock at same time; there was apparently mutual agreement among all parties concerned in execution of those contracts, and to hold that in such service the warehouse company acted for the shipper would require a denial of existence or validity of the contracts—a conclusion which the record would not support.—Id., p. 9.

Although the commission stated in the Kansas City case, 272 ICC 331, that such contracts should authorize the draymen to sign receipts as agents for the carriers, it did not indicate how that authority should be extended or exercised; that respondent does not issue receipts or bills of lading in name of the line-haul carrier, and drays only its own warehouse merchandise to carriers' depots, is not unlawful. Principles of the Kansas City case are controlling; neither the warehouse company's practices in operation of its warehouse, nor respondent motor carriers' practices under which they pay drayage charges for pickup and delivery and loading or unloading charges, are shown to be unlawful.—Id., pp. 9, 10.

Respondents' distribution rates on all-freight at Chicago and St. Louis have been in effect for a substantial period, and protestant rate bureau's cost evidence designed to show their noncompensativeness is not shown to be representative of respondents' costs; thus the rates under investigation are not shown to be unlawful. And while the record indicates that numerous motor carriers maintain varying levels of distribution rates at those termini, and some revision of such rates should be made, it contains no adequate cost data for prescription of a scale of rates, and the few respondents concerned could not participate in the traffic if their rates were required to be increased without comparable increases in rates of carriers not parties to the proceedings. Finding that rates in suspension proceeding and ancillary investigation are not unlawful is therefore without prejudice to any finding which might be made on a more comprehensive record.—Distribution Rates at Chicago, Ill., and St. Louis, Mo., 318 I.C.C. 145 (148, 149).

404. Absorption of charges.—[Vols. 11, 18].—Rule providing for absorption of pier loading and unloading charges on class-rated traffic moving to or from Virginia ports is not shown to be compensatory or a competitive necessity; not approved.—Absorption Pier Loading and Unloading Charges, 316 I.C.C. 577 (580).

409. Palletized shipments.—[Vols. 16, 18, 19].—Advantages to both carriers and shippers accrue from use of pallets in transportation of freight, and agreements for interchange of pallets between shippers and carriers, such as that under consideration, are not unlawful provided the exchange of pallets thereunder is covered by appropriate tariff provisions and is accomplished without discrimination, and that charges collected are reasonable for the entire service performed. The matter is similar to exchange of containers considered in 54 MCC 139, and views therein expressed are equally applicable.—Legality of Pallet Exchange Agreement—Kraft, 322 I.C.C. 439 (443).

415. Handling; terminal charge.—While order bill of lading shipments may well be more costly to handle than other types, terminal charge of $3 per shipment cannot be approved in absence of showing that it is for services necessarily peculiar to order shipments and that it does not substantially exceed any additional expenses thereby incurred; charges under investigation ordered canceled.—Terminal Charge on Order Bills of Lading Shipments, 315 I.C.C. 327 (332)*.

425. Transit service, generally.—[Vols. 11-15, 17-19].—Part I, §1(6), n. 501, 512.—Since a volume of mixed interstate and intrastate commerce tendered to a motor carrier by a shipper on one bill of lading does not become wholly interstate in character when the intrastate portion is unloaded under provi-

sions of a stop-in-transit rule, mere filing with the commission of a tariff containing stopoff provisions does not make those provisions applicable on such intrastate shipments; and, not having jurisdiction over motor carriage in intrastate commerce, the commission may not prescribe a rule providing rates or charges on such commerce, nor may rates restricted to intrastate application be applied on interstate commerce. Thus, on a shipment handled in the described manner, carrier may not assess charges at the interstate rate to destination on the total weight picked up at origin, nor, if charges at the intrastate rate to the stopoff point are the higher when computed on the total pickup weight, may it assess that rate on the entire shipment.—Central States Motor Freight Bureau, Inc., Petition, 319 I.C.C. 745 (747, 749, 751)*.

However, stopoff rules on interstate commerce normally provide for application on the entire shipment of the rate to final destination or to any stopoff point, whichever produces the highest charge; and in the situation considered, if a tariff is filed with both the commission and the State commission and the rate to the stopoff point is the same for both interstate and intrastate commerce, that rate may be made applicable to the entire shipment when higher than the rate to final destination. Or, if the interstate and intrastate rates to the stopoff point are different, the rule might provide for application to the interstate portion, or to the combined weight if the State commission is willing, of the interstate rate to the stopoff point when higher than that to final destination. Where such provisions are filed, the commission will assume, in absence of information to the contrary, that the State either does not require the filing of rates with it or that carrier has ascertained that the State does not object.—Id., p. 751.

If the State concerned does not prohibit such publication, it would not be unlawful for a motor carrier to provide for stopoff for partial unloading at an intrastate point and to use the combined intrastate and interstate tonnage to determine the applicable interstate rate. This would not make an intrastate rate applicable on an interstate movement or vice versa, but would merely permit a single rate to have both interstate and intrastate application; nor would that method apply where it produced a total charge higher than would normally accrue under the application intrastate and interstate rates without use of the combined weights. Moreover, the commission's suggestions concern only the interstate rates and movements; a State may choose to approve a similar rate or tariff rule, but only the State concerned can so decide.—Id., 321 I.C.C. 726 (730)*.

See also Roasting of Coffee in Transit at Fort Worth, Tex., §216(g), n. 65.

430. Multiple-truck service.—[Vols. 18, 19].—Multiple-car shipments, §1(5), n. 648.—Rate on soap and related articles, minimum 66,000 pounds. predicated on use of two vehicles, is compensatory for respondent, a specialized carrier of such products, when minimum revenue therefrom exceeds its system-average expense per vehicle-mile; considered rate appears necessary to meet competition of reduced rail boxcar rates; found just and reasonable.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421 (424-5).

Although proposed rate on alcoholic liquors, minimum 96,000 pounds in not more than two vehicles, requires minimum trailer loadings of 48,000 pounds, mere mention of maximum weight laws of States traversed and fact that they are complex does not indicate that violations thereof would automatically follow, especially as protestants admit that no violations would occur if respondent used city tractors in pickup and delivery service. Protestants have failed to overcome presumption that respondent will operate in accordance with the State laws; proposed rate is not shown to be unlawful.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (407, 408-9).

It must be assumed that two trucks would be necessary to carry proposed 60,000-pound minimum on malt beverages when respondent supplied no evidence as to tare weight of its equipment, and made no effort to rebut presumption raised by protestants that, in view of maximum gross weight permitted in the two States, proposed minimum could not be legally loaded on a single truck. Evidence indicates that, based on a two-truck movement, truck-mile earnings would be substantially

below respondent's system-average truck-mile cost and lower than its lowest estimate of out-of-pocket costs; proposed rates are shown to be compensatory.—Beverages and Empty Containers from and to N.J. & N.Y., 314 I.C.C. 792 (794-5).

445. Return loads.—[Vol. 19].—Clear intent of findings in 310 ICC 473 that return-load rules of motor carriers should provide, among other things, that consignee of return shipment be located at the same point or in the same commercial zone as consignor of the outbound movement, whether consigned to that consignor or another person, is that destination of the return load shall be the same point, or in same commercial zone, as the origin of the outbound load. Provision in proposed rule which would permit return loads to be consigned either to the outbound consignor or any person located at the same point or in same commercial zone as that consignor, regardless of whether or not destination of return load is the same as origin point of outbound shipment, does not conform to those findings.—Return Shipments Rule—Eastern, Southern Territories, 315 I.C.C. 267 (268).

Provision for application of the rule when excess mileage for the "return load movement" does not exceed 50 percent of mileage for the outbound shipment also fails to comply with those findings, since it would permit a return haul more than 50 percent greater than the outbound haul; "return haul" as used in that decision begins at destination of the outbound shipment, and the prescribed maximum excess mileage of 50 percent applies to distance from destination of the outbound load, not from origin of the return load.—Id., p. 269.

There should be a limit to excess mileage permitted under such rules even though a charge is provided for the empty mileage traveled to origin of the return load; assuming, in absence of challenge thereof, that proposed charge of 30 cents a mile is compensatory, such a charge nevertheless is generally substantially below the average loaded truck-mile revenue of motor carriers, and to permit empty mileage without limit, as would the proposed rule, would promote uneconomic transportation contrary to the national policy. Not approved.—Id., p. 269.

Any return-load rules which fail to conform to findings in 310 ICC 473 as thus interpreted should be promptly amended.—Id., p. 269.

Proposed rates on fatty acids from Franklin, Va., to points in New York, New Jersey, and Pennsylvania, and on acetic acid from Parlin, N.J., to Hopewell, Va., to apply only when there is a movement in both directions, do not conform with principles announced in 310 ICC 473, when proposed round-trip operation would entail empty movements up to 84 miles from northern destinations to Parlin and about 60 miles from Hopewell to Franklin, and respondent would absorb cleaning costs presently borne by shipper under a return-load rule.—Liquid Commodities between Va. and N.J., N.Y. & Pa., 316 I.C.C. 609 (612, 613).

See also Beverages and Empty Containers from and to N.J. & N.Y., §216(g), n. 65.

450. Routing; misrouting.—[Vols. 12-14, 16-19].—Part I, §1(6), n. 574, §15(8), notes.—Determination of rail carriers' routing practices has long been within the primary jurisdiction of the commission, and this jurisdiction is the more important in case of motor carrier routing where alternative routes are greater in both number and variety; furthermore, selection of the route is usually made on an ad hoc basis, precluding preshipment determination of its reasonableness. Unlike ratemaking, there is no statutory procedure by which routing practices may be challenged in advance, nor is the shipper by truck accorded the right given rail shippers by §15(8) to select and request a particular route of the carrier; survival of a damage claim for misrouting is therefore entirely consistent with the act and meets the proviso of the saving clause in §216(j).—Hewitt-Robins, Inc., v. Eastern Freight-Ways, Inc., Robins, 371 U.S. 84(87)*.

460. Demurrage.—[Vol. 13].—Schedules by which respondent proposed to cancel its participation in tariff rule governing charges for detention beyond specified free time of drivers and equipment, found not shown to be just and reasonable. Single instance referred to by respondent, by way of illustration, does not establish that the rule is unworkable, or that it is applied in a discriminatory manner; no shipper witness supported the proposal.

Some such rule is necessary to assure reasonably prompt release of equipment.—Removal of Detention Charges—Dixie Ohio Exp., Inc., 315 I.C.C. 389.

Failure of numerous and different rules to meet the problem in the past establishes need for a uniform rule, uniformly applied, to govern charges for detention of vehicles by consignors or consignees. However, proposed rule is concededly inappropriate for tank-truck and household-goods carriers, which maintain their own apparently effective rules; dump-truck operators should also be excluded in view of nature of their services. But iron-and-steel carriers should not be excepted merely because they consider the free time too generous; provisions of a rule for general application must apply to all members of the shipping public whose traffic is handled under similar circumstances, and to except one commodity, as distinguished from a wholly different type of service, would invite defeat of the rule by a multiplicity of claimed exceptions.—Detention of Motor Vehicles—Middle Atl. & New England, 318 I.C.C. 593 (606, 609)*.

And provisions of proposed rule defining consignor and consignee as parties to whom carrier delivers or from whom it receives the shipment, including warehousemen and connecting carriers with which it does not maintain joint rates, should be eliminated. The law is well settled that the party to whom shipment is consigned is the legal consignee, not the party in whose care the goods are shipped; status of warehousemen, pier operators, and carriers of other modes, who are not parties to the contract of transportation, cannot be changed by tariff provisions purporting to make them consignors-consignees for purpose of assessing charges in connection with transportation of a particular shipment (citing 59 ICC 205).—Id., p. 607.

Though in many instances the number of pieces in a shipment affects loading and unloading time more than its total weight, where varying free time is to be permitted weight is generally the most equitable basis, and actual weight should govern. However, restriction of the rule to shipments subject to "truckload rates" would cause confusion, since many rates are published on a "volume minimum" or only a specified minimum weight. Since conference exceptions to the classification provide for conversion of t.l. or volume minima upwards of 12,000 pounds to "truckloads," and such quantities are usually intended for handling as truckloads, rule should provide that where the rate on a shipment is subject to a minimum of 12,000 pounds or more it will be considered a truckload rate.—Id., pp. 606, 608, 609.

While provision for nonapplication when detention is wholly or partly attributable to carrier would be proper where tariff provides for shipper loading and unloading, where carrier has that responsibility the rule should be limited to delays caused by consignor-consignee, excluding time consumed by carrier in loading or unloading. Also, provision for computation of time where carrier is unable to meet a prearranged schedule should be eliminated as potentially discriminatory, since carrier could prearrange time for arrival at a preferred patron's premises and then arrive at a later, less convenient time, and in case of shipper loading-unloading free time would not commence until that had actually begun.—Id., pp. 608-9.

Proposed charges for detention include a penalty element, and shippers have no remedy under Part II for recovery of unreasonable charges. Prescription of lower charges at levels in effect under present conference rule will avoid such inequities, since current levels do not exceed adequate compensation for costs attributable to undue delays; should such charges prove too low fully to compensate respondents for such delays, increases will be considered upon a proper showing of costs. Amended rule prescribed for a 1-year test period for application by all respondents (with indicated exceptions) in Middle Atlantic territory and between that and New England territory.—Id., p. 610.

Carriers to Provide and Furnish Transportation

550. Duty to furnish transportation.—[Vols. 12, 13, 16-19].—Upon remand by the Supreme Court "for further consideration in light of Hewitt-Robins, Inc. v. Eastern Freight-Ways, Inc., 371 US 84," the court holds that shipper's amended complaint, as-

serting a common law right of action against motor carriers for failure to provide service, states a common law right of action which survived enactment of the Motor Carrier Act. What effect that act or any other federal statute may have on the surviving common law cause of action will have to be determined by the District Court in further proceedings.—Pensick & Gordon, Inc. v. California Motor Exp., 323 F. 2d 769 (770)*.

Since the Hewitt-Robins case is not construed as holding that the Motor Carrier Act created a statutory cause of action cognizable in the federal courts in the first instance, or as changing the holdings in 359 US 464 or 216 F.2d 543, further proceedings in the lower court, grounded solely in common law rights, will be limited to plaintiff and those defendants as to whom diversity exists. Starting point for such further proceedings will rest on the long recognized doctrine that a cause of action exists against a common carrier for unjustified failure or refusal to transport freight. A situation where common law rights of the parties must be balanced in light of the pertinent federal statutes may well be disclosed; resolution can best be accomplished after a full airing and consideration of all the facts. Remanded for further proceedings consistent with views expressed.—Id., pp. 771-2.

While quantum of service required at a particular point and facilities needed therefor depend on the circumstances and are within defendant's managerial discretion, it is required to render reasonably continuous and adequate service at St. Joseph, Mo., so long as its authority for that point remains effective. Losses from operations do not justify discontinuance, without notice, of virtually all physical service and also of telephone service at that point. As a bare minimum defendant should reestablish a realistic holding out of service to St. Joseph shippers, including some reasonable means whereby the shipping public may contact it to request service; otherwise, revocation of its authority for St. Joseph will be considered. Compliance order entered.—Cham. of Com. of St. Joseph, Mo. v. Red Ball Exp. Co., 91 M.C.C. 513.

The general requirement that motor common carriers provide adequate service does not extend to service which may be provided through a combination of authorities.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (424).

Respondent is required by §216(a) and (b) to provide adequate service, equipment, and transportation facilities, and §§204(a)(1) and 208(a) authorize the commission to impose conditions respecting such service; also, respondent's certificate specifically requires the holder to render reasonably adequate and continuous service as authorized. Respondent has not complied with his certificate when he has not handled one shipment thereunder since it was issued, and now has no equipment suitable for performing service authorized; his infrequent and unsuccessful attempts to obtain traffic indicate either lack of interest on his part or lack of public need for the certificate; and there is no showing that he has any future intentions or plans to institute effective service. Order entered requiring respondent, within reasonable time as specified, to institute and maintain reasonably adequate and continuous service under his certificate and to comply with rule 1.99 of the Rules of Practice, failing which the question of revocation will be determined by further proceedings under §212(a).—Dallas—Revocation of Certificate, 94 M.C.C. 15 (17-8).

Classification of Property: Rules and Regulations

694. Purpose of classification, generally. —[Vol. 18].—The classification and the class tariff, though complementary, serve entirely different purposes: the classification is designed to reflect characteristics of each commodity by establishing relations of a multitude of articles to each other in the rate structure, all to end of insuring that relatively favorable or unfavorable characteristics are appropriately reflected in carrier's charges; the class tariff, on the other hand, reflects characteristics of the haul, not the commodity, by establishing a relationship between localities based on weight and distance. By use of the classification in conjunction with the class tariff carriers are able to publish reasonable charges for transporting all articles of commerce between all points in United States without necessity of publishing billions of separate and distinct rates.—General Increas-

es—Eastern Central Territory, 316 I.C.C. 467 (483).

695. Basis of distinction.—[Vols. 12-14].—Although language of §216(b) varies slightly from that of §1(6), the statutory duty imposed on rail and motor carriers to establish and maintain reasonable classifications of freight is the same. But though the commission has no authority to exempt carriers from that duty, it likewise has no authority to assume, contrary to fact, that elements considered in establishing reasonable classifications, such as density and value of service, have any material significance in transportation of shipments weighing less than 300 pounds. Labor represents a high percentage of cost of terminal service, which in turn is about 80 percent of total cost of handling small shipments, and the steadily rising cost of labor justifies treatment of small shipments as a separate and reasonable classification within meaning of the statute. Respondents have found it impossible to give effect to classification ratings on small shipments and at same time avoid continuing losses; proposed scales of constant or flat charges on six weight brackets of shipments under 300 pounds, regardless of classification ratings, are not inherently unlawful.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (483, 484). [But see dissent.]

Difficulty of making classification revisions necessary to reflect current values of the various types of property transported and keep abreast of changes due to scientific, engineering, and industrial developments, noted.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (500)*.

704. Density of commodity.—[Vols. 16, 18, 19].—See Overnite Transportation Co. v. United States, §216(g), n. 25.

735. Household Goods.—[Vols. 14-18].—Extra labor charges are not warranted merely because loading may be more difficult in one instance than another; it is carrier's obligation to perform the service contracted for by shipper, and number of men utilized is a matter of managerial discretion; if carrier wishes to speed up loading time, it is free to hire extra help at its own expense; and extra charges might be provided for shipments moving to or from a location above a certain floor, or where the goods are located more than a certain distance from closest point the vehicle can reach.—Koss v. A. A. Lexington Moving & Storage Co., 315 I.C.C. 355 (358).

Defendant's acceptance of order for movement of a shipment of household goods and giving of an estimate without first having viewed the goods to be moved violated §176.10(a) of the commission's regulations, which requires visual inspection of the goods by the estimator; purpose of estimate is defeated unless it is reasonably accurate, which requires such inspection.—Id., p. 358.

Divided-shipment rules of household-goods carriers are similar in principle to stopping-in-transit rules of other motor common carriers for partial loading and unloading.—John F. Ivory Storage Co., Inc. v. Atlas Van Lines, Inc., 316 I.C.C. 224 (226)*.

Certain of defendants' consolidation and divided-shipment rules are unjust and unreasonable because vague, indefinite, or ambiguous in that they fail to provide specifically that property of more than one family or establishment will be accepted as a single shipment when requirements of the rules are otherwise met; to provide that rates will apply, under a definite minimum weight, to combined weight of shipments consolidated under the rules, such entire shipment to move on one bill of lading; or to define points of origin or destination specifically, resulting in uncertainty of their application. Assailed rules ordered canceled to extent found unlawful.—Id., p. 226.

Proposed modified rule for settlement of household-goods claims, under which carrier moving goods of a shipper's employees at released rates undertakes, for a charge of $10 per shipment, to arrange for repair of damaged articles and make settlement with shipper for those lost or damaged beyond repair, subject to reimbursement by shipper for amounts exceeding carrier's liability, provides a lawful, economical, and efficient method of settling claims, beneficial to all concerned; carrier's agent at destination is in position to inspect shipment, see to repairs, and arrange for payment of claims without undue expense or delay, and proposed charge appears compensatory.—Claim Settlement on

Household Goods—U.S.A., 318 I.C.C. 359 (361, 362).

Regulations of the Commission

29 FR 6324, May 14, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §§176.3(c), 176.7 and 176.8, amended, §§176.9 and 176.10, revised and §176.14 Claims for loss or damage, added, effective July 10, 1964.

29 FR 7390, June 6, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitions, revised, effective July 20, 1964.

29 FR 8481, July 7, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order (29 FR 6324) postponed to Nov. 10, 1964.

29 FR 9711, July 18, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitios, effective date of order (29 FR 7390) postponed from July 20, 1964 to Oct. 1, 1964.

29 FR 16125, Dec. 3, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) postponed to Dec. 30, 1964.

29 FR 19107, Dec. 30, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) further postponed to Feb. 1, 1965.

30 FR 3597, Mar. 18, 1965, Part 176: Effective date of order of May 6, 1964 (29 FR 7390) postponed to April 2, 1965.

30 FR 3711, Mar. 20, 1965, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.4 Accessorial or terminal services; tariffs providing therefor; packing and uncrating charges, amended and revised, effective on date of order.

29 FR 9835, July 22, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, corrections of order (29 FR 6324) in §176.8(c) and §176.12(a) and (b).

29 FR 14173, Oct. 15, 1964, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of order of May 6, 1964 (29 FR 7390) further postponed to Nov. 30, 1964.

29FR 15289, Nov. 14, 1964, Part 176: Transportation of Household Goods in Interstate of Foreign Commerce, §§176.3(c), 176.7, 176.8, 176.10 and 176.12 amended, and §176.14 Claims for loss or damage, added, effective Feb. 1, 1965.

30 FR 6117, Apr. 30, 1965, Part 176: Effective date of order of May 6, 1964 (29 FR 7390) postponed until further order, effective on date of order.

30 FR 16203, Dec. 29, 1965, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of regulations prescribed by order of May 6, 1964 (29 FR 7390) having been indefinitely postponed, currently effective regulations are published.

31 FR 8915, June 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §176.1 Definitions, revised, effective August 1, 1966.

31 FR 8916, June 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, §§176.3(c), 176.7, 176.8 revised; §176.9(b) and (c) revoked and §176.9(d) renumbered as paragraph (b); §176.10(a) and (c) revised, §176.10(d) is renumbered as §176.10(f) and new rules numbered §176.10(d), (e), and (g) are added; §176.12 is amended, and a new rule numbered §176.14 is added, effective Sept. 30, 1966, and will apply only on household goods removed from shipper's premises on and after effective date.

31 FR 10193, July 28, 1966, Part 176: Transportation of Household Goods in Interstate or Foreign Commerce, effective date of regulations prescribed by order of June 7, 1966 (31 FR 8916) postponed effective date to Jan. 1, 1967.

31 FR 13446, Oct. 18, 1966, Part 7: List of Forms, Part II, I C Act, Form BOC 101, prescribed as required by §176.10(e); §7.101 BOC 101, Form BOC 101 to report to the Commission all instances in which actual charges exceed written estimates by 10 percent or more, pursuant to §176.10(e), effective Jan. 1, 1967.

31 FR 14879, Nov. 24, 1966, Part 176: Transportation of Household Goods In Interstate or Foreign Commerce, §176.10(f), amended, Estimates of Charges, Reweighting, effective on date of order.

32 FR 6843, May 4, 1967, Part 287: Freight Rate Tariffs, Schedules, and Classifications, §287.201 Released rates on household goods, amended, effective June 1, 1967.

Section 216. (c) [*§316(c) U.S.C.*] Through routes and joint rates.— [Unchanged except that the new sentence, below, was added at the end thereof by act of Aug. 24, 1962, Pub. Law 87-595, 76 Stat. 397. See vol. 10, p. 8195.]

* * *As used in this subsection, the term "common carriers by water" includes water common carriers subject to the Shipping Act, 1916, as amended, or the Intercoastal Shipping Act of 1933, as amended (including persons who hold themselves out to transport goods by water but who do not own or

operate vessels) engaged in the transportation of property in interstate or foreign commerce between Alaska or Hawaii on the one hand, and, on the other, the other States of the Union, and the through routes and joint rates so established and all classifications, regulations, and practices in connection therewith shall be subject to the provisions of this part.

Historical Note

The commission recommends that parts I, II, and III be amended to authorize the commission, after investigation and hearing, when necessary and desirable in the public interest, to require establishment of through routes and joint rates between motor common carriers of property and between those carriers and carriers by rail, express, and water.—Annual Report, 1962, p. 201; renewed, Annual Report, 1963, p. 19, Annual Report, 1964, p. 69.

Notes of Decisions

Volume 10—p. 8195; Volume 11—p. 9546; Volume 12—p. 10451; Volume 13—p. 11105; Volume 14—p. 11628; Volume 15—p. 12238; Volume 16—p. 12899; Volume 17—p. 13603; Volume 18—p. 14592; Volume 19—p. 15856.

3. Construction and interpretation.—[Vols. 10, 12-14, 16].— Authority for through routes and joint rates between motor carriers and railroads is in §216(c), and the Motor Carrier Act gives the commission power to regulate such routes and rates as well as standards and procedure for exercise of that power. Provisions of §216(c), (f) and (g) are almost identical with those in Part I applicable to railroads, except that establishment of joint rates and routes is voluntary under Part II and cannot be compelled; thus, on their face, statutes dealing with combined motor-rail operations from a complete, self-contained system of regulation. Language used by Congress in Part II leaves no doubt that provisions thereof, dealing with through motor-rail routes and rates, were intended to be exclusive. Reading Parts I and II together, exclusion of rail portion of motor-rail operation from Part I is inherent in its inclusion under provisions of Part II, while there is nothing to indicate that motor-carrier portion was intended to be included under Part I; and, absent a clear provision by Congress, courts have refused to cross-apply one Part of the act to another.—New York Central R. Co. v. United States, 267 F. Supp. 619 (626-8)*.

Section 216(c) is permissive in nature, and the commission has no authority thereunder to require carriers to establish through routes. Different modes may establish through routes and joint rates by voluntary arrangement; and while joint rates necessarily include through routes, latter may exist in their absence; a through route may be evidenced by an express or an implied arrangement, and its existence is a question of fact.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (427-8).

Under the 1962 amendment of §216(c), water carrier operating under jurisdiction of Maritime Commission between ports in Alaska and Washington became subject to the commission's jurisdiction, including any necessary administrative determinations under §5a, when it joined with a motor carrier subject to Part II in establishing through routes and joint rates between Seattle and points in Alaska; by its terms §5a applies to any common carrier subject to Part II, and the water carrier is subject to Part II to extent it engages in transportation described by §216(c) as amended.—Alaska S.S. Co. and Consolidated Freightways—Agreement, 322 I.C.C. 726 (728).

4. Interchange and transfer.—[Vols. 11, 12, 14-18].—In order that common carriers may fulfill their public obligation to provide adequate service and facilities for interstate transportation of property, the Act itself encourages interchange by providing, in §216(c), a correlative privilege of establishing through routes with other common carriers by motor, rail, and water. Therefore, restrictions against interchange are not readily imposed on authority granted.—Tompkins Motor Lines, Inc., Extension, 95 M.C.C. 472 (481).

10. Through routes and joint rates.—[Vols. 10-19].—Under §216(c) motor common car-

riers of property may establish through routes and joint rates, but no statute requires them, or authorizes the commission to require them, to do so. Therefore, carrier was free to discontinue its participation, with plaintiff and a third carrier, in tariff establishing through routes and joint rates for three-line transportation of meats and packinghouse products. After it did so the the three-line joint rate was no longer effective, since the through operation was eliminated by its action of withdrawing from participation.—Great Western Packers Exp., Inc. v. United States, 246 F. Supp. 151 (153, 154-5)*.

Although authority for establishment of through routes and joint rates between motor carriers and railroads is permissive, and the commission's conclusion in 219 ICC 245 (1936), that when a motor carrier enters into such joint rates and routes it assumes obligations similar to those of participating railroad in observance of §4, has been followed in a number of its later decisions, the very language used by Congress in enacting the Motor Carrier Act permits of no doubt that it intended to and did create a complete, self-contained regulatory scheme covering all-motor, joint motor-rail, and joint motor-water rates. While nothing in the law relieves the participating railroad from provisions of §4, nothing therein compels joint motor-rail rates to be treated as a unit to compel their treatment under §4(1). Entire thrust of Parts I and II of the act, read together, indicates a contrary conclusion.—New York Central R. Co. v. United States, 267 F. Supp. 619 (624, 626-7, 629)*.

Where it so intended, Congress explicitly covered by §4(1) carriers subject to another part of the act and, where intended, it explicitly subjected motor carriers to the same rules as railroads; exclusion of rail portion of joint motor-rail rates from Part I is inherent in its inclusion under provisions of Part II, while nothing indicates that the motor carrier portion was to be included under Part I; such a definite pattern of inclusions and omissions dictates the conclusion that provisions of Part II, dealing with through motor-rail routes and rates, were intended to be exclusive. Accordingly, the commission's ruling that motor-rail or motor-rail-motor rates are subject to §4, and its finding that considered joint rates for TOFC service violate long-and-short-haul provisions of §4(1), are annulled and set aside.—Id., pp. 622-3, 627, 630-2.

Motor carrier rates subject to a minimum weight in excess of the physical or legal carrying capacity of vehicles are not unlawful per se, nor are they contrary to law merely because on same level as rail incentive rates. Reduced joint motor-water-motor commodity rates on acids, chemicals, drugs, and toilet preparations from New York and New Jersey rate groups to Dallas, Fort Worth, and Houston, Tex., published as incentive rates on weight of shipments in excess of 40,000 pounds, are lawful when they are compensatory and no lower than necessary to meet competition of like incentive rates for rail-water-rail service.—Drugs and Related Articles from N.J. and N.Y. to Tex., 318 I.C.C. 67 (71-2, 76-7).

Proposed proportional rates published to apply in connection with a prior or subsequent movement in rail TOFC service do not violate §216(c) by requiring rail protestants to join in through routes with respondent against their will. Respondent does not seek to establish joint rates, and whether through routes would exist in their absence is a question of fact. The proposals do not require protestants to join in through routes with respondent, but they may freely agree to institute such through routes and to withdraw from such agreements. There is nothing inherently unlawful in the method of publication adopted by respondent within its managerial discretion.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (427-8).

Both proposed joint single-factor rail-motor rates from Flint and North Flint, Mich., and assailed joint rail-motor rates from Lansing and Pontiac, Mich., on automobiles in trilevel cars to Minneapolis, thence by motor carrier to destinations in Iowa, Minnesota, the Dakotas, and Montana, on somewhat lower level per vehicle for compact automobiles loading 15 per trilevel car than for standard automobiles loading 12 to a car, are shown to be generally compensatory on both out-of-pocket and fully-distributed cost bases and therefore just and reasonable. As the rail-motor routes are in all instances the low-cost routes com-

pared with protestants' truck-boat-rail or truck-boat-truck routes, and latter are not shown to possess any service advantage requiring protection, considered rates are not competitively destructive in violation of the national transportation policy.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215 (225-6); Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (306, 309, 312)*.

Joint rail-motor, under TOFC plan V, see Motor Vehicles from Kansas City to Ark., La., and Tex., §1(5), n. 663.

See also National Auto. Transporters Assn. case, NTP, n. 10 *substituted service*.

See also Intercoastal Any-Quantity Class and Commodity Rates, §305(a), n. 165.

11. Terminal carriers; or service terminal in character.—[Vol. 10].—Though proposed plan V TOFC rates ostensibly offer joint motor-rail-motor service, essentially they provide for a rail line-haul only, with motor pickup and delivery within terminal areas of the origin and destination points named, which under commission precedents is considered incidental to the line haul and performed for the line-haul carrier within meaning of §202(c)(2); and that 46 MCC 623, holding that motor carriers are not proper parties to joint rates when their service is performed within terminal areas, involved joint all-motor rates rather than motor-rail, is a distinction without a difference. As there is no showing whether any of the numerous points grouped with the named points are beyond the respective terminal areas thereof, and therefore no proof that respondent motor carrier would perform any line-haul service, the proposed rates are not shown to be lawful.—Rubber Articles, Philadelphia to Ill., Ky., Mich., & Mo., 319 I.C.C. 632 (635-6, 638).

12. Application of §4 of Part 1.—[Vols. 10-13, 17-19].—While the commission's ruling that §4 of Part I of the act applies to joint rail-motor or motor-rail-motor rates (derived from 1936 decision in 219 ICC 245 that has since been followed in a number of cases) may be well established, administrative interpretations do not become ruling law on the issue, regardless of the time they may have been in effect, if initial interpretation was erroneous or beyond statutory authority in the first place; administrative construction is merely an aid to judicial interpretation and is not binding on the courts. Provisions of the statute are clear. Part I of the act applies to transportation by railroads or partly by rail and partly by water, and §4(1) applies to railroads and interstate water carriers; Part II applies to motor carriers engaged in interstate or foreign commerce, and the term "interstate commerce" includes commerce which moves partly by motor vehicle and partly by rail, express, or water.—New York Central R. Co. v. United States, 267 F. Supp. 619 (624-5, 626)*.

Authority for establishing through routes and joint rates between motor carriers and railroads is §216(c), and Part II gives the commission explicit power to regulate such routes and rates; Part II provisions dealing with combined motor-rail operations form a complete, self-contained system of regulation that includes protection against the evil dealt with in §4(1); thus, Congress intended to and did create a self-contained regulatory scheme covering all-motor and joint motor-rail and motor-water rates. Also, where it was so intended, Congress explicitly covered carriers subject to another part of the act by §4(1), and explicitly subjected motor carriers to the same rules as railroads. Since inclusions and omissions form such a definite pattern, the maxim "Expressio unius est exclusio alterius" obviously applies, and leads directly to the conclusion that Part II provisions, dealing with through motor-rail routes and rates, were intended to be exclusive. Considered joint motor-rail or motor-rail-motor rates (for TOFC service) are not subject to provisions of §4; commission's order annulled and set aside.—Id., pp. 624, 626-7, 630-1.

Although Part II does not contain an aggregate-of-intermediates provision as does Part I, the commission has often held that through motor carrier rates which exceed the aggregate of intermediate rates are prima facie unreasonable. This presumption, however, is rebuttable.—Petroleum and Plastics from Texas to Indiana and Ohio, 316 I.C.C. 155 (156).

Section 216. (d) [*§316(d) U.S.C.*] Undue preferences or prejudices prohibited.—[Unchanged. See vol. 11, p. 9548.]

Amendment, see footnote p. 9548.

Notes of Decisions

Volume 10—p. 8200; Volume 11—p. 9549; Volume 12—p. 10453; Volume 13—p. 11107; Volume 14—p. 11629; Volume 15—p. 12239; Volume 16—p. 12900; Volume 17-p. 13605; Volume 18—p. 14593; Volume 19—p. 15858.

1. Construction and interpretation.—[Vols. 10-13, 17, 19].—While §216(d) refers only to common carriers, 18 USC §2 makes it an offense for any person to command, induce, or cause a violation of federal law; and the Elkins Act gives federal courts jurisdiction to issue injunctions to prevent violations of the Interstate Commerce Act. Therefore, anyone who commands, induces, or causes another to violate §216(d), dealing with discrimination, is a principal offender under 18 USC §2 and is subject to the court's injunctive power.—United States v. City of Jackson, Miss., 318 F. 2d 1(9)*.

The commission has power to implement §216(d) by issuance of a general order prescribing regulations to prevent race discrimination between passengers in vehicles or terminal facilities when used in interstate commerce; record of proceedings before the commission adequately supports its findings that the policy of requiring racial segregation in facilities used for interstate commerce has been practiced on such a regular basis that case-by-case action initiated by individual complainants is not an adequate remedy; existence of statutes in many states expressly requiring segregation by race is itself an adequate basis for such finding. The contested order is therefore a valid and binding order of the commission; injunction denied.—State of Georgia v. United states, 201 F. Supp. 813 (815)*.

Plaintiffs' attempt to inject a question of undue preference and prejudice is rejected as irrelevant to the issue or proof in suit to set aside order requiring cancellation of territorial rate increases resulting in higher rates to border points than to points beyond in another territory. Under §216(d) motor carrier rates must meet two separate and distinct criteria: (1) they must be "just and reasonable"; (2) they must not result in "undue or unreasonable preference or prejudice." The commission's report is clear that the higher border-point rates were condemned because in that respect they were not shown to be just and reasonable; it did not purport to find that they resulted in undue preference and prejudice, and such a finding was not necessary for the decision reached or the validity of the order.—Accelerated Transport-Pony Exp., Inc. v. United States, 227 F. Supp. 815 (821)*.

Condition of reduced rates on gasoline and fuel oil, that respondent be allowed continuous loading and unloading from 12.01 a.m. Monday to 11:59 a.m. Saturday, is not unlawful because it might possibly be prejudicial to other carriers; §216(d) specifically excepts from its prohibitions the traffic of another carrier.—Gasoline and Fuel Oil within Middlewest Territory, 316 I.C.C. 435 (439).

The commission has power to promulgate general regulations forbidding race segregation of passengers in vehicles or terminal facilities in use in operations in interstate commerce. Entry of orders under §216(e), after opportunity for hearing, requiring a particular carrier or carriers to cease and desist from discriminatory or prejudicial practices, is not an exclusive remedy for enforcement of prohibitions of §216(d); power to enforce provisions of part II by general rules or regulations is also conferred by §204(a)(6); rulemaking power there set forth is coterminous with scope of agency regulation and extends to the transportation of passengers and property by motor vehicle engaged in interstate or foreign commerce and to procurement and provision of facilities for such transportation [344 US 298].—Discrimination—Interstate M. Carriers of Passengers, 86 M.C.C. 743 (745)*.

Proviso of §216(d) excluding traffic of other carriers from its prohibition is not a defense against a finding of discrimination as between traffic of interstate shippers merely because assailed practice may also work to detriment of complaining carrier.—Armored Carrier Corp. v. B.D.C. Corp., 92 M.C.C. 665 (667).

15. Differences in and comparisons of rates.—[Vols. 10, 12-14, 16, 18, 19].—Part I, §3(1), n. 67.] General declarations as to competition, unsupported by evidentiary facts, and a mere showing of disparity of rates do not establish undue prejudice and preference.—Petroleum and Plastics from Texas to Indiana and Ohio, 316 I.C.C. 155 (158).

Although South Dakota shippers compete with shippers from other States in common markets, and rate relation existing for remainder of the year between South Dakota points and points in other States is disrupted during March and April of each year by application of frost law charges on class- or exceptions-rated traffic from South Dakota, general allegation that certain of the South Dakota shippers must absorb the frost law charges in order to compete in certain markets is insufficient to support a finding of undue prejudice. Complainants must demonstrate that the rate disparity caused by the frost law charges has operated to disadvantage of the South Dakota shippers, but evidence in this respect, particularly with reference to need of those shippers to absorb such charges, lacks the definiteness required to establish undue prejudice.—Traffic Bureau of Sioux Falls v. Barber Transp. Co., 316 I.C.C. 325 (348).

Nor is unjust discrimination established by showing that shipments subject to the frost law charges may move in same vehicle, over same highway, and for same distance within South Dakota as shipments not subject thereto, when there is no showing that shippers or receivers of freight in the same community within South Dakota pay different "prices" for movement of like shipments from same origin to same destination by same defendant or defendants [citing 168 US 144]. Thus the frost law charges are not shown to violate §216(d).—Id., p. 349.

A mere showing of differences in rates, coupled with general declarations respecting competition between shippers or receivers in same rate group, or between aggrieved localities and others, is insufficient to warrant a finding of undue preference and prejudice.—L.T.L. Pickup & Delivery Charges—from or to New York, 319 I.C.C. 230 (233).

Record does not support contention that protestant's t.l. minimum weight for interstate shipments of petroleum products, though higher than its intrastate minimum and exceeding volume of any shipments shippers supporting application wish to make, results in discrimination against interstate commerce in favor of intrastate. While the minimum weight is an integral part of any t.l. rate and is to be considered in determining nature of such a rate, whether discrimination exists can be determined only by reference to relation of the actual rates charged; no such evidence has been submitted.—Fleet Transport Co. of Ky., Inc., Extension, 88 M.C.C. 762 (765, 766).

20. Localities.—[Vols. 10-13, 16, 18, 19].—Part I, §1(4), n. 106.—Proposed multiple pickup-and-delivery and stoppage-in-transit rules provide that when Austin, Ind., is the origin no charge will be made for split deliveries at destination, and when it is the destination no stopoff charge will be made, also that charges on shipments originating at Austin will be determined on actual weight of each portion stopped in transit, at actual rate to point of stopoff, thus according Austin shippers and receivers lower charges for services provided under the rules than those at other points. As transportation circumstances affecting traffic to or from any of points involved do not appear to differ materially, there are no grounds for such preferential treatment of Austin; proposed rules found unlawful and ordered canceled.—Split Pickup, Split Delivery, Stopping—Canned Goods, 316 I.C.C. 202 (203-4).

Proposed establishment of reduced class rates reflecting short highway mileages between Greenville, Miss., and some 20 Arkansas points, while maintaining present rates on higher bases to other points served by same carrier or carriers, including certain intermediate points, appears fraught with undue prejudice and preference as between points excluded and included; not approved.—Class Rates between Greenville, Miss., and Arkan-

sas, 316 I.C.C. 629 (632).

That 6-percent increase proposed in transcontinental rates and charges excludes some areas and some traffic is not unduly discriminatory; lawfulness of particular rates is not in issue, and approval is restricted to lawfulness of the proposed increase as applied to the basic rates.—General Increases—Transcontinental, 319 I.C.C. 792 (804).

25. Shippers.—[Vols. 10-14, 16-19].—Evidence before the commission revealed that, though originally some carriers furnished helpers without charge for loading and unloading of t.l. freight in Pittsburgh-Wheeling area for their own convenience, others were forced to adopt the same practice to remain competitive, with result that a service costing some $28 per day for each helper was furnished free of charge to some persons and denied to others. There was substantial evidence that furnishing of such free service violates §216 in giving an undue and unreasonable advantage to persons who receive the service, to localities where the service is performed, and to t.l. traffic between the Pittsburgh area and origins or destinations in middle Atlantic territory, and in subjecting persons, localities, and traffic not receiving such free service to unjust discrimination and undue prejudice and disadvantage. The commission's order requiring carrier defendants before it to cease the unlawful practice and to publish the remedial tariff rule prescribed, sustained.—Teamsters Joint Council 40 (J.C.) v. United States, 238 F. Supp. 301 (307)*.

Since the competitive air-freight rates on higher-rated articles are lower than respondent's rates for normal service, possibility that proposed any-quantity all-freight rates for expedited service between Atlanta and Chicago will result in unjust discrimination between shippers is remote.—Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663 (666).

Section 216(d) is intended to protect shippers, not competing carriers; protestant carrier association's contention that proportional all-commodity rates established to apply in conjunction with rail plan III TOFC service unduly prefer larger shippers is not supported by complaint of any shipper.—Proportional Rates between Harrisburg & Points in Pa., 315 I.C.C. 499 (503); moreover, the proportional rates apply to traffic of all shippers who choose to use plan III service to or from Harrisburg.—Freight, All Kinds, between Harrisburg and Pa. Points, 316 I.C.C. 41 (44).

While holding in 236 US 662 that the statutory prohibitions against unjust discrimination include the giving of preferences by means of consent judgments or waiver of defenses open to the carrier had reference to carriers and limitations of actions under Part I, that principle applies equally to the giving of unlawful preferences to shippers under Part II. Since the defense of the statute of limitations may not be waived as to shipments barred through failure to file action at law during the statutory period, voluntary payment of any overcharge claims on such shipments would violate the anti-discrimination provisions.—Bemis Bro. Bag Co. v. Felten Truck Line, Inc., 316 I.C.C. 417 (418).

Condition of reduced rates on gasoline and fuel oil, that respondent be allowed continuous loading and unloading from 12:01 a.m. Monday to 11:59 a.m. Saturday, is not inherently prejudicial or preferential; the rates apply for any shipper at involved origins who meets those requirements, and there is no evidence that any shipper at another origin would be disadvantaged in any respect.—Gasoline and Fuel Oil within Middlewest Territory, 316 I.C.C. 435 (439).

Since a box is an indefinite unit, publication of rates on bananas in cents per box, without a tariff definition of "box," would open the door to undue preference and prejudice forbidden by §216(d).—Bananas, Mobile & New Orleans to Idaho, Mont., Oreg., 318 I.C.C. 140 (142).

Although refinery which distributes sugar from Port Wentworth, Ga., and in whose traffic respondent has participated, considers the south Atlantic States to be its primary market area and objects to proposed commodity rate from Louisiana origins to North Carolina destinations, on ground that its Louisiana competitors should not have such rates available to points in its primary market area, no undue prejudice is shown to result therefrom.—Sugar from Louisiana to North Carolina, 319 I.C.C. 107 (109).

Proposed increased pickup and delivery

charges to be added to New York line-haul rates on traffic moving through that city to or from points in area just north thereof and on Long Island are not shown to be discriminatory when protestants have available carriers serving Long Island which do not participate in those charges and render service at a somewhat lower level of rates, and do not show that they have used services of carriers participating therein. Moreover, protestants have not shown that services rendered for their competitors in or near New York-New Jersey metropolitan area are of like and contemporaneous nature and performed under substantially similar conditions.—L.T.L. Pickup & Delivery Charges—from or to New York, 319 I.C.C. 230 (233).

Proposed reduced rates on meats and packinghouse products from the Midwest to mountain-Pacific territory do not unduly prefer midwestern packers and unduly prejudice west coast packers and livestock growers. There is no substantial evidence that they will harm west coast packers, and as those States do not begin to produce all the hogs required to meet consumer demand in the area, freight rates can have only a negligible effect on competition between those large regions in a common market; west coast packers who slaughter will retain important advantage of supplying fresh pork, which commands premium prices. Moreover, the commission has no right to preserve any absolute freight-rate advantage enjoyed by west coast protestants in the face of convincing proof that respondents, midwestern packers, and some west coast packers would thereby be injured.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (675-6).

Proposed proportional rates on t.l. shipments of freight, all kinds, in trailers furnished by shipper or consignee, applicable in connection with a prior or subsequent movement in rail TOFC service, are not unjustly discriminatory in violation of §216(d) when they apply to traffic of all shippers or consignees who choose to use the service. Section 216(d) is intended to protect shippers, not competing carriers, and no shipper appeared to protest the proposals.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (427).

Applicant's proposed lease of terminal facilities from supporting cement shipper will not adversely affect public interest; rental charges assertedly will be adequate to amortize shipper's cost of constructing such facilities and there is no indication that any improper practices would result or that applicant would derive any undue transportation advantages; inasmuch as applicant will be required as a common carrier to serve all persons needing its service indiscriminately and without undue preference or prejudice, appropriate remedies are available under the act if its rental of terminal facilities from that shipper should result in improper discrimination and prejudice or unlawful rebates.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (306).

Contention that applicant's weekly charge for daily pickup in its parcel-delivery service discriminates against infrequent shippers, particularly individuals desiring to make shipments from their residences, affords no ground for denial of extension application; there is no showing that protestant has challenged such charge in an appropriate rate proceeding, or that applicant has refused shipments brought to its offices to avoid the service charge.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (743)*.

Defendant's provision of free intrastate service in transportation of cash letters to a Milwaukee bank specifically named in its Wisconsin intrastate authority from country banks which are correspondents thereof and also customers of defendant in interstate transportation of like papers to Chicago, for which it makes appropriate charge, while withholding such free intrastate service from its other interstate customers in Wisconsin and in Indiana and Michigan, falls directly within the proscription of §216(d). Cease-and-desist order entered.—Armored Carrier Corp. v. B.D.C. Corp., 92 M.C.C. 665 (667).

See also Claim Settlement on Household Goods, §217(b), n. 50.

30. Passengers.—[Vols. 10-17, 19].—Part I, §3(1), n. 103—No State may require racial segregation of intrastate or interstate transportation facilities. The question is no longer open; it is foreclosed as a litigable issue.—Bailey v. Patterson, 369 U.S. 31 (33). [Not

arising hereunder.]

Policy and practice of affording separate passenger terminal facilities according to race, enforced or authorized by state law or by any other form of state action, not only offends provisions of the statute but also violates the Fourteenth Amendment; in addition, insofar as state-imposed segregation bears upon interstate travelers, it offends the Commerce Clause. Defendant city and its officials, by maintaining signs on sidewalk adjacent to passenger terminal which indicate that any portion of those facilities are separated on the basis of race, effect racial segregation therein in violation of the Commerce Clause, federal statutes, and the commission's regulations. And defendant carriers, though not responsible for the signs, are proper parties in injunction proceeding since they utilize those terminal facilities. Injunction should be issued against carrier and noncarrier defendants.—United States v. City of Jackson, Miss., 318 F. 2d 1 (5-7, 10, 17)*.

Louisiana statutes requiring separation of passengers according to race in common carrier terminal facilities, and posting of signs therein designating those facilities for such separate use, conflict with the commission's order in 86 MCC 743 (Part 180a in Title 49 of the Code of Federal Regulations), contravene §216(d), and are unconstitutional and null and void; enforcement thereof enjoined.—United States v. Lassiter, 203 F. Supp. 20 (22-3, 25).

Inasmuch as enforcement by defendant city and its police department of racial segregation in the facilities, including restaurant facilities, of city bus terminal regularly used by interstate motor carriers of passengers violates both §216(d) and the Elkins Act, plaintiff is entitled to injunctive relief as a matter of law; permanent injunction granted.—United States v. City of Shreveport, La., 210 F. Supp. 708 (710-1).

Discriminatory practices in violation of §216(d) are being followed by regulated motor common carriers of passengers: in a substantial part of United States many Negro interstate passengers are subjected to racial segregation in several forms, including seating in buses and use of eating, restroom, and other terminal facilities; such segregation is sometimes enforced by carriers or their employees, in many cases by local officials purporting to apply State or local segregation laws and ordinances; many terminals display signs designating facilities by race, and Negro passengers are often unlawfully required to establish their interstate passenger status affirmatively to avoid racial segregation in use of terminal facilities—a showing not required of white passengers.—Discrimination—Interstate M. Carriers of Passengers, 86 M.C.C. 743 (745-6, 753)*.

The commission's experience in administering part II verifies the prevalence of such practices, and instant record is convincing that case-by-case action on individual complaints is not by itself an adequate remedy and that prescription of general regulations to supplement the remedy provided by §216(e) is warranted. As §216(d) is directed to common carriers, the regulations prescribed reflect this statutory limitation; and since commission's jurisdiction does not extend to operations of an interstate carrier when it is transporting no interstate passengers and its vehicle is in fact engaged exclusively in intrastate commerce, they reflect that limitation also.—Id., pp. 746-7, 753.

Although many bus operators, for reasons of efficiency, combine their operations in interstate and intrastate commerce, voluntary transportation of interstate and intrastate passengers on same vehicle does not justify separation of interstate passengers on a racial basis; nor may interstate passengers using such common facilities be subjected to any inquiry as to whether they are traveling in intrastate or interstate commerce. Therefore, to enforce the statutory prohibition of unjust discrimination against interstate passengers it is necessary to prohibit the use in interstate operations of any vehicle or facility on or in which segregation is practiced.—Id., p. 747.

Regulations (49 CFR 180a (1) et seq.) set forth in appendix B are reasonable, necessary, and lawful; prescribed.—Id., p. 753.

In connection with rule prohibiting seating of passengers on vehicles on basis of race, color, creed, or national origin, posting of appropriate notice to that effect aboard buses carrying interstate passengers is desirable. However, posting of such notice for an indefinite period will not be necessary, and that

requirement will terminate concurrently with effective date of requirement that plainly legible notice to same effect be printed on each ticket sold for transportation on a vehicle operated in interstate or foreign commerce.—Id., pp. 748-9.

Utilization in interstate commerce of terminal facilities involving separation of any portion thereof, or use thereof, on basis of race, creed, color, or national origin, including waiting room, restroom, eating, drinking, and ticket sales facilities, is prohibited. However, this rule would not apply to independent establishments where buses stop solely to pick up or discharge occasional passengers, or which merely sell tickets and post schedules, without more. Meaning of "terminal facilities" as used in the regulations, and sections thereof which that meaning affects, discussed.—Id., pp. 749-51.

For same reasons that justify posting of signs in buses, rule requiring posting of appropriate sign or placard containing full text of the regulations at "terminal facilities" utilized by carriers is also warranted.—Id., pp. 751-2.

A rule providing that carriers are not to be relieved of any obligations under the act is also justified; the regulations will not alter their duty to provide service to the public and to provide for the safety and comfort of passengers. However, it is not the purpose of the regulations to change any lawful functions of a carrier, and carrier may still exercise necessary reasonable control over its passengers; it may also continue to provide a bona-fide reserved-seat service, or offer its equipment for exclusive use of charter parties, provided that in so doing it engages in no discriminatory practice.—Id., p. 752.

And a requirement that respondents report to the commission any interference by others with their observance of the regulations, which the commission has power under §§204(a)(7) and 220(a) to prescribe, is a logical substantive aid to enforcement of the requirements of the act and will inform local officials and others of the requirement which the commission places on interstate motor carriers of passengers to refrain from unjust discriminatory practices.—Id., p. 752.

Applicant's transportation of stockmen between Ames, Iowa, and stockyards at Chicago is not a discriminatory service favoring desirable long-distance traffic, compared with Greyhound's inclusive service to all intermediate points, particularly in view of imposed restriction to passengers picked up or discharged at the stockyards; applicant offers a special service somewhat analogous to a door-to-door, on-call service, designed for a specific class of passenger for whom Greyhound's regular-route scheduled service has little appeal.—Myers, 89 M.C.C. 125 (129)*.

40. Preference within carrier's control.—[Vol. 19].—A motor common carrier has a duty to supply adequate and efficient service without undue preference, unjust discrimination, or destructive competitive practices. Extension authority for new furniture must be denied motor carrier which also conducts a storage and warehousing business, and in addition controls and is managed in common with a forwarder that routes a substantial volume of traffic to its warehouse and terminal; economic advantages resulting from those dual capacities and identity of controlling interests, coupled with applicant's ability to control routing of certain shippers' traffic, would enable it to compete on such preferential terms that proposed operation might seriously affect interest of the public dependent on existing motor carriers in the area; this situation offers opportunities for unjust discrimination and unfair competitive practices against the public, shippers, and retail furniture dealers.—M.G.M. Transport Corp. Extension, 89 M.C.C. 699 (701).

Section 216(e) [§316(e) U.S.C.] Complaints to and investigation by commission; power of commission to fix reasonable rates, regulations, etc.—[Unchanged. See vol. 10, p. 8204.]

Notes of Decisions

Volume 10—p. 8204; Volume 11—p. 9551; Volume 12—p. 10455; Volume 13—p. 11108; Volume 14—p. 11630; Volume 16—p. 12901; Volume 17—p. 13606; Volume 18—p. 14595; Volume 19—p. 15863.

2. Construction and interpretation.—[Vols. 10, 12, 13, 16, 17].—Although §216(e) provides that when the commission finds a rate or rule to be unlawful it shall prescribe a lawful rate or rule, instant record is too meager to warrant prescription of any rule in lieu of defendant's helper-service rule found unlawfully ambiguous. But though complainant contends that cancellation of the unlawful rule without prescription of a rule for the future will leave defendant without a tariff rule governing loading and unloading, thus permitting unlawful discrimination, should defendant engage in unlawful discrimination it will be subject to penalties provided by §222(c).—Middle Atlantic Conference v. Transport Corp., 321 I.C.C. 308 (312).

3. Complaints to, and jurisdiction of Commission.—[Vols. 10-12, 14, 17-19].—The Commission has no authority under part II to consider allegations of unreasonableness, unjust discrimination, or undue prejudice in motor-carrier rates on past shipments; but a carrier subject to the act may not charge or receive greater or less compensation than that specified in its tariffs, unless authorized to do so by competent authority.—Koss v. A. A. Lexington Moving & Storage Co., 315 I.C.C. 355.

While the commission had declined in the absence of unusual circumstances to entertain an adversary proceeding concerning unreasonableness under part II of the act prior to institution of a damage suit in court covering the same matter, it has ample authority to require motor common carriers to observe reasonable practices in connection with their rates and classifications and to consider complaints alleging unreasonable practices relating thereto.—Winthrop Laboratories Div., Sterling Drug v. Dorn's, 325 I.C.C. 654 (655).

See also the Hewitt-Robins case, §216(b), n. 450.

4. Parties.—[Vols. 12, 16-19].—See Arbet Truck Lines case, §216(g), n. 14.

5. Discrimination against interstate commerce; intrastate rates and practices—[Vols. 10, 12].—See Fleet Transport Co. of Ky. case, §216(d), n. 15.

Rules, Regulations, Practices Prescribed

81. When no order necessary.—[Vol. 17].—Where rates charged are found inapplicable, it at once becomes the duty of the carrier to refund any overcharges, without an order or other action by the commission.—Koss v. A. A. Lexington Moving & Storage Co., 315 I.C.C. 355 (356).

See also Bemis Bro. Bag. Co. case, §216(d), n. 25.

Section 216. (f) [*§316(f) U.S.C.*] Commission empowered to establish just division of joint rates.—[Unchanged. See vol. 10, p. 8207.]

Notes of Decisions

Volume 12—p. 10457; Volume 13—p. 11109; Volume 15—p. 12240; Volume 19—p. 15864.

Section 216.(g) [§316(g) U.S.C.] New rates; determination of fairness by commission; suspension.—[Unchanged. See vol. 11, p. 9552.]

Amendments, see footnotes, vol. 10, p. 8208, vol. 11, p. 9552.

Notes of Decisions

Volume 10—p. 8208; Volume 11—p. 9553; Volume 12—p. 10457; Volume 13—p. 11109; Volume 14—p. 11630; Volume 15—p. 12240; Volume 16—p. 12901; Volume 17—p. 13607; Volume 18—p. 14596; Volume 19—p. 15864.

2. Construction and interpretation.—[Vols. 10, 11, 15, 18].—The grant or denial of suspension of a proposed rate is discretionary with the commission and is not judicially reviewable, unless the commission's action exceeds the powers delegated to it by Congress. Suspension of tariff covering participation of a carrier in three-line through route and joint rate, filed at same time that participation therein of one of original participants was cancelled, was within the commission's power under §216(g); although the rate, established before considered tariff was filed, remained the same, withdrawal of one of participating carriers changed the status. The rate was new to carrier added as participant in the tariff and, in addition, that carrier's action created a new joint rate for transportation by it, plaintiff, and a third carrier; before then traffic could have moved over routing of those carriers only by a combination rate.—Great Western Packers Exp., Inc. v. United States, 246 F. Supp. 151 (154-5)*.

Even if three-line joint rate in issue be considered as not a new rate because it is the same as that under which plaintiff and two other carriers formerly operated, addition of a different carrier to the tariff [at the time one former participant withdrew] was a regulation or practice affecting the joint rate which the commission is authorized to suspend under §216(g). And the commission's finding that the taking effect of considered tariff schedule could result in rates, regulations, and practices in violation of the act, was a discretionary determination which the courts have no power to overturn. Suspension order of the commission sustained.—Id., p. 155.

Insofar as plaintiff seeks relief from the court looking to suspension of motor carrier rates in issue because the commission refused to exercise its discretion to suspend, the court is without jurisdiction under the decision in Arrow Transp. Co. v. Southern R. Co., 372 US 658. Therefore, the court lacks jurisdiction either to grant an injunction to vacate the Board of Suspension's decision not to suspend proposed rates, or to enter an order suspending the contested tariffs.—Movers' and Warehousemen's Ass'n v. United States, 227 F. Supp. 249 (251).

As to plaintiff's prayer for mandatory injunction that the commission be directed to investigate lawfulness of the contested rates, an order to the commission to do what it was free in the exercise of its discretion not to do in regard to proposed rate reductions, at least absent arbitrary and capricious conduct, is not available in action seeking relief on the narrow ground that the rates were illegal because published in violation of rate bureau's §5a ratemaking agreement approved by the commission.—Id., pp. 250, 251.

Although proposed assembling and distribution rates restricted to forwarder traffic are higher than respondent's contract rates under §409, which it claims are on depressed level, they are lower than like rates it maintains which are not so restricted, and thus, if made available to consolidators and others shipping under like circumstances, as required by interpretation of §408 in 272 ICC 413, would constitute a reduction rather than an increase.—Assembling and Distribution Rates between Points in N.Y., 316 I.C.C. 606 (607-8).

4. Reasonable rates required by statute.—[Vols. 10-15, 17].—The act directs that charges for motor carrier services be "just and reasonable" and declares unlawful "unjust and unreasonable" charges. It is this standard by which proposed rates are judged, and the burden of proof is on plaintiff to show that the proposed rate is just and reasonable. An essential element of a just and reasonable rate is that it be compensatory, and this is basic to the commission's approach to ratemaking. The function of the court on review is to determine whether the commission's finding that the proposed rate in issue is not compensatory should be affirmed; if so, it follows that the commission's ultimate conclusion, rejecting the proposed rate, must also be sustained,

for it is clearly within the commission's discretion to reject as unlawful a rate which does not return out-of-pocket costs to the carriers. And in view of the commission's finding that the proposed rate was not compensatory, it was unnecessary for it to take into consideration the national transportation policy or §15a(3).—Middlewest Motor Freight Bureau v. United States, 234 F. Supp. 151 (153)*.

Though plaintiffs argue that the commission's conclusion is unjustified because it failed to use a net revenue test to determine compensativeness, and that they would be "better off" at the proposed rate on butter than in carrying grain, their present eastbound traffic between the points involved, grain is exempt from rate regulation by the commission, and to base rates on regulated items on a net revenue comparison with items exempt from rate regulation would ignore the standards of compensativeness used by the commission and approved by the courts, and could lead to destructive ratemaking. While courts should be alert to make certain that no statutory requirement is overlooked, the administrative ratemaker has broad discretion to establish standards by which the statute is applied, and the cost evidence presents a rational basis for the commission's conclusion as to noncompensativeness of the rate in issue. The commission's order sustained.—Id., pp. 154-5.

5. Burden of proof.—[Vols. 10-19].—Part I, §15(7), n. 35.—Under the limited review permitted, it cannot be held that the commission erred in finding that plaintiff had not met its burden of proof when, in absence of a showing of costs of owner-operators performing the physical transportation, evidence relating to plaintiff's system average expenses, comparisons of proposed rates with those of other motor carriers and railroads on same commodities between same points (without reference to earnings under compared rates), and excess of total revenues under proposed rates over those under existing rates were inadequate to support a finding that proposed rates would be compensatory.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (755)*.

Respondents have the burden of proving that rates resulting from proposed grouping of Huntingdon Valley, Pa., with Philadelphia instead of with Trenton, N.J., would be just and reasonable; that burden is not met by mere fact that Huntingdon Valley is closer to city limits of Philadelphia than of Trenton, when no competitive necessity for proposed change is shown, and, as present grouping follows that employed by railroads, the competitive situation as between motor carriers as a group and the railroads would be substantially altered, and earnings of a number who do not favor the change, as well as earnings of proponents, would be affected.—Huntingdon Valley, Pa.—Rate Group Amendment, 314 I.C.C. 680 (681, 682).

The burden of proof as to rates republished in suspended schedules without change rests with protestants; substantially all the evidence adduced by opposing parties relates to the proposed changed rates; those unchanged are not shown to be unlawful.—Beverages and Empty Containers from and to N.J. & N.Y., 314 I.C.C. 792 (795).

A respondent seeking rate changes has the burden of proving, as a minimum requirement, that the rates proposed would be compensatory, especially where the rates would be substantially below the normal level; proposed rates may not be approved when record is devoid of cost data or other evidence from which their compensativeness might be determined.—Chemicals, Other Articles, Kearney, N.J., to New York Area, 315 I.C.C. 71 (72).

When proposed rates, though not suspended, were made subject of investigation upon protest, and order of investigation specifically embraced any changes in those rates, subsequent increase of all the rates involved made no change in respondents' statutory burden of proof.—Magazines, Old Saybrook, Conn., to New Eng., N.Y. & N.J., 315 I.C.C. 281 (282).

Proposed point-to-point rate in same amount as rate now applicable under intermediate rule is not a reduction; respondent therefore has burden of proving it just and reasonable only insofar as it is affected by increase in minimum weight.—Iron or Steel Articles from Portage, Ind., to Chicago, 316 I.C.C. 255 (256).

Proposed commodity rates are not initial rates when carriers participating therein now maintain class rates on the traffic; according-

ly, burden of proof is on the participating carriers.—Dairy Products from Ill., Minn., and Wis. to Fla., 316 I.C.C. 693 (694).

Although proposed commodity rate on sugar is published to cover new service authorized in certificate recently issued, prior to issuance thereof respondent concurred in class rates published on sugar between the points involved, and while there is argument that such class rates were provided for joint-line movements with other carriers, they are not shown to have been restricted against application over the single-line routes authorized by the new certificate. Proposed rate is therefore a changed, rather than an initial, rate and the statutory burden of proving its lawfulness is on respondent.—Sugar from Louisiana to North Carolina, 319 I.C.C. 107 (108).

Section 216(g) imposes a statutory burden of proof on proponents of changed rates or tariff rules, but where a charge becomes effective before institution of an investigation by the commission there is no "changed" rate, and the statutory burden of proof is on those who assail the rates—not by terms of §15(7) or §216(g), but by §7(c) of Administrative Procedure Act. In such a case it must be determined whether protestants have met their burden of proof even though their evidence, standing alone, fails to establish by any clear preponderant weight the unjustness and unreasonableness of the assailed charges. —Terminal Charge on Order Bills of Lading Shipments, 315 I.C.C. 327 (329)*.

The public interest necessarily involved in the commission's quasi-legislative function of ratemaking cannot be determined merely on basis of who proved what by a clear preponderance of the evidence. Terminal charge in issue became effective without suspension following approval of a similar charge in 308 ICC 741; but, following reversal of that decision in 310 ICC 531, like charges published by other carriers were suspended. Thus, if "burden of proof" were construed in any strict or hypertechnical sense, charges in the suspension cases would stand condemned, while identical charge in instant proceeding would be permitted to remain in effect; such result would stultify the administrative process.—Id., pp. 328, 330.

As pointed out in 307 ICC 59, the question of who has the burden of proof is of more theoretical than practical importance; carriers involved in rate controversies are expected to aid in their disposition by making available all pertinent information within their knowledge, regardless of where the burden of proof lies. The commission is not required to view protestants' evidence in a vacuum; had they introduced none, it would have been obliged to supplement the record rather than permit the anomalous and discriminatory situation which would result from condemning and condoning identical charges.—Id., p. 330.

Although protestants' evidence, measured solely by its weight, falls short of clearly proving unreasonableness of the charge in question, they have submitted as much evidence as could reasonably be expected in light of information available to them; it was sufficient to require respondents to produce evidence justifying that charge on basis of facts peculiarly within their knowledge; respondents have not met protestants' showing as to comparative costs of handling order and straight bill of lading shipments by any showing that the charge is for services peculiar to order shipments and does not substantially exceed additional cost thereof; in such circumstances it may not be approved.—Id., pp. 331-2.

There is no affirmative burden of proof on respondent to establish lawfulness of proposed rates which became effective before institution of investigation.—Proportional Rates between Harrisburg & Points in Pa., 315 I.C.C. 499 (503).

There is no burden on respondent to justify a rate in effect when investigation concerning its lawfulness was instituted.—Canned Goods from Chicago, Ill. to Twin Cities, 316 I.C.C. 221 (223).

Though a proponent of changed rates has burden of proving that they are just and reasonable, where order of investigation included rates of another respondent which were already in effect, latter respondent has no statutory burden of proof.—Talc from Emeryville, N.Y., to Ohio, 316 I.C.C. 197 (198).

Because investigation of respondents' all-commodity distance rates was instituted after they became effective, respondents have no affirmative burden of proof. However,

protestants, by cost evidence indicating that a majority of considered rates are either noncompensatory or only slightly above out-of-pocket costs, have established a prima facie case that they are unjust and unreasonable, which is not rebutted by one respondent's evidence of revenues and earnings. Rates under investigation ordered canceled.—All Freight between Points in Ohio, 318 I.C.C. 731 (736).

Burden of proof is upon respondents to show that proposed reduced rates are just and reasonable. A minimum requirement in this respect is a convincing showing that the rate would be compensatory for the service to be performed; burden not sustained.—Glass Bottles From Muskogee, Okla., to Chicago. 323 I.C.C. 258 (263).

Since proposed rules providing a time payment plan for charges on household goods shipments are published as an alternative to present payment rules set out elsewhere in the tariff and are subject to them, they represent a change in the existing rules and burden of proving them just and reasonable is on respondent.—Time Payment Plan for Transing Household Goods, 323 I.C.C. 677 (678).

Though investigation of proposed rate on foodstuffs from Newark, N.J., group to Saylesville, R.I., was instituted before effective date thereof, and burden of proof is therefore on respondent, in view of respondent's stipulation to abide by decision in related complaint proceeding as to lawfulness of like rates from same origins to Providence, R.I., that aspect may be disregarded.—New England Motor Rate Bureau, Inc. v. Stone's Exp., 321 I.C.C. 767 (774).

See also Overnite Transportation Co. v. United States, APA, 5 USC, *burden.*

Initial rates: Where both initial and reduced rates are proposed from same origin, there is no burden on respondent to prove reasonableness of the initial rates, and record is devoid of any substantial evidence to show that they are unlawful; while permitting the initial rates to remain in effect will result in respondent's rates being improperly alined, distance considered, because it has not met its burden of proof respecting the reduced rates, this circumstance does not warrant finding the initial rates unlawful, and in view of the meager and inconclusive evidence submitted by the parties, the issues are resolved in favor of those not having the burden of proof. Respondent is free to initiate changes in its rates which it deems reasonable, and protestant to challenge lawfulness of the initial rates by filing complaint and assuming the burden of proof.—Frozen Foods from Caribou, Maine, to Midwestern Points, 314 I.C.C. 721 (724).

Where respondent, under temporary authority for substantially the same service, published initial rates per mile on considered traffic to three of four destination points, republication of same rates computed in amounts per truckload, upon receipt of permanent authority, represents merely a change in form of publication; as proposed rate to the fourth destination is an initial rate, there is no burden on respondent to justify level of any of the rates involved.—Wine from Canandaigua, N.Y., to Florida and Alabama, 316 I.C.C. 246 (247, 248).

Where the proposed rate is respondent's initial rate on considered traffic as a common carrier, in lieu of former contract-carrier rate, it does not have the burden of proving that the rate is just and reasonable.—Paper Articles between Chagrin Falls, Ohio & Goshen, Ind., 316 I.C.C. 393.

Since rates proposed are initial rates, respondent does not bear the burden of proof. Protestant's cost evidence, having little probative value, does not show proposed rates to be noncompensatory; protestant failed to meet its burden of proof.—Cable, Iron & Steel, Lumber between S. Dak. and Missile Sites, 316 I.C.C. 427 (430).

Burden of proof does not rest on respondent to show that proposed initial rates are just and reasonable; therefore, although record does not afford basis for determing whether they are compensatory and respondent's cost data are inadequate, proposed rates are not shown to be unlawful.—Wastepaper and Other Articles, Wis. to Wabash, Ind., 316 I.C.C. 464 (466).

Although respondent does not have the burden of proof as only initial rates are involved, proposed rates may not be approved when the evidence indicates that they fail to cover out-of-pocket costs.—Paint & Paint Materials, Chicago to Kansas City, Kans.,

318 I.C.C. 331 (334-5).

In proceedings involving initial rates the burden of proof is not on the respondent; protestants, having requested that the commission suspend and investigate the rate schedules involved and that ultimately an order be entered canceling the schedules, are proponents of an order within purview of §7(c) of Administrative Procedure Act, hence have the burden of proof. This follows from the basic structure of the Interstate Commerce Act, under which a carrier has the right to initiate rates as to which, aside from the suspension provisions, there is no presumption of unlawfulness and which their assailant in a complaint proceeding has the burden of proving unlawful; on their face, §§15(7) and 216(g) shift that burden only to the proponent of rate changes, as distinguished from initial rates which are published for the first time for a particular movement.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257 (259)*.

Protestants, in comparing initial rates proposed by respondent, a class III limited-commodity carrier, with average costs of class I and II general-commodity carriers, were aware of the differing character of his operations, since he had gone forward first with his evidence, and it was incumbent on them to adduce costs based on substantially the same type of operations in order to make a prima facie showing of noncompensatory nature of the rates. The best evidence available to protestants, if it does not meet the requirements of a prima facie showing, imposes no obligation on respondent to rebut such insufficient evidence or to assume the burden of proof.—Id., pp. 260-1. [See also concurrences.]

Where contract carriers have converted to common, their newly established common-carrier rates which are on same level as their prior contract-carrier rates are initial rates, as to which protestants have the burden of proving unlawfulness.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (238).

There is no statutory burden on a respondent to prove justness and reasonableness of initial rates; the only probative evidence to support protestant's contention that respondent's initial rates following its conversion to common carrier are too low is a showing that proposed rates on glassware would yield minimum earnings considerably below those under protestant's corresponding rates; such a meager showing does not warrant finding the proposed rates unlawful.—Various Commodities—Ill., Ind., Ky., Mo., Ohio, Pa., W. Va., 315 I.C.C. 576 (577-8).

Burden of proving initial rates just and reasonable does not rest on the respondent; in the light of deficiencies in protestants' cost study, record does not justify finding that proposed rates are unlawful.—Salt and Pepper from Kans. and La. to Ala., Fla., and Ga., 315 I.C.C. 695 (697-8).

Justification for increases: When a motor carrier files a new rate, §216(d) requires that it be just and reasonable; and when it seeks a change in rates, §216(g) places the burden of proof on the carrier. Plaintiffs were fully aware that lawfulness of proposed territorial rate increases, where they would result in higher rates to border points than to points beyond, was in issue and that such rates have been condemned in other general revenue proceedings. No uncontroverted evidence of segregated costs for the traffic subject to the rates found unlawful was presented to the commission, and plaintiffs do not claim that such border-point rates are unremunerative without the proposed increases; nor is there any inherent inconsistency in finding those rates unreasonable and finding that the increased rates of all the carriers as a group were otherwise reasonable. Plaintiffs did not meet their burden of showing that the increases resulting in higher rates for shorter than for longer hauls were just and reasonable; the commission's order requiring cancellation of such rates, sustained.—Accelerated Transport-Pony Exp., Inc. v. United States, 227 F. Supp. 815 (818-20)*.

Respondent eastern central carriers are in need of additional revenues, and proposed increases in commodity t.l. or volume rates, 5 cents on shipments of less than 24,000 pounds, 3 cents on those weighing 24,000 to 29,000 pounds, and 2 cents on heavier shipments, would result in operating ratios of 91.1, 97.7, and 107 percent for the three weight brackets, compared with present

102.7-percent ratio on all such traffic. Though those increases cover only about 20 percent of required additional revenue, and if operating ratios alone were the criterion a smaller increase on the lowest bracket and a larger increase on the highest would be more appropriate, the proposal reflects respondents' considered judgment as to competitive effect of the adjustment; such increases appear necessary to maintain versatile and adequate motor service and are just and reasonable.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (468, 473-4, 482).

Proposed increases in l.t.l. and any-quantity class or commodity rates, 20 cents on shipments of 1,000 to 1,999 pounds and 32 cents on those of 300 to 999 pounds, are just and reasonable in relation to the aggregate additional revenues needed, are necessary for maintenance of a sound rate structure, and will aid respondents in maintaining their overall transportation service. Because of lower revenue return on the lower weight bracket a greater increase is needed thereon; resulting operating ratio will still be high (about 98.2 percent), and proposed increase is justified to minimize subsidization of that traffic by larger shipments; increase proposed on the higher bracket should produce a more favorable ratio of about 91 percent, and resulting difference in levels appears reasonable to maintain present relationship of those weight groups.—Id., pp. 468, 474, 482-3.

Proposed distance scales of constant charges on shipments under 300 pounds, graduated according to weight and without regard to classification ratings, are justified by disproportionately high cost of handling such small shipments, are not inherently unlawful, and in the aggregate are not excessive when on basis of a composite operating ratio of 99.4 percent they would barely cover total costs. Despite admitted imperfections, proposed charges are a step in direction of tariff simplification, and as an attempt to solve the small-shipment problem should not be condemned merely because they represent a departure from traditional ratemaking practices.—Id., pp. 474, 485, 486.

As labor is the predominant cost factor in accessorial services, proposed 10-percent increase in charges therefor, including handling of order-notify shipments, stopping t.l. shipments for partial loading or unloading, reconsignment and diversion, and storage and rehandling, appear necessary to avoid losses in providing such services in view of the rapid rise in clerical and platform labor costs.—Id., pp. 474, 482.

Proposed rates as a whole should result in an overall increase of about 2.6 percent in respondents' revenues, about 80 percent of which would come from shipments under 2,000 pounds, reflecting their proportionately higher terminal costs; based on all facts of record, the proposed rates should result in an operating ratio on all traffic somewhere between 93 and 95 percent, and are just and reasonable. However, as the constant charges on small shipments are an experiment in ratemaking which may not be successful, approval is without prejudice to reopening for further hearing after a reasonable test period, either on petition of parties or on commission's own motion.—Id., pp. 471, 478, 482, 486.

Though in numerous general increase proceedings considerable weight has been given average operating ratios of carriers concerned, as a group, and increases expected to result in average ratio of about 93 percent have been approved, a ratio of 93 percent is not an immutable standard. In view of recurring attacks on use of operating ratios to justify revenue needs, particularly respecting effects on such ratios of transactions between carriers and their affiliates or subsidiaries, carriers are admonished that, in future, expense items of representative carriers should be shown in greater detail, and all pertinent information regarding carrier-affiliate relations should be disclosed. However, since standards should not in fairness be changed without due notice, and record in instant proceeding was made before the first announcement of such future requirements, respondents in instant proceeding are not bound thereby.—General Increases—Transcontinental, 319 I.C.C. 792 (803).

Also, in future, studies should be made which reflect the carriers' revenues and expenses in relation to the specific traffic on which the proposed general increases are to apply, such as the transcontinental traffic for

which they are now proposed.—Id., p. 803.

Justification for reductions: Where a respondent seeks to reduce its existing rates below those of other carriers transporting the traffic, it must first be clearly established that the reduced rates are compensatory; without such a showing, the reduced rates must be condemned, irrespective of whether the reductions are desirable from standpoint of a particular locality or shipper.—Frozen Foods from Caribou, Maine, to Midwestern Points, 314 I.C.C. 721 (723).

Carrier proposing a change in its scheduled charges has the burden of proving as a minimum requirement that the proposed charge would be compensatory for the service performed, especially where it would be below the normal level, and a charge for a service may not be found just and reasonable merely because it is on the same level as that maintained by competitors. Record is devoid of probative cost data from which compensativeness of proposed reduced stopoff charge could be determined; not approved.—Stopoff Charge on Salt—Michigan to Central Territory, 315 I.C.C. 66 (68).

Though proposed l.t.l. commodity rates are stated to be pool-car distribution rates to enable respondent to meet competition of railroads and unregulated local cartage companies, volume of considered traffic handled by the railroads and local truckers is not shown and the rates are not restricted to distribution service; proposed rates are not shown by convincing evidence to be compensatory or necessary to meet existing competition; not approved.—Paper Articles from West Virginia to Kentucky and Ohio, 315 I.C.C. 270 (271, 272).

Although conversion of respondent's l.t.l. class rates on machinery and other articles to a point-to-point commodity-rate basis was designed to avoid application of general class-rate increases to that traffic, the commodity rates were not published until after effective date of the increased class-rate schedules published by respondent's tariff agent for its account; thus, although they are the same as the former class rates, they represent a reduction in the legal rates, and, having been suspended before their effective date, the burden is on respondent to prove that such changed rates are just and reasonable.—Machinery and Related Art.—Hampstead, Md., to New Eng., 316 I.C.C. 71 (72).

Proposed addition of iron or steel roofing or siding to tariff item allowing aluminum roofing or siding to move in mixed shipments with other building, roofing, and insulating materials would result in reduction in rates on the iron or steel material when moved in mixed truckloads; minimum requirement to sustain burden of proof not met where respondent failed to show that proposed rates would be compensatory.—Iron or Steel Roofing or Siding Between Illinois, Indiana, and Iowa, 316 I.C.C. 97 (97, 98).

Under §216(g) a carrier proposing to establish assembling or distribution rates lower than normal rates, under authority of §408, has the burden of showing that they would be just and reasonable, including the minimum requirement of compensativeness.—Assembling and Distribution Rates between Points in N.Y., 316 I.C.C. 606 (608).

Although burden is on respondent to show reasonableness of proposed reduced rates, it did not submit any cost data or other evidence of compensativeness of proposed rates on telephone housings, and extent to which protestant's cost data are overstated cannot be determined; not approved.—Dry Goods and Telephone Housings within Central Ter., 318 I.C.C. 175 (179).

An affirmative showing of compensativeness is a minimum requirement in meeting the statutory burden of proving that changed rates are lawful. Respondent has not met its minimum burden of showing compensativeness of proposed reduced t. l. rate on tea extract when its cost-revenue comparison was based on revenue from a straight shipment of tea extract although proposed rate was designed to apply on, and was published to meet rail competition on mixed shipments of coffee and tea extract. While existing rail competition justifies establishment of rates which are only slightly in excess of the out-of-pocket costs, to the extent that out-of-pocket cost exceeds the revenue which would be realized on particular mixed shipments, the proposal is not shown to be compensatory.—Tea Extract, New Orleans to

Chicago. 325 I.C.C. 103 (105)*.

Proposed 3-cent reduction in respondent's present rates on dairy and food products when trailers are spotted at shipper's dock after 6 p.m. for loading by shipper's employees, and picked up the same night or next morning, is not shown to result in compensatory rates or increased profit; while some reduction may be warranted, shipper's additional cost for loading without the driver's help is admittedly less than 3 cents and it also benefits from less congestion at its dock during productive daytime hours. Not approved.—Dairy and Food Products between Chicago and Ohio & Mich., 316 I.C.C. 373 (374, 376-7).

Respondent has not met its burden of proving lawfulness of proposed reduction of class rates between certain points to reflect reduced highway mileage, when it made no attempt to show kind or volume of traffic transported in either direction, nor were actual performance studies made to show specific routes and distances covered; further, respondent submitted no evidence in formal docket which would establish compensativeness of proposed rates; not approved.—Class Rates between Greenville, Miss., and Arkansas, 316 I.C.C. 629 (631-2).

A respondent is entitled to meet existing carrier competition if it otherwise sustains the statutory burden of proof, an essential element of which is compensativeness of proposed rates.—Air Cleaners, Blowers, Fans—Buffalo to Ill., Ohio, Mo., 314 M.C.C. 779 (780); fact that a competitor maintains a rate the same as that proposed does not relieve respondent of its burden of proving proposed reduced rate is just and reasonable.—Aluminum from Heath, Ohio, to Dolton, Ill., 316 I.C.C. 38 (40); and a mere statement of desire to compete with another rate, without further support, has no value to justify a proposed reduction.—Pie Filling from Duluth, Minn., to Fargo, N. Dak., 314 I.C.C. 797 (798); the fact of such competition, including if practicable the volume of movement, should be established by competent testimony. Moreover, proposed reductions cannot be approved without evidence from which it can be found that the rates will pay their way and thus not be burdensome on other traffic.—Meats and Packinghouse Products from Chicago to South, 315 I.C.C. 699 (701).

Respondents' statutory burden to establish justness and reasonableness of proposed reduced rates includes a showing that they would be compensatory.—Rags from Winnepeg to Twin Cities, 315 I.C.C. 147 (150); it must appear with reasonable certainty that proposed rates will be compensatory for the service to be performed. This requirement may be met by submission of dependable cost data or by comparisons with other rates on the same or comparable commodities in the same general area.—Wearing Apparel —Pennsylvania to New York, N.Y., Area, 315 I.C.C. 28 (30); burden not met when evidence is not convincing that proposed rate would be compensatory. Moreover, record fails to establish competitive necessity for such rate.—Iron and Steel Articles, Johnstown, Pa., to Newark, Ohio, 315 I.C.C. 716 (717, 718); nor is burden met where respondent presented no cost data but relied wholly on the rates of two competitors, particularly when rates on the commodity are being investigated by the commission because of the considerable variances and disparities between the same points.—Bananas, Gulfport, Mobile & New Orleans to Indianapolis, 316 I.C.C. 194 (196).

6. Issues in the investigation.—[Vols-12-19].—As issue raised by order of investigation was lawfulness of rates, charges, rules, etc., in schedules named therein, "or as the same may be amended or reissued," rates in issue are those currently in effect on the traffic concerned, as increased subsequent to issuance of that order.—Magazines, Old Saybrook, Conn., to New Eng., N.Y. & N.J., 315 I.C.C. 281 (282).

Where higher combination rates applied prior to effective date of joint commodity rates under investigation, the joint schedules constitute changes within meaning of §216(g).—Machinery and Equipment, Central, South, Midwest, 316 I.C.C. 236 (237).

Although shipper protestants suggest that there are substantial transactions between respondents and their subsidiaries or affiliates, involving rentals of terminals, offices, and equipment, not weighted in cost data presented in justification of proposed general

increases, protestants did not identify any such transactions and record does not permit finding that they have any important effect on average operating ratio of carriers concerned; however, the matter is worthy of further development, and in any further hearing in instant proceeding to consider effect of the approved increases, or in some similar proceeding, the parties, in cooperation with commission, should produce all information required to show the precise effect of such transactions on carriers' operating ratios.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (473, 481).

As respondent now maintains all-freight rates on forwarder traffic between many of involved points, subject to a maximum weight of 20,000 pounds per trailer, and proposed rates on 30,000-pound maximum weight would alternate with the present rates, depending on which produces the lower charges, the proposed rates are in effect reduced charges.—General Commodities, Eastern, Central & Middlewest Ter., 321 I.C.C. 504 (507); and though revised rule in respondent's tariffs provides for substitution of rail line-haul service at carrier's, rather than at shipper's option, lawfulness of that rule is not in issue; however, as a practical matter respondent could not deny its principal shipper the privilege of choosing between all-motor and substituted rail-for-motor service; accordingly, merits of proposed rates are dealt with in light of fact that, whether or not shipper's option exists as a matter of law, it must be respected as a matter of fact.—Id., p. 509.

Although protestant questions legality of respondent's contractual arrangement with a railroad covering movement of loaded and empty trailers to and from rail yards in connection with plan II TOFC service, because there are no provisions in the rail tariffs for substitution of motor service under plan II rates, the railroad is not a party to suspension proceeding and none of its tariffs are in issue; therefore, protestant's contention regarding possible technical violations in any of the rail tariffs may not be considered. Moreover, as respondent has authority to serve the points involved and its operation between them cannot be considered unlawful, that contention has no bearing on lawfulness of proposed charges for moving shippers' trailers in like service in connection with plan III TOFC movement.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429 (430).

10. Evidence, in general.—[Vols. 10-19].—Plaintiff's offer of evidence relating to rental rates of an unidentified truck leasing company and annual earnings of four unidentified owner-operators was not in rebuttal of any facts appearing in any statements in suspension proceeding, but served merely to aid plaintiff's case in chief after its deficiencies had been pointed out by protestants; under Rule 1.49 of the commission's Rules of Practice, such evidence was properly stricken.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (755)*.

A commission is not bound to accept expert opinion evidence tendered by a proponent when the experts are in disagreement and interested, the subject is inherently uncertain, and the opinion is founded on a basic theory which the commission could lawfully disapprove; and the commission, as the tribunal appointed by law and informed by experience, would not be bound, even in absence of cross-examination or rebutting testimony, to accept cost evidence fallacious on its face. But none of those principles is decisive where the subject matter is fairly susceptible of measurement and the expert was concededly competent and purported to base his analysis on a cost-finding method published (though not formally adopted) by the commission itself. It would be inconsistent with policy underlying Administration Procedure Act for an agency to reject such testimony on basis of arguments which the expert never heard and which he might well have been able to answer.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (678-9)*.

The proposal of plaintiff's counsel, upon request by a commission accountant for permission to examine the cost analyst's work sheets and other data underlying plaintiff's cost exhibits, that any such data which might go into making of the decision be made evidence of record and that, if the commission's examination developed any criticism of the study, plaintiff should have opportunity to cross-examine and offer rebuttal evidence,

was appropriate in light of aborting of the modified procedure as result of the railroads' withdrawal of their protest.—Id., pp. 676, 682.

Plaintiff's counsel refused to allow examination of the underlying data unless plaintiff was furnished all information conveyed by the cost section to the commission; and if, thus, plaintiff improperly refused access to data needed by the commission for a hearing, it cannot be heard to complain of lack of one. It was entirely proper for the commission to have its staff prepare a report, which could lead to abandonment of the investigation. Whatever plaintiff's rights would be if the commission used data dehors the record to support an order made without a hearing, it was not entitled to inspect that kind of internal communication in advance of a hearing; but if the employee who made the report testified, plaintiff would be entitled to see relevant portions of his report as a possibly inconsistent statement.—Id., pp. 676, 682.

Respondents' claim that Huntingdon Valley, Pa., station of Reading Co. has been abandoned, urged in support of proposed regrouping of that point with Philadelphia in lieu ofpresent grouping with Trenton, N.J., which follows rail grouping, is not supported by reference to any rail publication; Huntingdon Valley is not included in list of abandoned stations in railroads' rate basis tariff, and is included in their list of open and prepay stations.—Huntingdon Valley, Pa.—Rate Group Amendment, 314 I.C.C. 680 (681).

Motion to strike as incompetent certain testimony of an official of protestant railroad concerning pickup and delivery service to be performed under proposed motor rates, over-ruled; there is no definite indication that such testimony may properly be designated incompetent, and respondent was in the best position to clarify any misstatements concerning those services.—Salt from Williston, N.Dak., to South Dakota, 314 I.C.C. 787.

Protestant's statements regarding traffic study questionnaires, traffic survey reports, and photo copies of freight bills obtained from unnamed conference carriers have little value and are not considered when underlying data are not of record.—Wearing Apparel—Pennsylvania to New York, N.Y. Area, 315 I.C.C. 28 (29).

Although respondent claims that total vehicle mileage shown in its 1959 annual report was erroneous, and that a greater total mileage was actually traveled, resulting in a lower per-mile operating expense, its failure to attempt to correct the mileage shown in its annual report is not explained; latter figure is therefore regarded as correct, especially as in 1960 it reported a considerably lower mileage, for operation with a larger fleet of vehicles, than that claimed for 1959.—Lead, Aluminum, Brass, Bronze, Copper Metals—Kofman's, 315, I.C.C. 344 (345-6).

Motion to strike respondent's statement of fact for nonconformity with Rule 1.50 of Rules of Practice, overruled; although respondent's traffic manager, who attested the statement, did not state affirmatively that he had personal knowledge of facts set forth therein, statement consists chiefly of matters normally within personal knowledge of a traffic manager.—Roofing & Building Materials, Jersey City, N.J., to N.C., 315 I.C.C. 519.

Since affidavit accompanying respondent's opening statement fails to state affirmatively that affiant had knowledge of the facts stated as required by rule 50 of the Rules of Practice, it is deficient and respondent's statement of facts is not considered.—Salt and Pepper from Kans. and La. to Ala., Fla., and Ga., 315 I.C.C. 695 (696).

Though a cost comparison such as presented by protestants, based on a public statement of commission's cost finding section reflecting operating data for carriers in considered territory, may contribute a prima facie showing of noncompensativeness if unrebutted, it may not be accepted as proof of non-compensativeness as between numerous carriers of general commodities, usually over regular routes, and two limited-authority carriers of one low-valued commodity over irregular routes.—Talc from Emeryville, N.Y., to Ohio, 316 I.C.C. 197 (201).

Evidence in respondent's reply statement which does not rebut protestants' evidence but attempts to correct deficiencies in respondent's cost presentation is supplementary rather than rebuttal evidence, in contravention of Rule 1.49 of Rules of Practice; motion

to strike granted.—Sugar, Beet or Cane, New Orleans, La., to Columbus, Ga., 316 I.C.C. 230 (230-1).

Respondent's lower operating ratio during period since considered rates became effective has little probative value, standing alone, to show compensativeness of the rates, as the difference in operating ratio may have been caused entirely by other factors.—Machinery and Equipment, Central, South, Midwest, 316 I.C.C. 236 (238).

Protestants presented cost data purporting to show rates from Wabash to representative Wisconsin destinations would be below cost, but proposed rates were published to apply from specified points in Wisconsin to Wabash; such cost data, directed against rates which are not in issue and which do not in fact exist, are irrelevant and has no probative value.—Wastepaper and Other Articles, Wis. to Wabash, Ind., 316 I.C.C. 464 (465).

Motion to strike verified statements of two witnesses for protestant carrier conference, overruled when one witness is employed by the conference as a cost analyst and his statement is directed solely to statistics submitted by a witness for respondent, and statement of the other, who is manager of protestant's rate department, concerns matters within normal scope of knowledge of his position.—Bakery Goods, Chattanooga, Tenn., to Southern Points, 316 I.C.C. 573 (573).

Presentation of cost data for first time in respondent's reply to protestant's statement of facts and argument contravenes Rule 1.49(a) of Rules of Practice when protestant submitted no cost evidence in its statement; motion to strike granted.—Absorption Pier Loading and Unloading Charges, 316 I.C.C. 577 (578).

Statements of traffic manager and statistical and cost director of proponent, signed by witnesses and sworn to before duly commissioned notary public, containing declarations that they are familiar with issues involved and have knowledge of facts stated, are in substantial conformity with Rule 1.50 of Rules of Practice when their testimony relates to matters of which witnesses could reasonably be expected to have knowledge in course of their duties.—Aluminum from The Dalles, Oreg., to Adrian, Mich., 316 I.C.C. 625 (626).

Legality of certain commodity descriptions and probability of empty return movements are relevant and material to determination of lawfulness of proposed schedules; motion to strike protestant's statement concerning such matters, overruled.—Bakery Goods, Foodstuffs & Groceries from N.J. & N.Y., 316 I.C.C. 639 (640).

Motion to strike as immaterial and irrelevant that portion of protestant's statement of facts and argument relating to respondent's operating rights, denied; rates without proper operating authority are unlawful.—Iron and Steel Articles from St. Louis to Kansas City, 318 I.C.C. 45 (46).

Objections to certain exhibits on ground that the witness is not a cost accountant and was not qualified to testify as to cost data, overruled; the data are computations from respondent's records, and the objections go to their weight rather than admissibility.—Candy and Confectionery, New York State to Midwest, 318 I.C.C. 409 (410).

Knowledge of facts stated in testimony of respondent's assistant traffic manager relating to movement of considered traffic is implicit in his position; motion to strike as hearsay overruled.—Candy & Confectionery, Ill. & N.Y. to Ill., Ky., N.Y. & Pa., 318 I.C.C. 540 (541).

Protestant's motion to strike certain testimony on ground that statement was self-serving, overruled; witness is a traffic manager of respondent, presumably with knowledge of the facts given under oath.—Substituted Rail Service between Jackson and New Orleans, 318 I.C.C. 629 (631).

Time-and-motion study, purportedly representative of respondent's operations, is inadmissible when respondent refused to furnish underlying data on ground that protestants might use such information for customer solicitation; production or disclosure of underlying data, sufficient to permit verification thereof, is prerequisite to admissibility of an exhibit of this nature as a safeguard against introduction of spurious evidence.—Sugar from Ovid, Colo., to Iowa Points, 318 I.C.C. 636 (637).

An examiner's report in another proceeding is not good evidence, and ordinarily should

not be considered in disposition of an unrelated proceeding. However, when examiner's report and recommended order in case cited was affirmed and adopted by the commission as its own, that report may be considered as a decision of the commission.—Road Paving Materials between Points in New England, 319 I.C.C. 95 (96).

Although rail protestants' witness was not permitted to read into the record statements made in pleadings presented to Board of Suspension, the statements concerned were in respondent's reply to the petitions for suspension, a document open to public inspection and as such admissible in evidence. [See Rule 1.81 of Rules of Practice.] Those statements, to extent they are reproduced in rail protestants' brief, are therefore considered.—Sugar from Louisiana to North Carolina, 319 I.C.C. 107 (108).

Though evidence of State maximum weight laws is not irrelevant or immaterial where a carrier publishes a rate subject to a volume minimum with limitation of number of vehicles that may be used, it would be inconsistent with effective administration of the act to encumber records in rate proceedings with engineering studies relative to such State requirements when obligations of certificated carriers to comply with such laws are so clear and so generally recognized. Protestants have failed to produce evidence that there is such reasonable expectation that proposed rate on alcoholic liquors, minimum 96,000 pounds in not over two vehicles, will result in violations of maximum weight laws of States traversed as to cast on respondent the burden of producing evidence showing that its proposed minimum weight is realistic in light of its duty to obey those laws.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (409).

Exhibit covering shipments by express agency was not prepared by respondent's witness, nor does it appear that he had any knowledge of facts asserted therein; there was no attestation by person who prepared the exhibit, nor was he offered as a witness; exhibit thus fails to comply with Rule 50 of Rules of Practice; motion to strike the exhibit and reference thereto in respondent's testimony, granted.—Clothing, in Multiple Shipments, from Nanticoke, Pa., 315 I.C.C. 181 (182).

Though examiner rejected protestant's and all but one respondent's statements of fact for noncompliance with Rule 1.50 of Rules of Practice because verifying witnesses excepted matters of "information and belief," the statements themselves and tenor of attestation indicated that witnesses were attesting to truth of the information presented, and matters stated were such as witnesses, all officials of high rank in their organizations, could reasonably be assumed to have knowledge of in their official capacities; considered statements are in substantial compliance with Rule 1.50 and pleadings of which they are a part are properly admissible in evidence; examiner's rejection thereof, overruled.—Magazines, Old Saybrook, Conn., to New Eng., N.Y. & N.J., 315 I.C.C. 281 (282).

Since respondent's reply statement was not sworn to as required by Rule 1.50 of the Rules of Practice, no weight may be accorded to cost data therein. Also, in accordance with rule 1.49 of the Rules of Practice, the reply statement should be confined to rebuttal of the opening statement; respondent's cost data should have been submitted in its opening statement.—Bananas, Gulfport, Mobile & New Orleans to Indianapolis, 316 I.C.C. 194 (196).

Although, upon reconsideration of order denying protestants' request for oral hearing to cross-examine respondent's cost witness, on ground that such request did not comply with Rule 1.53 of Rules of Practice, it appears that protestants' request was sufficiently in compliance with commission's rules, order of denial is sustained because approval of proposed rate is not based on respondent's cost evidence and therefore protestants' rights have not been prejudiced and requested cross-examination would serve no useful purpose.—Foodstuffs from Hudson, N.Y., to Chicago, Ill., 315 I.C.C. 184.

Objections to respondent's cost data on ground that witness was not qualified as a cost expert, did not have underlying data with him, and did not have personal knowledge concerning preparation of the study, overruled; witness was subjected to cross-examination by protestants, and objection goes more to

weight to be accorded the data introduced, rather than their admissibility.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (28).

Knowledge acquired in line of official duty or employment is not objectionable as hearsay.—Ground Wood Boards, Sheets—Bemidji, Minn., to Chicago, 314 I.C.C. 774 (775).

Copy of exhibit introduced by respondent at a hearing before State commission, which shows its operating expenses for 1958, 1959, and 1960, was properly received in evidence in suspension proceeding; motion to strike as hearsay, overruled.—Salt from Williston, N. Dak., to South Dak., 314 I.C.C. 787 (788).

Objection to certain exhibits showing proponent's estimated line-haul costs on considered traffic, on ground that underlying evidence supporting adjustments made is based on hearsay, overruled; the adjustments were based on results of a traffic study made by carrier's operating personnel and introduced in evidence by its general manager; though latter did not personally conduct the study, it was undertaken at his direction and under his supervision, and as general traffic manager it is his duty to keep informed of the factors developed by the study.—Ground Wood Boards, Sheets—Bemidji, Minn., to Chicago, 314 I.C.C. 774 (775).

Motion to strike entire testimony and exhibits of protestant's witness on ground that they are in nature of hearsay because derived from records which were not prepared by him and of which he had no personal knowledge, overruled; evidence in dispute was obtained under the witness's supervision in regular course of his employment.—Radio & Television Cabinets, Jackson, Miss., to Chicago, 315 I.C.C. 171 (172).

Exhibits introduced by protestant rate bureau based on reports of six member carriers who objected to proposed reduced rates, showing that those and other carriers have been transporting over 4,000,000 pounds monthly of considered traffic in territory involved at rates the same as respondent's present rates, and that to remain competitive they would have to make corresponding reductions resulting in annual revenue loss of over $30,000 on the traffic immediately concerned, are not objectionable as hearsay when the data therein were made available to the bureau in the regular course of its business.—Foodstuffs from N.J. to Conn., Mass., & R.I., 315 I.C.C. 179 (180).

References in testimony of protestant's witness to discussions with commission's staff employees in effort to ensure that protestant, in publishing a return-load rule, was complying with findings in 310 ICC 473, are not hearsay when witness participated in those discussions.—Return Shipments Rule—Eastern, Southern Territories, 315 I.C.C. 267.

Objection to statements of respondent's witness relative to movement of sugar by private carriage, on ground of hearsay, overruled; such information appears to have been gained by witness in ordinary course of his duties as assistant traffic manager.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (28).

In considering evidence concerning cost of proposed service to respondents employing owner-operators for the line haul, division 2 is bound by the recent precedent established by the full commission in 318 ICC 567; however, that decision does not require automatic approval of rates proposed by carriers who rely heavily or entirely on owner-operators for performance of line-haul movements. When proposed rates result in decreased gross revenues, and owner-operators are compensated on basis of a percentage thereof, respondents should show that the reduced level of compensation will not result in loss of services of owner-operators or require payment of a higher percentage of gross revenues on the traffic involved.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (674, 676).

Objections to testimony as to how the owner-operators were paid, expenses paid by the carriers, duration of leases, and other contractual arrangements, on ground that the contracts were the best evidence available and that oral testimony was inadmissible under the best evidence rule, were properly overruled. The question was not proof of the written contracts but of the relations between respondents and their owner-operators, and the witnesses properly testified of their own

knowledge concerning compensation, insurance, and other obligations, and stood cross-examination on their testimony.—Id., p. 669.

The commission takes official notice of quarterly reports of respondent class I and II motor carriers for the first 9 months of 1961, during which proposed general increase in transcontinental rates was in effect, as showing resulting improvement in their average operating ratios. And while respondents' ratios after payment of income taxes are an unreliable support for increased revenue need, they furnish a general indication of how much revenue is left to the carriers.—General Increases—Transcontinental, 319 I.C.C. 792 (795).

The commission takes official notice that investigation of virtually all of respondents rates is now pending.—Foodstuffs from Hudson, N.Y., to Chicago, Ill., 315 I.C.C. 184 (185).

While fact that over 50 percent of respondent's owner-operators have remained in its employ for periods of 4 to 8 years at agreed payment of 56 percent of gross revenue per shipment has probative value and is a matter to be considered, it does not, standing alone, justify conclusion that the owner-operators would be agreeable to a reduction in revenue on considered traffic, particularly when proposed reduced rates are below respondent's general rate level. There must be some definite evidence from which it can reasonably be concluded that they would supply the transportation for the particular proposal under consideration at the agreed percentage of revenue. Since evidence is insufficient for a finding that the agreed division will enable respondent to acquire and retain services of owner-operators for movement of the traffic on which the proposed rates apply, they cannot be found reasonably compensatory. Not approved.—Bicarbonate of Soda and Sal-Soda, Syracuse to Chicago, 321 I.C.C. 150 (152-3).

Protestants' objections to admission of data relating to cost of operating a tractor, on grounds that the basic books of record from which the figures were taken were not in the hearing room and that the witness could not be examined as to accuracy of such data, overruled because they go more to weight of that evidence than to its admissibility. The data were compiled under direction of the witness, who is responsibile for their keeping, and at hearing he had a stencil cut from the working papers of his subordinate, which reflected data from the original books of entry; he was extensively cross-examined as to the underlying cost and offered to bring in the basic work slips if necessary.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (424-5); and for like reason objection to admission of stated billing and collecting cost of 80 cents a shipment is also overruled; although respondent's exhibit showing other costs for that service was rejected because its witness was unable to stand cross-examination on it, witness testified from his personal knowledge that cost for that service, based on monthly studies made under his direction, was 80 cents.—Id., p. 425.

Respondents' witness testified that operating conditions for other carriers which would participate in movement of considered traffic are the same as for the carrier whose cost data they presented, though no supporting evidence was submitted. Predominant movement of traffic between considered points is southbound and consists principally of l.t.l. shipments, movements in reverse direction being mostly t.l. freight; most of the trailers used by the other respondents are comparable of those of representative carrier, and average mix of l.t.l. traffic is such that carriers cannot use full weight capacity of vehicles moving southbound; participating carriers are subject to same wage contracts for all drivers, and pickup and delivery cost for considered traffic would be almost identical; also, equipment used and cost of fuel are comparable among the carriers. Since elements of cost listed constitute most of the allocable cost of service for the traffic, respondents conclude that costs of other member carriers closely approximate those shown.—Jams, Jellies, or Preserves, Oklahoma City to Chicago, 325 I.C.C. 95 (96-8, 101)*.

Admission of respondent's cost evidence consisting of reproduction of appendix B to the commission's report in 323 ICC 416, which protestants move to strike as hearsay, will in no way prejudice protestants. Protes-

tants were parties to, and submitted evidence in, that proceeding, and their cost witness refers to same prior report in support of one of his cost computations; moreover, in the light of §14(3) and §204(d), the commission may take official notice of its own decisions. Official notice is taken of appendix B to the prior report; thus, it is unnecessary to pass on merits of protestants' motion to strike.—Candy and Confectionery, New York, N.Y., to Rockford, Ill., 325 I.C.C. 522 (523).

Although protestants did not press their objection to examiner's denial of a motion to strike portions of respondent's evidence pertaining to a 23-carrier cost study as provided in Rule 87 of the Rules of Practice, the commission can consider the motion in light of the evidence of record on its own volition. —Glass Bottles from Muskogee, Okla., to Chicago, 323 I.C.C. 258 (260).

While the value of automatic data processing is recognized in ascertainment of cost, proponent of reduced rates in issue must present sufficient acceptable evidence to establish a prima facie case. Any respondent should have no significant difficulty in assuring admissibility of cost evidence developed by automatic data processing. By properly qualified witnesses, it can show who selected the data imputs and the basis of that selection, in what fashion the data were processed, and that procedures followed comply substantially with those generally accepted, as outlined in public statement No. 4-62. Respondents' failure to produce a qualified witness for cross-examination on the 23-carrier cost study developed by automatic process, renders the study inadmissible; motion to strike granted.—Id., pp. 260-1.

The order authorizing oral hearing to permit cross-examination concerning that cost study comprehends that a qualified person responsible for preparation of the study would be presented for cross-examination. When respondents' witness testified that the study was developed by automatic data processing and was made by independent transportation consultants employed for the purpose, who in turn furnished the results to respondents, further cross-examination of the witness concerning his personal knowledge of the study could not have contributed evidence of value with respect to the cost data therein.—Id., pp. 259, 260.

Protestant's motion to strike respondent's cost studies, on the ground that the witness was unable to stand cross-examination, denied. The witness, a vice president and director of traffic for respondent, was able to explain the essential factors relating to the computations which he made, based on public statement No. 1-62; the objection goes more to the weight of the evidence than to its admissibility. Respondent's motion to strike certain testimony of a witness for protestant concerning the action of the standing rate committee of the Middle Atlantic Conference in originally imposing considered aggregate tender provision to prevent multiple pickup of small shipments is also denied. The witness was a member of that general rate committee and there is no reason to question his qualifications. If respondent doubted the facts asserted, or that the witness had personal knowledge thereof, it could have asked for his cross-examination.—Aggregate Weight Provisions on Paper, Mass. to N.Y., N.J. 323 I.C.C. 525 (527-8).

To the extent that respondent's reply statement attempts to introduce additional evidence, or relates to matters not of record, protestant's motion to strike on grounds that the statement contains new evidence which is unverified, in violation of Rule 50 of the Rules of Practice, is granted. However, portions of the matter complained of include verified opening statements and data based on respondent's annual report to the commission, and the reply statement includes certain corrections in reported statistics; those matters are properly before the commission.—Id., p.527.

Motion to strike copy of letter from the commission's cost finding section, concerning acceptability of a cost analysis using automatic data processing methods, from protestant's brief, granted; the matter violates Rule 86 of the Rules of Practice which prohibits submission of evidence after close of the hearing. And since cost study, which was developed by use of a computer and submitted by protestant in rebuttal, was not presented by a qualified witness, respondent's motion to strike the cost analysis because it did not

comply with Rule 50 of the Rules of Practice, granted. That the costs were developed on a computer is not the basis of the objection; while costs may be developed either manually or mechanically, they must be presented by a qualified witness; and underlying data must be available, upon proper request therefor.—Id., pp. 527, 530.

11. Presumption of reasonableness.—[Vols. 10, 12-14, 18, 19].—In absence of convincing evidence to the contrary, proposed reduced rate on foodstuffs is just and reasonable when it exceeds scale basis prescribed as reasonable minimum level throughout official territory in 294 ICC 371.—Foodstuffs from Hudson, N.Y., to Chicago, Ill., 315 I.C.C. 184 (185). [But see dissent.]

The mere fact that respondent's initial rates (following conversion from contract to common carrier) are lower than those of competing carriers raises no presumption of unreasonableness.—Various Commodities—Ill., Ind., Ky., Mo., Ohio, Pa., W. Va., 315 I.C.C. 576 (577).

Although the commission has often held that motor carrier rates which exceed aggregate of the intermediate rates are prima facie unreasonable, that presumption is rebuttable. Presumption that proposed rate is just and reasonable because it is equal to the aggregate of intermediate rates is rebutted by the showing that it fails to meet out-of-pocket cost of the service.—Petroleum and Plastics from Texas to Indiana and Ohio, 316 I.C.C. 155 (156-7).

While precise spread between revenue and system average expense that would be determinative of compensativeness depends on facts and circumstances of each case, revenues exceeding respondent's system average expense by 19.63 cents constitute a prima facie showing that one proposed rate is compensatory, but spreads of less than 10 cents do not constitute such a showing as to others. —Alcoholic Liquors from Eastern Points to South Dakota, 318 I.C.C. 195 (198).

12. Withdrawal of protest.—[Vol. 12].—See Davis & Randall v. U.S., APA, 5 USC, *Procedure*.

14. Parties.—[Vols. 17-19].—Motor carrier conference had standing to protest reduced rates published by plaintiff which is a member of the conference and a party to its ratemaking agreement; plaintiff is a voluntary member of the conference and had free and unrestrained right to take independent action to file its tariff, and to prove, independently of the agreement, that its proposed rates were just and reasonable; to assume invalidity of the agreement would not aid plaintiff in discharging its burden of proof.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (755-6)*.

Contention that participation in suspension proceeding by motor carrier rate conference constitutes representation of other parties in violation of Rule 1.71 of Rules of Practice and is contrary to its obligations to a member proposing the suspended rates, is without merit. [See 297 ICC 603 and 302 ICC 622.]—Floor Covering from Lancaster, Pa., to Charleston, S.C., 315 I.C.C. 550 (551).

It is well settled that an organization sanctioned under §5a has the right to protest schedules filed independently by member carriers, and that such right is derived, not from §5a, but from §216(e) and (g); the same conclusion is warranted as to protests of schedules filed by nonmember carriers. Rate bureau's practice of filing protests and appearing in resulting proceedings before the commission is a lawful representation of interests of its member carriers; such participation is an aid to the commission in administration of the act, especially in preventing destructive rate-cutting practices. Defendant rate bureau is interested in lawfulness of rates generally prevailing in its territory and in encouraging establishment and maintenance of reasonable, nondiscriminatory, and competitively fair charges for transportation services; it therefore is entitled to make by representation an appearance in its own name without specifically designating any member carriers. —Arbet Truck Lines, Inc. v. Central States Motor Freight, 321 I.C.C. 460 (463-4, 465-6). [But see dissent].

15. Orders as to suspended rates.—[Vols. 10-14, 16-19].—Proposed changed rates are not shown to be just and reasonable, and though rates republished therewith which were unchanged are not shown to be unlawful, latter rates would continue in effect if the suspended schedules were canceled in entire-

ty; as such cancellation would eliminate an otherwise superfluous tariff publication, all the schedules under investigation are ordered canceled.—Beverages and Empty Containers from and to N.J. & N.Y., 314 I.C.C. 792 (795).

Although certain of proposed rates represent increases, they are an integral part of proposed adjustment; as proposed reductions are not shown to be compensatory and may not be approved, entire schedules are required to be canceled.—Lead, Aluminum, Brass, Bronze, Copper Metals—Kofman's, 315 I.C.C. 344 (346).

Finding that proposed reduced rates are not shown to be just and reasonable will permit respondent to republish on statutory notice the same or different charges for movement of the traffic involved, subject to protest and possible suspension or investigation, or both; it would not benefit protestants to require respondent to maintain rates too high to meet cost of private carriage. However, should respondent republish rates on same basis, it should be prepared to offer more adequate justification.—Wallpaper, Paint, between Mechanicville, N.Y., and N.Y., 316 I.C.C. 11 (14).

In view of determination that respondent's authority does not embrace the commodities on which rates are proposed, the schedules under investigation are ordered canceled.—Road Paving Materials between Points in New England, 319 I.C.C. 95 (97-8).

An order requiring cancellation of proposed rates must meet requirements of §7(c) of Administrative Procedure Act that it be supported by and in accordance with reliable, probative, and substantial evidence.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257 (260)*.

20. Comparisons of rates.—[Vols. 10, 12-19].—For rate comparisons to be of substantial evidentiary value, the transportation conditions must be substantially similar; and burden of establishing reasonableness of comparisons rests on the party submitting them.—Frozen Foods from Caribou, Maine, to Midwestern Points, 314 I.C.C. 721 (724).

Comparisons submitted are insufficient to establish reasonableness of proposed rates when rates on like traffic from compared Pacific Northwest points to the Midwest are generally higher than from New England origin involved, and distances are considerably longer; extent to which such traffic moves at compared rates from eastern origins is not shown, and in making latter comparisons respondent used its average load and the minimum weight for the compared rates, whereas a fairer comparison would be on basis of either average loadings or applicable minima for all. Moreover, it is more probable that transportation conditions from such widely scattered points are different than that they are similar.—Id., pp. 723-4.

The commission has consistently recognized comparisons of rates with other reasonable rates for like transportation; proposed rates on foodstuffs (except nuts, tea, and yeast), in mixed truckloads, are lawful when protestant publishes like rates between same points, whose reasonableness is not questioned.—Various Commodities, Chicago to Cincinnati, Ind., Louisv., 314 I.C.C. 749 (751); however, as no competitive reason for proposed reductions on nuts, tea, and yeast is shown, inclusion of those commodities in other mixed-shipment rates of protestant is insufficient reason, standing alone, for their approval.—Id., p. 750.

Mere fact that proposed reduced rate are the same, or on same level, as those published by one or more competitors does not warrant a finding that they are just and reasonable.—Bicarbonate of Soda and Sal-Soda, Syracuse to Chicago, 321 I.C.C. 150 (153); Candy & Confectionery, Ill. & N.Y. to Ill., Ky., N.Y. & Pa., 318 I.C.C. 540 (543); Candy and Confectionery, New York State to Midwest, 318 I.C.C. 409 (412-3); Machinery and Equipment, Central, South, Midwest, 316 I.C.C. 236 (238); Drugs and Toilet Preparations, N.J. to Baltimore & Wash., 316 I.C.C. 252 (254); moreover, respondent has proposed reductions from some origins where no competitive necessity is shown.—Canned Goods—Md., Pa., Va., & W. Va. to Iowa, Mich. & Mo., 318 I.C.C. 171 (174); also, fact that competing carrier has an operating ratio which indicates that its overall operation is profitable is no basis for concluding that particular rates would be compensatory for that carrier or for respondent.—Paper and Paper Articles from

Ohio to Chicago, Ill., 316 I.C.C. 570 (571, 572).

Mere comparison of proposed rates with lower forwarder rates, without a showing of cost considerations on which those rates are based or competitive circumstances surrounding their establishment is insufficient to establish compensativeness of the former.—Air Cleaners, Blowers, Fans—Buffalo to Ill., Ohio, Mo., 314 I.C.C. 779 (780).

Comparison of proposed l.t.l. commodity rates from Bonner Springs, Kans., to the Southwest with lower rates on similar shipments from Dallas has little probative value when distances from Dallas are considerably the shorter; it is reasonable that under normal circumstances rates from the less distant origin should be substantially lower than those from the more distant origin.—Flavoring Sirup—Bonner, Kans., to Southwest, 314 I.C.C. 781 (782).

That point-to-point and distance rates proposed on meats and packinghouse products in lieu of rates presently maintained under intermediate rule compare favorably with numerous rates of other motor carriers on same commodities for comparable distances is convincing, in absence of opposing evidence, that they are just and reasonable.—Meats, Muncie, Ind., to New England, Middle Atlantic, South & Southwest, 314 I.C.C. 799 (800).

Proposed reduced rates are not shown to be reasonable by comparison with rates most of which are below the minimum level prescribed for rates on like traffic.—Wearing Apparel—Pennsylvania to New York, N.Y., Area, 315 I.C.C. 28 (30).

Rates currently under investigation are not a proper standard for determining compensativeness of proposed rates.—Chemicals, Other Articles, Kearney, N.J., to New York Area, 315 I.C.C. 71 (72).

Mere reference to rates from another origin, without some indication of revenues and distances, affords little help in passing on justness and reasonableness of proposed rates.—Candy—Montgomery, Ala., to Points in South Carolina, 315 I.C.C. 96 (98).

Existence of an anomalous rate basis from one origin does not justify extending that basis to another origin; in absence of proof that magazine distributed from Philadelphia is sharply competitive with that to be transported under proposed l.t.l. commodity rates from Old Saybrook, Conn., or that freight rates are an important factor in any such competition that may exist, l.t.l. commodity rates from Philadelphia cannot be accepted as a standard of reasonableness of the proposed rates, especially as they apply to only some of destinations involved, while class rates apply to the remainder.—Magazines, Old Saybrook, Conn., to Middle Atlantic Ter., 315 I.C.C. 273 (276).

Mere fact that commodity column rates have been established on a commodity with less favorable transportation characteristics than that considered does not establish that the considered article is entitled to l.t.l. commodity rates on the same level. Circumstances surrounding establishment of those commodity column rates are not shown, and there appears to be no competitive relation between the two articles.—Fluorescent Lamp Ballasts, LTL, Atlanta to Florida, 315 I.C.C. 412 (413, 414).

Compensativeness of proposed provisions for roasting-in-transit of coffee at Fort Worth, Tex., is not established by comparison of truck-mile earnings thereunder with truck-mile earnings under storage-in-transit arrangement on tea at Fort Worth on traffic destined to representative points involved; respondent does not show that the compared storage-in-transit charges plus the line-haul rates on tea are themselves compensatory, that there is any traffic now moving under those rates and charges, or that service rendered thereunder is in any way similar to that to be accorded under the proposed arrangement.—Roasting of Coffee in Transit at Fort Worth, Tex., 315 I.C.C. 455 (457).

And comparisons of earnings under present rates on coffee from Houston to representative destinations over normal routes with those which would accrue under proposed arrangement over routes via Fort Worth, which to some destinations are circuitous, consist of charges for dissimilar services and thus have little probative value to determine compensativeness of proposed arrangement.—Id., p. 457.

Proposed joint rate appears just and reasonable when, though it would result in a re-

duction over route to be used, it would produce $30.60 more revenue than minimum under existing combination rate and compares favorably with rate in effect from Cincinnati to same destination.—Oleomargarine from Columbus, Ohio, to Twin Cities, Minn., 315 I.C.C. 504 (506).

Comparisons of truck-mile earnings under proposed rate with those under rates on like traffic from other origins are not persuasive when compared earnings were computed for hauls ranging from 96 to 474 miles longer than distance for which proposed rate would apply.—Floor Covering from Lancaster, Pa., to Charleston, S.C., 315 I.C.C. 550 (551).

While cost data are the most common means of determining minimum reasonableness of particular rates, this issue may be resolved by other evidence. Proposed l.t.l. commodity rates on empty returned aluminum tote tanks of not over 400 gallons capacity are on higher level and would produce greater earnings than protestant's rates for comparable hauls of empty returned iron or steel barrels or drums; protestant's mere assertion that the compared rates were published "mainly" to meet competition, and thus afford an improper standard of reasonableness, is not convincing that they are below a compensatory level, and it may be reasonably assumed that protestant regards them as compensatory; proposed rates approved.—Aluminum Tote Tanks, Springfield, Ill., to Fort Madison, 315 I.C.C. 567 (569-70).

Evidence in opposition to initial proportional rates to be applied in conjunction with rail movement at plan III TOFC rates consists mainly of comparison with class rates, which normally reflect the maximum reasonable basis; as transportation characteristics of the compared commodities are not revealed, such comparisons have little weight; and comparison of charges for the through motor-rail movement is not relevant to determination of reasonableness of the proportional rates.—Various Commodities—N.J. Railroad Yards, N.J., N.Y., Pa., 315 I.C.C. 704 (706).

Reasonableness of proposed reduced rates on sugar is not established by comparison with those of another motor carrier, which took effect about 10 years earlier and have not since been changed.—Sugar, New York and Philadelphia to Bellefontaine, Ohio, 316 I.C.C. 27 (29).

Respondent presented no rate comparisons on considered commodity, confining its showing to comparisons of proposed rates with its rates on analogous articles from and to points involved; however, protestant's comparisons of the proposed with existing rates on same commodity from and to a number of points in same territory show that proposed rates reflect 17.4 and 19.7 percent of first class while compared rates reflect 23.4 to 27.8 percent thereof. In the circumstances, respondent's rate comparisons are not persuasive of reasonableness of proposed rates.—Titanium Dioxide from Chicago, Ill., to Kalamazoo, Mich., 316 I.C.C. 150 (153).

Comparisons of proposed rates on plastic materials with rates on same commodity to same destinations from other origins in the area do not show compensativeness of proposed rates; record is devoid of any showing as to similarity of circumstances surrounding the rates. While the compared rates are entitled to weight, they do not constitute an appropriate standard with which to measure reasonableness of proposed rates.—Petroleum and Plastics from Texas to Indiana and Ohio, 316 I.C.C. 155 (157).

That respondent maintains higher commodity rates on other commodities between same points does not establish unreasonableness of proposed rate on canned goods when transportation characteristics and conditions surrounding movement of the compared commodities are not shown to be similar to those surrounding movement of canned goods.—Canned Goods from San Francisco to Pocatello, Idaho, 316 I.C.C. 296 (297).

That proposed rates compare favorably with others on the same or similar products between other points is insufficient reason for establishment of rates that are not compensatory.—Sodium Silicate from N.J. & Pa. to Ill., Mich., Mo. & Ohio, 316 I.C.C. 699 (704).

Respondent has shown that transportation characteristics of considered commodity compare favorably with those of similar traffic moving from same origin at rates on same level, which apparently are compensatory, and that proposed rates would cover at least out-of-pocket costs; approved.—Bakery

Goods, Chattanooga, Tenn., to Southern Points, 316 I.C.C. 573 (576); however, in view of cost data showing that proposed rate would not be compensatory, comparisons with rates on other commodities for similar distances on basis of percentage relations to first class may not be accorded controlling weight.—Titanium Dioxide from Baltimore, Md., to Cleveland, Ohio, 316 I.C.C. 655 (656).

While mere reference to rates maintained by another carrier, the same as those proposed, is of little value in proving reasonableness of the latter, and respondent has merely shown its proposed distribution rates at Chicago and St. Louis on all-freight from Rogers, Ark., to be the same as those of a competitor and has submitted no cost data to show their compensativeness, protestant rate bureau and respondents in related investigation submitted evidence showing that at lease five other carriers maintain distribution rates at Chicago on same level as those proposed, and assert that their rates are compelled by maintenance of comparable rates by numerous other motor carriers. The bureau also publishes distribution rates at Chicago on traffic from Twin Cities lower than the proposed rates, and no reason appears why traffic from Rogers should be charged higher rates than that originating elsewhere. In the circumstances the proposed rates are just and reasonable.—Distribution Rates at Chicago, Ill., and St. Louis, Mo., 318 I.C.C. 145 (149).

Rates maintained by other motor carriers for like service in same territory on same commodities or others with similar transportation characteristics are an acceptable standard of reasonableness. Proposed reduced assembling rates on textiles from Carolina mills to Greensboro and Charlotte, N.C., exceed many point-to-point commodity rates of conference carriers in that area, are substantially higher than rates in reverse direction to certain seaports, and compare favorably with distribution rates from Charlotte on comparable commodities as well as with many assembling and distribution rates in other territories. In absence of proof to the contrary it may therefore be reasonably assumed that the proposed rates are not below a compensatory level.—Assembling Rates at Charlotte and Greensboro, N.C., 318 I.C.C. 429 (439).

Although minimum truck-mile earnings under proposed rates would approximate those under compared rates of competing motor carriers, there is no showing that considered rates cover transportation similar to the compared rates or that latter are just and reasonable. The rate comparisons therefore may not be used as measure of compensativeness of the proposed rates; not approved.—Paper and Related Art., Ga., N.C. & S.C. to Pa. & W. Va., 318 I.C.C. 440 (442, 444).

Initial common-carrier mileage rates of a former contract carrier on mortar and portland cement from New York and Pennsylvania points to New England and middle Atlantic States are not shown to be unlawful when they are on higher level than scales approved for middle Atlantic States in 313 ICC 103 and for New England in 314 ICC 459, as extended for distances up to 660 miles.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (242, 247).

As none of costs shown are representative of those incurred by such specialized carriers as respondents, who transport bananas one-way and exempt commodities on return, the best evidence bearing on reasonableness of proposed changed rates and initial mileage scales on bananas from Gulfport, Miss., to northern and northwestern States is respondents' comparisons of revenues thereunder with rates and revenues of rail and other motor carriers. Those comparisons indicate that, except to Washington, the proposed rates, which include heating or refrigeration and allow two free stopoffs in transit, are just and reasonable and necessary to meet competitive rates of other motor carriers; however, to that State the proposed point-to-point and mileage rates are not justified by either rate comparisons or competitive need and in numerous instances result in greater compensation for shorter than for longer hauls over same route in same direction; the proposed rates to Washington ordered canceled.—Bananas from Gulfport to the East, South, and West, 321 I.C.C. 274 (278, 281-2).

Compared class rates on traffic moving in carriers' trailers, which normally reflect the maximum reasonable basis of rates, are not indicative of a minimum reasonable level for

judging lawfulness of proposed proportional charges per trailer for moving shippers' trailers, loaded and empty, in connection with TOFC service. Moreover, compared charges between Jersey City and New Jersey and Connecticut are not shown to apply on traffic moving under similar transportation conditions to involved movements between northern New Jersey rail yards and Long Island.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429 (433); and that the proposed charges are lower than those maintained on like traffic by conference and other carriers is not controlling, as operations and generally costs of those carriers differ from those of respondent.—Id., p. 433-4.

Favorable comparison with rates in effect at same time between similar points of origin and destination under similar transportation conditions is acceptable evidence of reasonableness of a proposed rate. Respondent's comparison of proposed rate and earnings with those on other traffic from points in vicinity of considered origin to same destination commands greater weight than protestants' more selective comparisons.—Boards or Sheets from Hope, Ark., to Chicago, 319 I.C.C. 399 (400, 402).

While favorable comparison with other rates concurrently applicable on like traffic under similar transportation conditions is acceptable evidence of reasonableness of rates in issue, it commands little weight unless there is some indication that the compared rates are themselves just and reasonable and are actually moving traffic.—Cocoa Powder from New York, N.Y., to Council Bluffs, 322 I.C.C. 255 (259)*; Sheet Steel, Galvanized—St. Louis to Marshalltown, Iowa, 318 I.C.C. 589 (591) [But see dissent]; however such comparisons do not overcome protestant's showing that proposed rate would not be compensatory; not approved.—Aluminum Scrap from Jackson, Mich., to Madison, Ill., 316 I.C.C. 620 (621-2).

25. Classifications; comparisons; exceptions.—[Vols. 10, 12-16, 18, 19].—Suit to set aside commission order requiring cancellation of proposed increase of l.t.l. classification rating on stuffed animals, dolls, and toys, dismissed; record, as a whole, supports the commission's conclusion that proponent carriers failed to sustain their statutory burden to show proposed changed rating would be just and reasonable. A commodity classification develops from consideration of many factors, including weight per cubic feet, value, and liability to loss or damage; and, while commission finding that other factors would not warrant proposed higher rating for articles averaging 4 pounds or more in density clearly implied that if density were below 4 pounds, the higher classification would have been approved, plaintiffs' contention that, under the APA, the commission was obligated to fix average density of considered commodities at a definite arithmetic figure, cannot be upheld; that statute anticipates a decision based on paucity of proof. Duty of the commission, as the trier of fact, was to assay the proof; the court cannot find that its conclusion is without rational basis.—Overnite Transportation Co. v. United States, 266 F. Supp. 88 (90-91)*.

Proposed exception rating on 30,000-pound straight or mixed t.l. shipments of drugs and related articles, which would apply throughout a wide area, not approved; evidence of record fails to show that resulting rates would be compensatory.—Chemicals, Drugs, Toilet Prep.—Texas and Midwest-East, 315 I.C.C. 598 (599-600).

26. Reasonableness of regulations and practices.—[Vols. 10, 11, 16, 18, 19].—Proposed return-load rule for certain bulk commodities in tank trucks between points in various eastern, southern, and central States conforms with principles enunciated in 310 ICC 473 except insofar as it (1) fails to provide that destination of return loads shall be the same point or in same commercial zone as origin point of the outbound shipment, and (2) authorizes computation of the prescribed maximum excess mileage for return hauls (50 percent of the outbound mileage) over distances from origin point of the return load instead of from destination of the outbound shipment as contemplated by that decision. Proposed rule ordered canceled, without prejudice to establishment of a rule conforming with instant findings.—Return Shipments Rule—Eastern, Southern Territories, 315 I.C.C. 267 (268-9).

Proposed exception to tariff helper-service rule, which would eliminate charge for one

helper to load and unload in connection with t.l. shipments of foodstuffs from Baltimore to Philadelphia and New York City, found not justified. Present helper-service rule has general application for large number of carriers in the area, exceptions thereto are of little or no significance, and none of those exceptions affects considered traffic. Record fails to show that proposed rates are compensatory for the service to be rendered, including furnishing extra help in loading and unloading shipments, or that market competition necessitates proposed exception ro respondent's helper-service rule.—Free Helper Service on Foodstuffs from Baltimore to New York and Philadelphia, 315 I.C.C. 693 (694).

Proposed exception to tariff rule providing additional charges for helper service where additional labor is used at shipper's request, which would eliminate such charges on t.l. shipments moving to or from New York City zone 8 (New York Harbor piers and wharves), and on t.l. shipments on which shipper incurs inside delivery charges, is not shown to be just and reasonable. Although present rule precludes use of helper service in instances where it would benefit carrier, as on pier traffic where shipper does not request helper service and carrier must hire stevedore service, also where vehicle would otherwise be left unattended when driver alone makes an inside delivery, proposed exception is broader than necessary to meet the need shown; moreover, resulting charges are not shown to be compensatory for the service performed, including furnishing of extra help in loading and unloading shipments. —Nonapplication of Helper Service Rule, 316 I.C.C. 728 (729-30).

Proposed exception to general helper service rule, which would furnish loading and unloading service of an additional man without charge under line-haul rates on alcoholic liquors, is not shown to result in compensatory rates, nor is any competitive necessity shown therefor; not approved.—Helper Service, Alcoholic Liquors, Md. to N.Y. and N.J., 318 I.C.C. 102 (104).

Proposed tariff rule providing that line-haul rates would include loading and unloading services by not more than two men and canceling certain carriers' participation in the conference's present helper service rule, which provides for loading and unloading service of one man per vehicle, is not shown to be compensatory. Also, proposed rule would permit the use of two men at any time although it would not require their use; thus, the rule is objectionable in that it is uncertain, indefinite, and ambiguous, in violation of rule 11 of commission's Tariff Circular MF-No. 3.—Helper Service in Middle Atlantic Territory, 318 I.C.C. 810 (810, 813-4).

Proposal to eliminate minimum-tender requirement published in connection with l.t.l. commodity rates under which, in effect, the commodity rates would replace the class rates which now apply on shipments not meeting the required total tender, is not shown to be just and reasonable. Class rates on l.t.l. shipments apply with three rate scales published on less than 2,000 pound, 2,000 to 6,000, and over 6,000-pounds weight brackets. Alternate scaled commodity rates also are published for the same weight brackets and apply if shipper tenders a minimum weight at one time from one specified location. Minimum weights are integral parts of the related rates and they must be considered together. A primary requirement, of course, is that the resulting rates must be compensatory; respondent only shows that rates resulting from removal of the restriction would be compensatory on shipments under 2,000 pounds moving in single-line service. Proposal not approved, without prejudice to its establishment on less than 2,000-pound shipments in single-line service.—Aggregate Weight Provisions on Paper, Mass. to N.Y., N.J. 323 I.C.C. 525 (526-7, 531-2).

Although proposed multiple-vehicle provision, under which carrier performing stopoff service may for operating convenience use two or more vehicles in handling a single shipment and all portions of the shipment need not move through the stopoff point, is presently applicable for all rate-bureau members except respondent, respondent has undertaken to justify that provision solely in connection with proposed establishment of Charlotte, N.C., as a stopoff point for partial unloading of shipments moving from Chicago to Raleigh, N.C.; since latter provision is not shown to result in a compensatory operation,

the multiple-vehicle provision, as an integral part of same proposal, must likewise be found not shown to be just and reasonable.—Stopoff in Transit at Charlotte, N.C., for Unloading, 316 I.C.C. 317 (318, 321).

Condition of reduced rates on gasoline and fuel oil, that carrier be allowed continuous loading and unloading from 12:01 a.m. Monday to 11:59 a.m. Saturday, merely permits respondent greater utilization of its equipment by permitting access to shipper's facilities on 24-hour basis, 5-1/2 days a week; possible difficulty of policing the condition is no ground for finding it unlawful.—Gasoline and Fuel Oil within Middlewest Territory, 316 I.C.C. 435 (439).

Proposed rule providing for absorption of loading and unloading charges, not to exceed 7 cents, on all class-rated traffic moving to or from Virginia ports is not shown to be just and reasonable when respondent failed to show by properly submitted cost evidence that resulting rates would be compensatory, and as no competitive necessity for proposed rule is shown, it cannot be found that it would not constitute a destructive competitive practice; not approved.—Absorption Pier Loading and Unloading Charges, 316 I.C.C. 577 (580).

See also Gordons Transports, Inc. v. Strickland, NTP, n. 10 *Substituted freight service*; Removal of Detention Charges—Dixie Ohio Exp., Inc., §216(b), n. 460; Claim Settlement on Household Goods, §216(b), n. 735. See Claim Settlement on Household Goods, §216(b), n. 735.

65. Reasonableness of proposed rates.—[Vols. 14-19].—Whether proposed rates are just and reasonable within the nebulous statutory standard is a question of fact to be resolved by the commission after according appropriate weight to evidence offered in their support; obviously, rates which are not compensatory are not just and reasonable.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (754-5)*.

Even though the commission found that proposed rates were not proven to be compensatory by cost study submitted under modified procedure, other evidence of reasonableness, such as shipper's need for the rates to meet market competition, fact that competing carriers were not moving the traffic, and higher truck-mile revenue produced by the reduced rates than by existing rates for shorter distances, could appropriately have been considered, particularly since absence of protest by, or evidence of adverse effect on, competitors left protection of the carrier against its own unwisdom and possible burdening of its other traffic the only bases for government intervention. However, while the commission may under some circumstances permit a carrier to establish a rate not proved to cover out-of-pocket costs, it is not required to do so.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (677)*.

While the commission's minimum-rate power concededly may be used in absence of objection to the rates by other carriers, in a close case some weight ought to be given to management decision: there is no suggestion that plaintiff's management was incompetent or had any reason or desire to impair its operating ratio and return on capital by hauling involved traffic at a loss, thereby burdening other traffic. Considering also the apparently reasonable nature of plaintiff's cost evidence, that the commission's criticisms thereof are not so strong as to have necessarily survived a hearing or to call for affirmance no matter what a hearing produced, and the negligible possibility of injury to the public from allowing the rates to take effect, enforcement of the commission's cancellation order is enjoined, without prejudice to any future action it may take concerning those rates in a complaint proceeding under §216(e).—Id., p. 683.

Propriety of joint rate established for transportation by plaintiff and two other carriers does not establish that the same rate would be just, reasonable, and lawful for a three-line haul by plaintiff, one of former participants, and an entirely different carrier; existence of a joint rate for one group of carriers does not necessarily mean that the same rate would be proper for a different group.—Great Western Packers Exp., Inc. v. United States, 246 F. Supp. 151 (155)*.

Proposed rates that are not compensatory cast an undue burden on other traffic and are unjust and unreasonable.—Canned Goods, Cincinnati, Ohio, to Ind., Ill., Ky., Mo., & Wis., 315 I.C.C. 169 (170); Lumber from

Cimmaron, N. Mex., to Chicago, 315 I.C.C. 534 (536); Aluminum Siding, Chicago Heights, Ill., to Wis. Points, 315 I.C.C. 450 (453).

Proposed air-competitive any-quantity rates for expedited service on all freight (except articles rated higher than class 150) between Chicago and Atlanta, offering next-day delivery of shipments made available to carrier no later than 11 a.m. on date of pickup, are reasonably compensatory and otherwise lawful; $5 rate proposed for terminal-to-terminal service is higher than present class rates, which include pickup and delivery, on all but classes 125 and 150, and the line-haul movement is identical to "normal" service in transit time, billing-and-collecting costs, and platform handling; and the $8.60 rate per 100 pounds for door-to-door service, if also made the minimum charge, will be $2.31 higher than the rate for normal service on the highest-rated commodity that could be handled in the expedited service; approved on that basis.—Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663 (664, 666).

No special circumstances are shown to require establishment of proposed l.t.l. commodity rates on flavoring sirups from Bonner Springs, Kans., and since flavoring sirup is manufactured at numerous points in the same general territory, their establishment from that point would require that consideration be given to reducing the rates from other points, with unfavorable results on carrier revenues; not approved.—Flavoring Sirup—Bonner Springs, Kans., to Southwest, 314 I.C.C. 781 (782-3).

Although proposed reduced rates on salt are allegedly intended to enable Williston, N. Dak., to compete with Hutchinson, Kans., in South Dakota markets, no present or proposed relation between rates from those origins is shown, or why resulting rate spreads vary considerably where short-line distances are approximately the same from both origins; proposed rates are lower than corresponding rail rates and in many instances appear to be noncompensatory; moreover, they would in some instances result in higher rates for shorter than for longer distances over the same route, and that maladjustment would be aggravated if only the rates indicated to be compensatory were approved; proposed adjustment is therefore not approved.—Salt from Williston, N. Dak., to South Dakota, 314 I.C.C. 787 (790).

As respondent has not shown that proposed increased minimum of 60,000 pounds for malt beverages could be legally loaded on a single vehicle, like the present minimum, its meager cost evidence fails to show that the changed rates, including proposed any-quantity basis on returned containers, would be compensatory. Protestants' more nearly complete studies, reflecting need of two trucks for outbound movement of a minimum load, show that the proposed rates would yield round-trip earnings substantially below respondent's system average truck-mile cost; moreover, those studies assume that the return loading of containers would continue at the present level of 18,000 to 20,000 pounds, whereas respondent indicates that shippers prefer not to accumulate any minimum amount. Thus the proposed rates are not shown to be compensatory; not approved.—Beverages and Empty Containers from and to N.J. & N.Y., 314 I.C.C. 792 (794-5).

The proper basis for determining compensativeness is the rate and minimum weight proposed, or the average loading for the particular movement, not average truck capacity or system average weight. Though carrying capacity of trucks is 40,000 to 45,000 pounds, average loading of considered traffic is not shown; a shipper may offer and carrier may transport in one truck a shipment not exceeding proposed 20,000-pound minimum, and there is no evidence to show that other freight would be loaded with such a shipment or if so how the added cargo would affect the cost of performing the service. Proposed rate is not shown to be just and reasonable.—Pie Filling from Duluth, Minn., to Fargo, N. Dak., 314 I.C.C. 797 (798).

Rates which can be defended only on the speculation that a shipper may resort to another method of distribution may not be found just and reasonable.—Candy —Montgomery, Ala., to Points in South Carolina, 315 I.C.C. 96 (98).

Proposed reduced rates on foodstuffs are not just and reasonable when the traffic is

generally moving freely under present rates, and approval of the proposal would compel similar reductions from related origins, thus producing an extensive disruptive effect in the rate adjustment of many carriers.—Foodstuffs from N.J. to Conn., Mass., and R.I., 315 I.C.C. 315 I.C.C. 179 (180).

Though proposed l.t.l. commodity rates on multiple shipments of clothing in aggregate tenders of 2,500 pounds or more appear to be on general level of class rates maintained by respondent and other carriers, and therefore, in absence of contrary evidence, may be presumed not to be unreasonably low, they would have no effect without proposed minimum charges, which may not be approved because they are not shown to be compensatory and are insufficiently definite without a prepay requirement; not approved.—Clothing, in Multiple Shipments, from Nanticoke, Pa., 315 I.C.C. 181 (183).

Carriers have the right to adapt their rates and practices to needs of localities and industries they serve, so long as they do not contravene any provisions of the act or the national transportation policy. Over half of paper traffic moving between considered points on present 18,000 and 24,000-pound minima is accorded stopping-in-transit and split-delivery service, and shipper must often hold up small shipments to make the t.l. minimum, resulting in delays of several days; proposed volume rates on minima intermediate between present t.l. and l.t.l. quantities, with stoppage in transit and split deliveries limited to the 15,000-pound rates, substantially exceed fully distributed costs and will enable shipper to make more frequent shipments consistent with its customers' needs. Protestant's contention that proposed rates would tend to spread under pressure and thus undermine the rate structure has no substantial support of record; approved.—Paper Articles, Springfield, Mo., to Ind., Ky., Mich., Ohio, 315 I.C.C. 579 (581-2).

Proposed reduced rate, although compensatory, would result in reducing respondent's minimum t.l. revenue; other motor carriers of considered traffic could be expected to make a similar reduction in order to remain competitive; unnecessary dissipation of carrier revenues, both for respondent and competing carriers, would result; no shipper supports the proposal; not approved.—Vinyl-Coated Iron or Steel Sheet, Chicago to Kalamazoo, 315 I.C.C. 660 (661, 662).

Commodity rate proposed on iron and steel fasteners in shipments of less than 2,000 pounds from Rockford, Ill., to Anderson, Ind., is reasonably related to rates from competing origins, appears necessary to maintain sales position of Rockford shippers at Anderson, and is shown to be compensatory; however, rates proposed for higher weight brackets are not shown to be compensatory and would provide Rockford shippers with rates 7 to 12 cents lower than corresponding rates available to competitors at Cleveland and Detroit, somewhat closer to Anderson than Rockford, for which no justification is shown; as most of the Rockford traffic is in the lowest weight bracket, rate proposed thereon will be reasonable for all l.t.l. shipments.—Iron or Steel, LTL, Rockford, Ill., to Anderson, Ind., 315 I.C.C. 683 (687-8).

Proposed joint rates are not shown to be just and reasonable when delivering carrier submitted no evidence and initial carrier failed to show volume of traffic or to present competent cost estimates and supporting data, or any basis for making allowance for expense of the return trip.—Meats and Packinghouse Products from Chicago to South, 315 I.C.C. 699 (702).

Minimum truck-mile yields at proposed reduced rates and increased minimum weight on artificial rubber substantially exceed those at present rates, which are presumptively reasonable because of their long standing, and thus appear compensatory. That for loads only slightly above present minimum they will yield less than the present rates must be balanced against probable loss of the traffic to private carriage under the latter; the traffic is desirable to respondents because it is compact, easily loaded, of relatively low value, not susceptible to damage, and moves in direction of their light movement. Proposed rates are also necessary to enable shipper to meet competition from other origins; approved as just and reasonable.—Rubber, Sarnia, Ontario, to Conn., Mass., Mo., and R.I., 315 I.C.C. 707 (708, 709)*. [But see dissent.]

To establish reasonableness of proposed

reduced rates, it is incumbent on respondent to show that they are compensatory, even where they are designed to meet threat of private carriage.—Wallpaper, Paint between Mechanicville, N.Y., and N.Y., 316 I.C.C. 11 (13).

Proposed proportional all-commodity distance rates published as flat rates per trailer, to apply in conjunction with rail plan III TOFC service, between Harrisburg rail terminals and Pennsylvania points within 60 miles thereof, found just and reasonable; thourh respondent's cost data are deficient in some respects, it has made a prima facie showing that the proposed rates are compensatory, they are identical with rates of other motor carriers between the same points, which were found lawful in 315 ICC 499, and revenues thereunder would exceed that presently obtained in interline service with other motor carriers.—Freight, All Kinds, between Harrisburg and Pa. Points, 316 I.C.C. 41 (44).

Although respondent's operating ratios indicate its overall operations are being conducted at a profit, such data do not establish compensativeness of proposed rates.—Machinery and Related Articles—Hampstead, Md., to New England Points, 316 I.C.C. 71 (74).

Proposed service is an innovation in the motor carrier industry, with rates covering a pure line-haul service from terminal to terminal, in carrier-owned trailers, to enable carriers to compete more effectively with TOFC plan III service offered by railroads; in absence of adequate cost presentation, the evidence does not support a finding that the proposed rates are compensatory; not approved.—Automobile Parts and Other Articles, Central Territory, 316 I.C.C. 143 (143, 146). [But see dissent.]

Though proposed l.t.l. commodity rate on boots or shoes appears compensatory, it is not shown to be just and reasonable when neither volume of movement nor competitive conditions justifying a special rate are shown; the traffic appears to be moving freely within the territory at l.c.l. class rates, and proposed rate might undermine an existing just and reasonable rate structure; not approved.—Boot or Shoes from Columbus, Ohio, to Chicago, Ill., 316 I.C.C. 239 (241-2).

Since evidence submitted by the parties is meager and inconclusive, and there is no substantial evidence that proposed initial rate is unlawful, the issue of reasonableness is resolved in favor of respondent, which does not have the burden of proof; that rate and others representing merely a change in form of publication of initial rates are on same level as other rates of respondent on like traffic from same origin; proposed rates found not shown to be unjust or unreasonable.—Wine from Canandaigua, N.Y., to Florida and Alabama, 316 I.C.C. 246 (248).

Proposed point-to-point rate the same as rate applicable under intermediate rule but on higher minimum weight, resulting in a higher minimum charge per truckload and returning greater per-truck revenues than present rate, does not constitute a destructive competitive practice; evidence shows it is respondent's present rate which is causing an adverse effect on traffic of other carriers and not proposed schedules; approved.—Iron or Steel Articles from Portage, Ind., to Chicago, 316 I.C.C. 255 (257).

Compensatory nature of proposed all-freight rates, consignor to load and consignee to unload, is not clearly established when respondent failed to submit underlying data in support of its cost analysis; further, while rate comparisons submitted by respondent are entitled to weight, they do not constitute an appropriate standard with which to measure reasonableness of the proposed rates.—Freight, All Kinds, Chicago, Ill. to Dayton, Ohio, 316 I.C.C. 405 (406-7).

Proposed rate on soap and related articles, minimum 20,000 pounds, is noncompensatory when minimum truck-mile revenue therefrom is substantially below system average expense per vehicle-mile for respondent, a specialized carrier of such products, and no competitive reason for that rate is shown; not approved.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421 (424-5).

Initial rates on certain commodities from railheads in the Dakotas to South Dakota missile bases, on basis higher than respondent's Montana intrastate rates on like traffic, no lower than corresponding rates of another motor carrier on lower minimum weight, and

on same level as rates prescribed by South Dakota commission for intrastate movements of comparable commodities requiring special equipment, are not shown to be unlawful; approved.—Cable, Iron & Steel, Lumber between S. Dak. and Missile Sites, 316 I.C.C. 427 (429-30).

Although protestant objects to establishment of l.t.l. rates on envelopes for shipments of 2,000 pounds and over which would reduce spread previously existing between shipments of those weights and shipments of less than 2,000 pounds, former exceed full costs, and agreed scale rates in general are compensatory; mere reduction in spread between shipments of different weights is not indicative of unlawfulness.—American Envelope Co. v. A. & H. Truck Line, Inc., 316 I.C.C. 563 (565, 568)*.

That shippers and receivers regard present class rates between Greenville, Miss., and certain Arkansas points, established for rail ratemaking distances via other river crossings, as unjust does not, standing alone, establish that proposed rate bases reflecting short highway mileages via subsequently constructed highway bridge at Greenville are lawful.—Class Rates between Greenville, Miss., and Arkansas, 316 I.C.C. 629 (632).

A proposed rate may not be approved as just and reasonable in absence of positive evidence in form of either acceptable cost data or probative rate comparisons.—Lubricating Oil from Panama City, Fla., to Atlanta, Ga., 316 I.C.C. 696 (698).

Although respondent's cost data, in summary form without reference to underlying data, are entitled to little weight, the compensativeness of the proposed rate on ribbon bows is supported by a comparison of rates on other commodities actually transported by respondent from and to the same points; both vehicle-mile and ton-mile earnings are substantially higher than on such high-value commodities as cigars, cigarettes, and alcoholic liquors transported by respondent between points involved. Approved.—Dry Goods and Telephone Housings within Central Ter., 318 I.C.C. 175 (177).

As respondent holds itself out to accept minimum shipments of 33,000 pounds, rates must be compensatory at that weight.—Alcoholic Liquors from Eastern Points to South Dakota, 318 I.C.C. 195 (197).

Reduced rates and increased minimum weights on cement from Dewey, Okla., to Kansas points, proposed as result of increase in Kansas maximum weight limit, will yield more profit than present rates and will permit fuller utilization of respondent's equipment; approved.—Cement from Dewey, Okla., to Points in Kansas, 318 I.C.C. 281 (282, 284).

Proposed rate on sugar from Louisiana origins to North Carolina destinations, while on rather a low level, is compensatory and serves to balance respondent's operations. Furthermore, considering the troublesome situation confronting regulated carriers in transportation of sugar, due to competition of various "buy-and-sell" operators, a low rate level is justified. Respondent has met its burden of showing reasonableness of the proposed rate.—Sugar from Louisiana to North Carolina, 319 I.C.C. 107 (112).

While reasonably accurate cost data are helpful in determining reasonableness of particular rates, they are not the only criterion; a comparison of earnings yielded by transportation of shipments of varying size is also a factor of significance. Proposed reduced rate on brushware, minimum 35,000 pounds, is reasonable when it would yield slightly higher revenue than average loads of 32,960 pounds at present higher rate on 30,000-pound minimum.—Brushware & Cleaning Articles, Easthampton to Atlanta, 319 I.C.C. 164 (166)*.

It should not be inferred, from finding that comparison of initial rates of respondent, a class III limited-commodity carrier, with average costs of class I and II general-commodity carriers does not establish that the rates are noncompensatory and therefore unreasonable, that there are different standards of ratemaking as between the different classes of carriers. The relative size of a carrier has no bearing on requirement that just and reasonable rates be maintained.—Animal Feed, Miss. and Tenn. to Midwest and Southwest, 319 I.C.C. 257 (260)*.

While respondent shows that its southbound traffic predominates and that it needs northbound coffee traffic to balance its operations, it has not shown that rates and charges under proposed roasting-in-transit arrange-

ment would be compensatory, and the commission has repeatedly declined to approve rates justifiable only on added-traffic theory; proposal is not supported by any shipper witness, and respondent's statement that such transit provisions would divert traffic from private carriage to its common-carrier service lacks probative force; not approved.—Roasting of Coffee in Transit at Fort Worth, Tex., 315 I.C.C. 455 (457-8).

Averages of the minimum earnings which would be produced by the rates proposed and rates applying on other commodities moving in the opposite direction are entitled to little weight; earnings produced on traffic moving in the return direction cannot be considered in adjudging the compensativeness of a proposed rate, since rates which can be defended only on the backhaul or added-traffic theory may not be found to be just and reasonable.—Bananas, Gulfport, Mobile & New Orleans to Indianapolis, 316 I.C.C. 194 (195).

Proposed reduced rates on meats and packinghouse products, minimum 38,000 pounds, made 30 and 20 cents lower than previously approved Cudahy scales on boxed and hanging meats, minima 33,000 and 30,000 pounds, and designed to meet competition of private and illegal carriage of meats purchased f.o.b. plant, are higher than 66,000-pound TOFC rates established for same purpose and appear somewhat higher than charges of the gray area motor carriers and costs of private carriage. Proposed rates are amply compensatory and preserve same rate relations and groupings as under the Cudahy scales; approved as just and reasonable.—Meats and PHP, Central & Western to Far Western States, 319 I.C.C. 667 (669, 671, 675).

Proposed reduced joint rates on tobacco products between Greensboro, N.C., and Louisville, Ky., which reflect shipper's costs for interplant movements in rail plan III TOFC service, are just and reasonable when they exceed respondents' fully distributed costs for all movements and are necessary for them to continue participating in the traffic, most of which is now moving in the plan III service. The lower rates proposed for the movement from Louisville than in reverse direction are justified by differences in costs due to different load factors for movement of a single article in one direction and multiple articles in the other; and in round-trip service the proposed rates will result in an operating ratio of 83 percent at full costs.—Cigarettes and Tobacco between Greensboro and Louisville, 319 I.C.C. 679 (682, 684).

Proposed 6-percent increase in rates and charges on transcontinental traffic between points east and west of described line from El Paso, Tex., to Canadian boundary at Montana-North Dakota State line, except in commodity rates with minimum weights of 10,000 pounds or more and in all rates between specified points and areas, approved to provide revenues needed to meet increased operating expenses. As result of general increases in wages, equipment prices, and other operating costs, in 1960 the number of involved carriers with operating ratios below 95 percent was about half that for 1959, while the number with ratios of 100 percent or more had doubled; but during first 9 months of 1961, after proposed increase became effective, the number with ratios below 95 percent doubled, those with ratios of 95 to 100 percent declined by 102, and the number with ratios upwards of 100 percent was only about half that for 1960. Evidence is convincing that the transcontinental rates as thus increased do not exceed reasonable maxima.—General Increases—Transcontinental, 319 I.C.C. 792 (793-5, 803).

Respondents' detailed showing of the nature and extent of his operations sustains his claim that he must retain involved beer traffic in order to remain in business. He has been handling only a limited number of commodities, four of which provide over 90 percent of his total revenue, with beer and empty containers supplying over 40 percent thereof at time when his rates were substantially on same level as rail rates; and immediately following rail rate reduction he lost half his beer traffic and probably would have lost the rest had parity not been restored by the reduced rates in issue. Dissapproval of proposed rates would likely cause him to lose over $30,000 in revenue, with resulting impairment of operations that are partially balanced. Proposed rates appear compensatory in light of record as a whole; approved.—Malt Beverages—Ill.,

Ind., Ky., & Ohio to Chattanooga, 319 I.C.C. 787 (790-1).

Though the commission has frequently held that in determining compensativeness of t.l. rates the minimum weight should be used in computing earnings thereunder, rather than a speculative heavier load, that general rule is not controlling as to proposed 20,000-pound rates on paper bags, which cannot realistically be termed tantamount to t.l. rates when a 20,000-pound shipment fills only about one-fourth of a trailer. In view of probability that additional traffic would be carried on the vehicle, minimum earnings need not be considered the probable maximum t.l. earnings; respondents testified that are more than one 20,000-pound shipment would be transported in one trailer, and movements by certain respondents of paper bags and other articles average substantially over that minimum. Therefore, a departure from assumption in Highway Form B that the tariff minimum weight would exceed the average outbound movement is warranted in computing line-haul costs. Rates proposed are compensatory and the highest shipper will pay; approved.—Paper Bags from Chicago to Kansas City, 321 I.C.C. 732 (735-6).

Proposed motor rates on traffic moving on forwarder billing between points in eastern, central, and middlewest territories, subject to a maximum of 30,000 pounds per trailer and overage rates for excess weight, also subject to tariff provision for optional substitution of rail line-haul movement, are compensatory and are just and reasonable when they are higher than rail plan III TOFC rates they are designed to meet, and have substantially increased respondent's trailerload revenues due to heavier loading. Basic type of rate proposed was approved for same respondent on 20,000-pound maximum weight between eastern points and Chicago and St. Louis in 306 ICC 243; and proposed rates on 20,000-pound maximum between North Adams, Mass., and Chicago and St. Louis and between Glens Falls, N.Y., and St. Louis compare favorably with rates therein found reasonable for comparable distances. Approved.—General Commodities, Eastern, Central & Middlewest Ter., 321 I.C.C. 504 (508, 515-6).

Proposed l.t.l. commodity rates 68 and 69 percent of first class on mixed shipments of a specified group of articles, moving in carrier-furnished sealed containers without charge for tare weight thereof, but subject to conditions that a shipment consist of at least 10 differently described articles, be loaded and unloaded by shipper and consignee, and be subject to specified minimum charges, are not shown to be just and reasonable. Proposed rates would apply on over 400 different articles, some rated as high as class 300, and though overall rating of containerized articles handled during test period was 92.5 percent of first class, there is nothing to prevent shipment of a mixture of articles all rated class 200 or higher, or one consisting almost entirely of units of one high-rated article, so long as one unit each of nine other articles is included. Thus it cannot be found that savings from the proposed method of handling large numbers of small shipments would more than offset the revenue loss entailed plus cost of providing the containers. Not approved.—Freight, All Kinds, Chicago to Cedar Rapids, Des Moines, 321 I.C.C. 380 (384-5).

66.—Cost of service.—[Vol. 19].—See also §216(b), n. 100 through 113.—Plaintiff which does not own its own tractors, but leases them from other persons who also operate the equipment, did not meet its burden of proving compensativeness of proposed rates by merely showing that it paid the owner-operators 70 percent of the gross revenue per trip, without presenting any costs whereby the commission could determine whether that proportion of the gross revenue represented a compensatory return.—Malone Freight Lines, Inc. v. United States, 204 F. Supp. 745 (755)*. [But see 318 ICC 567.]

Although plaintiff's cost study prepared by a qualified expert, applying Highway Form B to data from its annual report, indicated that proposed rates exceeded out-of-pocket costs, the commission found that the cost data were not adequately supported and the rates were therefore not proved to be compensatory. But though the commission was not bound to accept plaintiff's uncontradicted cost evidence, it was not free to disregard the expert testimony offered without communicating its criticisms before decision. Though it criticizes the expert's use of Highway Form B as unsuita-

ble for a specialized carrier without considerable adjustment, in a subsequent case it accepted use of that formula for such carriers, and its specific criticisms of plaintiff's study appear to be matters that normally should be raised at a hearing; moreover, computation of plaintiff's costs according to Highway Form B as written shows the rates to be compensatory to nearly all of the destination territory. Considering the apparent reasonableness of plaintiff's cost evidence in light of other factors, the commission's rejection of the rates was not warranted. Cancellation order enjoined.—Davis & Randall, Inc. v. United States, 219 F. Supp. 673 (676-8, 680-3)*.

In a rate case, matters of cost are important and they are solely for the judgment of the administrative agency. To be compensatory, a rate must equal out-of-pocket costs, and it is clearly within the commission's discretion to reject as unlawful a rate which does not provide a return of out-of-pocket costs to the carriers; for, though the commission under some circumstances may permit a carrier to establish a rate not proved to cover out-of-pocket costs, it is not required to do so. The cost evidence presents a rational basis for the commission's conclusion that the rate in issue is not compensatory, and its finding reflects a permissible application of the statutory standards. Order rejecting the proposed rate, sustained.—Middlewest Motor Freight Bureau v. United States, 234 F. Supp. 151 (153, 154, 155)*.

The sole reason given by the commission in 318 ICC 567 for changing the evidentiary requirements stated in 313 ICC 530 for showing compensativeness of rates covering service provided with owner-operators was that it is virtually impossible for carriers to collect and submit reliable cost data for representative movements, because owner-operators are not subject to direct regulation by the commission and are not required to maintain accounts and records or file annual reports. This overlooks the commission's power to require submission of these data by the certificated carriers who can exact that information from their subcontractors who are their alter ego in the actual carriage. There is no question that the commission has full power and authority over the carriers hiring owner-operators, and it seems inescapable that it can require the carriers to obtain the necessary cost data; the owner-operator performs the function of a carrier and operates in accordance with the carrier's rights, and no rational basis is disclosed that makes the collection or submission of costs for owner-operator movements impossible.—Eastern Central Motor Carriers Ass'n v. United States, 239 F. Supp. 591 (598, 599)*.

While obtaining owner-operator costs may be difficult, the need for production of such evidence, in order to meet standards of the national transportation policy and requirements of §216(b), (d), and (g), outweighs the burden placed on the carrier and owner-operator. Requirement that a carrier using owner-operators has only to show that its retained revenue substantially exceeds its costs, and that amount paid an owner-operator is enough to acquire and retain his services, is based on the patently questionable assumption that latter will hire himself out to a carrier only if his earnings from the operation will exceed his expenses; but the commission has recognized that some owner-operators are not profiting from their operations with carriers. The whole is the sum of all its parts, and in owner-operator situations the total revenue expense comparison consists of that part dealing with carrier's revenue and expense and that part concerning revenue and expenses of the owner-operator. This second part may vary so as to make the applicable rates noncompensative but, under decision in 318 ICC 567, it is not even examined.—Id., pp. 599, 600.

The cost evidence problem arises because carriers with self-sustaining operations are vying with those using owner-operators to obtain a greater share of the available traffic; each faction would like to keep its rates lower than the other while realizing a profit. But unequal treatment is accorded on the one hand to carriers who own and operate the equipment and are required to submit refined and detailed cost data to assure compensativeness and, on the other hand, to carriers who lease the equipment and crew and who submit a lump sum covering the cost of rental equipment and crew and add to that only administrative and overhead costs and profit. This is

unjust discrimination against the self-sustaining carrier, as prohibited by the national transportation policy. In absence of sufficient reasons, when costs are used to prove compensativeness of reduced motor-carrier rates, full production of evidence is required for both the self-sustaining carrier and the carrier using owner-operators, in order to meet requirements of the national transportation policy and §216(b), (d), and (g). Accordingly, the order under review is set aside and the case remanded for further consideration.—Id., pp. 600-1.

While costs submitted by protestant may not be accepted as the precise equivalent of respondent's actual costs of transporting considered traffic, in absence of probative countervailing evidence they are the best evidence bearing on compensativeness of proposed rates and are acceptable as a reasonable approximation of cost of moving that traffic. Proposed rates cannot be approved when those costs show they would not cover out-of-pocket costs.—Paint & Paint Materials, Chicago to Kansas City, Kans., 318 I.C.C. 331 (334); when protestants' cost data shows that out-of-pocket costs exceed proposed rates to representative destinations by 99 to 204 percent.—Drilling Mud or Clay—Greybull and Gascoyne to Texas, 315 I.C.C. 191 (193); and when protestant's cost study shows out-of-pocket costs 9.92 cents in excess of proposed rate, since compensativeness thereof is not established.—Lubricating Oil from Panama City, Fla., to Atlanta, Ga., 316 I.C.C. 696 (698).

Cost data submitted will not support a finding as to compensativeness of proposed rates; those of protestants' study are overstated and are deficient; those of respondent based on average load is an inadequate study and is not supported by underlying data and respondent's costs are understated. Commission's restatement shows that the rates fail to meet respondent's out-of-pocket costs by substantial amounts, and in comparison with the combined costs for a seven carrier study, only the proposed 40,000-pound rate exceeds out-of-pocket costs, and that by the barest minimum of one-tenth of a cent. The burden of proof being on respondent, proposed rates are not approved.—Glass Bottles From Muskogee, Okla., to Chicago. 323 I.C.C. 258 (262-3).

When only cost evidence presented indicates that proposed rate is substantially below out-of-pocket cost of handling the traffic, proposed rate may not be approved.—Aluminum from Heath, Ohio to Dolton, Ill., 316 I.C.C. 38 (40).

Restatement of respondent's costs according to Highway From B shows that out-of-pocket costs exceed proposed initial rates by 2 to 40 cents per 100 pounds, and by 2 to 28 percent; proposed rates are therefore not compensatory; not approved.—Clay from Greybull, Wyo., to Points in the Middlewest, 314 I.C.C. 705 (709).

Cost data consisting of a summary of proponent's system out-of-pocket line-haul costs, which fail to take into account expense of performing proposed transit services, do not establish compensativeness of proposed transit charge.—Roasting of Coffee in Transit at Fort Worth, Tex., 315 I.C.C. 455 (457).

A minimum requirement of respondent's statutory burden of proving reasonableness of proposed rates is a showing that they would be compensatory for the service performed; although respondent criticizes protestants' cost data, it offered none of its own; protestants' showing thus constitutes the best evidence of costs prosented, and furnishes a reasonable guide as to compensativeness of proposed rates when it is based on respondent's annual report; wide spread between the proposed rates and costs shown indicates that they would not cover out-of-pocket costs.—Clay from Points in the South to Ohio, Pa., and W. Va., 316 I.C.C. 1 (3, 4).

Though respondent stresses that it needs the proposed rates to help improve its unbalanced operation, below-cost rates which can be defended only on the added-traffic theory may not be found just and reasonable. Not approved.—Id., p. 4.

When there is no substantiating evidence to show that cost data submitted are representative of movements anticipated, many cost items are omitted, and no attempt is made to determine proper apportionment of out-of-pocket costs to the traffic concerned, no conclusion of compensativeness can be made; proposed rates not approved.—Talc

from Emeryville, N.Y., to Ohio, 316 I.C.C. 197 (199).

Proposed removal of restriction on existing l.t.l. commodity rates on hardware and other articles, requiring an aggregate of 12,000 pounds and five or more shipments, may not be approved when the rates without the aggregate are not shown to be compensatory. Respondent's cost data, which admittedly are understated, show that charges on articles rated class 55 would not cover out-of-pocket costs for shipments under 2,000 pounds destined to points in a relatively short-haul area, and would not cover out-of-pocket costs for any shipment of class 50 articles under 2,000 pounds.—Hardware, LTL, New Britain, Conn., to Mid. Atlantic Terr., 322 I.C.C. 249 (252).

Rates which exceed out-of-pocket costs are not necessarily noncompensatory merely because they fail to cover fully distributed costs; proposed rate slightly exceeding out-of-pocket costs but less than fully distributed costs is compensatory and necessary to enable respondents to compete for film traffic all of which is presently moving by rail; approved.—Cellulose Film, Not Printed, Marcus Hook, Pa., to Chicago, 316 I.C.C. 322 (324).

Rates which exceed out-of-pocket costs are not necessarily noncompensatory merely because they fail to cover fully distributed costs; rate exceeding respondent's out-of-pocket costs, which is needed to retain the traffic, is not unlawful.—Canned Goods from Chicago, Ill., to Twin Cities, 316 I.C.C. 221 (223).

Proposed reduced rail-competitive rate on wrapping paper which would exceed fully distributed costs by 1 cent, approved as compensatory; but lower alternative rate on higher minimum may not be approved where it is substantially below respondent's out-of-pocket costs.—Wrapping Paper from Rhinelander, Wis., to Toledo, Ohio, 316 I.C.C. 455 (459).

Proposed new or reduced alternative rates on petroleum and products from Kansas City to Texas points produce minimum revenue exceeding variable costs in every instance except to Katy, Tex., and generally exceeding fully distributed costs by substantial amounts; approved, except the rate to Katy.—Petroleum Products from Kansas City, Kans., to Texas, 316 I.C.C. 307 (310).

Though protestant's computation of out-of-pocket costs is overstated to extent that pickup and delivery expense has not been adjusted to reflect shipper-consignee loading and unloading, such adjustment would not suffice to close the substantial gap indicated between the proposed rates and the out-of-pocket costs; not approved.—Ground Wood Boards, Sheets—Bemidji, Minn., to Chicago, 314 I.C.C. 774 (777-8).

Protestant's unrebutted showing that out-of-pocket cost for a 20,000-pound minimum load, based on data from respondent's annual report, exceeds proposed rate by 2.5 cents, even without provision for wage increases since incurred for over-the-road drivers under union contracts, indicates that the reduced rate is not compensatory; not approved.—Pie Filling from Duluth, Minn., to Fargo, N. Dak., 314 I.C.C. 797 (798).

Space and weight method used by respondents to compute line-haul portion of costs on considered sugar traffic fails to reflect accurate costs. Since density only affects line-haul costs when a vehicle is prevented from having a full weight load by bulkiness of the commodity carried, it would have no effect on the sugar traffic because density thereof of 50 pounds per cubic foot would provide weight capacity before space capacity became a factor. Respondents' unit costs as restated, with elimination of the space and weight principle and use of system average load in the reverse direction, show that total out-of-pocket costs exceed proposed rates in every instance; not approved.—Sugar, Colo., Nebr., S. Dak., and Wyo. to Iowa, Ill., Mo., 315 I.C.C. 371 (374-5, 376).

Although respondent seeks to justify proposed rates on basis of private-carrier and market competition, it is well established that out-of-pocket costs represent a floor below which rates may not be approved even to meet competitive situations.—Petroleum Products, Friendship to Bland and Rocky Gap, Va., 316 I.C.C. 114 (116).

One respondent's estimate of out-of-pocket expenses was not computed on any recognized cost formula and was not sufficiently

detailed to permit verification; out-of-pocket line-haul costs of another were not supported by any underlying data and were not sworn to by a person having knowledge thereof; protestants' cost evidence based on financial and operating statistics compiled from quarterly reports of class I and class II carriers indicates that proposed reduced rates would not be compensatory; not approved.—Hides and Pelts from Texas to Ill., Mo., and Wis., 316 I.C.C. 243 (244-5).

A minimum requirement in sustaining the burden of proof as to proposed reduced rates is a showing that they are compensatory. On the best cost evidence of record, proposed reduced rates, except to two destinations, fail to cover respondent's out-of-pocket costs and thus, with those exceptions, are not shown to be just and reasonable.—Alcoholic Liquors from Peoria, Ill., to Eastern Points, 321 I.C.C. 142 (147, 149)*.

Proposed rates convincingly shown to be noncompensatory where the proposed 10,000-pound minimum rates are below respondent's out-of-pocket costs in every instance for shipments to representative destinations, even assuming loaded return movement of exempt commodities, and the 20,000-pound minimum rates would similarily be below out-of-pocket costs in 6 of the 12 representative shipments, assuming a 75 percent loaded return. In addition, inclusion of probable dead-head mileage from respondent's terminal, to satisfy supporting shipper's requirements for expedited service would further reduce relative compensativeness of the 20,000-pound rates; moreover, record is convincing that it is unlikely that such rates would be used by supporting shipper.—Wooden Containers, Hebron, Md. & Suffolk, Va., to Florida, 322 I.C.C. 39 (45-6).

Though protestants show out-of-pocket costs for considered lumber traffic only from Cimarron, N. Mex., several hundred miles east of Albuquerque, it is reasonable to assume that operating costs from Albuquerque to Chicago would be at least no less than from Cimarron; based on similar average costs, similar rates proposed from those points were found noncompensatory in a prior proceeding, and in absence of rebuttal evidence protestants' cost evidence is convincing that proposed rate from Albuquerque is below a compensatory level; not approved.—Lumber from Cimarron, N. Mex., to Chicago, 315 I.C.C. 534 (535).

Special or expedited pickup and delivery trips have a higher proportion of running time than average trips and applicable unit costs per hour are greater because of additional consumption of fuel and wear and tear on vehicles, and if those services required a total of more than 30 minutes per 100 pounds their cost would wipe out the portion of proposed any-quantity, expedited-service rates intended to cover them; however, on a hundred-weight basis the proposed $3.60 increment to the terminal-to-terminal rates will exceed the cost of expedited pickup and delivery; proposed rates approved, provided the 100-pound rate is made the minimum charge.—Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663 (665, 666).

Though accurate cost data are desirable, they are not indispensable in establishing reasonableness of proposed rates. Proposed rates approved.—Rubber, Sarnia, Ontario, to Conn., Mass., Mo., and R.I., 315 I.C.C. 707 (708)*.

Costs presented by protestants, which are based on operations of numerous general-commodity carriers, are not shown to be representative of costs of respondent, a specialized carrier engaged primarily in transportation of foodstuffs; are therefore inconclusive.—Foodstuffs, New York Points to Milwaukee & Twin Cities, 315 I.C.C. 725 (727-8).

Protestants' cost estimates based on expenses of six class I and class II carriers are not a reliable indication of costs of respondent, a class III carrier; since respondent has shown that its operations are not confined entirely to one-way hauls, and costs submitted by protestants are not shown to be representative of respondent's costs for handling considered traffic, comparisons of revenue per vehicle-mile at proposed rates, computed over round-trip distances and assuming a 100-percent empty-return movement, with average vehicle-mile costs of those six carriers are not persuasive that proposed rates are noncompensatory.—Wine from Canan-

daigua, N.Y., to Florida and Alabama, 316 I.C.C. 246 (248).

Proposed reduced rate yielding greater minimum revenue than present rates on lower minimum weight is compensatory; although respondent's cost evidence did not include administrative or overhead expenses, margin of truckload revenue above costs is stated to be sufficient to cover such costs plus a profit. Proposed rate also exceeds costs for similar movement adduced by protestant in another proceeding based on a lower minimum and including loading and unloading, which would be performed by shippers under proposed rate.—Printing, Wrapping Paper, Pulpboard—Ohio to New York, 318 I.C.C. 49 (50-1).

As respondent's principal operations are limited to two commodities, it keeps separate records for its cement operations, and two terminals (including involved origin) are devoted exclusively to cement and all its cement vehicles serviced there, its statement of transportation, maintenance, and overhead expenses for cement can be accepted as reliable, considering simplicity of its operations. Comparison of its average truck-mile costs on cement with average truck-mile earnings under proposed cement rates to Kansas points of varying distances strongly indicates that proposed rates are compensatory; approved.—Cement from Dewey, Okla., to Points in Kansas, 318 I.C.C. 281 (283, 284).

Although cost data presented are too seriously defective to show compensativeness of proposed reduced assembling rates on textiles, indicated savings of 1.41 to 1.8 cents in collecting charges and about 19 cents in making deliveries, due to special conditions attendant on the proposed rates, together with favorable comparisons with other motor carrier rates, are convincing that they are compensatory; approved.—Assembling Rates at Charlotte and Greensboro, N.C., 318 I.C.C. 429 (437-8, 439).

Since unit costs computed from respondent's annual report through automatic data processing of Highway Form B were almost identical with those submitted by respondent, latter are acceptable; but its line-haul cost per hundredweight-mile was overstated due to its use of unit cost reflecting its average load rather than that reflecting round-trip load for the traffic in issue. Respondent's average costs are representative of most of its intercity operations, which are over toll-operated facilities, and use of express highways would not appreciably increase its costs. Applying respondent's unit costs to actual mileage, proposed rate is 110 percent of total out-of-pocket cost and is compensatory.—Alcoholic Liquors, Detroit, Mich., to Long Island City, 319 I.C.C. 404 (407).

As respondent recently converted from contract to common-carrier status referred to its 1960 annual report in preparing its 5-week cost study for that year, that report may be used to test its rate scale and costs. As restated, its costs show that its initial common-carrier rates on cement in bags cover total costs by a slight margin and that its lowest rates on bulk cement also approximate such costs for distances up to 125 miles. As that distance generally exceeds the average cement haul in that territory, respondent's rates as a whole cover its full costs and are compensatory.—Cement from Hudson, N.Y., to New England and Pa., 319 I.C.C. 235 (243, 244).

Though respondent holds out all-motor service, preponderance of involved forwarder traffic moves in substituted rail-for-motor service, and it properly included cost of purchased rail transportation in its cost study. But as both respondent's out-of-pocket costs and examiner's restatement are computed for short highway distances instead of either somewhat longer payment-mile basis on which owner-operators are paid or actual railroad mileages between points, its costs are understated to extent that rail mileages exceed highway distances. Also, there is no underlying evidence to show that trailer rental paid by respondent to its wholly owned subsidiary covers cost of furnishing trailers. However, as the restatement is calculated on movement of a maximum shipment of 30,000 pounds between typical points, whereas average shipment does not approach that weight, resulting overstatement more than offsets the understatements noted, and the restatement, which shows that proposed rates exceed out-of-pocket costs in all instances and fully distributed costs in all but three instances,

reasonably indicates cost of handling considered traffic.—General Commodities, Eastern, Central & Middlewest Ter., 321 I.C.C. 504 (513-4).

And though respondent's costs include expense of purchased motor transportation, without any showing of operating costs of the owner-operators, decision in 318 ICC 567, which laid down as test of adequacy of owner-operators' compensation that it be sufficient to acquire or retain their services for movement of the traffic to which the rate applies, is controlling. As most of owner-operators employed by respondent have served it for periods of 5 to 15 years, compensation paid them is clearly sufficient to retain their services; and since this compensation results from collective bargaining, it is fair to assume that the owner-operators are not being exploited. Proposed rates approved as reasonably compensatory.—Id., pp. 514-5.

While respondent has somewhat understated its costs in failing to include any amounts for supervision, administrative and general expenses, insurance and safety, and loss and damage, in other respects it has overstated its costs by a considerable margin, particularly in including trailer rental, since proposed rates apply only to shipments in shipper-furnished trailers. When adjusted to reflect average rental of tractors, exclusion of trailer expense, and corrected system average load, respondent's costs, even with addition of omitted items, show proposed proportional rates on all-freight, in connection with prior or subsequent rail TOFC movement, to be reasonably compensatory; approved.—Freight, All Kinds, Chicago and Ind., Mich., Ohio, 322 I.C.C. 423 (426-7).

Respondent's cost estimates for moving shippers' loaded and empty trailers, including loading and unloading, between northern New Jersey rail yards and Long Island points, while somewhat unorthodox, are convincing that proposed per-trailer charges are compensatory; mileage factors used are reasonable and time factors reflect respondent's actual experience; drivers' costs are about the same as for protestant conference members; and its assignment of 20 percent of operating expenses and administrative overhead to involved traffic is not disputed. Further, respondent has been experiencing a profit at like charges for similar service performed under contract for Long Island R., and mere difference in ownership of trailers in the two services would not alone affect respondent's costs.—Freight, All Kinds, & Empty Trailers bet. N.J. & N.Y., 322 I.C.C. 429 (432-3).

Proposed reduced t.l. commodity rate on edible jams, jellies, or preserves, n.o.i., subject to shipper loading and consignee unloading, will be compensatory when it exceeds out-of-pocket cost of carrier representative of respondents, motor carriers participating in certain Middlewest Motor Freight Bureau tariffs. Using unit costs from Highway Form B, respondents compute out-of-pocket cost for considered traffic on two bases, (1) line-haul cost for the average round trip load weight and (2) line-haul cost for the round trip load, adjusted for density; and cost computed on each basis is lower than proposed rate even before reduction to reflect shipper loading and consignee unloading. Also, respondents' cost evidence shows that, after pickup and delivery adjustment, proposed rate exceeds restated out-of-pocket cost on the first basis by 8.8 cents, and that it is 17.8 cents above such cost adjusted for density. Approved.—Jams, Jellies, or Preserves, Oklahoma City to Chicago, 325 I.C.C. 95 (97-8, 101-2)*.

Where equipment and terminal expense items, used in respondent's cost study on which review board based its finding of compensativeness of proposed rate, represent rental payments made to respondent's wholly owned subsidiaries which provided such service, the only question is the integrity of costs shown for the rental payments; and fact that respondent and its subsidiaries are separate entities is not shown to have a bearing on the cost of service issue. From an accounting standpoint, treating rental payments as expenses is wholly proper; but if such payments, which are within complete control of the parent company, are so exorbitant or inordinately iow, it can become necessary to scrutinize the costs underlying them. Facts of record do not in themselves warrant questioning reliability of the claimed rental payments, nor do protestants advance adequate justification for doing so.—Plastic Materials, Longview, Tex., to Chicago, 325 I.C.C. 691 (694).

Nothing in the record indicates that the rentals are grossly out of line with costs actually incurred by the subsidiaries in furnishing the equipment and terminals. Rental payments, most of which are made for use of line-haul equipment, are acceptable where the territorial average vehicle-mile cost computed by respondent is reasonably in line with that developed by the commission, of which official notice is taken, and little if any rental paid for terminals would be chargeable against considered traffic, which moves without terminal platform handling, and so would have an insignificant effect on the total costs.—Id., pp. 694, 695.

Cost data submitted will not support a finding as to compensativeness of proposed rates; those of respondent understate costs and are deficient; those of protestants, while tending to show that the rates are not compensatory, are inconclusive; the burden of proof being on respondent, proposed rates are not approved.—Candy and Related Articles, New York to Detroit, Mich., 314 I.C.C. 759 (762).

Proposed reduced rate may not be approved without a showing that it would be compensatory for the service to be performed thereunder. Underlying data on which proponent's revenue figures are based are not of record, its costs for handling considered l.t.l. traffic are not shown; record fails to show that proposed l.t.l. rates would be reasonably compensatory.—Fluorescent Lamp Ballasts, LTL, Atlanta to Florida, 315 I.C.C. 412 (414).

Respondent's cost exhibits do not reflect the joint cost of the round trip movement and make no allowance for the average load in the opposite direction; all equipment operated in one direction must eventually move in the return direction, thus, costs for movement of the vehicle must be apportioned to the traffic moving on the round trip.—Automobile Parts and Other Articles, Central Territory, 316 I.C.C. 143 (146).

While respondent criticizes protestants' costs based on public statement No. 1-61 of commission's cost finding section as not typical of its operations, it submitted no evidence of its own costs of transporting considered traffic; respondent, not protestants, has the burden of proof, and such cost evidence as was presented casts considerable doubt on compensativeness of proposed rates; not approved.—Brick and Related Articles, St. Louis, Mo., to Chicago, 316 I.C.C. 227 (229).

Respondents' study cannot be accepted as a reliable indication of t.l. cost on considered traffic when it is not calculated on a round-trip basis; truck-mile cost stated is not supported by underlying data; and wage expense makes no allowance for nonproductive time, social security taxes, workmen's compensation, welfare expense, and other costs related to a driver's wages. Protestants' computation of out-of-pocket costs is more reliable because based on an acceptable formula (Highway Form B) which provides a method whereby all expenses are accounted for; protestants' study indicates proposed rate would not cover out-of-pocket costs and thus casts doubt on its compensativeness. Not approved.—Sugar, Beet or Cane, New Orleans, La., to Columbus, Ga., 316 I.C.C. 230 (232).

A minimum requirement in proving reasonableness of a proposed rate is a showing that it would yield something above out-of-pocket costs of the service, even where it is proposed to meet competition. Respondents' cost data based on one-way movement are inadequate to reflect accurately the costs for considered traffic; protestants' cost study appears acceptable and indicates that proposed rates are not compensatory; not approved.—Brass, Bronze, Copper, Articles - Anderson, Ind., to Rochester, 316 I.C.C. 233 (235).

Though such line-haul expenses as drivers' wages, insurance covering vehicle operation, and registration fees are properly assignable on an hourly basis, expenses for repairs, fuel and oil, tires, and depreciation are properly mileage expenses, and use of a percentage of revenue to determine general overhead is improper because revenue is not a cost causative; cost data defective in those respects are not indicative of probable cost of considered movement. Proposed rates not approved.—Boot or Shoes from Columbus, Ohio, to Chicago, Ill., 316 I.C.C. 239 (240).

Proposed establishment of Charlotte, N.C., as a stopoff point for partial unloading of shipments moving from Chicago to Raleigh over a route beyond Greensboro 15 percent longer than respondent's normal route is not shown to result in a compensatory operation; no ba-

sis is shown for assumptions that pickup-and-delivery and platform costs would be one-half the average for all traffic, and that one-half the weight of a shipment would be unloaded at Charlotte; out-of-pocket line-haul costs claimed to consist solely of equipment and driver costs are not supported by underlying data, and respondent's study is further defective in excluding certain portions of general costs which are properly includible in out-of-pocket cost and in being calculated on a one-way basis. Proposed rule not approved.—Stopoff in Transit at Charlotte, N.C., for Unloading, 316 I.C.C. 317 (318-9, 321).

Both respondent's and protestants' cost studies are defective in allocating costs to mileage that do not vary directly with miles operated. Though respondent used short highway mileage in computing costs, it is not shown that its operation would be over the short route, and to extent that it would not, the short-line mileage should be increased by 6 percent to allow for circuity; moreover, no basis is shown for its assumption that administrative expenses for considered movement are 12.98 percent of other expenses listed. Neither study supports a conclusive finding as to compensativeness of proposed rate; not approved.—Soya Bean Oil, in Tank Vehicles—Lafayette-Cincinnati, 316 I.C.C. 461 (463).

Proposed reduced rates on fatty acids from Franklin, Va., to points in New Jersey area and on acetic acid from Parlin, N.J., to Hopewell, Va., restricted to apply only when there is a movement in both directions, are not shown to be compensatory. While truck-mile costs of contemplated round-trip operation would approximate respondent's system-average costs, round-trip earnings would not be profitable in connection with respondent's existing route from Parlin to Hopewell, but only over shorter route concurrently sought, authority for which is denied. Not approved.—Liquid Commodities between Va. and N.J., N.Y. and Pa., 316 I.C.C. 609 (614).

Respondent's cost study understates out-of-pocket costs of handling traffic when its computation of line-haul costs is based on one-way operation and fails to give any recognition to jointness of line-haul costs incurred in performing transportation as part of round-trip movement; resulting cost computations are unacceptable for ratemaking purposes; reduced rate not approved.—Aluminum from The Dalles, Oreg., to Adrian, Mich., 316 I.C.C. 625 (626-7).

Proposed initial rates on articles to be added to grocery list in respondent's tariff exceed out-of-pocket costs shown for 1955 in commission's public statement No. 7-56 for commodities of average density by 6 to 42 cents; subsequent adjustment of those costs to more recent levels based on experience of class I carriers is not shown to be reasonably applicable to costs of respondent, a class III carrier. However, protestant's showing that even on 1955 level out-of-pocket costs for weight brackets and distances involved, adjusted to reflect lower density of popped corn, potato chips, and pretzels, would exceed proposed rates thereon by substantial amounts is not rebutted; rates on those commodities therefore may not be approved. Otherwise, proposed rates are not shown to be unlawful except in failure of commodity descriptions to comply with tariff-circular requirements. —Bakery Goods, Foodstuffs & Groceries from N.J. & N.Y., 316 I.C.C. 639 (641-2, 644).

Respondent's computation of such expense items as safety, insurance, taxes, licenses, and general administrative expense by taking intercity portions of those expenses as reported in its annual report, dividing total miles operated to determine costs per intercity mile, and multiplying results by round-trip distance of considered movement, falsely assumes that such expenses vary directly with miles operated; costs so determined are not a reliable approximation of cost of considered service; as revenue from proposed reduced rate would exceed respondent's deficient cost estimate by only 94 cents per shipment, it is not shown to be compensatory; not approved.—Silica Flour from Millville and Newport, N.J., 316 I.C.C. 645 (647-8).

Respondent's cost study is deficient in numerous respects, principally in failing to consider jointness of line-haul costs incurred as part of a round-trip movement. Though percentages by which rail protestants in-

creased line-haul and terminal costs to allow for increases over 1956 levels are unsupported, even if no consideration is given to such increased costs, proposed rates are below out-of-pocket costs; and motor protestants' cost estimates based on Highway Form A and public statement No. 8-55 also indicate that proposed rates would not be compensatory. Protestants' cost studies are more nearly representative of cost of transporting considered traffic than respondent's; proposed rates not approved.—Candy & Confectionery, Hoboken & New York to Chicago, 316 I.C.C. 671 (674-5).

Proposed reduced rates on alcoholic liquors, including loading and unloading when such service can be performed by not more than two men, are not shown to be compensatory; cost data are in summary form and no basis is offered for assumption of 4 hours' labor for loading and unloading; thus cost of rendering the helper service cannot be ascertained; not approved.—Helper Service, Alcoholic Liquors, Md. to N.Y. and N.J., 318 I.C.C. 102 (104).
